This Supplement is printed so as to admit of it being bound up with the original Work. The portion applicable to each of the two Volumes is paged so as to follow in a proper sequence; and the Abstract of the Census has in like manner been divided so that each Volume may have the portion specially referring to it.

PREFACE.

SINCE the time that the publication of the IMPERIAL GAZETTEER was completed, very extensive additions have been made to our knowledge of various parts of the world. Africa—Southern, Central, and Eastern—has been opened up greatly by Livingstone, Barth, Richardson, Overweg, Vogel, Baikie, Andersson, Burton, Speke, Grant, Baker, and other travellers. The journeys of the Gregories, Macdouall Stuart, Landsborough, the unfortunate Burke and Wills, M'Kinlay, and others, have changed our ideas regarding the interior of Australia, hitherto supposed to be covered with salt scrub, hard-baked mud, or burning sands, and have shown that immense tracts are suited for the abode of the hardy settler, and capable of grazing countless flocks of sheep and herds of cattle. In Eastern Asia the Russians have augmented our knowledge of the lands bordering the mighty river Amoor; the British and French expeditions to China, and the researches of intrepid travellers, have increased our information regarding the features, the products, and the people of the Middle Kingdom; while in the Arctic regions, new islands, straits, and seas have been added to our maps by the numerous daring explorers who endeavoured to track the course and solve the fate of the lamented Franklin. Much has been done likewise to increase our knowledge of the less known parts of North and South America; and short but sanguinary continental wars have brought about extensive changes in the political geography of Central and Southern Europe.

In compiling the SUPPLEMENT, thus rendered necessary by the progress of discovery, all the valuable works of travel, home and foreign, that have appeared in recent years, have been consulted, and also the more important geographical and other periodicals published in this country, and in France, Germany, and America; and considerable additions of noteworthy facts have been obtained through the kindness of private correspondents.

Besides articles on places made known to us for the first time through recent discoveries, or which have risen into importance through war or commerce, additions have in many cases been made to those on places already noticed in the body of the Work, and sometimes new ones have been substituted in their stead, where the amount and value of recently acquired information seemed to demand such a course; and many places formerly omitted—whether accidentally or by design—have been

carefully inserted. At the end is given a full abstract of the Census of the United Kingdom of 1861, presenting the latest returns of the population of all its counties, towns, villages, parishes, and islands.

The plan adopted in the SUPPLEMENT is identical with that of the GAZETTEER. The descriptions and accounts have been taken almost solely from original authorities, and confined as far as possible to statements of fact; opinions and suppositions, as such, being studiously and uniformly excluded. Indeed, geographical conjectures are so frequently found in experience to require subsequent modification, that it would be contrary to the design of such a work as the IMPERIAL GAZETTEER to record matters which a few months or years after may prove to be really non-existent. The object has been simply to collect ascertained and tested facts, and to arrange them in such a manner as to give the substance of all that is known respecting the places treated of. And in compassing this object, no labour, or time, or expense has been spared.

Extensive and rapid as have been the additions made to our knowledge of the earth's surface in recent years, it is believed that the IMPERIAL GAZETTEER as now completed may fairly claim to exhibit a satisfactory view of the present state of geographical information.

The Editor desires to express his deep obligations to several gentlemen who have rendered valuable assistance in the compilation of the SUPPLEMENT—more especially to the Rev. W. B. FINDLAY, M.A., Rector of Etherley, who, besides writing many articles, scrutinized the MS. with the eye of an accomplished geographer, and greatly facilitated the work of revision—to the late HENRY BEVERIDGE, Esq., Author of the "Comprehensive History of India," who supplied a large number of important articles—to SAMUEL MOSSMAN, Esq., late editor of the "China Mail," and author of "China," "Our Australian Colonies," &c., who contributed most of the articles on Chinese and Japanese localities—to WILLIAM HUGHES, Esq., F.R.G.S., for contributions on African and Australian geography—and to friends at home and abroad who have sent information respecting the localities in which they reside, or with which they are intimately acquainted.

GLASGOW, *March 12, 1868.*

SUPPLEMENT

TO

THE IMPERIAL GAZETTEER.

ABA

ABA, a tn. Central Africa, kingdom of Bornou; a place of some importance, surrounded by a wall in good repair, and entered by three gates. The interior is adorned by large trees; and the huts, remarkable for their high conical roof, have a very cheerful appearance. The military spirit being strong among the inhabitants, industry and agriculture seemed to be much neglected.

ABA, a tn. Austrian empire, Hungary, co. and 11 m. S. Stuhlweissenburg, in an excellent agricultural district, with 3164 inhabitants, most of whom are Protestants, and engaged in weaving.

ABBEOKUTA, ABBEKUTA, or ABEOKUTA ('Understone'), [add.], a tn. W. Africa, Yoruba, cap. Egba land, l. bank Ogun river, 81 m. (by river) N.N.W. Lagos; lat. 7° 8' N.; lon. 3° 20' E. The town was founded by a remnant of the Egbas on the rock Olumo—whence its name—about 1826, under their chief Shosheke, who in 1838 invited Europeans to settle in it. Between 1842-6 Christian missionaries established themselves there; and in 1861 there were representatives of the Church of England, the Wesleyans, and two sections of American Baptists. The situation of the town is both striking and beautiful. 'There is a gorgeous growth around. Hill, water, forest, and homestead—the constituents of beauty in a landscape—all are present.' 'The principal peculiarity is the fantastic breaking of the undulating plain by masses of gray granite, between twenty and thirty in number, sometimes rising 250 to 300 ft. above the lower levels, towering above the patches of dark trees and large brown villages, or rather towns, composing Abbeokuta, which separate them. There is a long 'dorsum' nearly bisecting the town from N. to S., lying like a turtle's back between the scattered lines of habitations, which in some places are as close packed as cells in a honey-comb, in others are broken by bush. A line of denser and more regular trees marks the course of the river; and the rolling ground, broken by dwarf cones, in the distance subsides into a mysteriously hazed horizon.'—(Burton.) The defences—a mud wall 5 or 6 ft. high, without embrasures, and a ditch a few feet broad, choked with bushes—have a circumference of 17 or 18 m., and extend over the r. bank of the Ogun; to the northward there are three lines. The town itself is about 4 m. by 2 m. Besides the smaller gateways through the wall, leading to farms, there are five larger ones, at which *octroi* duties are collected—three to the N., and two to the S., each provided with a hollow bastion for the warders. The principal quarter, or village, is Ake, and contains the king's palace, the church and dwellings of the Church Missionary Society, and a printing-office, which issues a weekly newspaper, edited by the missionaries partly in Egba and partly in English, and printed by natives. Adjacent is the district occupied by the Christian natives. Of the town generally the streets are narrow and irregular, the wider ones being occupied as markets; the houses, built of tamped mud, and covered with tall thatched roofs, are in form a hollow square, with courts within courts, the rooms numbering from ten to twenty, for the various subdivisions of the polygamous families.

Abbeokuta has been several times invaded by the inveterate enemy of its people, the king of Dahomey. In 1861 the king Gelele marched upon it; but small-pox broke out

SUPP. IMP. GAZ.

ABLITAS

in his army, and carried off, it is said, 8000 of them. In 1864 he again attacked the town, but was repulsed and disastrously routed by the Egbas. The Abbeokutans have likewise had a long struggle with Ibadan, a Yoruban town about 50 m. N.E. of them.

The inhabitants are generally industrious, and apply themselves to various occupations; the chief trades, besides agriculture, being those of the blacksmith, the carpenter, the weaver, the dyer, and the potter. The presence of the missionaries and Christian converts has exerted a manifest influence upon the habits and character of the general population, who are better clothed and better conducted by far than the Dahomans and other Yoruban tribes, though they are still far from a state of civilization. By a treaty of 1852, renewed with additional stringency in 1861, the king and chiefs pledged themselves to a suppression of the slave trade and of human sacrifices. Pop. 100,000 to 150,000.—(Burton, &c.)

ABD-EL-KURI, or ABD-AL-CURIA [add.], an isl. E. Africa, belonging to the Sokotra group, in the Indian Ocean, 50 m. N.E. Cape Gardafui. It is about 20 m. long from W. to E., and from 3 to 4 m. broad, and consists, on its S. side, of a limestone plateau, upwards of 1200 ft. high, from which several peaks rise and attain the still greater height of 1500 ft. above the sea. The N. coast forms an almost unbroken line, but the S. coast is indented by bays and creeks, some of which give good anchorage. The soil is generally of a sandy, sterile character, scarcely affording sufficient fodder for a few herds of goats. The inhabitants, not above 100, subsist chiefly on fish, which abound on the coast. About 13 m. N. of Abd-el-Kuri are two other small islands, which are visited by the Somali and Arabs of the mainland for the guano found upon them.

ABENGIBRE, a vil. Spain, prov. and 17 m. from Alhacete, on a height. It is poorly built in a few irregular, unpaved, and dirty streets. It is famous for its onions and potatoes, and has manufactures of *alpargata* shoes, and a millstone quarry. Pop. 892.

ABERTURA, a vil. Spain, prov. and about 28 m. E. Caceres, on the slope of a hill commanding a pleasing view. It consists of 200 houses, irregularly grouped, and mostly of a single story, and has an ancient and somewhat decayed parish church, a townhouse, a primary school, and an insecure and unhealthy prison. Pop. 1096.

ABILA, or BILA, a mountain, W. Africa, dist. of Air or Asben, belonging to the Baghzin range, which attains a height of nearly 5000 feet. It is one of the most picturesque objects in the country.

ABITSCHÉ, a vil. Africa, dist. Kororofa, l. bank Chadda or Benuwe; lat. 7° 50' N.; lon. 8° 50' E; near two large islands, one of which is named Clarendon, and the other Washington. It is a large place, inhabited chiefly by Kororofa and Igbara people, and has a considerable trade.—(Jour. Roy. Geo. Soc. vol. xxv. p. 115.)

ABLITAS, a tn. Spain, prov. Navarre, cap. co. of same name, on a plain at the foot of a height washed by the Queiles, about 50 m. S. Pampluna. It is an ancient place, which, under the name of Oblitas, possessed a strong castle, and made some figure in the early Spanish wars. Pop. 1226.

ABOMEY, or **AGBOMEY** ('town within the precincts'), [add.], a tn. W. Africa, cap. kingdom Dahomey, 63 m. N. Whydah. It is approached from Kanah by a wide and good road, through a beautiful and fertile district, lined with villages and groups of 'fetish' buildings. The town is without walls, but surrounded with a moat, grown over with the thorny acacia and other dense bushes, which form a good defence. Around the northern part, the inclosure, from E. to W., is double, with an interval of a mile, which is filled with bush and grass. The outer circuit is about 5 m., and the number of gates is eight. The 'Agbo' is a mud screen of 5 steps or courses, 15 to 18 ft. high, and 100 yds. long, pierced with two wedge-shaped gaps as entrances, one for the king, the other for the public, and closed with hurdle-gates. Within this entrance are the ruins of a fort, with a number of useless guns. Abomey is the residence of the king, who has his principal palace here, the other being at Kanah, 7 m. S. The town is made up of several groups of houses, thickest in the W. and S.W., the palaces and houses of the chiefs being inclosed in 'componnds,' overgrown with trees and bush. On the W. side is a suburb, which is much superior to the rest of the town in cleanliness and pleasantness. There are four large and several smaller markets. The place suffers from scarcity of water. At Abomey are held the 'customs' or annual sacrifices of human beings, the object of which is to furnish the last deceased king with a continual supply of officials and attendants in the realm of the dead. Upon the death of a king, his successor celebrates the 'grand customs,' when the victims are estimated to amount to 500; at the annual sacrifices the number is said to be about 80, chiefly criminals and prisoners of war, reserved for the purpose. But frequent executions take place throughout the year; and thus the loss of life is estimated at not less than 500 annually, and 1000 in the year of the grand customs. The victims are executed in various ways—shooting, beheading, beating with clubs, and are often mutilated, the bodies being attached in various postures to scaffolds erected for the purpose.—(Burton's *Dahomey*, &c.)

ABONA, a vil. Canary Islands, isl. Tenerife, in a valley at the foot of a mountain called Meseta de Escalona, in the dist. of Orotava. It is built chiefly of uncemented stone, and has a parish church and a fertile soil, which suffers, however, from want of water. The chief products are wheat, barley, barilla, figs, and cochineal. At its small harbour a good deal of paving tile and hewn stone is shipped. Pop. 1516.

ABOO, a mountain, India, Rajpootana, in the territory and to the S. of the town of Serohee. It is connected with

temples, forming one magnificent edifice in the form of a cross, and declared by Tod to be, beyond controversy, 'the most superb of all the temples of India.' They are all of white marble, which, as it does not exist in the locality, must have been brought from a considerable distance; and one of them, the Vimla Sah, is said to have occupied fourteen years in its construction, and to have cost eighteen millions sterling. Externally it is perfectly plain, but within nothing can exceed the magnificence and richness of the decoration. The mountain appears to be composed chiefly of granite. Part of it is now used as a sanitarium, for which it is well adapted by its pure air, moderate temperature, and beautiful scenery.

ABRA, a prov. and river, Philippine Isles:—1, The prov. *Abra* or *Centro del Abra*, near the centre of the isl. of Luzon, lies between lat. 16° 6' and 17° 50' N., and is bounded N. by Ilocos-norte, E. Cagayan and Nueva Vizcaya, S. Pangasinan, and W. Ilocos-sur. It is rugged and mountainous throughout, and covered for the most part with dense forests, which yield strong and durable timber. Some of its valleys are fertile, and metallic ores, gypsum, and coal are said to exist among its mountains. The principal wild animals are the buffalo, hog, deer, and common fowl. The total pop. subject to Spanish rule is about 29,000, but many wild tribes occupy the mountain recesses. *Abra*, which previously formed part of Ilocos-sur, was erected into a separate prov. in 1846.—2, *Abra*, the river which gives its name to the prov., has its source in the highest part of the Cordillera of Caraballos, and after dividing into several branches in Ilocos-sur, reaches the W. coast. It is navigated by the light boats of the natives, and is much used for irrigation.—(Crawford's *Descrip. Dictionary of Indian Islands*.)

ABRAMAM, a tn. India, presid. Madras, dist. and 40 m. S.E. Madura, below the bank of a lake of same name. It consists of two long and well-formed but narrow streets, with mean houses, occupied chiefly by Mussulmans and a caste of Hindoo merchants called Chetties, whose trade in grain, cotton, and cloths is considerable. In consequence of the ample supply of water obtained from the lake the fields in the neighbourhood yield two crops annually. About the lake itself the only thing remarkable is its embankment, which is formed of stones so large that antiquarians are puzzled to understand by what means they were originally placed, and is so strong that no breach has ever been made in it nor even any repairs required.

ABRENDABAD, a vil. Persia, prov. and 17 m. W.N.W. Yezd. It has a small square fort, inclosed by a double wall.

ABRÜAD, the cap. of Nejd in Arabia. See **RIADH**.

ABRUCENA, a tn. Spain, Andalusia, prov. and about 25 m. N. Almeria, and 160 m. E.N.E. Gibraltar; picturesquely situated on the summit of a hill. It has a magnificent parish church, rebuilt in 1828, the former one having been burned down; several mills; and a pop. of 1268, chiefly engaged in agriculture and grazing.

ABUERA, a river, Russian empire, Manchooria, which, rising in a mountain range, flows W. and joins the Usuri on its right bank; lat. 47° N.; lon. 135° E. Though it has a course of several hundred miles it is so shallow at its mouth that it can be forded.

ABU GHER, a tn. Central Africa, Baghirmi, 20 m. N.N.W. Masena. It consists of two groups of huts, separated by a hollow, in which a very important weekly market is held for the sale of sheep and cattle, sorghum, cotton, tobacs, cowries, and hoes for field labour. The Fulbe or Fellatah having founded the place, still form a large part of the inhabitants.

ACAGUAPA, a river, Central America; tributary of the Lempa, and the last of any consequence which joins that river before it falls into the Pacific on the S. coast of San Salvador. It rises in the volcano of San Vicente, and has a course of about 30 m.

ABOO, VIMLA SAH, JAIN TEMPLE.—Fergusson's *Hindoo Architecture*.

the Aravulli range, and, rising from a base about 45 m. in circuit, terminates in numerous peaks, the loftiest of which, Guru Sikra, is nearly 5000 feet above the sea. It is much visited on pilgrimage, especially by the Jains, who have at Dilwara, about the middle of the ascent, a group of four

ACAPIALA, a plain, Central America, San Salvador, extending from its volcanic region toward the Pacific, and comprehending the territory along the course of the Sonsacate.

ACAYUCAN, a tn. Mexico, in the territory of Tehuantepec, 115 m. S.E. Vera Cruz. It contains 3000 inhabitants, half of whom are creoles.

ACELHUATE, a river, Central America, which rises in the vicinity of Old San Salvador, and joins the Lempa after a course of about 45 m.

ACHAS, a tn. Spain, Galicia, prov. and 16 m. from Pontevedra, in a hilly and well-wooded district, with a trade in maize, rye, flax, chestnuts, and wine. Pop. 1488.

ACHENTHAL, a tn. Austrian empire, Tyrol, circle and 24 m. N.E. Innsbruck, in a beautiful valley, and near a lake of same name, not far from the frontiers of Bavaria. It contains 1000 inhabitants.

ACHIOLI, a small seaport, European Turkey, on the Black Sea, 45 m. S. Varna. Its roadstead is well sheltered.

ACHIRAS, a tn. S. America, La Plata, on the borders of the Pampas, about 300 m. N.W. Buenos Ayres. It is a small place, but has mines of copper and silver in its vicinity.

ACKLIN, an isl. West Indies, Bahamas, the largest of the Crooked Island group, is of very irregular shape, stretching 45 m. from N.E. to S.W. with a varying breadth of 1 to 5 m. It has a very dangerous coast skirted in various places by reefs. The surface is generally low, but about 6 m. from its S. extremity there is a remarkable headland. The inhabitants are 370.

AC-MASTCHET, a fort, Russian empire, Khirghis Steppe, Turkestan, r. bank Syr Daria; 250 m. E.S.E. Sea of Aral. It is a large and strong place, which gives the complete command of the Syr Daria and the surrounding regions. Steamers can pass up the river beyond the fort within 20 m. of the tn. of Turkestan, and within 30 m. of Tashkend, and it is expected that they will yet be able to reach Khojend and pass on nearly to Kokhan.

ACQUIA, or AQUIA, CREEK, United States, E. part Virginia, flows through Stafford co. into the Potomac river, and is navigable for small vessels several miles from its mouth. The Confederates threw up batteries upon its banks in the early part of the civil war, which were bombarded by the Federals in June, 1861. It formed afterwards a position of considerable importance as a base of supplies to the Federal armies operating in Virginia, &c.

ACSA, a tn. Austrian empire, Hungary, co. and 14 m. N.E. Stuhlweissenburg, with 1700 inhabitants, mostly weavers, tile-workers, and distillers of brandy.

ACTOPAN, a tn. Mexico, state and about 40 m. N. Mexico, in a valley which opens into the great plateau of Mexico, and is inhabited by Otomi Indians, who raise large quantities of maize, wheat, barley, vegetables, and fruit. It was founded in 1540, contains a large population, and has an Augustine monastery.

ADAMAUA, or FUMBINA, a kingdom, Central Africa, between lat. 6° and 11° N.; and lon. 11° and 17° E. Much of the surface is mountainous, and though none of the summits appear to reach the snow-limit, that of Atlantika, near the centre, is from 9000 ft. to 10,000 ft. The principal rivers are the Benue or Benuel, and its tributary the Faro. Neither has been properly explored, but the former, said to rise in the S.E. of the kingdom, traverses it centrally, first in a N. and then in a W. direction; and the latter, said to rise in the S., in Mount Labal, flows N.N.E., skirting the E. slope of Mount Atlantika, and joins the Benue about 20 m. N.E. Yola. Where crossed by Dr. Barth, the Benue had a width of about $\frac{1}{2}$ m., and a depth of about 10 ft.; the Faro a width of about 700 yards, and a depth of 3 ft. Both rivers have a strong current, inundate extensive tracts during the rainy season, and are full of crocodiles. The Benue is supposed to carry gold. From Uba, the most N. town of Adamaua, southward, the whole country is covered with splendid herbage, and enriched with numerous herds of cattle belonging to the Fellatahs. The population appears to be considerable, as large towns are met with every three or four hours, with intervening villages, occupied exclusively by slaves, who do all the work, and are very numerous, every Fellatah, even the poorest, possessing at least from two to four, while those of the chiefs seem to be almost countless. In fact, in addition

to cattle, slaves are considered the chief source of wealth, and there is no country in the world where slavery and slave-trade exist to such a degree. Next to this abominable traffic the chief article of trade is ivory, which is extremely cheap on account of the great number of elephants. The principal imports are *turkedies*, robes, glass, pearls, and salt. Instead of cowries, which have here no value, the current medium of barter is narrow stripes of coarse cotton, called *gebbeqa*. After Yola, the capital, the most important towns are Saraw and Fatacl or Patawel, the latter being the great ivory-market of this part of Central Africa.—(Richardson, Barth, &c., *Exped. to Central Africa*.)

ADAMS (PORT), China, on E. coast Gulf of Liautung or Leao-tong. It is formed at the head of a deep indentation called Society Bay, and has its entrance in lat. 39° 16' N.; lon. 121° 32' E. It is accessible at high tide over a passage with 23 ft. water, and affords secure shelter for a large number of vessels. This fine harbour was first discovered and surveyed in the end of 1860.

ADAN, N. Asia, a valley of one of the upper tributaries of the Amoor, in the N.E. of Manchooria, where sables of the finest quality are obtained.

ADEJE, a tn. Canary Islands, in a beautiful valley in the S.E. Tenerife isl., with a well-placed parish church of good construction, an ancient castle crowning a height, a primary school, and a fine old mansion, in which the former lords of the place resided. While Tenerife was one native sovereignty the ruler is said to have held his court here. Pop. 1058.

ADERAR, a territory, Africa, beyond the E. frontiers of Timbuctoo, and stretching on the W. to the banks of the Arrinda or Gurma. It is a fine hilly country, excellent for breeding both camels and cattle, and is inhabited by the powerful tribe of the Awelimmiden. It was once much more populous than it is at present.

ADERER, an elevated district, N.W. Africa, on the W. borders of the Sahara; composed of sandhills grouped round a considerable range of hills, and encircled towards the N. by a zone of immense sandhills called Maghter, and towards the S. by a similar but less sterile zone called Waran; these zones, joining eastward at a point called El Gedam, form its E. boundary, while on the W. the desert again interposes between it and the Atlantic. Between Aderer and El Hodh, and partly separated from it by a range of hills to the N. of Taganet, is a very extensive valley called Khat-e-dem, stretching from E. to W. along the northern foot of the ridge of Aderer. This valley possesses abundance of wells, and even a couple of ksour or perpetually inhabited villages.

ADIRONDAC, a mountain range, N. America, U.S., which stretches from the N.E. corner of New York in a S.S.W. direction towards the middle of the state, and is prolonged to the S. of the Mohawk river by the Catskills. It attains its largest development and greatest height in the W. of co. Essex, where Mount Marcy, the culminating point, is 5337 ft. above the sea. It rises, like the other mountains of the range, from an elevated plateau averaging 200 ft. of absolute height. The rocks being granitic often assume a conical form or rise abruptly into fantastical peaks, and produce much wild and romantic scenery. The forests consist of birch, beech, maple, and ash on the higher slopes, and of hemlock, spruce, white pine, and cedar on the lower. A considerable part of the drainage is carried to Lake Champlain by the Saranac and Ausable. Large seams of magnetic iron-ore exist within the range, and have been worked to some extent.

ADJUNTA, a decayed tn. India, Hyderabad, 222 m. N.E. Bombay; lat. 20° 32' N.; lon. 75° 49' E. It stands on S. side of the mountains forming the boundary of Candeish. On the N. side, in the face of a cliff 300 ft. high, is a remarkable group of Buddhist cave-temples, hewn in the solid rock, and decorated in the interior with a profusion of brilliant frescoes, in which female figures are depicted as fair as Europeans. The openings into them extend along the face of the cliff for a distance of 500 yards.

ADJYGHUR [add.]—1. Tn. and fort, Central India, Bundelcund, 130 m. S.W. Allahabad; lat. 24° 52' N.; lon. 80° 20' E. The fort crowns a hill 800 ft. above the town at its base, the summit being covered with fragments of carvings and images finely wrought in stone of extreme durability.

On the N. side of the hill is a natural chasm filled with water said to be several hundred feet deep. The ascent to the fort is by difficult footpaths, and then by steps cut in the rock, which are further protected by a succession of strong

The surrounding district, though fertile, is marshy and unhealthy.

AFKA, a vil. Palestine, about lat. $34^{\circ} 10' N.$; lon. $35^{\circ} 50' E.$, situated on the W. Lebanon range, in a large and verdant amphitheatre in the S.E. branch of the basin of the Akura, where the Nahr Ibrahim (anc. *Adonis*) has its sources. In its vicinity a fine fountain bursts forth in cascades from a cavern, and directly in front of these are the shapeless ruins of a large temple of Venus.

AFRICA. [add.] Great additions have been made within a recent date (and especially within the last fifteen or twenty years) to our knowledge of the African continent. Our information respecting that vast region is still, indeed, for the most part, devoid alike of the fulness and precision which belong to the geography of other lands, and will probably long remain so—at least in so far as the greatly larger portion of its surface is concerned. The conditions of its physical geography, equally with the social position of its native races, account for this undesirable distinction. The mysterious interior of the African continent has, however, been penetrated at numerous points, and the comparison of any good recent map of

PORT OF ADJYGHUR.—Pogson's History of the Bundelas.

gateways. The tn. is neat and regularly built, but subject to malaria; it contains about 5000 inhabitants.—2. A territory, of which the foregoing is the cap., with an area of 340 sq. m., and containing upwards of 600 villages and about 45,000 people.

ADONCHOLON, a mountain range of the Trans-Baikal, Siberia, stretching in a N.E. direction between the rivers Shilka and Argun. Though the southern slopes are bare, the summits are partially, and the northern slopes densely, clad with birch.

ADRIAN, a tn. U. States, Michigan, cap. co. Lenawee, on a tributary of the Raisin, and on the Erie and Kalamazoo railway, 70 m. S.S.W. Detroit. It possesses several fine public edifices, and abundance of water-power. Pop. 4000.

ADSANETA DE ALBAYDA, a tn. Spain, Old Castile, prov. and 32 m. S.S.W. Valencia, about 90 m. N.W. Madrid, in an elevated valley; with a large and substantial parish church, a boys' and a girls' school, both well endowed, and municipal buildings. It is said to have been founded by the Saracens. Pop. 1204.

ADSANETA DEL MAESTRE, a tn. Spain, Valencia, prov. and 30 m. N.W. Castellon de la Plana, and about 185 m. E.S.E. Madrid, r. bank Monleon. It is well built in regular streets and a spacious square, and has manufactures of linen, bombazine, and shoes, and several oil-mills. Pop. 1224.

AEMGUN, a river, Asiatic Russia, Amoorland, which, formed by several streams from the Kingan mountains in Manchouria, flows eastward, and joins l. bank Amoor, not far from its mouth. Near its banks live the Samagires, a Tungus tribe, together with the Nagidal or Nishdal, and four other tribes; in its valley good sables are obtained.

AENG:—1, A river, Arracan, British India, rising in centre of Yoomadong mountains; lat. $20^{\circ} 2' N.$; lon. $94^{\circ} 15' E.$, and flowing S. 60 m. into Combermere Bay.—2, A vil. Arracan, l. bank river, and 45 m. from its mouth. Formerly a place of considerable size and trade; latterly, with not more than 150 houses, it derives its present importance from being the starting-point of the great route over the Yoomadong mountains to Ava. At spring-tides the river is navigable up to the village.

AFADE, a tn. Central Africa, prov. Kokoto, near E. frontiers of Bornou, and 30 m. from S. shore of Lake Chad. It is a walled town of considerable extent, but in a very ruinous condition.

AFFREVILLE, a vil. N. Africa, Algeria, prov. and 60 m. S.W. Algiers, at the foot of Mount Zakkar, in the valley and near the banks of the Shelif. It is proved by inscriptions to have been the site of a Roman town. Its present inhabitants, amounting to 1276, are almost all Arabs.

this portion of the world with one of older date renders obvious at a glance the results accomplished by explorers of the present generation. It shows, at the same time, how much, notwithstanding the achievements of modern travel, yet remains open to the labours of future explorers.

It is difficult, within the limits of a brief sketch, to convey a clear idea of the widely divergent aims and directions of modern African travel, still more of its geographical and other results. Perhaps the purpose of the general reader will be best served by concentrating attention upon those features in the physical geography of Africa which recent explorations have tended most to illustrate, and the inquiries undertaken in connection with which have proved the means of bringing under notice a vast body of facts concerning the general structure of that continent. The great rivers of Africa, by means of which the interior is chiefly accessible to European enterprise, supply the connecting links between the efforts of individual explorers; and three amongst them have served, in especial measure, to guide the course of modern discovery. These three are—the Nile, the Niger, and the Zambesi, to the regions respectively watered by which, or in immediate contact with their areas of drainage, the footsteps of the most distinguished among African travellers of the present generation have been directed.

1. The Nile, first amongst African rivers, has constituted a problem in African geography, and one of which the solution is even yet far from accomplished. Bruce, the Abyssinian traveller of the last century, had visited (1770) the sources of the Blue Nile, or Bahr el-Azrek, an achievement in which, however, he had been anticipated a century and a half previously by a Portuguese traveller. The source of the White Nile, or Bahr el-Abiad—unquestionably the greatly longer, though in other regards the less important, arm of the river—remained an object of inquiry. Amongst the many efforts directed to the attainment of that mysterious spot, those undertaken at the instance of the pasha of Egypt, in 1839, and again in 1841, take a foremost place. In the former of those years, the Egyptian expedition ascended the river to a point stated as within $3^{\circ} 35'$ of the equator. This was subsequently removed by M. d'Arnaud, who accompanied, as surveyor, the expedition of 1841, to lat. $6^{\circ} 35' N.$, while d'Arnaud himself claimed to have advanced no farther than within $4^{\circ} 22'$ of the equator. Some doubt, however, attaches to the verity of the observations made upon both these occasions. Meanwhile, missionary labours and commercial enterprise combined to extend the range of inquiry in this region. The Roman Catholic missionaries established at Gondokoro (lat. $4^{\circ} 50'$), in 1853–9, claimed to have examined the river up to lat. $3^{\circ} N.$; and some of the merchants of various European countries, engaged in the ivory trade, had

established depôts lying as far, or nearly as far, to the southward. Beyond the third parallel of N. lat., however, the maps exhibited a blank.

Dr. Beke, whose travels in Abyssinia, along the course of the Blue Nile, had procured for him, in 1844, the gold medal of the Royal Geographical Society of London, was among the first to suggest the eastern coast of Africa, within a few degrees of the equator, as the locality whence exploration might be most advantageously directed towards the adjacent unknown interior, with a view to the determination of the limit of the Nile basin, and of ultimately reaching the sources of the Nile itself. Several causes combined to direct attention towards that region. The Church Missionary Society established, in 1844, a mission in the neighbourhood of Mombas (lat. 4° S.) The missionaries were brought into contact with the numerous Arab traders frequenting Mombas and other ports on that line of coast, and received from them accounts of a great lake situated at some distance in the interior. In the course of various journeys made in 1847 and the two succeeding years, Mr. Rebmann and Dr. Krapp, the missionaries, obtained acquaintance with an extensive tract of country lying between the parallels of 3° and 5° S., and extending inland to a direct distance of perhaps two hundred miles from the Indian Ocean. They saw for the first time the mountain Kilimandjaro, the summit of which appeared to be covered with snow, whence its altitude was estimated at not less than 20,000 feet above the sea. Other, and perhaps loftier mountains, were recognized as occurring within the same region, particularly one to which the name of Kenia is given, lying to the northward of Kilimandjaro, though its precise bearing thence has been very variously stated. The asserted existence of snow-clad mountains in such near proximity to the equator awakened much interest, and was warmly questioned by critical geographers. It has, however, been confirmed by the testimony of subsequent observers, and particularly by that of the Baron von Decken (1860-1), a native of Hanover, who, starting from Mombas, and proceeding thence southward along the coast to Wanga, struck from the last-named place into the interior, and crossing the Ugono and Aruscha ranges (the latter 4000 feet high), reached the loftier region to which Kilimandjaro belongs. The baron made two ascents of Kilimandjaro, and upon one of these occasions reached the height of 13,900 feet. At the height of 11,000 feet, snow, mixed with rain, appears to have fallen during the night, but disappeared with the morning sun, excepting above an elevation estimated at about 17,000 feet. The triangulations of Baron von Decken give for the main peak of Kilimandjaro an altitude of 20,065 feet.

The intelligence gained by the missionaries respecting a great lake, or lakes, in the interior of E. Africa, awakened great interest among the cultivators of geographical science and confirmed the conclusions already, as early as 1835, drawn by Mr. Cooley, from Portuguese and Mahometan sources. Captain Burton, an officer of the Indian army, and already familiar with African travel from the experience of a journey in 1854-5 to the kingdom of Harar, lying inland from the upper extremity of the Gulf of Aden, submitted to the Royal Geographical Society a project for opening up the lake regions of interior Africa to the S. of the equator. The project happily met with the approval of that learned body, and, with the sanction of the British government, who made a pecuniary grant for its purpose, the proposed journey was undertaken; Captain Burton being accompanied in it by Captain Speke, a fellow-officer of the Indian army, and his companion at Berbera, on the coast of the Somali country, in 1854.

Zanzibar, off the coast of E. Africa, was the point of departure for the expedition of Burton and Speke, who started from Kaole, on the coast opposite to Zanzibar, at the end of June, 1857. Captain Burton determined to penetrate, by a direct W. route, through the country of Unyamwezi. The first 200 m. of the journey lay through successive plains and valleys, fertile, and for the most part under cultivation. Various mountain ridges were then crossed, the more westwardly of which, the mountains of Usagara, reach 5700 feet in elevation. These mountains formed the highest ground seen by the expedition. To these succeeded high plains, arid and comparatively sterile, but improving in character as the

plateau region of Unyamwezi was reached, by a course bearing to the N.W. From Kazeh, the capital of Unyamwezi, a farther W. route led to Ujiji, on the shore of the large lake of Tanganyika, the waters of which were first seen in February, 1858. Respecting the linear extent of the lake, however, nothing was precisely determined, its S. portion being wholly unvisited. At Unyanyembe (within the highlands of Unyamwezi, and the tract within which Kazeh is situated) Captain Burton, in the course of the return journey to the coast, was disabled by sickness. During the enforced detention at that point of the leader of the expedition, Captain Speke made a detached journey to the northward, and, after travelling about 200 miles, made the discovery of another, supposed, great lake, called by the natives Nyanza—a generic name for water, whether lake, river, or pond, in this part of Africa. Speke reached the S. extremity of this lake. The expedition again reached the coast, on their return, early in the year 1859, after nearly twenty months passed in the interior.

The journey of Burton and Speke in 1857-9 led to the later expedition of Speke and Grant in 1861-2. Immediately on his discovery of the Nyanza lake, a body of sweet water, found within a few degrees S. of the equator, and at an elevation of between 3000 and 4000 feet above the sea, Captain Speke formed the conclusion that it would prove the head-water of the Nile. With the countenance of the Geographical Society of London, Speke had no difficulty in the equipment of a new expedition for the purpose of solving a problem in which all geographers were warmly interested. In this second journey his companion was Captain Grant, another officer of the Bengal army. Speke and Grant left England in 1860, and proceeding by way of the Cape of Good Hope, reached Zanzibar in the latter half of that year. Thence (October, 1860) they started for the interior, pursuing the route taken by the prior expedition as far as Unyanyembe. Many untoward occurrences delayed the expedition during the earlier stages of its progress. From Kazeh (in Unyanyembe), which the travellers were unable to leave until September, 1861, a new route was taken to the N.W., which, passing through the districts of Usinsa and Karagwé, the latter a highland region, and crossing the Kitangulé river, led to Mashondé (lat. 50' S.) in the upper portion of the Uganda country. It was from this place that the first view of the Nyanza was obtained on this journey. Upwards of a hundred and sixty miles (direct measure) intervene between Mashondé and the point where Captain Speke had reached the Nyanza on the preceding journey—a distance, however, which may be regarded as trifling in respect of a body of water to which its discoverer (chiefly upon hearsay information) assigns proportions considerably exceeding those of Lake Superior. The further course thence was round the N.W. and part of the N. coast of the Nyanza (or Victoria Nyanza, as Captain Speke prefers to call it), through a country composed of low sandstone hills, streaked by small streams—the effect of almost constant rains—and grown over with gigantic grass, excepting where the latter is supplanted by cultivation. The same aspect, but with increased beauty, continued N. of the equator, to a short distance above which Speke carries the coast-line of the lake on that side. Two rivers, the Mweranga and the Luajjeri, of moderate dimensions, and both flowing to the N., were crossed, and farther to the E. the Nile itself, described as issuing from the lake by a passage over rocks of igneous character, with a descent of 12 feet immediately below, forming what the explorer designates the 'Ripon Falls.' At this point, the coast-line of the lake was abandoned, and the stream of the river followed downward to the Karuma Falls (lat. 2° 20' N.), its course lying at first through sandstone hills, amongst which it rushes with torrent-like force, and afterwards passing over long flats, where it has rather the aspect of a lake than a river. Owing to native wars, which forbade the continuance of the track along the course of the stream immediately below the Karuma Falls, the river was here abandoned for a time; Speke, continuing his route to the N.W., again came upon it in the Madi country (lat. 3° 40' N.), where 'it still bore the unmistakable character of the Nile—long flats, long rapids.' From the point now reached, the Nile (increased within the part left untraced by the junction of what Speke calls, from

native report, the little Luta 'Nzigé lake) flows N., receiving a little below a considerable affluent, the Asua river, on its right bank, continuing, though with numerous windings, the same general course. At Gondokoro (lat. 4° 50' N.), where the expedition met Mr. Baker, an Englishman, the travellers were upon known ground, and their farther course thence, by Khartoom, through Nubia and Egypt to the Mediterranean, presented no novelty. They had reached Gondokoro in February, 1863, above twenty-eight months after the date of their setting out from the coast opposite to Zanzibar.

Captain Speke was detained five months at Uganda, while waiting for his companion, who had been left behind from illness at Karagwé. Mr. Petherick, who had been despatched from England with well-appointed means to ascend the Nile valley, in order to aid in the accomplishment of the main purpose of the expedition, did not arrive at Gondokoro until after Speke and Grant had also reached that point upon their downward course, and accomplished nothing in the way of geographical discovery. A partial examination of the Bahr el-Ghazal, a W. affluent of the Nile, joining the main river about lat. 9° 10' N., is due to the enterprise of that gentleman on a previous occasion. Results of some interest in reference to the same locality have ensued from the enterprise of a party of Dutch ladies—Madame Tinné and her daughter—who, accompanied by Dr. Heuglin, a German *savant*, undertook the examination of the Bahr el-Ghazal basin, without, however, accomplishing their ultimate intention of reaching the mountainous region in which its waters appear to originate.

The results of Captain Speke's expedition, though of high value to geography, cannot be regarded as final in their nature, even in so far as the outlet of the Nile, from its alleged reservoir the Victoria Nyanza, is concerned; while they admittedly leave to the solution of future explorers many questions connected with the real source of the Nile, the extent and character of the Upper Nile basin, the limits of the Nyanza lake, and the nature of the ground by which it is bordered to the E. Indeed, the existence of the Nyanza as a single lake is not absolutely determined. Speke touched it at only three points in his two journeys, and those at long intervals; and there is nothing to identify the waters seen at these several times as forming one expanse; on the contrary, the natives informed him of a road to the coast, which must have crossed the very centre of the alleged Nyanza. Again, between the point at which Captain Speke left the river which he traced downward below its issue from the lake, and that at which he rejoined its waters, there intervenes a distance of above 100 miles in a direct line, and of nearly double that measure by the winding course which his map gives to the supposititious channel of the river itself. Anything less satisfactory than Captain Speke's geographical details, when critically examined, it would be difficult to conceive. The whole E., and most of the W. and N. sides, of the Nyanza basin remain, moreover, wholly unexplored. Even allowing the claim of that body of water to be regarded as the *reservoir* or head-water of the Nile, the most distant source of supply to the Egyptian river has yet to be determined, by examination of such affluents as may be found to contribute to the Nyanza basin. Whether any of these derive their supply from the high lands to which Kilimandjaro, Kenia, and others of the snow-capped summits above referred to, belong (and which Dr. Beke and others seek to identify with Ptolemy's 'Mountains of the Moon'), constitutes one of the points to be settled by future travellers.*

The picture of social life which Captain Speke's pen places before the reader is in the last degree unattractive. The native kingdoms which adjoin the Nyanza on its W. and N.W. side exhibit a population sunk in a condition of almost hopeless barbarism, and present an aspect of things which appears altogether to negative the idea of any advantage, commercial or otherwise, to be realized from intercourse with these lands.

2. Farther to the southward, the course of recent African discovery has been chiefly in connection with the valley of the river Zambesi and the affluents to its extensive basin.

* Mr. Cooley, in his learned and critical essay, *Claudius Ptolemy and the Nile*, endeavours to show that the 'Mountains of the Moon' do not belong to the genuine text of Ptolemy, but are an Arab interpolation.

The results realized in this direction are mainly due to the energy of Dr. Livingstone, whose functions as a missionary led him to intercourse with the Bechuana and other natives dwelling to the northward of the Cape Colony, and beyond the banks of the Orange river. Dr. Livingstone's journeys in the more distant interior were preceded by his visit in 1849, in company with Messrs. Oswell and Murray, to the banks of the lake of 'Ngami, previously known only by report, and to reach which the Kalahari desert had to be traversed. Two years later the enterprising missionary arrived, several degrees farther north (lat. 17° 30' S.), on the banks of a considerable river flowing to the eastward, and which he at once concluded to be identical with the Zambesi. From Sesheke, on the Lecambe (as the river is there called), Livingstone performed a most arduous journey in the general direction of N.W., by way of the Leeba valley, and across the elevated region which divides the waters of the E. and W. seas, to the Portuguese settlement of Loanda, on the Atlantic coast, which he reached early in 1854. After a brief stay in that city, he retraced his steps to the eastward, and in the course of that and the succeeding year accomplished the still more arduous feat of crossing the entire breadth of S. Africa, arriving early in 1856 at the Portuguese settlement of Tété, on the Lower Zambesi, whence he reached Quillimane, on the shore of the Indian Ocean. In the course of this prolonged exploration, Livingstone visited the magnificent falls of the Lecambe, to which he gave the appellation of the Victoria Falls (lat. 18° S.; lon. 25° 50' E.)

The discoveries of Livingstone excited the warmest interest on the part of his countrymen, and, indeed, throughout the civilized world. The fact (first demonstrated by him) of the existence of a network of waters in the interior plains of S. Africa, which find a way to the oceans on either side through openings in the bordering high grounds, gave a solution to the previously unsettled problem presented by the formation of that continent; while the conditions of climate and native produce throughout great part of the regions which he traversed were such as to encourage sanguine hopes of future commercial intercourse with those distant regions, with attendant advantage to its native races. Here, as elsewhere in that unhappy continent, the slave-trade is the chief agent of debasement, and extends its influences from the coast regions far into the interior. Wherever Livingstone penetrated beyond the authority of the Portuguese, to whom the seaboard on either side of the continent belongs, and beyond the influences of the slave-trade, he found a docile and well-intentioned native population, obviously capable of improvement. But the ardent temperament of the courageous missionary had led him, as his own later experiences have too painfully shown, to draw too highly-coloured a picture of interior S. Africa; and the promise of a navigable river affording easy access to the heart of the continent is altogether belied in the case of the Zambesi and its affluent streams.

Dr. Livingstone visited England in 1856, after sixteen years passed in S. Africa. In the spring of 1858 he returned to the scene of his labours, provided with means for the ascent of the Zambesi, with a view to the adoption of measures calculated for the suppression of the slave-trade, and the substitution for it, on the part of the native populations, of cotton-culture and other legitimate branches of industry; fortified by the sanction of the British government, by which he was invested with a consular mission to the Portuguese settlements on the coast of E. Africa. Its most sanguine promoters allow this Zambesi expedition to have proved a failure, in so far as its higher aims are concerned; and Dr. Livingstone, after six years of brave, though hopeless, struggle against the difficulties by which he has been surrounded, has since revisited England. Most of his companions had already abandoned the promised field of enterprise, and directed their labours to other channels. The steamer with which Livingstone had been furnished proved altogether unsuited for stemming the powerful current of the Zambesi, which (like all the other streams of the African continent) exhibits striking changes with opposite seasons of the year, the periodical rise of water being in one part as much as 80 ft. Results of considerable geographical importance have, however, been accomplished. The Zambesi was ascended to 60 m. above

Teté, at which point the Kabrbesa rapids offer a formidable impediment to further progress; above the rapids its course was traced, with few intervals, up to the Victoria Falls, and the identity of the Zambesi with the Leambye river placed beyond doubt. Dr. Livingstone's own labours, however, were principally directed to the valley of the river Shire—a considerable affluent of the Lower Zambesi, on the N. bank of the latter. The Shire was found navigable from the point of junction with the Zambesi up to the cataract of Mamvera—a distance of about 150 m.—at which point commence a series of falls extending through 33 miles. Above these cataracts the river again becomes navigable to its outlet from the fresh-water lake of Nyassa, or Nyinyesi, in lat. 14° 25' S. A narrow isthmus, in one part only 6 m. across, divides the Shire valley and the S. extremity of the Nyassa lake from another lake of large dimensions called Shirwa, which latter has no outlet, and the waters of which are bitter, though drinkable. The valley of the Shire was found to be bounded by well-defined terraces on either side, Mount Zomba rising above the level of the E. plateau to 4000 ft., or double that altitude above the sea. Livingstone launched on the waters of the Nyassa lake a boat carried above the cataracts for the purpose, and explored its W. coast-line to a distance of 200 m. Nothing was ascertained respecting the limits of the lake to the northward.

The discovery of the two large lakes above-mentioned, with the examination of the Shire valley, constitute the chief gains to geography due to the Zambesi expedition. The lower course of the Rovuma river, which enters the sea beside Cape Delgado (lat. 10° 25' S.), was also examined in person by Livingstone, and enough ascertained to negative its supposed connection with the Nyassa lake.

3. The countries watered by the river Niger have during nearly three-quarters of a century offered an inviting field for African travel and exploration, in spite of the attendant difficulties and dangers, due to unhealthiness of climate and barbarous conditions of social life. The African Association, formed in London in 1778, directed its earlier efforts to these regions. In the case of the river Niger, the problem which long presented itself was the reverse of that offered by the Nile; the great object to be attained consisting in the tracing the stream to its final outlet. To this object, during a long series of years, the travels of Mungo Park, Clapperton, the Landers, and others, were perseveringly devoted.

At length, however, the problem of the outlet of the great river was solved by Richard Lander and his brother John; who, jointly leaving the coast of Guinea in the early part of 1830, and reaching Boussa, traced the course of the Niger thence downward to the sea, following the channel known as the Nun river, the principal one amongst the many branches belonging to its extensive delta.

The successful enterprise of the Landers prepared the way for later attempts at developing the commercial resources of W. Africa. Laird and Oldfield, in 1833, ascended the river with a view to this object, accompanied by Captain William Allen, who executed a survey of it from the sea up to some distance above the point where it is joined on the E. bank by the great stream then known as the Chadda, but since more correctly called the Benuwe, and examining also the latter for some miles above the junction. In subsequent years repeated ascents of the Lower Niger have been made by Becroft and others; and the stream known as the Old Calabar, which enters the sea to the E. of the Niger delta, has been similarly explored by means of steam-navigation, which alone enables the unhealthy belt of mangrove swamp immediately adjoining the coast-line to be traversed with the speed requisite to insure safety. The Niger expedition of 1841, fitted out by the British government for philanthropic purposes, with a view to the suppression of the slave-trade on its banks, proved an utter failure, and was attended by terrible sacrifice of life. But the feasibility of navigating the Lower Niger and Benuwe rivers, without serious danger to life, has been fully demonstrated by Dr. Baikie, who in 1854 took the steamer *Pleid* up the main stream to the point of junction with the Benuwe, and ascended the latter river to a distance of more than 300 m. above the point of junction, or 250 m. above the farthest point reached by Allen and Oldfield in 1833; returning to the sea without the loss of a single life. Dr. Baikie's

successful conduct of this enterprise induced the British government to equip a renewed expedition, directed with a view to the forming a station, alike for commercial purposes and as a centre of missionary operations, at some point within the basins of the Lower Niger and Benuwe. In command of this expedition Dr. Baikie left England in 1857, and was engaged during the seven succeeding years in various investigations within the region adverted to, some of his later journeys in the interior having been extended to the kingdom of Kano and the high grounds dividing the basin of the Niger from that of Lake Chad. The geographical results of this expedition, which have hitherto been but partially given to the public, are its only important fruits, and have been purchased (like so many of the discoveries made in the African continent) with the life of its conductor, who died on his return to England, in 1864.

The voyage of the *Pleid* was in some measure supplementary to the purposes of an important expedition for the exploration of Central Africa by overland journey through the desert, conducted at the expense of the British government. This was the undertaking originated by Mr. Richardson, an English traveller, with whom were associated Drs. Barth and Overweg. At the close of 1849, the three started together from Tripoli to proceed southward through the desert. Want of harmony, however, soon led to their separation on different routes, though it was arranged that the town of Kouka, the capital of Bornou, should form a point of common rendezvous. Richardson died shortly after from fever. Barth and Overweg rejoined one another at Kouka, whence the latter devoted some time to an examination of the Chad basin, including a hurried and imperfect navigation of the lake itself, in a boat which had been carried across the desert for the purpose. Overweg, like so many other African explorers, paid with life the penalty of his enterprise, dying in the following year (1852). The sole conduct of the enterprise, during its remaining portion, devolved on Dr. Barth. After some time spent in Agades, engaged in the study of the mixed nations that dwell on the borders of the desert, he again repaired to Bornou, and thence accompanied a native embassy southward to Adamana—a tract of country hitherto unvisited by Europeans, and lying within little more than eight degrees of the equator. On his way Barth crossed the Benuwe river, immediately below its junction with the Faro—another considerable stream, flowing (like the Benuwe itself) from the southward. The confluence of the Faro and Benuwe is ascertained to be within 50 m. or 60 m. of the farthest point reached by the officers of the *Pleid*, in the ascent of the so-called Chadda (properly Benuwe) river; and the identity of the Benuwe with the great eastern affluent of the Niger is fully established. The Benuwe is said to be navigable a long way farther up, and to lead into populous regions as yet unvisited. By excursions into the countries southward of Lake Chad, in the course of which he crossed the two branches of the Shary river, Barth defined the limits of the Benuwe basin to the eastward, and established its complete separation (and consequently that of the Niger) from the waters of that inland lake.

Barth subsequently directed his footsteps to the westward. Reaching Soccatoo, he advanced thence to the banks of the Niger; and crossing that river, proceeded in a north-westerly route, until he again came upon the stream above Timbuctoo, in which city (hitherto unvisited on the part of Europeans, except by Major Laing in 1826, and, two years later, by René Caillé, a Frenchman), he made a stay of seven months. Our prior knowledge of Timbuctoo had been vague and imperfect in the extreme. Laing had been murdered in the desert shortly after leaving that place, and Caillé's account of it was altogether wanting in precision. During his prolonged residence there Dr. Barth obtained a large amount of valuable information bearing on the geography and history of Central Africa, and strikingly confirmatory of the views which had been enunciated by Mr. Cooley, several years before, in the volume entitled *The Negroland of the Arabs* (London, 1843). After tracing the river downward from Timbuctoo to the point at which he had previously crossed it on his upward journey, and thence regaining Bornou, Barth subsequently returned to Europe, bringing with him the valuable fruits of six years of adventure, often pursued under circumstances of privation, hardship, and peril.

While Dr. Barth was engaged on his journey to Timbuctoo, the expedition, of which he had now become the sole conductor, received a reinforcement in the person of his countryman Dr. Edward Vogel, who in the summer of 1853 set out from Tripoli, on his way to Kouka, the starting-point for his future operations. From Kouka, Vogel made in the course of 1854 and the following year several extensive journeys to the S., S.W., and W.—visiting, in company with a slave-hunting expedition of the sheikh of Bornou, the Mus-gow country, to the S. of lake Chad, and the mountainous tract of Mandara, in the same general direction. To the S.W. he penetrated to Jakoba (lat. 10° N.), and thence reached the banks of the Benué, at the point where the English expedition under Baikie had terminated the navigation of that stream. Returning to Kouka at the end of 1855, Vogel's great remaining object was to penetrate eastward through the unvisited country of Waday, to the lands falling within the basin of the Nile. He proceeded on this adventurous enterprise by way of the S. shore of the Chad and the basin of Lake Fitri, and succeeded in reaching Wara, the capital of Waday. At that place, in February, 1856, he was barbarously put to death by order of its sultan. The subsequent murder of his sole European attendant involved the loss of his papers, with the detailed record of his later proceedings and observation—a matter of more than ordinary regret, since Vogel was known as an accomplished astronomer and botanist.

The space intervening on the map between the E. shore of the Chad and the W. borders of the Upper Nile basin, comprehending the barbarous Waday and its adjacent lands, indicates the present great desideratum in the geography of the N. half of the African continent. Southward of the Niger and Chad basins, a still larger area remains open to the efforts of future explorers. The basin of the great river Congo, which enters the Atlantic in lat. 5° 10' S., is almost entirely a *terra incognita*, and the native kingdoms which intervene between the Portuguese possessions on the W. coast, to the S. of the equator, and the Tanganyika of Burton and Speke, are only known from the reports of Arab traders. The expedition commanded by Captain Tuckey in 1816, was directed to the mouth of the Congo, under the impression that it might prove to be the outlet of the Niger, then unexplored. Tuckey carried his ships only a short way up the river, but explored it to a farther distance (280 miles on the whole) by means of boats, and partly by land-marches. All the leading members of this unfortunate expedition, including the commander, fell victims to the terrible fever of the African coast. Notwithstanding this fatal experience, however, Captain Bedingfield proposes (1864) a fresh expedition to the Congo, with a view to exploration of the high lands adjoining its upper course. No difficulty appears to attend the navigation of the river for 100 miles upwards. Formidable rapids in its course, through which the stream is narrowed between high rocks on either side, form an impediment to farther progress, except by boats; above the rapids, the Congo again expands into a noble stream.

The researches pursued by M. du Chaillu during a period of four years (1856–9), within the tract of country extending two degrees on either side of the equator, and adjoining the mouth of the Gaboon river, upon the W. side of the African continent, excited deep interest in Europe, in connection chiefly with the great anthropoid ape, the gorilla, of the habits and characteristics of which that traveller professed to give the first authentic account. The field of M. du Chaillu's adventures includes the lower channels of several considerable rivers, of which the Ogowai appears to be the most important. M. du Chaillu claims to have penetrated in the course of his various journeys to a distance of above 200 miles inland; but his geographical details are confessedly imperfect. He has since (1863) left England for the scene of his former labours, with a view of following the line of the equator until he meets some of the rivers falling into the Nile, which he supposes to exist W. of the country visited by Burton and Speke. On

the same side of Africa, a few degrees farther northward, Captain Burton has (1861–62) increased his many prior claims to the gratitude of all who take an interest in African geography, by a careful examination of some of the smaller rivers that enter the Bight of Benin, and also by an ascent of the lofty Camaroums Mountain, a volcano not yet wholly extinct, which he identifies with the 'Theon Ochema' of Hanno's Periplus. The highest point of the mountain, according to Captain Burton, reaches upwards of 13,000 feet above the sea. The elevated regions of the Camaroums exhibit every morning, even during the hot season, a covering of hoar-frost, and are well suited for the purposes of a sanitarium.

It is perhaps in reference to the physical conformation of the southern half of Africa that the gain due to modern travel is most conspicuous. Instead of the high plateau-lands which it was long supposed to constitute, the interior appears to exhibit a series of watered plains, but moderately elevated above the sea, and bordered on either hand by ranges of higher ground, through openings between which the waters of the interior reach the ocean upon either side. The numerous lake-basins already ascertained to exist within the eastern interior, to the S. of the equator, constitute indeed one of the most strikingly important features of modern geography, and one that stands most in contrast with the popular conceptions of a region generally associated with the intensest conditions of heat and aridity. Much, however, is yet wanting to give anything approaching completeness to our knowledge of the African continent, and to warrant anything beyond a merely general view of its structure, such as is here expressed.

AGA, one of two mountain chains, Arabia, which stretch N.E. and are separated from each other by the valley of Jebel Shammar. Both are composed of granite, have an estimated height of 1000 ft. above the adjoining plain, and embrace a circuit 'probably not exceeding three days' journey.' They are covered with brushwood, and intersected by flat valleys and plains. The less and more eastern range is called Selma. The Aga, which is much more extensive, commences in the vicinity of Medina, and continues to stretch N.E. till it becomes linked with the chain of Alhagaz, so as to form the natural boundary of Nejd on the N.W. side.

AGADES [add.], a tn. W. Africa, cap. kingdom of Air or Ashen, 340 m. N. by W. Kano; lat. 17° N.; lon. 8° E. It stands upon the edge of a table-land, at an absolute height of about 2500 ft., and is inclosed within a circuit of about 3½ m. The

AGADES.—Barth's Travels in Africa.

most conspicuous public building is the chief mosque, surmounted by a *mesallaga* or tower, of singular construction, rising from the platform or terrace formed by the roof to the height of about 95 ft. The hollow interior is lighted by seven openings on each side. Being built entirely of clay, it has been strengthened by binding the walls together with thirteen layers of boards of the doum-palm, which form as many separate stories. The other mosques, said to have been once seventy, and still ten in number, are undeserving of special notice. There are also six schools scattered over the place,

in which a little reading and writing is taught to about 300 boys. The former trade of Agades has been diverted into other channels, and speculation in grain is now the principal business—grain itself forming the chief medium of exchange. It is in an advanced state of dilapidation and decay, and the pop. cannot be estimated at more than 7000.—(*Barth.*)

AGANGUEO, a tn. Mexico, state Mechoacan, about 20 m. W.N.W. Morellia. It stands in a mountainous and well-wooded district, at the height of 8000 ft. above the sea, and was once famous for its mines. Pop. 2000.

AGBOM, a tn. Yariba, W. Africa, about 20 m. E. Ibadan, about lat. 7° 35' N.; lon. 4° 2' E. It is surrounded by a wall, which incloses, in addition to the houses, a large extent of uncleared ground.

AGBOMEY. See ABOMEY.

AGBORO, a tn. Nuhi, Central Africa, about 20 m. S. of the Kwara; lat. 8° 30' N.; lon. 5° 45' E. The houses occupy a considerable height, and look at a distance like large stones on the top of a bare hill.

AGHDA, a tn. Persia, subject to the governor of Nain, about 100 m. E.S.E. Isfahan. It lies about 2 m. N. of the mountains which bound the plain of Nain on the S., and though now a very ruinous and mean-looking place, with about 300 poor families, indicates, by the adjacent ruins, that it was once of more importance. Its prosperity has been destroyed by the frequent incursions of Beloochee and Bakhtiari plunderers. The productions of the district are wheat, barley, cotton, excellent pomegranates, figs, grapes, &c.

AGNO-GRANDE, a river, Philippine Isles, Luzon. It rises in the loftiest valley of the cordillera of Caraballos, in prov. Agra, pursues a tortuous course through a mountainous country, and falls into the deep gulf of Lingayen, on the W. coast. Its banks are clothed with useful timber, bamboos, and ratans, which are conveyed directly to the Spanish dockyards. Many of the natives find employment during several months of the year in washing its alluvium for gold, with the aid of the soapy juice of a tree called the *gogo*, which acts as a precipitate.—(*Crawford's Descrip. Dict.*)

AGOST, a vil. Spain, Valencia, prov. and about 12 m. W. Alicante, and about 210 m. S.E. Madrid, partly on a plain and partly on a hill crowned by an ancient strong castle. It consists of several streets and two squares, one of them adorned with a fountain. The trade is chiefly in carob-beans and almonds. It is of Arab origin. Pop. 1969.

AGRA [add.], a city, India, cap. prov. same name, r. bank Jumna and E. Indian railway, 905 m. (by rail) N.W. Calcutta, and 276 m. (by rail) N.W. Allahabad; about 650 ft. above sea-level. There are a printing-office, bank, handsome church, two places of worship for Romanists and one for Baptists, and an orphan institution. Being the seat of the subordinate government of the North-West Provinces, Agra has the necessary revenue and judicial establishments similar to those at Calcutta. Adjacent to the city on the W. is the official residence of the lieut.-governor, and the government offices are on the N.W. The climate is considered healthy from November to March; but the three succeeding hot months, and the rainy season, from the end of June to September, are very prejudicial to health. The markets are well supplied with whatever is required by Europeans. Cotton is sent down the Jumna in boats from Agra, being the produce of the surrounding districts. Salt, also, is an important article of commerce, passing through from Rajpootana. The fort stands on the bank of the Jumna in a confined and unhealthy position. During the great mutiny the Europeans retreated to it, and defended themselves with great gallantry till they were relieved. Pop. 75,000.—(*Thornton.*)

AGRES, a tn. Spain, Valencia, prov. and 22 m. N. Alicante, and about 185 m. S.E. Madrid, on a mountain slope in a valley of same name. It has an uneven site, which makes the streets irregular; manufactures lenses and articles in esparto, and in winter carries on a trade in snow, which is conveyed for sale to San Felipe and other places. Pop. 1644.

AGUA AZUL, a remarkable tributary of Lake Yojoa or Taulebe, Honduras, Central America. It is near the centre of its eastern shore, and is described as 'an immense spring of clear blue water, 70 ft. across, from which a stream flows into the lake equal in size to any of its outlets.' In the month of April, however, Agua Azul, as well as all the other sources, become dry.

SUPP. IMP. GAZ.

AGUANO, a vil. S. America, Ecuador, l. bank Napo, with gold washings in its vicinity. It has some trade in rock-salt, brought from the banks of the Amazon.

AGUARICO, a river, S. America, Ecuador, which rises in the cordillera of Pimampiro, not far from the frontiers of Granada, flows circuitously S.E. for about 240 m., and joins the Napo on its l. bank. In its course it forms a number of lakes. It traverses the country of the Encabellada Indians, and is much frequented by other Indian tribes. Gold is said to abound near its sources.

AGUARON, a tn. Spain, Aragon, prov. and 25 m. from Saragossa, on a mountain of same name. It is irregularly and poorly built. The trade is in wine. Pop. 1125.

AGUAS, the initial name of numerous places in Spain, especially:—1, *Aguas-Dulces*, a vil. Andalusia, prov. and 54 m. E.S.E. Seville, in a plain on the Gilena, with numerous flour-mills, driven by water, the copiousness and excellence of which has given the place its name. Pop. 888.—2, *Aguas*, or *Aigues de Busot*, a vil. Valencia, prov. and about 6 m. from Alicante, at the foot of a lofty mountain. Its chief attraction is derived from the mineral springs of Busot in the vicinity. The inhabitants, 1250, are chiefly employed in weaving linen and digging ochre from some valuable mines of that substance.—3, *Aguas-Santas*, a vil. and par. Galicia, prov. and about 6 m. from Orense, on a lofty hill, with a large and beautiful church, which once belonged to the Templars. Pop. 692.

AGUAS CALIENTES, a state, Mexico, formed out of portions of Zacatecas, is bounded N. by Zacatecas and San Luis de Potosi, E. Zacatecas and Guanajuato, and S. and W. Jalisco; area about 2560 geo. sq. m.; pop. (1856) 85,839. The surface is partly level, consisting of a plateau of 5000 ft., of mean height, and partly mountainous, being traversed, particularly in the N., by branches of the Sierra Madre. The climate is in general mild and healthy, and the soil is throughout very fertile, producing corn and pulse of excellent quality. In the W., where the heat is greatest, many tropical fruits thrive well. The mineral wealth is unimportant, though some mines of silver and other metals are worked in several localities.

AGUDO, a tn. Spain, New Castile, prov. and 50 m. W.S.W. Ciudad-Real, and about 145 m. S.S.W. Madrid, in a large and beautiful valley at the foot of a mountain range. The houses, though only of one story, are built in regular streets and two squares. Pop. 1240.

AGUILA, a volcano, San Salvador, Central America, one of a group which 'forms almost an entire hilly volcanic territory, from which arise the elevated peaks of the different fiery craters' overlooking the shores of the Pacific.

AGULLANA, a vil. Spain, Catalonia, prov. and 20 m. N. Gerona, on the S. slope of the Pyrenees. It is well built, and has a massive and very old parish church. Cork is the principal article of trade. Pop. 1034.

AGULLENT, a tn. Spain, Valencia, prov. and about 33 m. Valencia, at the foot of the mountain range of same name. It is of pleasing appearance, and well built in regular streets. Pop. 1107.

AGUR, or AYGUR, a tn. India, in an isolated portion of Scindia's Dominions (Gwalior), on an open and elevated plain in the vicinity of a large and beautiful tank; lat. 23° 41' N.; lon. 76° 2' E. It stands at the height of 1598 ft. above the sea, is surrounded by a stone rampart, and is further defended by a well-built fort. Pop. about 20,000.

AGUTAYA, a small isl. of the Philippines, belonging to the Cuyos group, in the sea of Mindoro. Though only 6 m. long by 3 m. broad, and so rocky as to admit only of patches of cultivation, it contains above 2000 inhabitants, who subsist chiefly by fishing trepang for the Chinese market, and rearing cattle, which they exchange in Manila and the fertile isle of Panay for rice and other necessities.

AHIGAL, a tn. Spain, Estremadura, prov. and about 45 m. Caceres, and about 140 m. W.S.W. Madrid, on a wide plain, r. bank Alagon. It consists of houses grouped in irregular but tolerably spacious streets, and its chief trade is in corn, wool, and fruit. Pop. 1370.

AHMEDABAD, a collectorial dist. India, presid. Bombay, extending 148 m. N. to S., and 62 m. broad, bounded by the Guicowar's Dominions, dist. Kaira, terr. and Gulf Cambay and Kattywar, with an area of 4356 sq. m. and pop. of

650,233. It is traversed by the river Saubermutty, and is very low and level, and consequently much affected by the rains; the climate, too, is very hot and sultry. The inhabitants are generally more prosperous than those in other parts of the Deccan, and are much benefited by the passage of the Bombay and Baroda railway through the district, and by a smaller line between the town and port of Dhollera for the conveyance of cotton, the growth of which has been introduced and carried on extensively in this and the neighbouring districts. Good roads are much wanted; but the loose and sandy nature of the soil, and the absence of suitable material, make the construction of them very difficult.

AHMEDABAD [add.], a tn. India, presid. Bombay, cap. dist. same name, 1. bank Saubermutty, 270 m. N. Bombay. It was founded in 1412 by Ahmed Shah, on the site of Yessuvul, and was converted by him into a great capital, adorned with splendid edifices, among which is the great mosque, which stands in the middle of the city. It has two lofty, well-proportioned minarets, highly decorated, and

coarse cloth and silk, the latter chiefly wrought in the town of Yeola.

AHMEDNUGGUR [add.], three places, India:—1. A tn. presid. and 122 m. E. Bombay, cap. dist. or collectorate of same name, near the source of the Seena, a tributary of the Beemah, surrounded with a wall of no great height, but possessing the additional defence of an immense and impene-trable prickly-pear hedge. Within the town are a Protestant church, four government schools, one of them English, and the others vernacular, and a commodious *durmsalah*, or travellers' lodge, capable of accommodating 250 persons. Ahmednuggur was founded by Ahmed Nizam Shah in 1494, and, after passing through various hands, was treacherously sold to the Peishwa in 1759 by the Delhi officer then commanding. In 1803, the Duke of Wellington, then General Wellesley, compelled its surrender, after a siege of only two days. Having returned to the Peishwa, it passed with his other possessions under British rule in 1817, and is said to be gradually recovering its prosperity. Pop. about 20,000.

—2, A tn. North-West Provinces, dist. and 40 m. S.E. Allyghur, containing 6740 inhabitants.—3, A tn. Gujerat, cap. dist. of same name, 90 m. N.N.W. Baroda. It stands on an extensive plain, watered by the Haut Muttee, is partly inclosed by the remains of a fine old stone wall, possesses a fort in a very ruinous condition, and contains 9000 inhabitants.

AHUACHAPAM, a town, Central America, state and 45 m. W.N.W. San Salvador, dep. Sonsonate, beautifully situated in the centre of the magnificent valley or mountain slope and near a lake of same name; lat. 14° N.; lon. 89° 40' W. Though once a flourishing place, it has no building deserving of notice. The pop., about 8000, one-half Indians, are chiefly employed in the cultivation of coffee, the cochineal-cactus, and the sugar-cane, from the latter of which about 250 tons of brown sugar are annually produced. In the environs, about 3 m. to the E., are numerous hot sulphur springs, rising from the spurs of the volcanoes Lajunita and Apaneca.

AIDINSCHIK, a tn. Turkey in Asia, Anatolia, near isthmus connecting peninsula of Cyzicus with mainland, 72 m. S.W. Constantinople. It stands 600 ft.

above the sea, consists of about 600 houses, ranged in narrow dirty streets, and, though not very ancient, contains many columns and beautiful Corinthian pillars, which appear to have been brought to it from Cyzicus. It figures much in the early history of the Osmanlis, as the point from which they started to make their conquests in Europe.

AIGUNT, or **SAGALIN OOLA**, a naval arsenal of the Chinese, Manchooria, situated r. bank Amoor, 20 m. below the junction of the Zeya, in a district abounding with villages and cultivated fields. It was once a place of importance, and though now consisting only of a citadel and a few mud cottages, symmetrically arranged, still 'serves the whole Chinese Amoor fleet as a harbour and head-quarters.' Its supplies of timber are floated down in rafts from the well-wooded country through which the Kamara flows.

AILLONES, a tn. Spain, Estremadura, prov. and 53 m. S.E. Badajos. It consists of houses of two stories, of which only a few are commodious and well built, and has a beautiful fountain. The chief trade is in corn and wool. P. 1798.

AILUTAKI, or **WHYLOSTACKE**, an isl. S. Pacific, Hervey group; lat. 18° 32' S.; lon. 159° 24' W. It is about 9 m. long, and rising to the height of 360 ft. has a hilly but fertile surface. Around it is a barrier reef, which on the S. side extends nearly 7 m. from the beach, but has an opening forming a good and practicable entrance for small vessels. The inhabitants, about 2000, profess Christianity.—(*Report on Central Polynesia*, Sydney, 1857.)

AINA, a tn. Spain, Murcia, prov. and 24 m. S.W. Albacete, and about 140 m. S.S.E. Madrid, on the Mundo, between two almost inaccessible heights. The houses are arranged in a long and narrow street and a spacious square.

AHMEDABAD, THE SHAKING MINARETS.—Grindlay's Views in Western India.

having flights of steps and a gallery at the top. The domes rest on equidistant columns, and the cupolas are embellished with elegant mosaic fretwork, and the portico has a beautiful marble pavement. Under the Moguls it lost none of its splendour, and is described by Ferishta, in the beginning of the seventeenth century, as having streets 'sufficiently wide to admit of ten carriages abreast,' and as 'on the whole the handsomest city in Hindostan, and perhaps in the world.' In its present decayed state it is a large and populous place, with 130,000 inhabitants, and inclosed by a strong and lofty wall, flanked with numerous towers, and entered by a dozen gates. On a thorough repair of this wall, government, in 1834, expended a sum of £25,000, and other means of restoring its importance have been employed. The manufactures for which it was long celebrated consisted chiefly of fine silk and cotton fabrics, cloths of gold and silver, various other articles of the precious metals, and of steel, enamel, mother-of-pearl, &c. Three government schools, one for English, and two for the vernacular, have been established here, and a new church was erected in 1848.

AHMEDI, a tn. and dist. Persia, about 200 m. S. Ker-man, defended with a small mud-built fort. The dist., which extends to some distance on all sides of the fort, has a pop. of about 1000 families, and yields a great quantity of dates, figs, oranges, and other fruits.

AHMEDNUGGUR, a dist. presid. Bombay, India, between lat. 18° 16' to 20° 30' N.; lon. 73° 29' to 75° 37' E., 179 m. N.W. to S.E., and 100 m. broad, and containing 9931 sq. m., with a pop. of about 1,000,000. It is intersected by the Great Indian Peninsula railway, and the Bombay and Agra and other roads. The manufactures are principally of

The chief products are grain, &c.; and many goats, sheep, and cattle are reared. Pop. 1190.

AINTAS, a river, S. Africa, which drains the Kalahari desert, and, flowing S., joins r. bank Orange river about lat. 28° S.; lon. 20° 20' E. Its course is estimated at 400 m., and its basin 140,000 sq. m.; and yet, when visited by Mr. Moffat, in Sept. 1858, it had a width at its mouth of only 80 or 90 ft., with a deep sand-bed fringed with the usual river trees.

AIR, AHIR, or ASBEN, a kingdom, Africa, Sahara, between lat. 16° 15' and 20° 15' N. and lon. 6° 15' and 9° 30' E.; area about 37,000 geo. sq. m. It consists of a succession of mountain groups and valleys, with a general W. slope, and attains in its culminating point, Mount Dogem, situated near the centre, a height of 5000 ft. In the S. a *hamada* or tableland forms the boundary and water-shed between the Sahara and Soodan. The prevailing rocks are granite and sandstone, but in the S. basaltic cones and trachyte pierce the horizontal sandstone strata. The valleys, though separated by complete deserts, are very fertile, and often of picturesque appearance, winding along steep precipices, and presenting threads of green, in which the *tholubi* and several species of mimosa and acacia, with the *suak* and other trees, flourish in immense growth, sometimes garlanded and festooned by parasitical plants. Various wild animals, including the giraffe, hyena, wolf, jackal, wild boar, wild ox, &c., range at will in unfrequented places. The climate partakes partly of that of the Sahara and partly of that of Soodan, more agreeable than the former, less dangerous than the latter, and on the whole healthy and not unsuitable for Europeans. The tropical rains fall regularly, the rainy season lasting from the middle of August to the beginning of October. During the winter months, the temperature sometimes falls to the freezing-point, and ice is occasionally found in the S. *hamada*. The soil is cultivated mostly by slaves, and gardens and corn-fields, irrigated during the dry months, are common near the towns and villages. The principal vegetable products are *ghussub* (millet), wine, dates, various kinds of vegetables, senna, and indigo. The most important mineral is salt, which is exchanged for the productions of Soodan, on which the inhabitants, consisting chiefly of two great tribes called the Kelowis and Kilgris, depend more than they ought, trusting too little to their own resources. The government is described as a monarchy, with a curious mixture of the patriarchal character, and even a dash of democracy. The chief town is Agadez. Pop. about 64,000, said to furnish 14,000 able-bodied warriors.—(Richardson, Barth, &c., *Exped. to Central Africa*.)

AITONA, or AYTONA, a tn. Spain, Catalonia, prov. and about 11 m. Lerida, and about 80 m. W.N.W. Barcelona, r. bank Segre, on a wide plain, at the foot of a lofty and rugged hill. It consists of 450 well-built houses, and the trade is in silk, fruit, and especially live-stock of all kinds. Pop. 1427.

AJI, or HADJEE, a river, India, Bengal, which rises in dist. Rangurh, about lat. 24° 32' N.; lon. 86° 10' E., flows successively S.E. through Rangurh and Mongheer, S. through Beerbhoom, and E. along the S. boundary of this district, separating it from Burdwan, and, after a course of about 180 m., joins the Bhagruttee on its l. bank at Cutwah, in lat. 23° 39'; lon. 88° 9'. It flows through a valuable coal-field, which is worked to some extent; and, being navigable for about ten weeks during the rains, is then used for sending down coal and iron to Calcutta.

AJOFRIN, a tn. Spain, New Castile, prov. and 8 m. from Toledo. It consists of above 400 houses, many of them in a dilapidated state. The manufactures are woollens, bombazines, corduroys, and articles in esparto. Pop. 2883.

AJROOD, or KALAT AJRUD, Egypt, the first station of the Egyptian pilgrims on their way to Mecca, 8 m. N.W. Suez. Its castle is large and in fair order.

AKARAMBAY, or the 'iron gates' of the Niger, Central Africa, is so called because the stream, previously of considerable width, suddenly contracts, and rushes between two large masses of rock not more than 40 ft. asunder.

AKHLI, a tn. European Turkey, near shores of Black Sea, 40 m. S. Varna. It stands at a considerable elevation amid fine scenery, and is supposed to be the locality where a great battle was fought, in the beginning of the fourteenth century, between the Catalonians and the Massageta.

AKIKE, a tn. Africa, on isl. of same name, belonging to a small group in the Red Sea, off the coast of Nubia, in lat. 18° 30' N. It is almost destitute of vegetation; but is important because of the market which is held at it, and is much frequented by the Bedouins. Many of the inhabitants are engaged in the pearl-fisheries.

AKNUR, or AKHNOOR, a tn. N.W. India, Gholab Singh's Dominions, 95 m. N. by E. Lahore, on the Chenab, which is here a large navigable stream. It stands at the base of the lowest Himalaya range, and at a distance presents a very picturesque appearance, the remains of its old palace contrasting in a striking manner with the buildings of its new fort. When entered it is found to be mostly in ruins. There is here a ferry over the river. Mount Triketa, in the vicinity, is much resorted to by pilgrims visiting the temple situated on its N. side.

AKOWLAH, or AKOLA, a tn. India, Hyderabad, on an affluent of the Poorna, 290 m. N.E. Bombay. Its lofty and well-constructed walls, and the numerous ruins contiguous to it, indicate a former magnitude and importance which do not now exist; but it is still a large and populous place.

AKPOKO, a tn. Central Africa, cap. dist. of same name, r. bank Chadda or Benuwe; lat. 7° 55' 34" N.; lon. 8° 5' 22" E. It is prettily situated at the foot of the Doma hills, a small range seemingly of unstratified rock, which rises to the height of about 600 ft. Its inhabitants are hospitably and commercially disposed.

AKRABEH, a large and flourishing tn. Palestine, which of old gave its name to the toparchy of *Acrobattene*, at some distance from r. bank Jordan, about lat. 32° 10' N. and lon. 35° 25' E. It is finely situated on the base of a high ridge, which here forms a watershed, and sends the waters of the adjoining open valley or plain in opposite directions, E. and W.

AKRON, a tn. N. America, U. States, cap. co. Summit, Ohio, on the Ohio and Erie canal and on the Cleveland and Zanesville railway, 100 m. N.E. Columbus. It occupies an elevated site about 400 ft. above the level of Lake Erie; and being furnished with ample water-power by the Little Cuyahoga, possesses a number of large flour-mills, as well as two woollen factories, and manufactures of cards, stoves, and steam-engines. In the vicinity extensive beds of mineral paint are extensively worked. There is also a blast-furnace. Pop. above 5000.

ALABAMA, a river, N. America, formed near Montgomery, in the state of Alabama, by the junction of the Coosa and the Tallapoosa; flows W. and then S. to its junction with the Tombigbee, about 50 m. above Mobile Bay, when it assumes the name of the Mobile, and falls into the bay of Mobile on the gulf of Mexico. Steamboats ascend to Montgomery, 320 m.; but the navigation is interrupted during the season of low water. Some of the largest cotton plantations of America are situated on its banks.

ALACUAS, a tn. Spain, Valencia, prov. and 11 m. from Valencia, on a plain in a healthy district. It is regularly built, and the manufactures consist chiefly of various articles of earthenware, made of a fine red clay and displaying considerable taste. Pop. 1773, of whom a considerable number are muleteers.

ALAJAR, a tn. Spain, Andalusia, prov. and about 44 m. N. Huelva, and 240 m. S.W. Madrid. It stands in a central space, surrounded by four lofty and rocky heights, and is, on the whole, indifferently built. Many of the inhabitants are muleteers. Pop. 1995.

ALA-KOOL, a lake, Asiatic Russia, in the S.E. of gov. Tobolsk, on the frontiers of Chinese Tartary. It is about 40 m. long by 17 m. broad, and has, near its N. shore, a small rocky island rising about 100 ft. out of the water. It receives eight streams, but has no outlet. Humboldt states that a volcano exists on an island in the lake; but according to Atkinson (*Oriental and Western Siberia*) 'no volcano has ever been in action in this region.'

ALAMAY, a tn. Central Africa, Bornou, not far from Bundi. It is surrounded with a wall and a ditch, and a dense thorny fence about 10 ft. thick.

ALAMO, a fort, U. States, Texas, l. bank river same name, on N.E. side of San Antonio. It was the scene of a deadly struggle in 1836 between a strong body of Mexican troops and a handful of Texans, who shut themselves up in it and perished to a man.

ALANIS, a tn. Spain, Andalusia, prov. and about 38 m. N. Seville and 205 m. S.S.W. Madrid, in a hollow between two hills at the end of the Sierra Morena. It consists of 305 houses, arranged in commodious, clean, and well-paved streets, and a spacious square. Pop. 1683, generally employed in cultivating the ground and rearing cattle.

ALANTIKA, a lofty and isolated mountain, Central Africa, near the W. frontiers of Adamaua, 30 m. S.E. Yola. Its height is from 9000 to 10,000 ft., and its circumference at the base about 50 m.

ALASUA, a vil. Spain, Navarre, in the valley of Burunda, and within 2 m. of Rurmendi. It is regularly built, and has manufactures of linen. Pop. 1116, many of them employed in felling timber.

ALATOZ, a vil. Spain, Murcia, prov. and about 20 m. E.N.E. Albacete, and 145 m. S.E. Madrid, between some heights on the side of the Sierra Chinchilla, near the Jucar. It consists of poor houses in irregular streets, and its trade is chiefly in agricultural produce, considerable numbers of sheep, and some goats, &c. Pop. 1366.

ALAYOU-AMBA, a tn. Abyssinia, Shoa, on a conical mountain of same name, about lat. 10° 12' N.; lon. 40° 50' E. It is an important place of 3000 inhabitants, who carry on an extensive trade with the interior, sending thither glass, cotton goods, and silks from India, and receiving in return coffee, cotton, tobacco, and slaves. Salt, in pieces of fixed dimensions, is said to be the usual medium of exchange.

ALBALADEJO, a tn. Spain, New Castile, prov. and 50 m. N.W. Ciudad Real, and about 85 m. S.S.W. Madrid, on an uneven and somewhat elevated site. The inhabitants, 1695, are chiefly employed in agriculture and the rearing of cattle, and in exporting pine timber from the sierras of Segura and Alcaraz.

ALBALADEJO DEL CUENDE, a tn. Spain, New Castile, prov. and 14 m. Cuenca, on an irregular slope. Agriculture is the chief employment. Pop. 1333.

ALBALAT DE SEGART, or ALBUIXECH, a vil. Spain, Valencia, prov. and 10 m. N.N.E. Valencia, picturesquely situated on a mountain side, and a station on the Valencia and Castellon railway. It has mean houses and indifferent streets, with a small square. The trade is chiefly in flour, fruit, oil, and brandy. Pop. 846.

ALBANY (PORT AND ISLAND), Australia, Queensland, a short distance S.E. of Cape York, the N.E. extremity of the continent; lat. 10° 40' S.; lon. 142° 35' E. The island is separated from the mainland by a deep channel, not more than $\frac{1}{2}$ m. in breadth, and is upwards of 3 m. long and 1 m. in its greatest breadth, with an irregular outline produced by a number of bays with small rocky headlands. It is well wooded, and has open tracts of excellent grass-land; and the soil, which mostly consists of red sandy loam 6 to 15 in. deep, mixed with nodules of ironstone, is well adapted for the growth of useful vegetable productions. The rocks of ironstone in irregular masses, and of coarse sandstone, furnish an abundance of good material for building; and on the E. side of the island are beds of coral of the best description for making lime. Near the N.E. point is a rill of pure water, fringed with flowering shrubs and grasses, and running into a small natural reservoir.—PORT ALBANY, on the mainland, opposite the island, affords good and secure anchorage, and is convenient for large steamers, while whole fleets of ships might ride in safety in the adjacent Evans and Newcastle Bays. The general nature of the soil in the neighbourhood is a rich black sandy loam about 24 in. deep, and is well supplied with fresh-water streams flowing through valleys, in which are trees growing in great luxuriance, and fine clear flats with open forest ground. The timber on the mainland is of greater variety, and better adapted for building purposes, than that on the island. The climate is exceedingly temperate and healthy, being free from the excessive heat usual in tropical situations. The port and island have been selected for a new settlement (1865), to which the name of *Somerset* has been given, and which is likely to become one of much resort and importance as an intermediate station for steam communication between the more southerly colonies and the Eastern Archipelago, &c.

ALBARES, Spain:—1, A tn. New Castile, prov. and 16 m. Guadalajara, has straight and spacious streets, but indifferent houses. The principal crops are wheat, barley, oats,

and hemp. Pop. 1031.—2, *Albares de la Libera*, a tn. Leon, prov. and about 32 m. W. Leon, in a valley. The trade is in cattle and timber. Pop. about 1000.

ALBARRACIN, an episcopal tn. Spain, Aragon, prov. and 28 m. W.S.W. Teruel, and about 105 m. E. Madrid, cap. dist. same name, on S. side of a mountain belonging to the chain of Idueda. It is surrounded by much-dilapidated walls, and entered by three gates; is built of houses, generally of three stories, in narrow and very steep streets, many of them unpaved; is the seat of courts of primary and of appellate jurisdiction, and has among its edifices and institutions a large cathedral of the Composite order, of little architectural merit, but containing some good sculptures and paintings; two other churches, and a college in which about 180 pupils are gratuitously educated. Neither trade nor manufactures are of any importance. Pop. 1530.

ALBAZCHA, or EMUKI, a tributary of the Amoor, which joins its l. bank a little above Albassin. On a low island before its mouth are still traces of the batteries erected by the Tartars when Albassin was besieged. Albazcha abounds with fish.

ALBEMARLE, an isl. S. America, Ecuador, in the Pacific, the largest, and, with Narborough, the westernmost of the Galapagos group, is 60 m. long by about 15 m. broad, and forms a singular mass of volcanic ejections, consisting of six huge craters, united at their base by the lava which has flowed from them. The loftiest rises to the height of 4700 ft. above the sea. The S.W. side, which lies open to the trade-wind, and is usually covered by the clouds brought by it, is green and thickly wooded. Immediately N. of S.W. Cape is the loftiest of the craters, and at its foot Iguana Cove, so called from the numbers of iguanas frequenting it. These reptiles, though of repulsive appearance, are good eating. Two of the craters were seen in action in 1812, and a terrific eruption took place in 1825.

ALBERCA, a vil. Spain, Leon, prov. and 37 m. S. Salamanca, and about 110 m. W.N.W. Madrid; on the Sierra de Francia, consists of 490 ill-arranged houses. In a very deep valley, about 4 m. distant, stands the celebrated monastery of Batuecas. Pop. 1701, chiefly labourers and muleteers.

ALBERTI, a tn. Austrian empire, Hungary, co. and 27 m. S.E. Pesth, on the railway, with 2358 inhabitants, who are mostly Protestants. It has a brewery and a poorhouse.

ALBOLOTE, a vil. Spain, Andalusia, prov. and about 3 m. Granada, and about 220 m. S. Madrid, on a plain at the foot of Sierra Elvira, with houses of one story, and a square, with the remains of an Arab fort adjoining it. Pop. 1526, almost all engaged in agriculture.

ALBONDON, a tn. Spain, Andalusia, prov. and 38 m. S. Granada, and about 215 m. S. Madrid, on an elevated plain commanding fine views, with 496 ill-arranged houses in unpaved streets, and a parish church of the Doric order divided into three naves. The principal product is wine. A copper mine was once worked in the vicinity. Pop. 3392.

ALBOREA, a vil. Spain, Murcia, prov. and about 22 m. N.N.W. Albacete, and about 110 m. S.E. Madrid, between the Cabriel and Jucar. A good deal of linen for home use is woven, and there is some trade in wine. Pop. 1721.

ALBUDEITE, a tn. Spain, Murcia, prov. and 14 m. Murcia, on a hill, with picturesque views. Pop. 1398, chiefly employed in manufacturing esparto.

ALBUQUERQUE, a vil. S. America, Brazil, prov. Matto Grosso, beautifully situated in a grove of tropical trees about 3 m. W. of r. bank Paraguay; lat. 19° 26' 53" S.; lon. 57° 28' 51" W.

ALBURKAH, an isl., or rather group of swampy isls., Oru, W. coast of Africa, near the mouths of the Kwara, in the Bight of Benin.

ALCALA DEL VALLE, a tn. Spain, Andalusia, prov. and 45 m. E. Cadiz, in a mountain valley, with a distillery, oil and flour mills, and a trade in corn, wine, and oil. P. 1764.

ALCANADRE, a tn. Spain, Old Castile, prov. and 14 m. N. Logroño, on a plain r. bank Ebro, with the supposed remains of a Roman aqueduct, and a trade in agricultural and garden produce, sheep, and mules. Pop. 1260.

ALCOCER, a tn. Spain, New Castile, prov. and 25 m. Guadalajara, on a plain at the foot of a hill, with two schools, a parish church, a Franciscan nunnery, manufactures of bombazine, and some trade in farm produce. Pop. 1352.

ALCSUTH, a tn. Austrian empire, Hungary, co. and 18 m. N.E. Stuhlweissenburg, with 1200 inhabitants, and a fine archiepiscopal palace.

ALDERE, or ALDEYRE, a tn. Spain, Andalusia, prov. Granada, about 210 m. S. Madrid, at the foot of the Sierra Nevada, 8 m. from Guadix. It is poorly built in winding streets. Pop. 1547, employed partly in agriculture, partly in making alpergata shoes, and partly in the mines of zinc, lead, and antimony in the vicinity.

ALDERSHOTT, or ALDERSHOLT [add.] An extensive tract of moorland in the parish was purchased, and a permanent camp for training the British army, with extensive barracks, was established upon it, by the government in 1854. Pop. in 1861 (including military), 16,720.

ALEGRETTE, a tn. S. America, Brazil, prov. Rio Grande do Sul, on an affluent of the Ibicui, 280 m. W. Alegre. It is an agreeably situated place, consisting of substantial houses, and possesses a church with three light spires, which form conspicuous objects at a great distance. Pop. 1412.

ALEISAR, a tn. Spain, Catalonia, prov. and 52 m. Tarragona, on a mountain slope, with well-built houses and regular well-paved streets, a parish church with a magnificent chapel, and several distilleries, oil and flour mills.

ALELLA, a vil. Spain, Catalonia, prov. and 6 m. Barcelona, on a hill near the sea, with well-built houses, manufactures of cotton and mixed goods, and several distilleries. In the environs, which are beautiful and picturesque, there are many fine villas. Pop. 1794, a large proportion of them fishermen.

ALEPE, or AULAPOLAY [add.], a tn. and port, India, pres. Madras, dist. Travancore, on the Malabar coast, 32 m. S. by E.-Cochin, 366 m. S.W. Madras; lat. 9° 30' N.; lon. 76° 25' E. It lies scattered between the beach and an extensive tract of rice-grounds, bordering the backwater, which here stretches eastward, and forms an extensive lake; it is also traversed by a canal, which passes through its centre, from the backwater to the timber-yard on the coast, and is crossed by six wooden bridges. The S. portion is divided into compounds, containing the dwelling-houses of the wealthier classes of the inhabitants. In the N. portion the Church Missionary Society have a church and mission-house. Alepe was comparatively insignificant half a century ago, but from the encouragement given to merchants and settlers of all classes it has gradually increased its population, and become a place of great trade. It is now the chief entrepôt for the produce of the interior, consisting chiefly of teak timber, pepper, and cardamoms.

ALEXANDRA LAND, the name recently given (1865), without any precise definition of its limits, to the territory of N. Australia, or to that part of it which extends from the parallel of Central Mount Stuart (lat. 22° S.) northwards to the mouth of the Adelaide river (lat. 12° 15' S.), thus including a portion of what has hitherto been known as *Arnhem Land*. The country S. of Central Mount Stuart, and intervening between it and the northern limit (lat. 26° S.) of the colony of S. Australia, has been named *Stuart Land*, after the indefatigable traveller J. McDouall Stuart, who was the first to cross (in 1862) the middle of the Australian continent from S. to N., and who has given the designation of *Alexandra Land* to the new country which he traversed. Probably this latter title will supersede or comprehend all previous ones, so that Alexandra Land will be used and understood of the whole of the territory of 'N. Australia,' comprising alike Stuart Land in the S. and Arnhem Land in the N. In this event, Alexandra Land may be described as coterminous with N. Australia, and therefore as lying between lat. 11° 30' and 26° S., and lon. 129° and 138° E., and bounded on the E. by Queensland and the Gulf of Carpentaria, W. by Western Australia, S. by South Australia, and N. by the Arafura Sea. The interior of the country has been as yet only partially explored, but although mostly intratropical it is found to be of a highly fertile and salubrious character. Several rivers intersect it in various directions, flowing through ranges of hills and lofty tablelands, the elevation of which renders the climate unusually temperate and healthy. The principal of these rivers are the Roper, which appears to rise in the table-land from 500 to 800 ft. above the sea in about lat. 15° S. and lon. 133° E., and flowing generally eastward, and receiving many tributaries, enters the Gulf of Carpentaria about lat. 14° 55' S.;

lon. 135° 40' E.; the Alligator river, which, rising in the table-land of an elevation of 3000 to 4000 ft., in about lat 13° 20' S.; lon. 132° 40' E., flows N. into Van Diemen Gulf; the Victoria, in the N.W., running through a hilly and fertile district in a N.W. direction to the sea; and the Adelaide, a fine stream, rising in the same range of high land as the Alligator, and flowing N.N.W. into Adam's Bay opposite Melville Isl. The Victoria is one of the largest tidal rivers in Australia, the tide being said to rise 30 to 40 ft.; and the gulf into which it flows is capacious enough and suitable for vast fleets of ships. The entrance to the Adelaide likewise affords an excellent harbour for vessels, with shelter from every wind. The river Adelaide has a depth of from 4 to 7 fathoms at its mouth, and at 120 m. up it is still about 7 fathoms deep and 100 yards wide, with a clear passage all the way; it abounds with fish and water-fowl. The country around it is excellent, and abundantly supplied with fresh-water streams, and the herbage most luxuriant. The timber is chiefly composed of stringy-bark, gum, pine, and other varieties of large trees, with quantities of bamboo of great size. The soil about the Adelaide is generally black and alluvial, and capable of producing everything that is necessary. This is for the most part the character of all the country N. of about lat. 17° S., the soil being generally formed of fine lacustrine deposit; tropical vegetation appears in the valleys of the Roper, and thence to the Adelaide and the sea-coast. Notwithstanding its tropical situation, the country is considered admirably adapted for sheep-farming, which is already largely carried on in the adjacent colony of Queensland as far N. as lat. 19° S., and is being rapidly extended northwards. There is also a vast tract of marsh land contiguous to the Adelaide, highly suitable for the cultivation of cotton. The formation of the high land in which the Adelaide rises is fine granite and quartz, with occasional appearances of ironstone; further S. are found sandstone and ironstone, and ranges of sand-hills of great extent and elevation, the whole interspersed with extensive and luxuriant grassy plains; the more southerly districts towards the centre of the continent are less prolific and adapted for habitation, being subject to long droughts and consequent scarcity of water. The whole territory is sparsely inhabited by small tribes of natives, generally fine grown and athletic people, but timid and inoffensive. Upon the whole, the new country, especially in the vicinity of the Adelaide river, is calculated to become very attractive to colonists, for it presents all the features desirable in new settlements. The introduction of labourers from among the Malays and people of the Eastern Archipelago would materially assist European settlers in the successful cultivation of the land. The home government is already preparing to organize an administration for its proper legislative management.

ALEXANDRIA [add.], a tn. N. America, U. States, cap. co. of same name, Virginia, finely situated r. bank Potomac, about 7 m. S. Washington. It is generally well paved and well lighted with gas, and possesses 12 churches, several good schools, and three banks. The port, now connected by a branch with the Central railway of Virginia, and provided with a good haven, carries on a considerable trade, exporting corn, tobacco, and coal. Shipbuilding is also carried on to a considerable extent, and several large cotton-factories have been erected. The whole country of Alexandria once formed part of the district of Columbia, but was retroceded to Virginia by an act of Congress in 1844. The adjacent heights have been noted as a fortified position during the civil war, on the outbreak of which they were held by the Confederates, but were taken possession of by Union troops in May, 1861. Pop. 8752.

ALEXANDRIA (FORT), British Columbia, Western N. America, l. bank Fraser river; lat. 52° 33' N.; lon. 122° 38' W. It is the head-quarters of the Hudson Bay Company for the district, and the nearest and best-known port for the Quesnelle and Caribou gold diggings, being the point to which various routes, existing and proposed, from the coast converge.

ALEXIEVSKAIA, a tn. Russia, gov. Don Cossacks, cap. dist. Chopersk, on an affluent of the Choper, 215 m. N.N.E. Novo-Tcherkask. It contains 2691 inhabitants, and has several public offices and an annual market.

ALEXINATZ, a tn. Turkey in Europe, in the S.E. of Servia, cap. circle of same name, on the Bulgarian Morava, 102 m. S.E. Belgrade. It is the seat of a court of justice and other public offices, and has a quarantine establishment, a church, and a school. Pop. 2704.

ALFACAR, a vil. Spain, Andalusia, prov. and 3 m. from Granada, 216 m. S. Madrid, on a mountain slope, a ramification of the Sierra Jarana. It has four squares, a public granary, a well-built prison, an endowed school, and a large and handsome parish church. It is an ancient place, and has many houses nearly as the Arabs left them.

ALGABA, a tn. Spain, Andalusia, prov. and within 3 m. of Seville, on a plain between the Guadalquivir and the Huelva, which often overflows its banks. It is poorly built, and has the remains of an ancient Roman tower. Pop. 1813.

ALGAWF, a tn. N. Arabia; lat. 30° 35' N.; lon. 40° 20' E. It is beautifully situated in the centre of a valley of same name, which has nearly the form of a regular circle, surrounded on all sides by the chain of Gal Algawf, which rises with a uniform ascent about 500 ft. above the bottom. On the N.W. side the chain opens in a defile, through which the road towards Syria passes. The town itself, built for the most part of sun-baked bricks, and having every one of its twelve separate *souks* or quarters surrounded by a wall of the same material, is nearly semicircular in form; opposite to it, on a limestone precipice, stands the old castle of Almarid, overlooking the town and the whole valley, the diameter of which is about 3 m. Besides the date-palm, which appears to be indigenous, almost every fruit common to the climate is cultivated, though only to a limited extent, in the gardens and orchards.

ALGERSDORF, a tn. Austrian empire, Bohemia, circle and 12 m. N.N.E. Leitmeritz, with a parish church, cotton, woollen, and flour-mills. Lignite is worked in the vicinity. Pop. 1400.

ALGETE, a tn. Spain, prov. and 13 m. Madrid, on the side of a hill overlooked by others of greater height. Pop. 1500, of whom many are muleteers.

ALGHAZALÉ, a large vil. N. Arabia, in the valley of Jebel Shammar, between the two chains of Aga and Selma, about lat. 26° N., and lon. 42° E. It is surrounded by a wall of sun-baked bricks, and has a pop. of about 200 Shammar families.

ALGIERS, N. Africa, the central province of the three into which Algeria is divided, extends along the shores of the Mediterranean, from Cape Corbelin westward to Cape Magrono, and is bounded E. by prov. Constantine, S. the Sahara, and W. prov. Oran. Area about 44,000 sq. m. The surface is composed of mountains and valleys, the former lying generally between W.S.W. and E.N.E., and the latter occupying the intervals between them. The mountains, which belong to the system of the Atlas, slope partly toward the Mediterranean, and partly toward the desert. The division between the two slopes is formed by an elevated plateau. The two most important rivers are the Shelif and the Jeddî, which both have their sources in the lofty range of Jebel Amoor. The Shelif, after a circuitous course northwards into the heart of the province, turns W., and after forming part of the boundary between Algier and Oran, falls into the Mediterranean, near Mostaganem. The Jeddî flows eastward, across the Algerian Sahara, and is lost in Lake Melrir. The other more important streams, are the Nessa, which receives all the waters which descend from the N. slope of Mount Jurjura, the Isser, which, after forcing its way through mountain gorges, falls into the Mediterranean near Dellis, and the Mazafran. Between the Sahel and the Atlas, on the S., lies the beautiful and fertile plain of Metidja, which has a length of about 60 m., and a mean breadth of about 40 m., and is by far the finest tract in Algeria. For administrative purposes the province of Algiers is divided into two districts, a military and a civil. The former has six subdivisions; the latter forms the two arrondissements of Algiers and Blidah. The European pop. of Algiers, exclusive of the army, is estimated at 74,467; the native pop., exclusive of the tribes of the Sahara, at 583,472.

ALGYOGY, a tn. Austrian empire, Transylvania, circle and 21 m. S.W. Karlsburg, cap. dist. of same name, on a small stream, near its confluence with the Maros. It has thermal springs, with baths, and a large trade in fruit. Pop. 1180.

ALHABIA, a vil. Spain, Andalusia, prov. and 11 m. from Almeria, l. bank Aboloduy, near its confluence with the Andarax. It is well built, and has manufactures of linen, a distillery, and some trade in wheat, barley, and maize. Pop. 1492.

ALHAMA, a tn. Spain, Murcia, prov. and 18 m. from Murcia, at the foot of a hill crowned by an ancient castle. It is well built in spacious streets, and a public square. The baths, erected over the mineral springs, are ascribed to the Romans. The manufactures are linens, woollen covers, and saltpetre; the trade is in grain, charcoal, snow, and timber. Pop. 6935.

ALHAMA, a tn. Spain, Aragon, prov. and 80 m. (by rail) S.W. Saragossa, and 133 m. (by rail) N.E. Madrid. It is a station on the Madrid and Saragossa railway.

ALHAMA-LA-SECA, a vil. Spain, Andalusia, prov. and 11 m. from Almeria, 250 m. S.S.E. Madrid, on the side of the Sierra de Gador, with very indifferent houses; manufactures of linen, distilleries, saltpetre refineries, and oil and flour-mills. Pop. 2384.

ALHUCEMAS, a tn. Morocco, on a small rocky island of same name off its N. coast, 97 m. S.E. Centa. It rises irregularly upon a slope, and is a place of some strength, being surrounded by a wall with two gates, and defended by a castle flanked with towers. It belongs to the Spaniards, who use it as a penal settlement, and garrison it with 200 men.

ALIAGA, a tn. Spain, Aragon, prov. and 30 m. N.E. Teruel, 155 m. E. Madrid, on a beautiful plain at the foot of a mountain, l. bank Guadalupe. In the vicinity there is an old castle in good preservation. The manufactures consist of sacking, corduroys, and linens. Pop. 1122.

ALIBUNAR, a tn. Austrian empire, Servian Banat, military frontier, 29 m. N.E. Belgrade, on the N. side of the sandy waste of Bieloberdo. It contains 4400 inhabitants, and has three Greek churches, a school, and a potash refinery.

ALI BUNDER, a small tn. India, Scinde, on the Gonnee, one of the offsets of the Indus to the E. The ameer Futeh Ali, in 1799, in order to impound the water for irrigation, and exclude the tidal salt-water, constructed a dam near the town, which has had the effect of allowing the channel below to become almost obliterated, and of rendering the Gonnee, between the town and Hyderabad, navigable by boats only during the rainy season, through the vast deposits of alluvial matter brought down the river being prevented from passing the artificial obstruction. Thus the largest estuary of the Indus has been nearly blocked up, and the adjacent country, formerly very fertile, reduced to the utmost sterility.

ALIPORE, a tn. India, presid. Bengal, 4 m. S.E. Fort William or Calcutta. It has a dry and healthy site, which has induced several Europeans to make it their residence, and contains a large jail.

ALISCH (GREAT), a tn. Austrian empire, Transylvania, circle and 36 m. N.E. Hermannstadt. Here, in 1661, Prince John Kemeny was defeated and slain by Michael Apaffi, who, in alliance with the Turks, was contending for the principality. Pop. 1140.

ALISEDÁ (LA), a vil. Spain, Estremadura, prov. and 13 m. from Caceres, on a slope of the Sierra-del-Algibe, in a rugged and mountainous district. It is regularly built in level streets. The trade is in bricks, tiles, and charcoal. Pop. 1764.

ALLAHABAD [add.], a city, Hindoostan, at confluence of Ganges and Jumna, 630 m. (by rail) N.W. Calcutta. It is an important station on the East Indian railway, which here crosses the Jumna. In the great mutiny the town suffered much from the violence of the rebels; and the European residents, with a detachment of faithful Sikhs, were besieged by them in the fort, until relieved. Pop. in 1853, 72,093.

ALLEE MOHUN, or **RAJPOOR ALI**, dist. and tn. India, Malwa, with an area of 708 sq. m., and pop. about 70,000. By an arrangement with the Dhar state, to which it was subject, Allee Mohun became tributary to the British government in 1821. The rajah, who is a Hindoo, resides at Rajpoor.

ALLENDE (SAN MIGUEL), a tn. Mexico, state and 50 m. E.S.E. Guanajuato, on the Rio-de-la-Laxa, near the frontiers of Queretaro. It has a parish church, a Franciscan

monastery, and a superior school. The inhabitants manufacture arms and articles in leather, and also rear great numbers of cattle. Pop. estimated at 12,000.

ALLENTOWN, a tn. U. States, Pennsylvania, cap. co. Lehigh, on the river of this name, 18 m. above its junction with the Delaware, and on a railway which connects it on one hand with the anthracite coal-field of the Lehigh, and on the other with Philadelphia and New York. Its pop., mostly of German descent, is about 8000, and the chief trade is in coal and iron. For smelting the latter several large blast furnaces are in operation. Allentown is said to contain the first Lutheran church that was built in America.

ALLISONIA, a vil. U. States, Tennessee, on the Elk, and the railway from Nashville to Chattanooga, being nearly equidistant from both these places. It possesses the finest water-power in the state, and employs it partly in driving a very large cotton factory.

ALLIYAR-KA-TANDA, a tn. India, Seinde, dist. and 24 m. E.N.E. Hyderabad. It has some manufactures, chiefly of cotton, plain and dyed, and a good bazaar. Its position at the intersection of two great routes, the one from Hyderabad towards the E., and the other from Cutch to Upper Seinde and the Punjab, gives it great advantages for trade. Pop. 5000.

ALMA, a river, Russia, in the S. of the Crimea, formed by several streams from Mounts Chatir-dagh and Babugan; flows W.N.W., and falls into the S. part of Kalamita Bay, about 18 m. N. Sevastopol. It is a rapid but insignificant stream, which has acquired celebrity from a battle which now bears its name, and was fought September 20, 1854, when the Russians, though advantageously posted, with a most formidable artillery, on the heights which line its l. bank, were driven from their position at the point of the bayonet by the Anglo-French army, and forced to a precipitate retreat.

ALMAS (GREAT), a tn. Austrian empire, Transylvania, circle and 25 m. N.W. Klausenburg, with 1610 inhabitants, and the ruins of a castle which figured in the wars of the sixteenth century. There is a remarkable cavern in the vicinity.

ALMENARA, a tn. Spain, Valencia, prov. and 17 m. S.S.W. Castellon-de-la-Plana, on the side of a lofty hill crowned with a strong castle. It is surrounded by a strong and high wall, flanked with towers at the salient angles, and has substantial houses, straight, wide, and clean streets; and two good squares, a massive and beautiful parish church, faced with blue marble. It is near the railway from Castellon to Valencia. Pop. 1270.

ALMENDRAL, a tn. Spain, Estremadura, prov. and 17 m. Badajos, on three hills which are spurs from others of greater elevation. It consists of houses, or rather huts, for a labouring population. One of its two churches is a splendid edifice, of three naves, richly adorned both externally and internally. Pop. 1670.

ALMONACID DE ZORITA, a tn. Spain, New Castile, prov. and 22 m. Guadalajara, on the side of the Sierra de Buendia. It has two fine mansions belonging to the Counts of San Rafael and Saceda, and a suppressed Jesuit college, whose buildings are still entire, and constitute one of the chief ornaments of the place, its church being still used for worship. Pop. 1265.

ALMUDEVAR, a tn. Spain, Aragon, prov. and 7 m. from Huesca, 24 m. by rail N.E. Saragossa, on an extensive plain, with commodious and paved streets. It is a station on the Barcelona and Saragossa railway. The remains of an ancient strong castle crown a height in the vicinity. Pop. (agricultural) 1998.

ALTAFULLA, a tn. Spain, Catalonia, prov. and 7 m. E.N.E. Tarragona, on the slope of a hill near the sea-shore. It consists of very indifferent streets and houses; in the vicinity is an ancient castle of massive structure in tolerable preservation. Pop. 1119.

ALTAMAHA, a river, U. States, which, formed by the Oconee and Ogeechee in the S.E. of Georgia, flows S.E. through sandy plains and pine barrens, and after a course of 140 m. falls into the Atlantic, 12 m. below Darien. It is navigable through its whole course for vessels of 50 tons.

ALTANGAN, plateau, Russian Trans-Baikal territory. It is traversed from W. to E. by the Uzulungui, a tributary of the Argun, attains in its culminating point, the mountain

pass of Suktui, a height of about 3200 ft., and is well wooded, except towards its S. frontier, where it becomes almost sterile, and may be considered as forming the N.E. extremity of the Gobi desert. On each side of it, to the W. and E., are several salt lakes, of which the Torei-nor is the largest in the former direction, and the Ubuduk, Tsagan-nor, and Hara-nor in the latter.

ALTATA, a seaport, Mexico, prov. Sinaloa, Gulf of California, at mouth of river, and 28 m. below Culiacan; lat. 25° 3' N.; lon. 108° 10' W. It has a considerable trade in Lima or Nicaragua wood, which grows all along the mountains of the Sierra, from San Blas up to Sonora.

ALTGBIRG, a tn. Austrian empire, Hungary, co. and 8 m. N. Neusohl, 120 m. N. Pesth, with 2184 inhabitants, and valuable mines of argentiferous copper.

ALTHÜTTEN, a tn. Austrian empire, Bohemia, circle and 25 m. S.S.W. Prague, with a machine factory, tin and iron works; and blast furnaces supplied with iron ore from mines in the vicinity. Pop. 1000.

ALTIN-KOOL, a lake, Russian empire, W. Siberia, gov. and 450 m. S. by E. Tomsk, among the Altai mountains. It is a long and narrow expanse, stretching about 70 m. from N. to S., with a breadth of not more than 8 m., and lies in an enormous chasm surrounded by lofty mountains, some of them presenting nearly perpendicular precipices 2000 ft. high. On the W. and S. sides of the lake some of the mountain peaks exceed 10,500 ft. in height, and penetrate far above the line of vegetation into the region of perpetual snow. The depth of water is said to have been found in one spot 2000 ft.; in others still deeper there are no soundings. The surrounding rocks are composed chiefly of slate and granite, and many plants and flowers grow out of their crevices with almost tropical luxuriance. The lake is navigated by the Kalmucks, in canoes hollowed out of trunks of trees.

ALTON, a city and river port, U. States, Illinois, l. bank Mississippi river, 21 m. above St. Louis, and 3 m. above mouth of the Missouri. It is well and spaciouly built, and has large quarries of fine limestone, and abundant coal and timber in its vicinity. It is the central point of several lines of railway diverging from it in every direction. Pop. 4000.

ALTOONA, a tn. U. States, Pennsylvania, on the Central railway, 244 W.N.W. Philadelphia. Pop. 3000, the greater part of whom are employed in the extensive engine houses and machine factories belonging to the railway company.

ALTSTADT, a tn. Austrian empire, Moravia, circle and within a mile of Hradisch, with 1800 inhabitants, and a church. Between it and Hradisch stand the remains of Willebrad, which was once the capital of an independent kingdom, and was the cradle of Christianity in Moravia.

ALTSTADT, a tn. Austrian empire, circle and 36 m. N.W. Olmütz, cap. dist. of same name, on the Graupa, near the foot of the Spieglist Schneeberg, with 1500 inhabitants; an ancient parish church, a paper mill; manufactures of linen and leather, and four yearly markets.

ALUKNUNDA. See *ALAKNANDA in Gazetteer*.

ALWUR, or **ULWAR**, or **MACHERY**, a state, India, in the N.E. of Rajpootana, situated between lat. 27° 4' and 28° 13' N.; lon. 76° 7' and 77° 14' E., and bounded N. by the British dist. Goorgaon, and the native state Kot Quasin, E. Goorgaon and Bhurtapore, S. Jeypoor, and W. Jeypoor and Jhujhur; length N. to S. about 80 m., and breadth about 65 m.; area, 3573 sq. m. The surface is generally elevated and rugged, one or more of the summits rising to a height of 2000 ft. above the sea. The general level, however, is at least 1000 ft. lower, and the far greater part of the drainage is carried into a valley watered by the Saubie Nullah, which flows N.N.E. and joins the Jumna. Though much of the territory is of an arid description, water is generally found on the plains by digging a little beneath the surface, and the means of irrigation being thus provided, the soil, though sandy, is highly productive. The inhabitants, known by the name of Mewatties, have long borne a bad name, but the influence of British rule, and the dread of punishment, are said to have had considerable effect in taming their predatory and turbulent disposition. Estimated pop. 280,000.

ALWUR, or **ULWAR**, cap. of above state, stands at the base of a rocky range of quartz and slate, 80 m. S.S.W.

Delhi. It is a place of no great size, surrounded by a mud wall, of which the gates only are flanked by bastions, and it is very poorly built. The only edifices worth notice are the rajah's palace, which is of a cubical form, and has its wall pierced with numerous small windows, and decorated with rude and glaring paintings; a pavilion of white marble, built by the late Rao Rajah, near a very deep tank which he had executed, and displaying no small degree of taste; and several Hindoo temples, in a style imitated from Mahometan structures. A fort, crowning the lofty mountain which overhangs the town, is highly ornamented, and serves the rajah both as a summer palace and as an asylum in times of danger.

AMAPALA, or **AMALAPA**, a seaport, Central America, Honduras, on the E. side of Tiger Island, in the Gulf of Fonseca. It is beautifully and advantageously situated on the mountain slope of the island, but very indifferently built. Its port, the best in that part of the Pacific, completely sheltered, and with ample depth of water, has made it the most important staple place of Honduras on the W. coast, and given it commercial relations with foreign places. Pop. not more than 1000.

AMARAKANTAK, a famous Hindoo shrine, dist. Ramghur, territory Saugor and Nerbudda, 120 m. S.E. Jubbulpore, on a mountain estimated at 3500 ft. above the sea. It is situated in a wild and almost pathless jungle, and though visited by large numbers of pilgrims, has never been thoroughly explored. The temple is said to be 40 ft. in height, and to contain a great number of images of Bhavani, or Parbati, the consort of Siva, who is worshipped here with great fervour. The rivers Nerbudda and Soane are said to rise in its vicinity.

AMARANTE, a vil. and par. Spain, Galicia, prov. and 7 m. from Orense. The church is ancient, but not otherwise remarkable, and the two schools are endowed. Pop. 1660, many of them muleteers.

AMAZOC, a tn. Mexico, state and about 12 m. S.S.E. Puebla, at a point where two important roads meet. It stands in a fertile district, and is a large and well-built place, with two fine churches, and manufactures of spurs and horse-bits, which are of excellent quality, and in general use throughout the country.

AMBÁ SAHALIAN, a vil. Chinese Tartary, Manchouria, r. bank Amoor, above the junction of the Zeya. It consists of a number of scattered houses, badly built of wood, rushes, and clay, but each provided with a garden with clusters of trees, among which are birches, elms, maples, acacias, and the *pyrus spectabilis*. The fields are sown with varieties of millet and Indian corn.

AMBACA, a tn. W. Africa, Portuguese settlements, prov. Angola, cap. dist. of same name, 140 m. E. by S. Loanda, about lat. 9° S., 15° 30' E. It is beautifully situated on an eminence in a plain surrounded on all sides by lofty mountains, and was once a place of importance, though it is now insignificant. The district, which has a pop. of upwards of 40,000, has a finely diversified surface, is wonderfully fertile, and rears great numbers of cattle, and all kinds of agricultural produce, at a cheap rate. About 12 m. to the N. of Ambaca, the Jesuits had a missionary station called Cabenda. They are still spoken of with veneration, and seem to deserve it, since the fruit of their labours is still apparent in the great number of persons within the district who can both read and write. Few of them can have been taught directly by the missionaries, and the account given is, that ever since their expulsion, the natives have continued to teach each other.

AMBALAPULLY, a tn. India, presid. Madras, dist. Travancore, situated between the Malabar coast and an extensive tract of cultivated ground, 37 m. S. by E. Cochín. Its chief attraction is its temple, a small, but neat and costly edifice, crowning an earthen mound, and having its inner apartment covered with plates of copper, and surmounted by three gilt spiral ornaments. Near it is another inclosure, containing numerous apartments for the Brahmins. Its annual festival draws great numbers of devotees from the surrounding country.

AMBÁLEMA, a tn. S. America, New Granada, l. bank Magdalena, in a romantic district, 60 m. W.N.W. Santa Fe de Bogota. Tobacco of the finest quality is cultivated to a great extent in its vicinity, and forms the chief source of its prosperity.

AMBAS, or **AMBOISES** [add.], bay, W. Africa, Gulf of Guinea, at foot of Camaroons mountains, which abut abruptly on it. It is a well sheltered harbour, open to the sea breeze, and capable of receiving the largest vessels, and of being made a most complete naval station. The land rises from the almost perpendicular cliffs which form the landward side, and attains an elevation of 5000 ft. within 5 m. of the shore. The E. and innermost recess, named Morton Cove, is completely landlocked towards the weather, and at the head of it is Victoria, the missionary station, on a broken uneven ledge, formed by alluvium from the mountains, and extending 1 or 2 m. in breadth. Opposite the mission-house are some scattered rocks, forming a natural breakwater, and easily convertible into a pier. Several small streams of pure water flow into and near Morton Cove, and the heights are covered with noble timber; stone and coralline in abundance furnish ample materials for building. It is the only point on the W. coast of Africa, N. of Cape Colony, where a European settlement could be established above the fever level, which is presumed to be 4000 ft. above the sea. The advantages its position offers are, besides its qualifications as a harbour, the rapid ascent to a temperate climate free from fever, a small and peaceable native population, a central position for all the trading ports on this coast, and a much needed sanitarium. The European could transact his business at the port during the day, and retire to the pure air of the high land at night. For these reasons it is said to be well adapted for colonization, and peculiarly so for a convict establishment, and to be likely to become the Singapore of W. Africa. In 1837, Billeh, chief of Bimbia, who claimed Ambas Bay and Island, is said to have conceded the best part of the country to Colonel Nicholls, for the British government, and in 1844 slavery was abolished by a treaty made with the king and his chiefs for a consideration. Victoria was settled in 1858 by missionaries and converts from Fernando Po, when Spain resumed its right to that island, and refused toleration to those not of the R. Catholic faith; the site, a coast length of 12 m. being purchased from the native chiefs for £2000.

AMBATO, a tn. S. America, Ecuador, cap. cant. same name, l. bank the Ambata, on a sandy arid plain, about 80 m. S. by W. Quito. It has straight and well-paved streets, good houses, substantially built, some of them of two stories, with gardens attached, and contains a parish church and several convents. Its manufactures of leather and leathern articles are in high repute, and form a considerable article of trade. Pop. 10,000.

AMBOOR, a tn. India, presid. and 120 m. W.S.W. Madras, dist. N. Arcot, near the E. hills of the Barramahal. It was once defended by a strong fort, crowning an adjoining height, and is a neat, well-built, stirring place, inhabited chiefly by active, enterprising Lubbay traders, who purchase the produce of the surrounding country, both above and below the Ghauts, and transport it to Madras. The staple articles of trade are castor-oil, which is largely manufactured within the town, ghee, tobacco, and indigo.

AMBROGIO, SAN, a tn. Austrian empire, Italy, prov. and 10 m. N.W. Verona, with 3155 inhabitants, a new church, with a beautiful tower, and excellent quarries of red and white marble.

AMBUIM, or **OMBE**, a territory, W. Africa, Benguela, between lat. 10° 40' and 11° 30' S., and lon. 14° and 15° E.; bounded N. by Quisama and Libolo, E. Kibala, S. Selles, and W. Sumbe; area about 3000 sq. m. It is divided into three distinct parts, each of them under a separate and independent chief. The surface is to some extent covered by the Hama mountains, but has several broad and fertile valleys, and is watered by three considerable streams—the Longa in the N., the Cuvo in the centre, and the Sumbe in the S. The principal agricultural products are manioc, maize, beans, gourds, and potatoes, and the trade is in ivory, wax, gum copal, and orchel. The inhabitants are charged with cannibalism. Pop. about 75,000.

AMEE, a river India, rising in dist. Goruckpore, lat. 27° 8' N.; lon. 82° 38' E., and flowing S.E. with a slow stream, and joined by the Burar or Budh, till about 70 m. from its source it expands into a lake. From this lake a branch stream flows round, and rejoins it, forming a triangular island, on which stands the town of Maguhar, near which the Anee is crossed by the road from Goruckpore to Lucknow. Con-

tinuing a S.E. course, it flows into the Rapti a few miles below Goruckpore, receiving throughout numerous small streams in this level alluvial district.

AMERICAN, a river, U. States, California, formed in the N. central part of the state by the junction of two forks—North Fork, rising at the foot of the Sierra Nevada, and flowing in a general W. S. W. direction for 100 m.; and South Fork, issuing from Bonpland Lake, El Dorado co., and flowing between that co. and Sacramento, W. S. W. and W. to its confluence with North Fork. These streams pass through the principal gold-mining districts, and the main river runs with a S. W. course into Sacramento river near the city of that name.

AMES, a vil. and par. Spain, Galicia, prov. and about 40 m. S. W. Coruña, with a modern church, a primary school, and several mills. Pop. 4604.

AMESBURY, a tn. U. States, Massachusetts, 40 m. N. Boston. It lies along the N. bank of the Merrimac, and contains 3585 inhabitants, the greater part of whom are employed in the manufacture of leather and leathern articles, carriages, flannel, and satin. The American poet, J. G. Whittier, was born here.

AMEZQUETA, a tn. Spain, Basque provinces, prov. Guipuzcoa, l. bank Oria, at the foot of Mount Aralar, 32 m. N. N. W. Pampeluna, about 200 m. N. N. E. Madrid. The copper mines, which once employed a great number of persons, are no longer worked. Pop. 1480.

AMHERST, an isl. British America, the largest of the Magdalen islands in the gulf of St. Lawrence, forms the S. W. extremity of the group, and is connected with Grindstone island, situated to the N., by a double line of sandbars, inclosing an extensive lagoon 5 or 6 m. long, and 1 to 3 m. wide. The hills of the interior rise to the height of 550 ft. Towards the S. E. a remarkable conical hill, called the Demoiselle, and composed of trap of a dark red colour, has a height of 280 ft. Amherst harbour, situated about 1 m. S. E. of this hill, and formed by a peninsula in the S. W. corner of Pleasant bay, besides having the advantage of an excellent roadstead outside, is the easiest of access and egress in the Magdalen islands. The depth over its bar, however, is only 7 ft. at low, and from 9 to 10 ft. at high water.

AMITE, a river, U. States, Mississippi and Louisiana, rises in the S. W. of the former, and flows through Amite co. into the latter with a S. course, and then E. into Lake Maurepas. Small steamboats navigate it for 60 m.

AMJERAH [add.], a petty rajpoot state and tn. India, Malwa, between lat. 22° 16' and 22° 47' N., lon. 74° 40' and 75° 15' E., and bounded N. E., E., and S. E. by Dhar, S. Dhar and dist. Baug, S. W. Allee, Rajpoot, and N. W. Jabooah; length N. E. to S. W. about 42 m.; breadth S. E. to N. W. about 33 m.; area 584 sq. m.; estimated pop. 57,232. It forms five talooks or small districts. The principal crop is opium, which is very extensively cultivated; the other staple crops are Indian corn, cotton, grain, sugar cane, jowary (*Holcus sorghum*), and bajra (*Holcus spicatus*).—The town, cap. of above state, 60 m. S. W. Oojein, stands in an extensive valley, open toward the N., but inclosed on all other sides by low hills, and is nearly 1900 ft. above the sea. It possesses good bazaars, which are fully supplied, and a fine tank, which furnishes abundance of water when the small stream which passes the town becomes dry. Number of houses, 500.

AMMONOOSUCK, two rivers, U. States, New Hampshire. The one, *Ammonoosuck, Lower*, rising near Mount Washington, in co. Coos, traverses a course of 110 m. and joins the Connecticut; the other, *Ammonoosuck, Upper*, also rises in co. Coos, and joins the Connecticut after a course of about 75 m.

AMOSKEAG, a vil. U. States, New Hampshire, at the falls of the Merrimac, close to Manchester, with which it is incorporated. It possesses several large cotton factories, in which above 4000 hands are employed.

AMOY [add.] This is the most accessible of all the ports in China open to foreign trade, for ships of large burden, either entering or departing. So easy is the navigation, according to the charts of the Royal Hydrographic department, that no pilot is necessary, so that it is optional for a shipmaster to employ native boatmen for that purpose. Perhaps it was from this facility of access that Amoy became the first Chinese port to trade with foreigners, who are stated in the records

of the country to have visited its harbour before the eighth century. In 1730 English and Portuguese ships frequented this emporium of the province of Fokien, or Foo-kèen, as it is pronounced by the inhabitants. According to an estimate made in 1860, the island of Amoy is 40 m. in circuit, having numerous fisher's hamlets scattered over it, containing an aggregate population of 115,000; while that of the city and suburbs was upwards of 210,000. The foreign residents are not more than 120, few of whom reside in the city, as the islet of Koolangsoo, less than 3 m. in circumference, and 700 yards wide, is more pleasantly and healthily situated, and has residences erected on the hill and along the shore; with docks 300 ft. long.

Since the formal opening of the port in 1844, and the establishment of British and other foreign consulates, the trade of Amoy gradually increased to 1860, with a considerable export of Ankoï, Oolung, and other black teas, chiefly in foreign vessels, and sugar, alum, rice, tobacco, and iron-ware; the imports comprising the usual descriptions of cotton manufactures and opium. A branch of the Foreign Inspectorate of Customs was established at this port under the regulations of the Treaty of Tientsin, ratified in 1860, from which correct returns of legitimate trade are obtained; but there is a good deal of contraband traffic carried on in native junks. According to the returns furnished in that year, the British trade was as follows:—Shipping inwards, 83,463 tons; value of imports, £1,153,705; exports, £795,956. Since that year the returns have shown a considerable decrease except in the aggregate tonnage—shipping inwards in 1862, 83,819 tons; imports, £713,143, and exports, £420,000. Besides this, the foreign trade in American and other vessels fell during the same period from 77,765 tons to 70,598, with a corresponding decrease of value in imports and exports, which cannot be exactly ascertained, on account of a large portion of this tonnage not being engaged specially in the trade of Amoy. In the year 1862 the whole number of arrivals comprised 484 square-rigged vessels, measuring 154,417 tons. Of the exports to Great Britain, tea forms almost the sole item, and for the season ended May 31, 1863, the quantity cleared at the customs was 2,135,000 lbs.—(*Custom Returns; Chinese Commercial Guide*.)

After the suppression of the Taiping rebellion in the northern provinces, by the capture of Nanking, the suicide of Hung Sin Isiuén, and the decapitation of the Chung Wang, a number of the rebels escaped to the province of Fokien, under the leadership of a chief calling himself the Sszo-Wang. Here they settled down within some 50 miles of Amoy about the close of 1854, and, by the judicious proclamations of regard for private property on the part of their chief, maintained a strong position in the surrounding country, with a view to the capture of Amoy, as an excellent seaport for supplies of munitions of war. The British consul visited this chief, who stated to him that the rights of all foreign residents would be respected; and in April, 1865, this remnant of the formidable Taiping armies was located near Amoy, with no prospect of being dislodged by foreign troops. The effect of this was to paralyze legitimate foreign trade; while there was a contraband traffic in arms and ammunition, chiefly from Shanghai, against which the governor of Hong-kong issued a proclamation.

AMPATA, or OMPTA, a tn. Bengal, dist. Hoogly, on river Damooda, 22 m. W. Calcutta. Large vessels ascend to it, and as it is the principal depôt for the coal brought down in boats from Burdwan and Bancoora, it is a place of importance.

AMPUERO, a tn. Spain, Old Castile, prov. and 20 m. S. E. Santander, 200 m. N. Madrid, on a mountain slope. It consists of houses built of stone, and covered with tiles, and has two churches, one of them a large structure of striking appearance, with rich internal decorations. Pop. 1301.

AMRAWUTTY, or AMARAVUTTY, a river, India, presid. Madras, which rises among the Annamullay or Dolly mountains, near the S. W. frontiers of Coimbatour, flows circuitously N. E., and after a course of about 140 m. joins the Cauvery on its r. bank, a little below Caroor.

AMREELI, or UMREYLE, a tn. India, Guicowar, peninsula Kattywar, on the Thobee, a tributary of the Setroonjee, which has its mouth on the W. shore of the gulf of Cambay, 130 m. S. W. Ahmedabad. It has a rather striking appear-

ance when approached, being surrounded by a strong wall, with large round towers, and consists of about 2000 houses, among which is the residence of the provincial governor. It appears prosperous, and is said to have greatly improved since the general protection of the British government was extended to the tributary vassals of the peninsula.

AMSCHELBERG, a tn. Austrian empire, Bohemia, circle Tabor, 28 m. S. by E. Prague. It contains 3718 inhabitants, and has manufactures of alcohol and leather, a brewery, an oil-press, and two mills.

AMURNATH, Cashmere, a natural cave in a rock of gypsum, in the Himalayan mountains, N.E. Cashmere. It is regarded by the Hindoos as the residence of their god Siva, and is therefore much frequented. Its dimensions are said to be 100 yards in width, 30 in height, and 500 in depth. Vast numbers of doves inhabit it, and are regarded with much superstition.

AMUSCO, a tn. Spain, Old Castile, prov. and 13 m. (by rail) N. Palencia, on a beautiful plain. It is a station on the Alar del Rey and Venta de Banos portion of the railway from Madrid to Santander. The houses are only of one story, and the streets, though wide, are ill-paved and dirty. The chief buildings are a very large church, with a lofty tower, a court-house, and hospital. The manufacture of horse-cloths is important. Pop. 1743.

AMWAS [anc. *Emmaus*], a vil. Palestine, between Yalo and the road leading to Jerusalem from the W. It stands on a declivity looking westward over the great plain sloping to the Mediterranean, and though a poor place, gives proof of its former importance in a fountain and the ruins of an ancient church, a fine structure of large hewn stones.

ANAA, or CHAIN ISLAND, an isl. S. Pacific, Feejee group, lat. 17° 14' S.; lon. 145° 23' W. It is 12 m. long, by 7½ m. broad, and contains about 5000 inhabitants, who are very dark, inclining to the Papuan type, and were once notorious cannibals, but have been professed Christians for the last twenty years. The island was first discovered by Captain Cook on 8th April, 1769.—(*Official Rep. on Cent. Polynesia*.)

ANANDPOOR, a tn. India, in the hill state Kubloor, on the tongue of land formed by a remarkable bend of the Sutlej, about 130 m. E. by S. Lahore. It stands at the base of the peak of Nina Devi, which rises about 3000 ft. above it, and more than 4000 ft. above the sea, and has a somewhat imposing, though rather sombre aspect; it contains several large brick buildings, with flat roofs and windowless walls.

ANANIEV, a tn. Russia, gov. Kherson, cap. circle of same name, with 4977 inhabitants, and two churches.

ANCHIALO, a tn. Turkey in Europe, W. shore Black Sea, in the S.E. of Bulgaria, with a harbour, which is much frequented by coasters, and carries on a considerable trade in wine and fish, chiefly mackerel. Pop. 4000.

ANCONA [add.], city and port, Italy, on Adriatic, 132 m. N.E. Rome, has increased in trade and vitality since the consolidation of the kingdom. Shops and houses of a higher class have replaced old ones, and building has gone on in every quarter. Railway communication is completed or in progress with Rome, Pescara, Foggia, &c. The growth of cotton, to which the soil and climate are well adapted, has been attempted in the neighbourhood, but with no great energy or success. The harbour has been materially improved by dredging and by the construction of a quay for the use of large vessels, and a line of steamers runs between this port and Alexandria. The imports in 1863 were:—British, value £196,520, and tonn. 83,650; foreign, value £317,119, and tonn. 112,326; total value £513,639, tonn. 195,976. Exports in 1863:—British, value £26,489, and tonn. 14,862; foreign, value £92,245, and tonn. 107,948; total value £118,734, tonn. 122,810.—(*Consular Report*, Jan. 1864.)

ANCUD, or SAN CARLOS, a seaport tn. Chili, on a creek or gulf of same name N. side isl. Chiloe, of which it is the cap.; lat. 41° 52' S.; lon. 73° 55' W. It occupies two heights and an intervening valley, and consists of houses generally of wood, small and with little appearance of comfort. The plaza, or public square, situated on a flat at the summit of the S. height, and commanding an extensive view, contains the best buildings, public and private. Among the former are the cathedral, the residence of the intendente, and the public offices. The harbour, though completely secure when

once entered, is rendered somewhat difficult of access by shoals and other obstacles. Ancud is a bishop's see. P. 3865.

ANDACOLLO, a tn. Chili, prov. and 30 m. S.S.E. Coquimbo, in a wild mountain district about 2500 ft. above sea-level. It is the seat of an important mining industry, and derives considerable advantage from the number of pilgrims who annually resort to it on account of an image of the Virgin which has the reputation of working miracles. Pop. 1583.

ANDAHUAYLAS, a city, Peru, cap. prov. same name, dep. Ayacucho; lat. 13° 44' S.; lon. 73° 40' W. It takes its name from a cordillera belonging to the mountain knot of Cuzco, the most considerable in the Andes, and has a population estimated at 19,184. To the prov. 31 vills. belong.

ANDALA, a tn. W. Africa, Benguela, territory Galangue, about lat. 13° 35' S.; lon. 17° 40' E. The inhabitants, estimated at 2500, have numerous herds of fine cattle, obtained chiefly by plunder in the lands of the south.

ANDORRA, a tn. Spain, Aragon, prov. and 50 m. Ternel, on the side of a hill, with commodious houses, generally of two stories, spacious paved and clean streets, two squares, and two fine fountains. The trade is in corn, wine, silk, wool, honey, and wax. Pop. 1600.

ANDRÁ (Sr.), a tn. Austrian empire, duchy Carinthia, on the Lavant, 27 m. N.E. Klagenfurt, with a beautiful cathedral and 1200 inhabitants.

ANDRES (SAN), a tn. Bolivia, prov. and 70 m. N.W. Oruro, with a large church surmounted by a dome. Immediately adjoining is an extensive building, which occupies three sides of a square, and serves alike for townhouse and hotel.

ANDRICHAU, a tn. Austrian empire, Galicia, circle Wadowice, cap. dist. of same name, in a beautiful district, 30 m. S.W. Cracow, with 2677 inhabitants, a fine baronial castle, manufactures of woollen and linen cloth, a walk-mill, and important weekly markets.

ANDROS [add.], an isl. West Indies, one of the largest of the Bahamas, situated not far from the E. entrance of the gulf of Florida, and forming the W. side of what is called the Tongue of the Ocean. It is 90 m. long from N.N.W. to S.S.E., and varies in breadth from 40 m. near its centre to 20 m. in the S. and only 10 m. at its N. extremity. On the E. it is skirted by a narrow ridge from 70 to 100 ft. high, but is generally low and swampy, especially on the W. shore, which is composed of a slimy mud like pipe-clay, and so little above sea-level that in N.W. gales it is overflowed to a considerable distance inland. It is well wooded, but little cultivated; its few inhabitants, who have their chief settlement at Red Bay, near its N.W. end, employing themselves in collecting sponge, which is found in large quantities, and in shipping the wood which is floated down from the lagoons in the interior.

ANDROSCOGGIN, a river, U. States, which, issuing from Lake Umbagog, in co. Coos, New Hampshire, flows first E. then S. into Maine, and joins the Kennebec about 18 m. above its mouth in the Atlantic, after a course of about 150 m. The tide ascends about 35 m. above the point of junction.

ANDUJERD, a vil. Persia, prov. and 40 m. E. Kerman, about lat. 29° 47' N.; lon. 57° E. It is defended by a castle, situated at some distance from it on a lofty hill, and was a flourishing place till the extortions of the governor reduced the inhabitants to poverty. It has groves of palm, orange, and lemon trees, and the finest henna of Persia is grown in its vicinity.—(*Jour. Roy. Geog. Soc.* vol. xxv. p. 36.)

ANDULO, a territory, W. Africa, Kimbunda country, between lat. 9° 40' and 11° 10' S.; lon. 16° 50' and 17° 40' E.; bounded N. by Malemba, a dependency of Bailundo; E. Massongho or Kissendi; S. Bihé; and W. Bailundo. Area about 2400 sq. m.; pop. 40,000. In physical features it strongly resembles Massongho, which bounds it on the E., consisting of gently undulating plains alternating with dense forests and grassy prairies. Its chief river is the Bale, which, descending from the Bulum Bulu steppe, flows N. to the Kulatu, a principal affluent of the Coanza. The inhabitants, who are peaceable and industrious, cultivate the soil and carry on a considerable trade, chiefly in wax, and, to a less extent, in ivory. The prince, though nominally absolute as to his internal administration, is tributary to Bailundo.

ANGEY KYOUNG, a long narrow isl. Hunter's Bay, Arracan, lat. 20° N.; lon. 93° 10' E. It is about 20 m. long, 3 m. broad, rugged, and uninhabited.

ANGIAMA, a tn. W. Africa, dist. Oru, l. bank Kwara, about 30 m. above its mouth. It is the largest place belonging to the Waree tribe, and has a melancholy interest attached to it as the place where the traveller Lander was mortally wounded. It is much frequented by the Benin palm-oil traders.

ANGOSTA, or ANGOXA [add.], a tn. and territory, E. Africa, Mozambique. The town, 12 m. above the mouth of a river of same name, lat. 16° S., lon. 39° 45' E., consists of a number of small houses, partly of wood and partly of stone, and thatched with palm leaves. The inhabitants, about 1000, mostly Arabs, carry on a considerable trade with Zanzibar, Melinda, and Mombas. The principal articles are oil of sesame, much used as a substitute for olive-oil, ivory, ebony, gum copal, coir and ground nuts, cocoa-nut oil, and orchil.—The territory, governed by an independent prince, has a sea-board of 90 m. between the month of the Antonio on the N. and that of the Quizans, or Mome, on the S. coast, and extends a considerable distance inland, chiefly along the banks of the river Angoxa, which is said to have its source in a large lake, and to be navigable for 180 m.

ANGUIANO, a tn. Spain, Old Castile, prov. and 20 m. S. W. Logroño, 132 m. N.N.E. Madrid, at the foot of a mountain called Cameros Altos, and crowned by the ruins of an old monastery. It is traversed by the Nayerilla, is indifferently built, and has a copious and beautiful fountain. The trade is in wool and grain. Pop. 1020.

ANHIM, a tn. Siam, on the E. shore of the N.W. arm of the gulf of Siam; lat. 13° 21' N.; lon. 100° 55' E. Its salubrity has made it famous as a watering-place and sanatorium for Europeans and Americans suffering from the prevalent diseases of Bangkok. The first king of Siam and his court spend some time here every year, and houses have been built for their accommodation. Many of the inhabitants are employed in catching and curing fish for the market at Bangkok. Between Anhim and Bangpasoi there are extensive rice-fields.

ANINON, a vil. Spain, Aragon, prov. and 48 m. Saragossa, at the extremity of a small mountain. It consists generally of mud houses plastered over and placed in various squares and narrow unpaved streets, and has several fountains, manufactures of linen, and distilleries. Pop. 1700.

ANJENGO, a tn. India, presid. Madras, Travancore, on a narrow strip of land between the Malabar coast and an extensive lagoon or backwater, 92 m. S. by W. Cochin, 390 m. S.W. Madras. It consists of a town, composed chiefly of two parallel rows of houses, and of an old fort, situated at its S.E. extremity. At the opposite extremity there is a R. Catholic church; most of the inhabitants, descendants of the Portuguese or native converts, professing that form of Christianity. They are generally poor, and live by fishing or manufacturing cordage of coir or cocoa-nut fibre. There is no proper harbour, and ships visiting the place must anchor two miles off in an exposed roadstead. The E. India Company had long a factory here.

ANNABERG, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on a considerable eminence, 50 m. S. W. Vienna. It contains 1480 inhabitants, and has a church to which pilgrimages are made, ironworks, quarries of gypsum, and mines of coal and antimony.

ANNAMULLAY, a mountain-range, India, presid. Madras, in the S. and S.W. of dist. Coimbatore. The mountains attain their greatest height toward the E., where they are said to be nearly as high as the Neilgherries, or about 6000 ft. above sea-level. They are covered with magnificent teak forests, which are systematically worked, on account of government, for the purpose of supplying the Bombay dockyard and the gun-carriage manufactories in Bombay and Madras. The timber is first conveyed in carts to the brow of the Ghauts, about 7 m. distant, and then let down by a slide. What is intended for Bombay is carted for 40 m. farther to Mungara, near Palghaut, on the Madras railway, and afterwards floated down the Ponany to the W. coast; what is intended for Madras is carted to Yangul, near Caroor, and floated to the E. coast by the Cauvery.

ANN ARBOR, a city, U. States, Michigan, cap. Wash-

ternaw co., on Huron river and Michigan Central railroad, 40 m. W. Detroit. It is well-built in a pleasant and healthy situation, and has a flourishing university. The district is agricultural, and has an active trade. Pop. (1850) 4868.

ANOOPSHUHUR, a tn. India, N.W. Provinces, dist. Boolundoosur, 70 m. E.S.E. Delhi, r. bank Ganges, the channel of which is here 1 m. wide, though not more than a fifth of this space is filled in the dry season. The town is both surrounded by a mud wall 20 to 30 ft. thick and defended by a large brick fort; and at the N. end is the large antique palace of the zemindar. The houses, either of mud or ill-cemented brick, are poorly built. Pop. 8947.

ANOVER DE TAJO, a tn. Spain, New Castile, prov. and 11 m. from Toledo, on a considerable eminence, with houses of regular construction, a parish church with a very ancient tower, and manufactures of earthenware, saltpetre, and fine plaster.

ANSO, a tn. Spain, Aragon, prov. and 59 m. from Huesca, l. bank Veral, on a plain surrounded by mountains. It is tolerably built and excellently paved, and has manufactures of linens and woollen stuffs and a trade in wool. Pop. 1416.

ANTAL (SZENT), a tn. Austrian empire, Hungary, co. Honth, 6 m. S.E. Schemnitz, with 1300 R. Catholic inhabitants, an imposing castle situated on an eminence, and a trade in wood, obtained from the large oak and pine forests of the district.

ANTANANARIVO. See TANANARIVO.

ANTHONY (Sr.), a tn. U. States, Minnesota, l. bank Mississippi, near the celebrated falls of same name, 8 m. N.N.W. St. Paul. It stands at the head of navigation of the river, contains 3258 inhabitants, and has a state college and a number of saw-mills and manufacturing establishments. St. Anthony city, which is a mere village, adjoins it on the S.; and Minneapolis, which in 1860 had a pop. of 2564, is immediately opposite to it on the r. bank of the river.

ANTICOSTI [add.], an isl. British America, in the N.E. entrance of the St. Lawrence; has a length from W.N.W. to E.S.E. of 122 m., a breadth of 30 m., and a circuit of about 270 m. Its shores are everywhere bordered with rocks of secondary limestone, and do not furnish a single good harbour. This want of anchorage, coupled with the frequency of fogs, makes the navigation dangerous. On and near the coasts the limestone is covered with a thick and often impenetrable forest of dwarf spruce firs, which sometimes, in exposed situations, are only a few ft. high, and so twisted and matted that it would be possible to walk some distance on their tops. The surface of the island is nowhere higher than 700 ft. above the sea. The S. coast is generally low and shelving, with limestone reefs which dry at low water; the N. coast, for about 80 m. from its E. extremity, is bold and precipitous, presenting picturesque headlands and cliffs which have upwards of 400 ft. of perpendicular height. The rest of the N. coast is low, like the S. The interior of the island is little known, but is probably less sterile than the coasts, as white spruce large enough for the mast of a schooner of 60 tons, and a species of larch called juniper, of sufficient size to form a schooner's keel, have been seen upon it. Land birds are very scarce, and the quadrupeds are confined to four or five species—the black bear, fox, otter, marten, and a few mice. The climate being insular, seems not to be more severe in winter than that of Quebec; but the summer is cold, foggy, rainy, and stormy. Of its agricultural capabilities little is known, the only attempts at cultivation being at Gamache bay, South-west point, and Heath point, the latter being exposed places. Potatoes, pease, barley, and oats have been grown successfully; and at South-west point cattle have been kept in good condition.

Gamache or Ellis bay, about 8½ m. from W. end of lighthouse on the S. side, and Fox bay, 15 m. from Heath point lighthouse on the N. side, are the only harbours that are comparatively safe. They might be connected by a road, 120 m. long, over a regular and tolerably level surface, thus opening the whole interior of the island. Along the low lands of the S. coast is a continuous peat plain, extending upwards of 80 m., and 2 m. broad, with a thickness of peat from 3 to 10 ft.; and along this coast lies an immense quantity of timber, drifted from the rivers of the mainland.

From the water alone is it possible to obtain any profitable return for industry. The streams, which are numerous

though too small to admit boats, generally abound with trout, and are periodically visited by great numbers of salmon, which are taken by the two or three resident families and salted for the Quebec market. Seals frequent the limestone reefs, and cod are taken occasionally off several parts of the coast in small schooners, the crews of which often join the occupation of wreckers to that of fishermen. They come from the Magdalen islands and other parts of the gulf. Three lighthouses have been erected on Anticosti—one on Heath point, at its E. extremity, another on the S.W., and the third on the W. point. The first two are built of a beautiful enclinal limestone, quarried on the spot, and the other of stone faced with fire-brick. They are all visible at the distance of 15 m. The only resident inhabitants of the island are the people who have charge of the lighthouses and provision posts.

ANTIETAM, a creek, U. States, rises in S. part of Pennsylvania, and, flowing S. into Maryland, falls into the Potomac about 50 m. N.W. Washington. On Sept. 17, 1862, a great battle was fought upon it, near Sharpsburg, between the Confederate army under General Lee and the Federals under General McClellan, each army numbering about 100,000 men. The engagement lasted with great determination and fury from daylight till dark without any decisive result; but during the night the Confederates withdrew, and recrossed the Potomac. The losses were about 14,000 on each side.

ANTIGUA (LA), a tn. Fuerteventura, one of the Canary Isles, on a spacious plain near its centre, consists of about 470 houses, and has linen and woollen manufactures. The chief products are wheat, barley, millet, barilla, cochineal, potatoes, and cotton. Pop. 1780.

ANTIPODES [add.], a group of isls. to the S.E. of New Zealand, near the boundary between the S. Pacific and the S. Polar or Antarctic Oceans. The name was formerly given to a single isl., which was supposed to be the land in the S. hemisphere which, in respect of latitude and longitude, corresponded most exactly with those of Greenwich in the N. hemisphere, and was believed to be situated in lat. 49° 40' S., lon. 179° 42' E.; in other words, differed from the true antipodes only by a deficiency of 1° 48' 6" in latitude, and of 0° 18' in longitude. The locality was visited in 1846 by Captain Darley, and in 1859 by Captain Stevenson, who both found, not a single island, but a group. According to Captain Darley, the group consists of a principal island about 15 m. in circuit, surrounded by six or seven minor islands. Of the principal island, which he proposed to call Penantipodes, he made the lat. 49° 40' S., and the lon. 178° 40' E., thus leaving the latitude exactly as before, but increasing the deficiency of longitude; making it, not 0° 18' as was formerly supposed, but 1° 20'. Captain Stevenson entirely agrees with him in regard to this increase of longitude, but counts only four islands in the group, which, according to him, lies nearly due N. and S., and extends over an area of 4½ sq. m. The islands seem to have a maximum height of about 600 ft., and are of a somewhat forbidding aspect.

ANTOLIN, two places, Spain, Asturias:—1, *Antolin (San)*, a vil. and par. prov. and W. from Oviedo, on the *Ibias*, which is here crossed by a wooden bridge. Its monthly market for corn and farm-produce is important. Pop. 3600.—2, *Antolin de Villanueva (San)*, a vil. and par. prov. and 40 m. W.N.W. Oviedo, stands on an open plain on the *Navia*, near its mouth in the Bay of Biscay. Pop. 2500, many of them fishermen.

ANTON (Štr.), a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on the *Jesnitz*, 55 m. S.W. Vienna. It contains 1622 inhabitants, and has manufactures of nails and cast-iron pipes, an oil-press, several saw-mills, and a seam of lignite, which is worked to a considerable extent.

ANTONIO (SAN), a tn. Spain, isl. of *Ivica*, on a bay on the W. coast which forms a large but imperfectly sheltered harbour. It is defended by a strong tower, and has a large and substantial church of regular architecture, and some trade in farm-produce and charcoal. Pop. 3539.

ANTONIO (SAN), a tn. Central America, Honduras, lat. 14° 26' N.; lon. 87° 20' W.; curiously built on a steep mountain-ridge of same name, which terminates the magnificent valley of the *Yeguaré*, on the road from *Comayagua* to *Teguicigalpa*. It has a handsome church, and in its immediate vicinity are silver mines, which are the oldest, and were

at one time considered to be the richest, in the country. Pop. about 1200.

ANTREE, a tn. IndiaScindia's Dominions, at the S. entrance of a rocky ravine, 8 m. S.E. Gwalior. It appears to have been once a handsome place, defended by a fort with four strong towers, but is now very much decayed. Salt is manufactured here by washing the saline earth in the vicinity.

ANTWERP [add.], the principal port of Belgium. It has in recent times made considerable advances both in general trade and in population. The steady increase in the number and tonnage of the vessels entering the port, as shown in the subjoined table, is a satisfactory evidence of the progress of trade:—

	No. Entered	Tonnage.	Aver. Tonn.
1832,	1164	129,607	117
1843,	1301	269,281	161
1853,	1811	335,817	185
1856,	1920	439,915	229

The more recent state of the vessels entered and cleared, and the exports and imports is as follows:—

	Entered Tonnage.	Cleared Tonnage.	Value of Imports by sea.	Value of Belg. Expts. by sea.
1861,	2517	612,002	2521	619,150
1862,	2128	557,090	2145	558,950
1863,	2337	576,337	2405	585,520

Fully a third part of the vessels that enter the port of Antwerp are under the flag Great Britain.

The chief imports are flees, cotton, and wool, in all of which there has been a considerable increase in recent years; and besides these, coals, seeds, hides, sugar, tobacco, and wines figure for large amounts. The principal exports are coals, iron wrought and cast, glass manufactures, grain, and firearms.

Antwerp is one of the most important entrepôts for hides and wool from the river *Rte*. It has extensive refineries of colonial sugar, and manufactures of cigars, silk, and candles, and in addition several shipbuilding-yards, including one for iron-vessels. The pop. had increased in 1862 to 117,324.

ANUNG-HOY, an isl. China, in the entrance to Canton river, near the *Boca Tegu*. It has a peak which rises to the height of 1500 ft., immediately in front of which the principal fortifications for defending the strait are erected.

ANYISHI, a vil. W. Africa, dist. Kororofa, l. bank *Benuwe*, picturesquely seated at the top of a cliff; lat. 7° 48' N.; lon. 9° 5' E. Among the huts are many papaw trees and croton bushes; and immediately around, numerous cultivated patches of maize and *Dawa* corn. Anyishi, recently founded by a tribe driven from their former seat, *Sundubé*, is subject to *Wukari*.

ANZUOLA, a tn. Spain, Basque Provinces, prov. Guipuzcoa, on the high-road from Madrid to France, 20 m. Tolosa. It stands on a flat surrounded by mountains, and consists of four streets and two squares. It has two churches, one of which, of very ancient date, belonged to the Templars. The industrial establishments are tanneries and flour-mills, and a number of looms are employed in weaving a kind of cloth which is made of flax at goat's hair, and in large demand in the neighbouring districts. Pop. 1800.

AOM, a river, Sibex, Manchooria, which rises in the *Khotski* mountains, flows W., and joins the *Usari* on its r. bank, after a course of 15 m., in lat. 47° 30' N.; lon. 135° E.

APANECA, volcanoid Indian vil. Central America, San Salvador. The vil. which is situated 40 m. W. San Salvador, at the N. foot of the extinct volcano, possesses little interest. But the volcano of *Apaneca*, which rises 5530 ft. above the sea, presents some remarkable features. Its crater, which is nearly three quarters of a mile in diameter and comparatively shallow, is partly occupied by a lake frequented by large numbers of ducks and other wild fowl, and partly covered with green pastures, on which herds of cattle are fed. The Indians, to whom these belong, have fixed their huts within the same locality and thus converted what is usually a solitude into a beautiful landscape. The lake of the crater is, from its appearance called the *Laguna verde*, and is nowhere above 12 ft. deep; but there is a second crater, which partakes more of its form which craters usually exhibit—displaying much wild features, and inclosing within its precipitous sides a lake called *Lagunita*, which is in some parts so deep that no beam has been found.

APARRI, a tn. Philippine isles, Luzon, prov. Cagayan, l. bank river of same name, at its mouth on the N. coast, lat. $18^{\circ} 23' 7''$ N.; lon. $121^{\circ} 13'$ E. It contains about 5000 inhabitants, no live in houses composed of frail materials. Some of the public buildings, however, are substantial; and the harbour, the only one on the N. shore of the island, is not devoid of importance.

APATKLVÁ, a tn. Austrian empire, Hungary, co. Bekes-Csant in a fertile dist. on the Muros, 16 m. E.S.E. Szegedin, 14 m. S.E. Pesth. It contains 4079 inhabitants, who trade in all kinds of agricultural produce and a good wine.

APATKLVÁ, a tn. Austrian empire, Hungary, co. Borsod, 20 m. W.S.W. Miskolcz, with 1300 inhabitants, a flour and paper-mill, lime-kilns, and a stone-quarry. On the rocky hill of Belaberg, in the vicinity, there is a cavern, from which autumn issues a vapour that takes fire when a light is applied to it. At the foot of the same hill are thermal springs.

APATKLVÁ, a tn. Austrian empire, Hungary, co. Tolna, about 7 m. S.W. Szegsard, with 1190 inhabitants; glass-works and stone-quarries.

APÉ HILL, or **TAUKAU**, Chinese empire, on the S.W. coast of the I. of Formosa, lat. $22^{\circ} 38' 3''$ N.; lon. $120^{\circ} 16' 30''$ E., appars, on a N. and S. bearing, like a truncated cone sloping toward the land, and looks at a distance like an island. It rises to the height of 1110 ft., and though of a shape which indicates a volcanic origin, is one vast block of coral, with no traces whatever of igneous agency. As the coast is here very low, the Hill, from standing out prominently, and being often distinctly visible when everything else is shrouded in mist, furnishes a most useful landmark. A huge level block, which juts out about 300 yards from its S. side, and is separated from it by a deep chasm 50 fathoms wide, forms the little port of Ta-kan-ko.

APPLETON, or **GRANDE CHUTE**, a vil. U. States, Wisconsin, cap. of Outagamie, on the Neenah or Fox, 30 m. above its mouth in Green bay, and 4 m. from the point where it issues from Lake Winnebago. The rapids of Grande Chute, in its vicinity, making a descent of about 30 ft. in a mile and a half, furnish immense water-power, while, by means of dams and canals on the Fox and the Wisconsin, a continuous navigable communication has been established along the course between Lake Michigan and the Mississippi. Appleton, availing itself of these advantages, has risen in importance, and in 1855 a pop. of 4474.

APPOMTOX, a river, N. America, U. States, Virginia, which rises in a mountainous district near the centre of the state, flows circuitously E.S.E.; joins the James at City Point. Flowing in a narrow deep channel, it is navigable by vessels of 10 tons to Petersburg, 20 m. above its mouth; and by means of a canal which avoids the falls at the latter place, may be navigated by boats carrying 4 or 5 tons for 80 m. further. It was the scene of many of the military operations of the civil war, especially during the siege of Petersburg and Richmond, in 1864-65.

ARABAT, or **TONKA**, an isthmus or tongue of land, Russia, off the E. of the Crimea, washed on its W. side by the Sivachev Putrid Sea, and its E. by the Sea of Azof. It is separated from the mainland on the N. by the Genitchi or Tonkoi Strait, and stretches continuously for about 70 m. between N.W. and S.S.E., to the town of Arabat. It consists of a low bank, with an average width of not more than 1 m., though it widens out towards the N. at two places, the more S. of which contains the fresh-water lake of Presnoe, and the more N. the salt-water lake of Genitchi. The shore of its E. side nearly an unbroken line of sand, but that of its W. side which is irregularly shaped, and very much serrated, is chiefly composed of vegetable earth. The depth of water on the E. side, about 1 m. off the shore, is from 14 ft. to 22 ft., with a bottom of sand and shells. A road has been carried along the whole line of the isthmus.

ARAKLVÁ, a tn. Greece, nomarch Phthiotis and Phokis, near the W. frontiers of Attika and Bœotia, 70 m. N.W. Athen. It stands in a mountainous district, at the height of 300 ft. above the sea, and has in its vicinity, at the foot of Mount Liakhura, a remarkable cavern, 330 ft. long by 200 ft. broad, full of beautiful stalactites and stalagmites and capable of containing 3000 persons.

ARANAZ, a tn. Spain, prov. Navarre, dist. and 23 m. from Pampeluna, on a height surrounded by lofty mountains; with a parish church, primary school, townhouse and prison; manufactures of linen, several flour-mills, and a trade in charcoal and timber. Pop. 1349.

ARANDA, a tn. Spain, Aragon, prov. and 40 m. W.S.W. Saragossa, 137 m. N.E. Madrid, on a height above a river of same name. It consists of two distinct portions, one crowning the height, and evidently of Moorish origin, and the other on the slope below, of comparatively modern date. The manufactures are confined to some ordinary linens; the trade, consisting of hardware, clothing, and foreign articles, is chiefly carried on at the large annual fair. Pop. 1360.

ARANGA, a vil. and par. Spain, Galicia, prov. and 20 m. S.E. Coruña, on a height above the Mandeo, with 1500 inhabitants, mostly engaged in agriculture or in making charcoal.

ARANYOS (MEDGYES), a tn. Austrian empire, Hungary, co. Szathmar, 16 m. E. Szathmar Nemethi, with 2229 inhabitants, and an old castle.

ARAUCO, a tn. S. America, Chili, prov. and cap. dep. of same name, on the S. shore of Arauco bay, 35 m. S.S.W. Concepcion. It was once a place of importance, and figured much in the early history of S. America, but is now only a small square fort, or rather inclosure of earth, about 300 yards square, within which the white population find a refuge when attacked by the Indians. The bay, in the entrance of which lies the island of Santa Maria, is of large extent, having a breadth of 15 and a depth of 18 m. On its E. shore good steaming but quick-consuming coal is worked, and shipped to some extent at Lota, immediately N. of Colcura.

ARAWAN, a tn. Western Africa, cap. dist. Azawad, 115 m. N.N.W. Timbuctoo. It has a pop. not exceeding 1500, but is of great commercial importance, being a principal entrepôt for the gold-dust which is brought from the interior of the continent. Hence much of its general business is transacted by means of this precious metal, and the inconveniences of barter are avoided.

ARAYAT, a tn. Philippine Isles, Luzon, prov. and on both sides of river Pampanga. It occupies a beautiful and healthy site on the S. slope of a volcanic mountain of same name, from the summit of which a fine view is obtained of the town and shipping of Manilla. The spacious lake of Buracan, in the vicinity, abounds with fish. Pop. 7765.

ARBA, a tn. Algeria, prov. and 10 m. S. by E. Algiers, near the foot of Little Atlas. It was founded by the French in 1849, and has made great progress. Iron and copperas exist in the district. The Arab weekly market is important.

ARBE [add.], a tn. Austrian empire, Dalmatia, circle Zara, on the isl. of same name, in the strait of Quarnero, and off the W. coast of Croatia. It stands on a height at the outlet of a valley, is surrounded with walls with two gates; consists partly of very ancient houses; was, under the Venetians, a bishop's see, and has still an ancient cathedral, a Benedictine and a Franciscan monastery, and a tolerable harbour. Large quantities of salt are made in the vicinity. Pop. 1000.

ARBECA, a tn. Spain, Catalonia, prov. and 14 m. from Lerida, on the side of a hill crowned by a feudal castle, with walls and towers in good condition, having been restored. It is regularly built, and has flour and oil mills, and a large trade, chiefly in oil and corn. Pop. 1900.

ARBO, a vil. and par. Spain, Galicia, prov. and 22 m. from Pontevedra, on a plain sloping gently to the Miño; with several flour-mills, manufactures of linen, and a considerable trade in wine. Pop. 3422.

ARBOS, a tn. Spain, Catalonia, prov. and 20 m. E.N.E. Tarragona, on a height above r. bank Foix, commanding a view of the Mediterranean. It consists of regular houses on a somewhat uneven site, and has a magnificent parish church. The manufactures consist of linen, blond lace, and brandy, and there are two important annual fairs. This place was wantonly burned by the French in 1808.

ARCADIA, or **ΚΥΡΑΡΙΣΣΙΑ**, a tn. Greece, Morea, nomarch Messenia, on a steep slope of the mountains which border the gulf of Arcadia on the S. It has a Hellenist and a parish school, a justice of peace court, and a custom-house, and contains 2400 inhabitants.

ARCALLANA, a vil. and par. Spain, Asturias, prov.

and 25 m. N.W. Oviedo, in a mountainous district, not far from the bay of Biscay. It has manufactures of woollens, and fulling and other mills. Pop. 1496.

ARCHIBALD, a vil. U. States, Pennsylvania, Luzerne co., on Lackawanna river, and Delaware and Hudson railway. Rich coal-mines exist in the vicinity, and the iron trade is carried on extensively. Pop. 1500.

ARDATOV, a tn. Russia, gov. and 78 m. S.S.W. Nijnei-Novgorod, cap. circle of same name, on the Lemet. It contains 5751 inhabitants, and has three churches. Within the circle, castings, chemicals, and woollens are extensively made, and beet-root for sugar is cultivated.

ARDEBAL, a dist. Persia, prov. and about 150 m. S.W. Kerman. It is situated to the S. of Kum, to the government of which it is at present attached, and contains seven villages, as well as a great many *mezrah* or detached cultivated lands. It yields a revenue of 20,000 *tomans* (£10,000), partly in money and partly in kind. The principal productions are barley and wheat, rice, cotton, sesame, palma Christi, inferior tobacco, a little good opium, and various fruits, particularly melons of superior quality.

ARDRAH, or ALLADA [add.], a tn. W. Africa, Dahomey, 22 m. N. Whydah, anciently cap. of kingdom of same name; became subject to Dahomey by conquest, by Agaja the king, in 1724. The town, then said to be 9 m. round, is now no more than a large village and market. Pop. 4000, or perhaps much less.

ARENAL (EL), a tn. Spain, Old Castile, prov. and 25 m. from Avila, on a plain watered by a river of same name. It consists of good houses in very irregular and ill-paved streets, and has oil and flour mills, and a trade in fruit and vegetables. Pop. 1343.

ARENAS, Spain:—1. *Arenas del Rey*, or *de Alhama*, a vil. Andalusia, prov. and 15 m. S.S.W. Granada, on a slope at the foot of a mountain. There is a thermal spring here, but the water is of bad quality. Pop. 1280.—2. *Arenas de San Juan*, a tn. New Castile, prov. and 20 m. E.N.E. Ciudad Real. It is regularly built, and has a very ancient church, said to have once belonged to the Templars. Pop. 770.—3. A tn. Old Castile, prov. and 35 m. S.E. Avila, picturesquely situated in a hollow surrounded by lofty hills. It is built in regular well-paved streets. It has a very ancient church with a tower, and the manufactures are crockery, hats, copperware, paint, and linens. Pop. 1548.—4. *Arenas de Velez*, a tn. Andalusia, prov. and 15 m. N.E. Malaga, surrounded on all sides by lofty heights. It is poorly built in winding unpaved streets, and has an oil-mill and two distilleries, and some trade in fruit. Pop. 1390.

ARENYS DE MUNT, a tn. Spain, Catalonia, prov. and 22 m. (by rail) N.E. Barcelona, within a short distance of the sea, with well-built houses, spacious, well-paved, and clean streets, a large church with a tower and richly decorated altars, several fountains of excellent water; manufactures of casks and wooden ware, and a trade in wine of good quality. It is a principal station on the Barcelona and Gerona railway. Pop. 1233.

ARGANZA, a tn. Spain, Leon, prov. and 45 m. W. Leon, 200 m. N.W. Madrid, in a somewhat unhealthy valley, with a ruined palace, and linen and woollen manufactures. Pop. 1750.

ARGAUM, a vil. India, Nizam's dominions, near the N. frontier, 40 m. W.S.W. Ellichpoor, memorable for the victory gained in its vicinity on the 28th November, 1803, by the Duke of Wellington, then General Wellesley, over the combined Mahratta force.

ARGENTONA, a vil. Spain, prov. and 24 m. from Barcelona, in a pleasant valley, on a stream of same name, within 2 m. of the sea. It consists of houses of a single story, and has a massive Gothic church with a lofty tower, and manufactures of cotton and blond lace, three spinning and five flour-mills. Pop. 1630.

ARISPE [add.], a tn. Mexico, prov. Sonora, in a fertile valley on the Sonora river, at the foot of the Sierra Madre, 60 m. N.N.E. Ures; lat. 30° 30' N.; lon. 109° 50' W. It was once the cap. of the prov., and had a pop. bordering on 7000, but, in consequence of political changes, lost all its importance, and does not now contain above 1500 inhabitants. It is still, however, possessed of a church, which has not only a handsome exterior, but many rich internal decorations. Its

altar is said to be covered with massive plates of embossed silver.

ARIZONA, a territory, U. States, formed from that part of the old territory of New Mexico lying W. of lat. 109° W., and bounded S. by Mexico, W. by Colorado river and California, and N. by Utah and Nevada. Area estimated at 130,800 sq. m. The surface is generally mountainous, but many fertile and well-watered valleys lie between the ridges. The existence of gold-bearing districts has long been known; but in 1863 the great mineral wealth of the territory began to attract attention, and subsequent explorations have confirmed the belief of its vast richness in deposits of the precious metals, equal to any in the mining regions of the great plateau between the Rocky Mountains and the Sierra Nevada. The rich silver-mines of Nevada on the N., of Sonora on the S., which latter have been traced into and successfully worked in the S. part of the territory, recent discoveries in the valleys of the Upper Colorado and its tributaries, and in western New Mexico and eastern Arizona, all point to this territory as the grand centre of the immense mineral deposits of this region.—(*U. S. Commission.*) The gold-fields are generally described as well supplied with timber, water, and grass. The capital is Tucson. The territory was organized, with the usual government administration, in February, 1863. White population roughly estimated at 20,000; Indian, 50,000.

ARIZCUN, a vil. Spain, prov. Navarre, on an eminence open to all winds, 23 m. Pampeluna. It is well built, and has a parish church, with a beautiful façade and very large porch, and the ancient palace of Ursua, of which many strange and terrible legends are current. Pop. 1253.

ARJISH, a tn. European Turkey, Walachia, circle and on river same name. It is the see of a bishop, and has an ecclesiastical seminary, and the most remarkable church and the finest monastery in Walachia. Pop. 2700.

ARKANSAS POST, a vil. U. States, Arkansas, cap. co. same name, 1. bank Arkansas river, 50 m. from its junction with the Mississippi. It was founded by the French in 1685, and has several stores, and a landing for steamers. It was captured from the Confederates in December, 1862, by Gen. Grant, with the assistance of gunboats, and a large number of prisoners and quantities of military stores were taken at the same time.

ARLESEGA, a tn. Austrian Italy, prov. and 9 m. W.N.W. Padua, on the railway to Milan, with a parish church and a Conturine villa.

ARMEGON, a vil. India, presid. Madras, on the coast, 66 m. N. Madras. A factory was established here in 1628, being one of the earliest settlements of the E. I. Company in the Carnatic.

ARMILLA, a vil. Spain, Andalusia, prov. and 2 m. Granada, on a plain 1. bank Genil, with ill-built earthen houses, forming a single street along the highroad from Granada; manufactures of linen, hemp, and flax. Pop. 1332.

ARNI, a tn. Greece, nomarch Cyclades, on the isl. of Andro, with seven churches, and a pop. of 970.

ARNOYA.—1. (*San Salvador de*), a vil. and par. Spain, Galicia, prov. and 12 m. from Orense, on the Minho. The only remarkable edifice is a suppressed Benedictine priory. The houses are generally ill built, in narrow winding streets. The principal products are good red and white wine, maize, flax, &c.; the industrial establishments are a tannery and several flour-mills. Pop. 1860.—2. Small river, flowing into 1. bank Minho, about 20 m. below Orense, after a westerly course of about 30 m.

ARNSDORF, a tn. Austrian empire, Bohemia, circle and 23 m. N.N.E. Leitmeritz, with 1200 inhabitants; manufactures of linen and hosiery, dyeworks, two mills, and a trade in glass.

ARNUERO, a vil. Spain, Old Castile, prov. and 10 m. from Santander, on a plain. Pop. 1930, many of whom find employment in other provinces as bell-hangers, gilders, and painters.

ARO, or Aro, a tn. Western Africa, nearly equidistant from the Kwara on the W., the Old Calabar river on the E., and the shore of the Bight of Biafra on the S. It is described as being nearly thrice the size of Aboh, and extremely populous. The inhabitants are skilful artizans, and manufacture swords, spears, and metallic ornaments. It owes much of its celebrity to the siffine of Tshuku, to which pilgrimages are made from all the surrounding districts.

ARO, vil. and par. Spain, Galicia, prov. and about 35 m. S.W. Coruña, cap. dist. of same name, in a mountainous but healthy district watered by the Tambre. It has some trade in corn, cattle, and dairy produce. Pop. 3410.

ARRAH, a tn. India, presid. Bengal, dist. Shahabad, in a fertile and well-cultivated district, 25 m. W. Dinapore, and 433 m. (by rail) N.W. Calcutta. It is a station on the East Indian railway, and contains about 2775 houses and

FORTIFIED HOUSE AT ARRAH.—From a Sketch by Major Eyre.

a government school. It acquired some celebrity during the Sepoy mutiny in 1857, by the gallant defence made by a small body of European civilians against an overwhelming force of rebels. They retired to, and hurriedly fortified, the bungalow represented in our illustration, and were under a heavy fire of musketry and ordnance from 27th July to 1st August, at which latter date they were relieved, under circumstances of the greatest difficulty, by Major Vincent Eyre.

ARRONIZ, a tn. Spain, Navarra, on the S. slope of Monte-Jurra, 23 m. S.W. Pampeluna. It consists of three distinct portions, arranged in the form of a triangle; and has a parish church with a remarkable tower, four oil-mills, and some export of oil, corn, and wine. Pop. 1430.

ARTA, a tn. Austrian empire, Venetia, prov. and 21 m. N. Udine, l. bank But, an affluent of the Tagliamento, with 2103 inhabitants, and two mineral springs; the one sulphurous, and the other chalybeate.

ARTENARA, a vil. Spanish dominions, Canary isles, island and prov. of Gran Canaria, near the centre, on the declivity of a hill. The parish church, a hermitage, and two houses are the only stone buildings. All the rest are mere caves or cellars, in which the natives live in a state of poverty and wretchedness. The vegetable products include grain, lentils, honey, figs, and other fruits, and a good deal of goat-milk cheese is made. The only manufactures are a few articles of thread and wool. Pop. 1074.

ARTES, a tn. Spain, Catalonia, prov. and 18 m. from Barcelona, on a height washed by several streams. It contains an ancient palace or castle of the former feudal lords of the place, which has been converted into a prison; and has manufactures of cotton and woollen cloth, a distillery, three flour-mills, and a very limited trade. Pop. 1279.

ARUL, a navigable river, India, Scinde, running from the Manchar Lake, which is formed by an expansion of the river Narra, into the Indus on the western side. During the rainy season the navigation by the Narra, the lake, and the Arul is preferred to that of the Indus, the current being more moderate. The junction with the Indus is in lat. 26° 24' N. and lon. 67° 55' E.

ARUN, a river, Nepaul, rises in Tibet, about lat. 28° 45' N.; lon. 87° 30' E., and flows through it for 200 m. to the Himalayas, between which it passes, receiving the waters from the northern face of the Snowy mountains, and then, with a further course of 110 m. through Nepaul, enters the Coosy, of which it is the principal tributary, in lat. 23° 58'; lon. 86° 57'.

ARURE, a vil. Spanish dominions, island of Gomera,

one of the Canaries, in a pleasant and fertile valley at the foot of lofty mountains. It consists of 190 straggling houses, has a church, and raises tolerable crops of grain, vegetables, potatoes, silk, flax, &c. Pop. 905.

ASABA, a tn. Western Africa, dist. and about 40 m. above Aboli, r. bank Kwara, is finely situated on a rising ground about 100 ft. above the river, is surrounded with walls and palisades of tall trees, and consists of numerous huts wide apart, well constructed, and often white-washed or coloured. The inhabitants, though friendly, are wild, rude-looking, and much tattooed. Yams and other agricultural produce, as well as fowls, cattle, and sheep, are abundant.

ASAIHAN, a native state and river on the N.E. side of the island of Sumatra, in the Indian Archipelago.—The STATE consists chiefly of an extensive alluvial tract, which stretches along the coast, and is for the most part covered by a tangled and almost impenetrable forest. The cultivated crops are rice and pulse, and the principal exports are pulse, a red dyewood called *lakka*, bees'-wax, horses, and slaves. The inhabitants are Malays, who form the dominant class, and Batakas. The fish, with which both the sea and the rivers abound, forms their principal food.

—The RIVER, which rises in a mountain range and plateau called Tubala; flows E., and falls into the straits of Malacca in lat. 3° 1' 30" N.; lon. 99° 52' E. It is about 1000 yards wide at its mouth, but in the course of 7 m. contracts to a third of this width. The depth of its channel nowhere exceeds two fathoms.

ASHENUMMA, a tn. Central Africa, cap. Tebu country, situated on a flat, at the foot of steep cliffs, about 380 m. S. by W. Murzouk; lat. 19° 8' N.; lon. 13° 15' E. It consists of about 120 cottages, built with rough stones, very low, and covered with the stems and leaves of the palm-tree. The inhabitants suffer much from depredation. Dried fish is their chief medium of commerce.

ASHKEZER, a vil. Persia, prov. and 12 m. W. Yezd, 175 m. E.S.E. Ispahan. It is a large place, with extensive walled gardens; but owing to its site among sandhills, the desert has gradually encroached so as almost to exclude field cultivation.

ASHLAND, a tn. U. States, Ohio, cap. co. same name, 85 miles N.N.E. Columbus, in a fine farming country, and connected by a branch line with the Cleveland and Columbus railway. There are manufactures of wool. Pop. 1500.

ASHTA, two places, India.—1. A tn. Malwa territory, and 50 m. S.W. Bhopal, r. bank Parbutty, which is here fordable. It contains about 500 houses, and possesses a fort and a large tank.—2. *Ashtee* or *Ashta*, a vil. presid. Bombay, dist. Sholapore, 112 m. E.S.E. Poonah. Here, in Feb. 1818, the Peishwa, Bajee Row, pursuing a hopeless flight from the British forces, was overtaken by General Smith, and in consequence compelled to sign a treaty which finally extinguished the Mahrattan empire.

ASHWANIPI, or HAMILTON RIVER. (See HAMILTON RIVER *in Supp.*)

ASHWANIPI (LAKE), British N. America, Labrador; lat. 52° 30' N.; long. 65° W. It forms the head-water of the Ashwanipi river, and is sometimes frozen till the month of June.

ASPANG, two nearly contiguous places, Austrian empire, Lower Austria, 46 m. S. by W. Vienna. One of them, cap. circle of same name, has an old castle, a town-house, a wire factory, and oil, iron, and saw mills, with a pop. of 690. The other, with a pop. of 1530, has also numerous saw-mills and a very ancient parish church.

ASPINWALL, a seaport tn. New Granada, isthmus of Panama, on the island of Manzanilla, in Lemon or Navy bay, opposite Chagres, and near the Atlantic terminus of the Panama railway. It was founded in 1850 by the engineers and other officials and the workmen who arrived to commence the railway, and has gradually grown into a place of some importance; consisting of about 200 houses, and containing about 1000 permanent inhabitants.

ASSAM, the name proposed for a mountain chain, which, rising suddenly from the plains of E. Bengal, about 220 m. N.E. Calcutta, stretches E. in a broadening chaos of woody spurs and ridges, taking the successive names of the Garoos,

Kasias, Nagas, and other tribes, who inhabit it. In the vicinity of Munipoor it changes its direction to N.E., and after assuming the name of the Patkoi range, becomes linked with some outliers of the E. Himalaya. Still further E. it becomes known as the Langtang range, and sends down from the snows of its southern face the head-waters of the Irawadi. From its W. commencement it gradually increases in height, from 3000 and 4000 ft. among the Garoos, to 6000 ft. among the Kasias, and 8000 to 9000 to the N. of Munipoor. Abreast of Brahmakund it reaches 12,000 to 14,000 ft., and beyond rises far above the limit of perpetual snow.

ASSIENTOS, or ASSIENTOS DE IBARRA, a tn. Mexico, state and 55 m. S.E. Zacatecas, on the N.E. side of an almost isolated mountain group, at the height of 7000 ft. above the sea. It is a tolerably large mining town, but shows by the number of large and decaying houses within it, that its prosperity belongs to the past rather than the present. Its famous mines of silver, copper, and lead are in a great measure abandoned. The only minerals now wrought to much advantage, are copper and silver, for which new mines have been opened.

ASSINIBOIA, British America, better known by the name of the *Red River* or *Lord Selkirk's Settlement*, extends southwards from Lake Winnipeg up both banks of the Red river, and thereafter westwards along those of the Assiniboine. Fort Garry, situated at the confluence of these two rivers, and the head-quarters of the British American fur trade, ranks as its capital. The settlement, generally fertile, and well adapted for agricultural purposes, has been erected into what is called the diocese of Rupert's Land, and has been provided with a tolerably complete ecclesiastical organization, in the shape of churches and schools. In St. John's parish, where the bishop resides, a college has been erected, and the church, which is in a somewhat tottering condition, is about to be supplanted by a substantial and commodious cathedral. Several of the other parish churches have elegant spires, which form prominent objects in the landscape. The R. Catholics, forming a considerable proportion of the population, have also an imposing cathedral in St. Boniface, and a spacious nunnery with schools attached; and in 1856 the Presbyterians obtained the erection of a church. The population, arranged under the heads of the above three denominations, is as follows:—Church of England, 3050; R. Catholic, 2500; Presbyterian, 400; total, 5950. The greatest difficulty with which the settlers have to contend is the want of a proper outlet for their produce.

ASSINIBOINE [add.], a river, British America, which rises in lat. 51° 40' N.; lon. 103° 20' W., flows first S.E. for about 260 m., to the confluence of the Qu'appelle, then E.S.E. for about 240 m., and after a total course of about 500 m. parallel to the basins of the Great Lakes on the E. of the Riding and Duck mountains, joins or is joined by the Red river of the North, at Port Garry, in lat. 49° 50', and lon. 97°. At Lane's Port, 22 m. above Fort Garry, it is 120 ft. broad, with a mean sectional depth of 6 ft., and a current of 1½ m. per hour; near Prairie Portage, 67 m. above Fort Garry, its current is 2 m. per hour; at the confluence of the Little Souris, 140 m. above Fort Garry, it is 230 ft. broad, with a mean sectional depth of 8-6 ft., and a current of 1½ m. It thus appears that the river is larger when 140 m., than when only 22 m. from its mouth. Still higher up the same thing is observed, for at Fort Ellice, 240 m. from its mouth, its breadth is 135 ft., and its mean sectional depth 8 ft. This singular fact of a decrease instead of an increase of water in the course of the river, is brought out still more distinctly by another calculation, which shows that while the quantity of water hourly discharged at Fort Ellice is 9,979,200, and at the confluence of the Little Souris is 12,899,040 cubic ft., at Lane's Port, which is 218 m. below the former, and 118 m. below the latter, the hourly discharge is only 5,702,000. Evaporation is the only cause yet assigned for this extraordinary diminution of volume. The principal affluents of the Assiniboine are, on its l. bank, the Two creeks, Pine creek, Shell river, Birdstail river, and Rapid river, or Little Saskatchewan, and on its r. bank, the White Sand river, the Qu'appelle or Calling river, Beaver creek, and the Little Souris or Mouse river. The only impediment to its continuous navigation for many miles is a rapid of no very formidable character, as it is only in summer when the water is

lowest that it becomes impracticable. The valley of the Assiniboine is so fertile and well adapted for cultivation, particularly on the l. bank of its lower course, that several promising settlements have already been made upon it, and form the nucleus of a new territory.

ASSI-YNSGHIAD, a tn. Turkey in Asia, Anatolia, 23 m. E.S.E. Angora. It occupies a picturesque site in a mountainous district, and contains 250 houses, all occupied by Turks, whose chief employment is agriculture.

ASSOURI, a river, British N. America, which rises about lat. 49° N.; lon. 105° W., flows E. and joins the Assiniboine, formed by it and the Little Saskatchewan. The prairie, through which it has cut a deep channel, is covered in extraordinary profusion with boulders of granite, gneiss, limestone, &c., and in the strata exposed along its banks occur some thin beds of coal, not well defined, and graduating into shales.

ASSUMPTION, or ASUNCIÓN [add.], S. America, cap. Paraguay. Its streets are wide and traced at right angles; the houses, of brick and one story high, are generally spacious and well constructed. It possesses several fine buildings, among others the cathedral, and the churches of San Roque and the Incarnation, the government house, the barracks, the railway station, and a large market-place in the middle of the town. The port is convenient and safe, with a spacious quay, and is defended by several batteries. Pop. (in 1857), 48,000.—(Du Graty's *Paraguay*.)

ASSUNGE, a tn. W. Africa, Benguela, on a steep height near r. bank Sumbe, 98 m. N.E. Benguela. It stands in the midst of beautiful scenery; is the residence of an independent chief, and contains 3000 inhabitants, who cultivate the ground, and trade in wax and gum copal.

ASU, a tn. W. Africa, prov. Logon, tributary to Bornou, r. bank Shari or Ba, a tributary of Lake Chad. It was formerly walled, but the walls are ruinous, and the whole place exhibits signs of the decay common throughout the province. A considerable revenue is derived from the ferry, which is much frequented.

ASUA, ASCIA or USUA, a river, E. Africa, supposed to rise from the Bahari-Ngo lake, about lat. 2° N.; lon. 35° E., and uniting with the White Nile in lat. 3° 34' N.

ASUDI, a tn. N. Africa, dist. Air, situated not far from the foot of Mount Chereka, lat. 18° 24' N.; lon. 8° 34' E., was once a place of great importance, which is indicated by the extent of its ruins. It had at one time seven mosques and a population of 8000 to 10,000; but now possesses about 1000 ruinous houses, of which only 80 are inhabited. The market, however, is well supplied with provisions, and even ordinary merchandise.

ATACAMA (SAN PEDRO DE), a tn. S. America, Bolivia, cap. prov. same name, 7000 ft. above sea-level, on the Rio de Atacama, which about 5 m. below is lost in the sand. It is an extremely dirty place, with only a few buildings which deserve the name of houses, and a church in a dilapidated state. Almost all the inhabitants are employed as carriers.

ATAD (GREAT), a tn. Austrian empire, Hungary, co. Somogyh, on the Ringa, 23 m. S.W. Kaposvar, with 2081 inhabitants, a district court, Franciscan monastery, brewery; a trade in corn, and important annual markets.

ATAJO, one of a continuous chain of low islands, S. America, which skirt the l. bank of the Parana, immediately after the confluence of the Paraguay. The island is claimed by La Plata, but Paraguay has possession, and secures it by a military post.

ATAKI, a tn. Russia, gov. Bessarabia, circle and near Khotin, with two churches, and a pop. of 6614.

ATHENS, a tn. U. States, Georgia, r. bank Oconee river, 92 m. W.N.W. Augusta, and 71 m. N. Milledgeville. The situation and climate are healthy, and the branch of the Charleston and Decatur railway, of which it is the terminus, has caused the town to increase rapidly, and before the civil war it was the market for an extensive cotton-growing district. It has five churches, a cotton factory, and several others in the vicinity, and a college.

ATKARSK, a tn. Russia, gov. and 50 m. N.W. Saratov, cap. circle of same name, on the Atkara. It has two churches, a circle school, and a charitable institute. Pop. 5779.

ATLANTA, a city, N. America, U. States, Georgia, co. De Kalb, at the junction of several lines of railway, 101 m.

N.W. Macon, 290 m. W. Charleston. It occupies a healthy and elevated position, and has grown rapidly from its commencement in 1845 into a place of considerable size and importance, the railways rendering it the centre of a large trade in cotton and grain, and connecting it with many principal ports and inland towns. In 1864, however, after being held by a Confederate army for some time, it was abandoned to the Federals, who expelled great numbers of the inhabitants, and subsequently evacuated it, leaving a great part of the town in ruins by fire. Previously it contained several churches and other public buildings. Gold, iron, and other minerals, are found in the surrounding country.

ATROWLEE, a tn. India, N.W. Provinces, dist. and 20 m. E.N.E. Allyghur, in the Doab. It stands in a highly cultivated neighbourhood, abounding in fine mango groves, and is a large open place, with a well-supplied bazaar. Pop. 12,722.

ATSAISKAIA, a tn. Russia, gov. Don Cossacks, r. bank Aksai, at its mouth in the Don. It is the chief ferry across this river on the road to the Caucasus, and has an important trade in corn, wood, and iron. Pop. 4342.

ATTANUGAR, a tn. India, Oude, dist. Salon, 65 m. S.S.E. Lucknow. The inhabitants, two-thirds of whom are Mahometans, as well as those of the district generally, are of a warlike temperament, and used to furnish a large number of sepoy recruits. Pop. 6000.

ATTLEBOROUGH, a tn. U. States, Massachusetts, Bristol co., 31 m. S.S.E. Boston, on the river Mill. It has a bank, and extensive manufactures of cotton and other goods, and is connected by a branch with the Providence and Worcester railway. Pop. 4200.

ATYCHAN, a mountain ridge, Russian Trans-Baikal territory, which stretches from S.E. to N.W., not far from l. bank Amoor, and becomes linked with the low hills of the Yablonoi chain. It is composed partly of masses of granite. In the valleys and terraces at the base of the ridge bushes and isolated trees occur, but its summits, consisting of a number of pyramidal peaks, are perfectly bare.

AUBURN [add.], a tn. U. States, New York, cap Cayuga co., on the Albany and Buffalo railway, 174 m. W. of Albany. It is 2½ m. N. by W. from Owaseo Lake, the outlet of which runs through the town, and furnishes water-power for manufactories of cotton, wool, carpets, iron, and paper, and various

S.W., about 360 m.; greatest breadth, measured on the parallel of 38°, 200 m.; area, 26,562 sq. m., or 17,000,000 acres. The coast is of very irregular shape, and so deeply indented that it measures, when its windings are followed, about 900 m. The continuity of the coast is least broken on the W., where the only important openings form the harbours of Manukau and Kaipara; the E., on the contrary, presents a succession of large and deep bays, with numerous creeks opening from them, and penetrating far into the interior. Proceeding from the N., the most extensive of these bays are Doubtless Bay, the Bay of Islands, Hauraki Gulf, and the Bay of Plenty. The interior is covered by wooded mountain ranges of moderate elevation, with many intervening valleys of great fertility, well watered by numerous streams. Most of these are mere mountain torrents, running a short and rapid course before they reach the sea. The largest are the Waitato, which has its mouth on the W. coast; the Piako and the Thames, which both fall into the Firth of Thames, a S. arm of Hauraki Gulf; and the Wirinaka and Whakatane, which fall into the Bay of Plenty. Among the lakes are the Rotorua and the Taupo, the latter by far the largest which New Zealand possesses. The climate, owing to its N. position, is the warmest in the country, and brings to perfection some fruits which cannot be grown successfully in any other part of it. Among the most important productions are the *kauri*, the forests of which, situated chiefly on the W. coast, furnish the materials of an important spar and lumber trade, flax of superior quality, corn, fruit, gum, honey, oil, and wool. For administrative purposes the province is divided into five districts, of which Auckland is the capital. Pop. about 79,000.

The following table illustrates the condition of the province:—

Year.	European Population.			Natives (estimated).	Revenue.	No. of Public Schools.
	Males.	Females.	Total.			
1861	13,494	10,926	24,420	50,000	£97,692	55
1862	15,155	12,489	27,644	—	110,984	—

AUCKLAND [add.], cap. of the above prov. and of New Zealand, is advantageously situated on the N. side of an

other mills. A railway has also been constructed from it to Ithaca, 40 m. southward. Pop. 10,500.

AUCKLAND, the most northerly of the eight provinces into which New Zealand has been divided, lies between lat. 34° 20' and 39° S.; lon. 172° 30' and 178° 40' E., and consisting mainly of the peninsula which forms the N. part of the island of Eaeheinomawe or New Ulster, is washed by the ocean on the W. N. and E., and bounded on the S. by provs. Taranaki, Wellington, and Hawke; greatest length, N.W. to

isthmus between two seas, the one washing the E. and the other the W. coast, and each furnishing an excellent harbour; lat. 36° 51' 30" S.; lon. 175° 45' E. Being situated on rugged ground much broken by hills, it has scarcely a level street, but is nevertheless well built, and contains a number of houses and shops which would not disgrace any European town. The principal buildings are the government-house, newly erected near the site of an older edifice, which was burned down; the courts of justice, the official residences, the

Episcopal church, situated at the top of a crescent, and neatly built of white stone in the early English style; the Scotch, Wesleyan, and R. Catholic churches, the last a handsome stone edifice, with a large floreated cross; the Wesleyan college, and various other schools belonging to the different religious denominations; the custom-house, the barracks, jail, &c. A line of wharves and jetties, and two or three streets of substantial shops and warehouses, some of wood,

became very much depressed; but the upper country of Georgia becoming more densely settled, and the formation of the Augusta canal, 9 m. in length, bringing the waters of the Savannah to furnish water-power, the prosperity of Augusta has revived, and factories, machine-shops, and similar works have been established and successfully worked. The streets are wide, straight, and lighted with gas, and among the public buildings are the city-hall, a masonic hall, a medical college, 14 churches, an hospital, arsenal, 6 banks, and 4 or 5 newspaper offices. A line of steamboats runs to Savannah; and a bridge connects the city with Hamburgh in S. Carolina. Pop. 12,000.

GENERAL VIEW OF AUCKLAND.—Hochstetter's Neu-Seeland.

but more of brick or stone, afford ample facilities for trade, and furnish proof of its great extent and increasing importance. The botanical gardens, and the little suburban bays sparkling with the white villas of wealthy merchants, afford many beautiful walks. The great drawback, however, is the total absence of trees, except such as the settlers themselves have planted. Auckland, though founded only in 1840, has an estimated pop. of 10,000.

The following statistics present a view of the progress of the port:—

	Immigrants.	Vessels.		Imports.	Exports.
		Entered.	Cleared.		
		No.	Tons.	£	£
1860	2954	82	36,508	454,311	78,164
1861	1559	103	33,974	591,468	57,673
1862	4036	107	37,018	815,205	72,354

AUCKLAND BAY, E. side of Bay of Bengal, in Tenasserim provinces. The rocks and islands of the Mergui Archipelago encircle the entrance.

AUERSPERG, a tn. Austrian empire, duchy Carniola, 12 m. S.S.E. Laibach. It is supposed to occupy the site of the Roman *Arupium*, is the cradle of the Auersperg family, and has a castle with a beautiful hall, a riding-school, and many antiquities. Pop. 1000.

AUGUSTA [add.]:—1 A city, U. States, cap. Maine, at the head of the sloop navigation of Kennebec river, and on the Portland and Bangor railway, 60 m. N.N.E. Portland. It is handsomely built, chiefly on r. bank of the river, which is crossed by a bridge, and upon rising ground, which gives it a commanding position. It contains a spacious park, an arsenal, and an hospital for the insane, besides several schools and manufactories. About half a mile above the city a dam has been constructed across the river to improve the navigation above it, and at the same time to provide water-power for manufacturing purposes. Steamboats ply above the dam between Waterville and Augusta. Pop. 9500.—2. A city, U. States, Georgia, cap. Richmond co., on the Savannah, 231 m. from its mouth, and on the S. Carolina and Georgia railways, of the latter of which it is the E. terminus. Originally it depended very much on the waggon trade, which was destroyed by the construction of the railway, and the place

considerable progress, and the inhabitants have breweries and lime-kilns, but are chiefly employed in the cultivation of the surrounding district, which is said to be fertile. Government has here a breeding stud. There is a weekly Arab market. Pop. 1516.

AUPA (GREAT and LITTLE), two nearly-contiguous places, Austrian empire, Bohemia, circle and about 20 m. N.E. Gitschin:—*Great* or *Gross-Aupa*, situated in a valley of same name; has a parish church, four mills, and a limestone quarry; the inhabitants are chiefly employed in the forests or in spinning. In the mountains near it are mines of copper and arsenic. Pop. 2611.—*Little* or *Klein-Aupa*, situated on a small stream at the foot of the Black Koppe; has a church and a mill, and contains 1100 inhabitants.

AURAG, or ORAYE, a river, India, which rises on the S.W. frontier of Bengal, in lat. 21° 20' N.; lon. 82° 43' E.; flows E. for about 100 m., and joins the Tell Nuddee on its left bank, 17 m. above the junction of the latter with the Mahanuddy.

AURONZO, a tn. Austrian Italy, prov. and 26 m. N.N.E. Belluno. It is the seat of a court of justice; and has in its vicinity mines of lead and calamine, and the great forest of St. Marco, which furnishes the best timber for the navy. Pop. 3475.

AURUNGABAD, the name of several places in India:—1. A tn. Nizam's Dominions (see *Gazetteer*).—2. A tn. N.W. Provinces, dist. and 4 m. S.W. Muttra.—3. A tn. presid. Bengal, dist. Moorsshedabad, 31 m. S.E. Rajmahal.—4. A tn. Oude, 34 m. E. Shajehanpoor. It obtained an unhappy celebrity during the sepoxy mutiny, from its proximity to the scene of one of the horrible massacres perpetrated on defenceless Europeans.

AUSCHA, a tn. Austrian empire, Bohemia, circle and 9 m. N.E. Leitmeritz, cap. dist. of same name; with a parish church, an hospital, and manufactories of cloth, liqueurs, and chemicals. Excellent hops are grown in the district. Pop. 1600.

AUSSIG [add.], a tn. Austrian empire, Bohemia, circle and 10 m. N. by W. Prague, at the confluence of the Bila with the Elbe, and on the Bohemian-Saxon railway, 321 m. (by rail) N.W. Vienna. It consists of the town proper and three suburbs; is the seat of several important public offices, and has a deanery church, a high school, a townhouse, extensive manufactures of linen and cotton goods; and a consider-

able trade in cotton goods, wine, which bears a high name, corn, fish, fruit, and wood. Both lignite and common coal are worked in the vicinity. Pop. 6956.

AUSTRALIA. In no part of the world has geographical exploration made more rapid advance, within the last twenty years, than in the great island-continent of the southern hemisphere. Nor has discovery been anywhere more fruitful of consequences. The rapid progress of settlement, and increase of population in Australian lands, are among the most noteworthy conditions in the social and commercial records of the present century. Discovery has, in this case, been not merely the solution of a geographical problem, but the immediate precursor of civilized existence and colonial industry. The explorer has heralded the way for the squatter, and the dwelling-places of man have sprung into existence along the tracks which he has marked out in the bush. A vast portion of the *terra incognita* of a prior (and yet but recent) date, as shown upon our maps of Australia, is now crossed by the lines which indicate the rapid advance of such enterprise.

The first settlement of the white man upon the Australian shores dates hardly more than three-quarters of a century since. Five and twenty years elapsed after the foundation of Sydney (1788), before the colonists had succeeded in crossing the range of the Blue Mountains, by which their western horizon was limited. Bathurst, on the Upper Macquarie, within the fine plains that lie beyond the mountain-chain, was at once founded (1813), and interior discovery thenceforward continued to advance, though for a time by slow and gradual stages. The great rivers flowing inland, in a westwardly direction, early rewarded the persevering efforts made by the colonists of New South Wales to extend their knowledge of the Australian interior. Portions of the rivers Lachlan, Macquarie, Murrumbidgee, and Upper Murray (or Hume), were successively traced, between the years 1817 and 1824, by Oxley, Cunningham, Hovell, Hume, and others. Sturt, in 1829, first reached the stream of the Darling. All of these rivers, with others of less considerable extent, were subsequently ascertained to belong to the extensive basin of the Murray, the main channel of which was ultimately (1830) traced, by the last-named explorer, to its outlet in Encounter Bay, on the coast-line of the Southern Ocean. Major (afterwards Sir Thomas) Mitchell, in succeeding years, 1831-6, visited the Karanla and other northern affluents of the Murray basin, followed the stream of the united Lachlan and Murrumbidgee to its junction with the Murray, and traced the Darling upward to the point to which its stream had been already pursued downward. A vast range of country, extending through more than ten degrees of latitude, thus became opened to the enterprise of the settlers of New South Wales. The portion lying south of the Murray, explored and partially surveyed by Mitchell, received the name of Australia Felix—an epithet justified by its abundant and well-watered pastures.

The foundation of Melbourne (1837), on the banks of the river Yarra, a short distance above its outlet into Port Phillip, and the occupation of the adjacent plains by the colonists of Tasmania and New South Wales, rapidly ensued. The Port Phillip district, however, remained until the gold discoveries of 1851 a pastoral region, and its population up to that date was only 77,000. It was in that year first constituted a distinct colony, under the name of Victoria.

The year 1836 had witnessed the establishment of a settlement, entirely distinct from the older colony, on the shores of St. Vincent and Spencer Gulfs, the nucleus of the now flourishing colony of S. Australia. Already, seven years previously (1829), the banks of the Swan river had become the home of British settlers, and the name of W. Australia replaced that of New Holland, by which the western half of *Terra Australis* had, since the early days of Dutch discovery, been chiefly known. Queensland, hitherto the Moreton Bay district of New South Wales, was first made a distinct province in 1859.

The gold discoveries of 1851 exercised a vast influence over the growing prosperity of Australia, and the development of its resources. Up to that date the total number of the colonial populations, including Tasmania, fell short of 400,000, of whom the colonists of New South Wales, with the Port Phillip district, included above a quarter of a million. The population of New South Wales had, however, doubled

itself within the preceding ten years, and the industrial resources of the province were already making rapid advance. S. Australia had at the same date 67,000 inhabitants; the Swan River settlement fewer than 10,000. Within five years of that period the Australian colonies jointly numbered more than 800,000 inhabitants; in 1861 their united population exceeded 1,100,000, Victoria alone having upwards of 500,000 inhabitants, and its capital, Melbourne, having grown from a provincial town, of hardly more than 20,000 people, into a stately metropolis, with upwards of 100,000 inhabitants. The population of Victoria, indeed, became more than quadrupled within the five years immediately ensuing on the gold discoveries.

Before the era of development above adverted to, the settlers on the eastern seaboard of Australia were comparatively isolated from the colonists on its southern and western shores. Such intercolonial intercourse as existed was maintained chiefly by sea; in the case of Western Australia, exclusively so. Vast tracts of impassable desert were believed to separate S. Australia from the province of New South Wales on the one hand, and the Swan River settlement on the other. Overland communication, even between Adelaide and Melbourne—the two most nearly adjacent of the provincial capitals—was not established until the period when the attractions of the gold-fields of Victoria began to draw thither, with irresistible influence, the unsettled population of neighbouring lands. As early as 1837-8, however, Mr. Eyre, whose name has subsequently become identified, in an eminent degree, with Australian discovery, had driven a numerous herd of cattle overland from Sydney to Adelaide, a period of eight months being occupied on the route, although the direct distance between those cities is less than 800 miles. Mr. Eyre repeated this exploit, with some deviation from his prior route, in the succeeding year, accomplishing the distance in less than three months; overland communication between the colonies of New South Wales and S. Australia, for the purposes of the squatter, was thenceforward definitely established. Subsequent efforts of Mr. Eyre were directed towards the accomplishment of a similar communication with the settlement of W. Australia, and the exploration of the unknown interior lying to the northward of Adelaide. The years 1839-41 were chiefly devoted to these objects. In 1840, while engaged in examining the country lying at the head of Spencer Gulf, Mr. Eyre discovered the southern arm of Lake Torrens. In the following year, leaving Adelaide under the auspices of the colonial government, he advanced nearly 400 m. along the shores of the lake, to which, however (owing in part, it appears probable, to the effects of *mirage*, and in some measure to the extraordinary seasonal changes which belong to the interior waters of Australia), he assigned proportions since proved to be vastly in excess of the reality. The enormous horse-shoe shaped Lake Torrens, which for many years after the date of Mr. Eyre's journey continued to figure upon our maps, has only recently given place to numerous detached basins, ascertained to occupy its supposed place. Mr. Eyre's most remarkable exploit, however, was the making (1841) an overland journey from Port Lincoln, on the western shore of Spencer Gulf, along the shore-line of the great Australian Bight, to King George Sound, a distance of more than 1000 miles. This journey, through a sterile tract of country, almost destitute of water, was accomplished under circumstances of peculiar difficulty, the only white companion of the explorer being murdered by the native attendants during its progress, and the last 600 m. being traversed with the companionship only of a single native boy! The account of the country passed through on this occasion was such as to deter others from repeating the attempt at opening inland communication between S. and W. Australia. Recently, however, the attention of the Swan River colonists has been turned in the same direction; there appear to be some reasons for regarding a portion of the hardships which Mr. Eyre underwent as incident only to the progress of a first explorer, and it has even been proposed to found a settlement in the neighbourhood of Cape Pasley and Point Malcolm, midway between King George Sound and the head of the great Australian Bight.

The wide range already covered by the explorations of Sir Thomas Mitchell within the territory of New South

Wales was yet farther extended in 1846, by a journey undertaken with the view of opening overland communication with the Gulf of Carpentaria. Starting from the banks of the Upper Darling, Mitchell surveyed the more northwardly affluents of its extensive basin: he thence followed a general northwardly course, through a broken and difficult country, as far as the parallel of $21^{\circ} 30' S.$, and afterwards turning westward, and crossing a dividing range of mountains, struck the channel of a river flowing to the N.N.W. Mitchell followed the course of this river (to which he gave the name of 'Victoria') for ten successive days, through a watered region of the most promising description, finally leaving it in lat. $24^{\circ} 14' S.$, lon. $144^{\circ} 34' E.$ The course of this stream led its discoverer to the sanguine conviction that its outlet would prove to be in the Gulf of Carpentaria, and Mr. Kennedy was despatched from Sydney in the following year, with the view of tracing the newly-found channel to its expected outlet. Shortly after reaching the furthest point attained by his predecessor, however, the course of the river was found to turn S.W., and afterwards almost due S., while its waters, divided among several channels, became almost lost in the arid plains to which it conducted. Kennedy ultimately found it necessary to abandon the stream in lat. $26^{\circ} 13' S.$, lon. $142^{\circ} 20' E.$, returning to Sydney by a more southwardly route. The direction of the latter portion of its channel pointed to the inference, since verified, that the 'Victoria' of Murray and Kennedy would be found continuous with the 'Cooper Creek' of Sturt's Central Australian expedition, and the name of Cooper River has since been substituted for the designation first conferred upon it. Kennedy's ultimate fate was disastrous; in the following year (1848) he took the charge of an expedition fitted out for the purpose of exploring the Cape York peninsula and the adjoining shore of the Gulf of Carpentaria, and perished in its course, at the hands of the natives.

Meanwhile, an overland journey between Moreton Bay and Port Essington, at that time the site of a settlement maintained by the imperial government, had been successfully made by Dr. Leichhardt, a German resident in New South Wales, a man who combined high scientific attainments with a rare amount of courage and enterprise. Moreton Bay was then the most northwardly point of settlement on the sea-board of E. Australia, and it was from Jimba, the farthest inland station of Darling Downs (60 m. W. of Brisbane), that Leichhardt finally started on his perilous undertaking, in October, 1844. After a journey of fourteen months, in the course of which he traversed a vast extent of watered and fertile country—much of it admirably adapted for the purposes of the settler—Leichhardt finally reached Port Essington in December, 1845, and thence returned by water to Sydney, to the mingled surprise and delight of the residents in that city, by whom he had been given up as lost. In the course of this marvellous, and at the time unexampled journey, conducted solely by the aid of private resources, Leichhardt had passed over more than 2000 m. of entirely new country, much of it since occupied by the flocks and herds of the Queensland squatters.

The same enterprising explorer formed, in 1847, the plan of a still more extensive journey, in which he proposed to cross the entire breadth of the Australian continent, from east to west. Leichhardt's first essay towards the achievement of this gigantic enterprise was thwarted by untoward circumstances, and, after penetrating a short way to the N.W. of Sydney, he was compelled to return. He started again in the beginning of 1848, and never returned; his subsequent fate remaining involved in mystery. Traces of his direction were found by Mr. A. C. Gregory, who, in the course of a journey undertaken expressly for that purpose, in 1858, discovered a tree marked with the initials of the ill-fated explorer, together with other indications of Leichhardt's having encamped at the spot. This was about lat. $24^{\circ} 35' S.$, lon. $146^{\circ} 6' E.$, within the valley of Mitchell's 'Victoria' river.

While Leichhardt was engaged in extending knowledge of the Australian interior from the side of New South Wales, the colonists of S. Australia were anxiously awaiting the result of an enterprise directed towards the central regions of the continent, of which their metropolis formed the starting-point. This was the Central Australian expedition

of Captain Sturt. In 1843, Captain Sturt had submitted to the home authorities the plan of an extensive exploration of the Australian interior, and arrangements for the conduct of the expedition were finally made with the provincial government of S. Australia. The expedition, which was upon a somewhat extensive scale, consisting in all of twenty persons (John Macdonald Sturt, whose name subsequently fills so distinguished a place in the records of Australian discovery, was amongst the number, being attached to the party in the capacity of draughtsman), left Adelaide in August, 1844, and, proceeding in the first instance to Moorundi, on the lower Murray, ascended that river to the junction of the Darling. Up to this point they were accompanied by Mr. Eyre. The channel of the Darling was then followed up to Williorara or Laidley Ponds (Menindie), in lat. $32^{\circ} 26' S.$, whence the party finally struck into the interior, through a hitherto untraversed region, following a general direction to the W. of N. They found themselves on the summit of a plateau, traversed by numerous rocky ridges, of moderate elevation, with a general N. and S. direction, beyond which, to the westward, extended vast and dreary plains, covered with forest and scrub. After some months passed amongst country of this description, the ranges were found to terminate a short way to the northward of the 29th parallel, and the immense level of the interior lay spread before the explorers. The heat was intense, the thermometer ranging from 108° to 118° in the shade during the afternoon, and on one occasion (January 21) standing in the bush at 132° in the shade, and 155° in the sun! The hot blasts of wind from the N.E. were felt like the scorching blaze of a large fire, and the whole surface of the country was rendered lifeless by the intense heat. Yet the nights were cold, and the men, besides the shelter of their greatcoats, were glad to creep close to their fires. Birds of prey, with parrots and pigeons, meanwhile migrated to the N.W., while pelicans, cormorants, and wild-fowl, were observed to come from that quarter.

Captain Sturt's depôt during this period was situated amongst the ranges, in lat. $29^{\circ} 40' S.$ Thence, after a lapse of more than six months without a drop of rain having fallen, he determined, in July, to divide the party, detaching a third of its number for the purpose of returning to Adelaide, while he himself made a further attempt to penetrate the dreary wilderness to the west and northward. The thermometer, which had reached 157° in February, fell in July to 24° . A second depôt was established, between 50 and 60 miles N.W. of the former, in lat. $29^{\circ} 6'.$ The alternate sand-ridges and flats which stretched to the westward were found to be terminated (at a distance of about 80 miles) by the sandy bed of an extensive lake—part of the Torrens basin of Eyre's map. This consisted chiefly of sand and salt, with patches of clay and gypsum, and, though for the most part dry, contained detached sheets of dark-blue salt water, with sapphire bushes around. Farther progress in this direction was impracticable, and a return to the depôt was necessary. Thence, attended by four companions only, taking a light cart and two pack-horses, with fifteen weeks' provisions, Capt. Sturt struck a N.N.W. course into the interior—leaving the depôt on August 14, and continuing to advance until September 9th, at which time he had reached a point in lat. $25^{\circ} 4' S.$, lon. $138^{\circ} 15' E.$ The ground passed over was in many parts of the most forbidding description—high and broken ridges of sand, of fiery-red colour, succeeding one another like waves of the sea. The sand-hills only terminated in a vast stony plain, within which the horses left no track, and in which no object was visible on the horizon. A polygonum flat of two miles in breadth bounded this stony desert on the west, and arid plains, destitute alike of stones and of herbage, succeeded. At intervals, however, water was met with, and in its vicinity grassy and wooded tracts of country, the resort of numerous parrots, cockatoos, and other birds. Native habitations were also seen. The bed of Eyre Creek, coming direct from the N.N.W., was found full of grass, but sand-ridges closed it in upon either side, and the last fresh-water pond at the head of the creek limited the advance of the party. They pushed, indeed, a few miles farther northward, but in every direction the country was alike impracticable, and the drought was extreme. They reached the depôt again upon October 3. One further attempt was made to penetrate the

interior (on a bearing to the E. of the former course), and the discovery of Cooper Creek, with extensive permanent sheets of water, rewarded their arduous labours. Beyond this, to the northward, the sand-hills, and after them the stony desert, were again met with, and the same unbroken wilderness stretched around. The return to the *dépôt* was attended by extreme suffering, the party being only saved from perishing by the timely discovery of a solitary water-hole. Cooper Creek, however, was found to contain abundance of grass and water; and was the abode of numerous natives, by whom Sturt and his companions were received with the greatest kindness. The *dépôt* again reached, the farther and final task of bringing back the party in safety to the Darling involved considerable difficulty, the country being in a fearful state of drought, and the heat intensely painful. By the 20th December, 1845, the Darling was reached, and the ensuing 19th January witnessed the return of Sturt and his companions to Adelaide, after an absence of sixteen months.

The results of this expedition were unfavourable to the prospects of settlement within the Australian interior, and, combined with the prior experience of Eyre, tended to discourage the sanguine hopes which had been directed to that quarter. A hasty generalization, based upon imperfect and utterly insufficient materials, led to inferences which have since been found altogether fallacious. Because Sturt, in a season of unusual drought, had struck a track which proved to lead to an arid wilderness, it was assumed that the whole vast interior of Australia must be equally barren, and a million square miles of country were condemned, in the minds of speculative geographers, to irremediable sterility. Happily the enterprise of S. Australian colonists was daily taking a direction which involved practical disproof of these theories, and has ultimately led to their relinquishment. The increasing flocks and herds of the settlers involved the continual necessity of farther advance from Adelaide in every direction, and cattle-stations were gradually pushed forward into the tracts of country lying beyond the head of Spencer Gulf, both to the eastward and northward. In 1856-7, examination of the country inclosed within the supposed vast circuit of the Torrens basin, by Babbage, Goyder, and others, showed the existence of permanent waters near localities where Eyre had found nothing but an arid wilderness, and even in near proximity to the 'Mount Hopeless' of that traveller. Within the same and immediately succeeding years, the labours of Babbage, Warburton, Macdonall Stuart, and other explorers, were directed to the country lying west from Spencer Gulf towards Streaky Bay, on the southern coast-line, and stretching northward from the gulf past the western side of Lake Torrens, towards the more distant interior. The ideal Lake Torrens of earlier Australian geography has been found to include a chain of lakes, distinct from one another, to which the names of Eyre, Gregory, Frome, and others, have been subsequently attached. Lake Gregory, formerly regarded as the eastern arm of the Torrens basin, receives a portion of the drainage of Cooper Creek, and with it of a large area of the more distant interior. Lake Torrens (which, even in the more restricted limits now ascertained to belong to it, extends upwards of 150 miles in the direction of N. and S.) has its drainage into the head of Spencer Gulf, though divided from it during the season of drought by an intervening isthmus. Lake Eyre, like Lake Gregory, represents a basin of interior drainage, and has permanent sheets of salt water, fed by the Neale and numerous smaller streams. Its basin, the surface of which is only 70 ft. above the sea, probably represents the most depressed portion of the interior yet known. The western limits of the Eyre basin, however, are marked by well-defined ranges of high ground, some points in which are probably from 1500 to 2000 feet above the sea.

Of these results, the most important are due to the enterprise of Macdonall Stuart, whose subsequent labours have placed him in the foremost rank of Australian explorers. The more energetic among the settlers of S. Australia had long cherished the idea of opening communication with the northern coast of the continent, by a direct route across the intervening interior, with the ultimate view of establishing commercial relations with India and the islands of the Eastern Archipelago. Macdonall Stuart's exploratory journeys in

1858-59, joined to his previous experiences under the leadership of Captain Sturt, marked him out as the fit man to carry the bold project into execution, and the necessary means were supplied chiefly through the instrumentality of two public-spirited colonists, Messrs. Chambers and Finke. In March, 1860, Stuart started from Chambers Creek (on the S.W. angle of Lake Eyre), with the hope of reaching either the Victoria river of the N.W. coast, or of making the sea-shore at some point between that river and the Gulf of Carpentaria. His general course was a little to the W. of N. Alternate hills, plains, grassy flats, and intervening creeks were traversed, water being sometimes scarce, but the proportion of good land, on the whole, far exceeding that of an opposite description. In seven weeks from the time of starting he had reached the centre of the continent, and fixed the place of a conspicuous eminence of red sandstone, the 'Central Mount Stuart' of subsequent maps. His advance thence to the north-westward, in the direction of the Victoria, was prosecuted for 150 miles, but the absence of water compelled a return to Mount Stuart, and the resumption of a northwardly course. In this, however, after advancing to the lat. of 18° 45' S., he was finally baffled, less by the difficulties and hardships attendant upon long-continued drought, than by hostile encounter with large bodies of natives. Chambers Creek was again reached on September 3, six months only having been consumed in an enterprise which went farther towards proving the feasibility of crossing the Australian continent than anything that had previously been accomplished. A second and a third journey were, however, necessary before final success was realized.

Macdonall Stuart's second journey occupied part of the year 1861. Passing over his track of the previous year, he succeeded in reaching nearly to the parallel of 17° S., where he found the plains covered with a dense scrub, which put a barrier to farther progress, either in the direction of the Victoria or the Gulf of Carpentaria. The bed of Newcastle Water, however, in lat. 17° 36' S., presented large permanent sheets of water, with well-grassed and wooded banks, adjacent alluvial soil, and evidences of a numerous native population. The limited means at the disposal of the party again necessitated return, and Adelaide was reached by the middle of September. Public attention, both in the colony and at home, was thoroughly aroused to the importance of the enterprise, yet incomplete, and only a few weeks elapsed before Stuart again started (Dec. 1861) on his third and finally successful journey, which involved a period of a few days more than a year. By the month of April, 1862, Newcastle Water was again reached; beyond, were well-grassed plains, with a country dipping to the eastward. A northerly track was now pursued, until the party struck the banks of the Roper river, well known in connection with Leichhardt's and Gregory's explorations, and along the valley of which the former had travelled in 1845, on his journey to Port Essington. Stuart's farther course lay in the direction of N.W., about 60 m. to the W. of (and nearly parallel to) Leichhardt's track. The Mary river, an affluent of the Adelaide, which debouches into Van Diemen Gulf, was reached in the middle of July; the Adelaide itself soon followed, and at length (July 24), the sight of the sea rewarded the enterprise of Stuart and the delighted companions of his toils! The point reached lay a short way E. of the mouth of the Adelaide river, in Van Diemen Gulf. The return journey was one of much hardship and personal suffering to the leader of the expedition.

Macdonall Stuart's successful enterprise was the immediate precursor of a scheme of settlement on the N. coast of Australia, at the hands of the S. Australian colonists. The vast tract of country which extends northward from the 26th parallel (the prior northerly limit of S. Australia) to the Indian Ocean, between the meridians of 129° and 138° E. (and upon which the name of 'Alexandra Land' has been bestowed by its explorer), has been provisionally placed under the charge of the colonial government. Stuart's journeys seem to give assurance that this country may be safely traversed by the flocks of the settlers. It remains to demonstrate the successful occupation, for pastoral purposes, of a tract of country lying altogether within the torrid zone, and approaching within twelve degrees of the equator.

While Macdonall Stuart was seeking to carry out the designs of the colonists of S. Australia, the people of the adjoining

ing province of Victoria had directed their regards to a similar result, and the waters of the Gulf of Carpentaria had been actually reached (February, 1861) by the members of an expedition fitted out at Melbourne during the preceding year. This was the ill-fated enterprise under the charge of Robert O'Hara Burke, which, though undertaken with a more than ordinary amount of prior organization, and abundantly provided with means of success—camels being for the first time employed upon this endeavour to penetrate the Australian interior—was ill-managed from the outset, and cost the lives of its leaders. The 'Burke and Wills' expedition, as it is called, left Melbourne in August, 1860. Menindie, on the lower Darling, was made its first dépôt, and an advanced party, headed by Burke, reached Cooper Creek by the 11th November. On the 16th of the following month, Burke, accompanied by three Europeans—Wills, King, and Gray—and taking with him six camels, a horse, and three months' provisions, started for the Gulf of Carpentaria. The dépôt at Cooper Creek was left in the charge of Mr. Brahé, with instructions to await the return of the leader of the expedition. Its remaining members, who, with the chief bulk of the stores, had been left behind at Menindie, were to advance to Cooper Creek by more gradual stages. Burke and his companions, in a rapid journey of two months, succeeded in reaching the tide-water of the Gulf of Carpentaria, near the mouth of the Flinders river—their track lying for the most part along the line of the 140th meridian. Although the sea was not actually visible, its immediate proximity was indicated by the saltness of the water in the channels of the intervening marshes, upon which wild geese, plover, and pelicans were enjoying themselves. A like period was consumed in the return journey to Cooper Creek, in the course of which one of the party, Gray, died. Burke, with his two surviving companions, Wills and King, regained the dépôt at Cooper Creek on the evening of April 21, and found it deserted—a note left by Brahé conveying the information that the party under his charge had started upon the morning of that very day, upon their return to the Darling! A supply of provisions had, indeed, been left behind. The exhausted condition of Burke and his companions forbade any attempt at overtaking Brahé's party, and seemed to render equally hopeless the chance of their reaching Menindie (from which they were 400 m. distant) by any exertions of their own. After attempting in vain to reach the out-settlements of S. Australia, and prolonging for several weeks a wretched existence—almost their sole resource during the chief part of the time being the seeds of a plant called *nardoo*, the use of which they learned from the natives of Cooper Creek—Burke and Wills, their strength utterly exhausted, and hopeless of relief, lay down to die. King, the sole survivor, was preserved from utter starvation by the kindly aid of the natives, and was found living amongst them in the ensuing September, when a party of inquiry, despatched from Melbourne under the charge of Mr. Howitt, reached the creek. Thus fatally for its leaders terminated the expedition in which the Australian continent was first directly crossed, from sea to sea. The diaries kept by Wills convey information of the existence of much good country along the line of route taken by the explorers, and scarcely a day appears to have passed, either on the outward or the return course between Cooper Creek and Carpentaria, without a creek or other watercourse having been traversed. A considerable portion of the country between the tropic and the gulf was found to be well-watered and richly grassed.

The finding a practicable route from Victoria to the Gulf of Carpentaria was not the sole, nor even the most important fruit of the unfortunate 'Burke and Wills' expedition. While the fate of its leaders was still in suspense, the keen interest awakened on their behalf led to the fitting out of expeditions for their relief, on the part not merely of the people of Victoria, but also of the colonists of S. Australia and of Queensland. The services of M'Kinlay, Landsborough, and Walker were directed to this purpose—the first-named at the instance of the S. Australian settlers, the two latter on the part of the Queensland population. These expeditions, although failing in the primary purpose of carrying aid to Burke and his companions (whose fate was, indeed, already decided), achieved results of high importance to the cause of interior discovery. M'Kinlay, leaving the most distant out-

station of S. Australia (in the vicinity of Eyre's 'Mount Hopeless') in September, 1861, advanced northward across the Torrens basin—once supposed to constitute an impassable barrier in that direction. A watered region, with numerous lakes, succeeded. Part of the 'stony desert' of Sturt was then traversed, and, crossing the track which had been pursued by Burke and Wills, a general northwardly course—through a partially flooded country, succeeded by vast grassy plains, with volcanic hills as their boundary—brought the party to the southern shore-line of the Gulf of Carpentaria, at the point where the river Leichhardt enters the sea. This was in May, 1862. Thence M'Kinlay, turning his steps eastward, pursued an overland route to Port Denison, in Queensland, reaching the out-stations of that colony early in the month of August.

Landsborough, whose experience as a practical bushman rendered his journey a remarkable instance of great results successfully accomplished with limited means, had the mouth of the Albert river as his starting-point, being conveyed thither from Moreton Bay by sea. He first sought to penetrate inland in a S.W. direction from the Gulf of Carpentaria, but after an advance of 200 m., without meeting any traces of Burke and his companions, returned to his dépôt on the Albert. This was in January, 1862. Starting again, in the following month, he traversed the whole central interior of the Queensland province, from the Gulf of Carpentaria to the banks of the Warrego river, and thence, by the Warrego valley and the Darling, reached Menindie, on the last-named river. The country crossed on this occasion consisted, in the neighbourhood of the gulf, of thinly-wooded and well-grassed plains, bearing the marks, so common in Australia, of alternate drought and flood; basaltic ridges, leading to fine pastoral uplands, were afterwards found.

Walker, meanwhile, starting from Rockhampton, on the Fitzroy river, in September, 1861, had made his way overland to the Gulf of Carpentaria by a distinct route—first proceeding westward to the upper portion of Mitchell and Kennedy's 'Victoria' river, and thence striking north-westwardly to the mouth of the Albert, finding on the way, upon the banks of the Flinders, the tracks of Burke and his companions. Much of the country passed through by Walker's party was found of the most serviceable description for the purposes of the squatter.

The routes of Burke, M'Kinlay, Landsborough, and Walker, joined to those of Gregory, Leichhardt, and other explorers, intersect in numerous directions the vast N.E. interior of the Australian continent, as Macdouall Stuart's do its more central regions. The map alone can show with precision the immense field over which these explorations range, and their bearings relatively to one another. The practical enterprise of the Queensland settlers is rapidly filling up the gaps between them, in so far, especially, as the north and eastwardly divisions of that province are concerned. The cattle stations of the settlers are now found as far north as the parallels of 18° and 19°, above 1000 m. distant from Brisbane; and the course of similar enterprise has well-nigh extended to the Gulf of Carpentaria, if, indeed, its shores be not ere this already reached.

One highly important series of expeditions remains to be noticed—those, namely, which had W. and N. Australia for their field of operation, and with which the names of Augustus C. Gregory and his brother are intimately associated. The exploring labours of the Messrs. Gregory range over a lengthened period—from the year 1846 downward—the most important amongst them being those connected with the N. Australian expedition of 1855–56, under the charge of Augustus C. Gregory. In 1846, in the course of an exploring journey through the country lying N. and N.E. of Swan river, the brothers Gregory discovered coal on the banks of the Arrowsmith river. Two years later, Augustus Gregory was intrusted with the command of 'the settlers' expedition,' the object of which was to find available tracts of land to the northward of the hitherto settled districts of W. Australia, and, if possible, to reach the Gascoyne river, which flows into Shark Bay. At the same date Mr. Roe, then surveyor-general of the colony, explored successfully a large area of the country lying S.E. of Perth, and connected his observations in the tract extending eastward from King George Sound with the discoveries made by Eyre in 1841. Austin, in 1854,

extended the limit of Gregory's observations in the interior to the northward of Perth, passing over country comparatively worthless for the ordinary purposes of the settler, though containing evidences of mineral wealth. The abundance of a poisonous plant, which affects horses fatally, within large areas of the interior in this direction, forms a noteworthy and unsatisfactory characteristic. The same plant was found by Gregory in parts of the more northern interior.

The 'North Australian expedition' of 1855-56 was a more important undertaking. Its main purpose was to ascertain the suitability of the N.W. coast for the purposes of permanent settlement. Hardly anything was then known of those portions of the mainland beyond the line of the coast surveys, the expedition of Grey and Lushington, in 1837, having penetrated but an insignificant distance inland, in the neighbourhood of Hanover Bay and Prince Regent river. The Victoria river, which enters the eastern arm of Cambridge Gulf, explored and ascended to some distance by Wickham and Stokes in 1839, seemed to offer a promising field of search; and it was thither that the N. Australian expedition (organized and finally equipped at Sydney in 1855) was directed, the party being conveyed to the mouth of the Victoria by sea. Mr. Gregory's first labours on this occasion were devoted to a careful examination of the lower Victoria, a depot camp being established about 80 m. above the mouth of the river. Thence, with a few companions, the leader of the party sought to penetrate, in a S.W. direction, the unknown wilderness of the interior. Ascending the Victoria to its source, and crossing (at a height of about 1600 ft.) the dividing ground which separates the coast-drainage from the waters of the interior, he struck the course of Sturt Creek, flowing S.S.W., which he followed for nearly 300 m. to its termination in the dry bed of a salt lake (lat. 19° 10' S.; lon. 127° 30' E.). The aspect of the country was here of the most forbidding description—a boundless waste of sand-ridges and low rocky hillocks, in which the surface waters became rapidly absorbed. Return to the depot was determined on, and thence the exploring party started (June, 1856) in the direction of the Gulf of Carpentaria and Moreton Bay. The general course followed in this prolonged journey of more than 2000 m. lay in the reverse direction of Leichhardt's track in 1845—in many parts nearly parallel to it, though at a somewhat farther distance inland. The dividing ground between the rivers of the north-west coast and those flowing into the Gulf of Carpentaria was found of very moderate elevation, nowhere exceeding 800 ft. The valley of the Roper was next crossed. Thence the party skirted the edge of the extensive table-land of N. Australia, crossing the various rivers which Leichhardt had found flowing into the Gulf of Carpentaria, at points about 50 m. nearer their sources than in the case of the earlier traveller. Gregory remarks upon the great scarcity of animal life in the level plains lying E. of the Flinders river, which, as usual, showed marks of extensive inundation. The valley of the Gilbert was next ascended to its head, and the Carpentaria basin left behind, as the party crossed the basaltic ranges which divide its waters from those of the Burdekin valley. The Burdekin was descended to its point of junction with the Sutor, or Cape River of Leichhardt, and the route of that traveller connected with the explorations of Mitchell on the Belyando. Thence, crossing the Mackenzie and Comet rivers, the out-stations of the colonists were reached, and the party ultimately arrived at Brisbane before the end of 1856.

In 1858, Mr. F. T. Gregory, at the instance of the settlers of W. Australia, conducted a highly successful examination of the tract of country watered by the Murchison and Gascoyne rivers—the former flowing into Gantheaume Bay, the latter into Shark Bay; large tracts of available land being found within the valleys of the upper Gascoyne and its northerly affluent, the Lyons. Mount Augustus, a detached hill near the S. bank of the Lyons, 3480 ft. in height, afforded a view over a wide range of country, terminated to the eastward by bold ranges of trap and granite. The general aspect of the country explored on this occasion was indeed superior to that of W. Australia in general, and presented—especially towards the upper portion of the rivers—a more varied and hilly character. Three years later (1861), under the same leader, an expedition, equipped on a more extensive scale, was despatched from the mouth of Swan River to the

N.W. coast, which was reached at Nickol Bay (lat. 20° 40' S.), the starting-point of its labours in the N.W. interior. Mr. F. Gregory's labours upon this occasion included the discovery of the Fortescue, Hardey, and Ashburton rivers, flowing towards the W. coast, from the last-named of which he connected his observations with those made on his previous visit to the valley of the Lyons. The country in which these rivers have their origin was found to be the most elevated in W. Australia; Mount Samson (lat. 22° 38' S.), which was ascended by our traveller, having an elevation of 1000 ft. above the valley of the Hardey, while Mount Bruce and the mountain-ranges to the eastward were assumed to reach not less than 4000 ft. above the sea. A large amount of fine pasture country was found adjoining the S. and E. base of the Hamersley Range, as the hilly tract on the S. border of the Fortescue valley was called. Making a second start from the shores of Nickol Bay—this time on an eastwardly course—the travellers crossed in succession the valleys of the Sherlock, Yule, Strelley, Shaw, De Grey, and Oakover rivers, all flowing northward, and reached their extreme limit in extensive plains of drift-sand, lying E. of the last-named stream (between the parallels of 21° and 22° S. and the meridians of 121° and 122° E.). The country had gradually declined in elevation as this arid tract was approached, and it was necessary to fall back upon the watered districts. In the course of the return journey to Nickol Bay, the De Grey river was followed down to its outlet in the sea, which it enters through an extensive delta. Fresh water is here abundant, and there are large areas of well-grassed land, composed of alluvial deposit.

The two last-described journeys of Mr. F. Gregory go far towards completing the examination of the seaward division of W. Australia, from the S. coast-line of the continent northward to the mouth of the De Grey river. The remainder of the N.W. coast, between the De Grey river and the mouth of the Victoria (at which latter point the labours of Augustus Gregory commenced), is the only portion of the Australian seaboard which remains untraversed, in so far as inland exploration is concerned; a very limited portion only of the wide intervening area having been examined by Grey and Lushington, in the unsuccessful expedition of 1837.

In glancing, however briefly, at the course of Australian exploration within recent years, it is impossible not to be struck with the vast accessions made to our knowledge of the Australian interior, and with the eminently satisfactory nature of the results that have been obtained. In nearly every direction in which the continent has been traversed, watered and grassy plains have been found to occupy at frequent intervals—sometimes, indeed, over continuous areas of large extent—the space hitherto supposed to be an arid wilderness, and the general capability of the Australian interior for the purposes of pastoral settlement is placed beyond doubt. Exceptional cases no doubt occur—among the most noteworthy those marking the termination of Sturt's journey in 1845, and of Augustus Gregory's inland tract (within the north-western interior) in 1856. But Macdonall Stuart's routes lie midway between those points, and the supposed barren waste of which they were once held to constitute the external limits can have no real existence. That interior Australia has peculiar characteristics, distinguishing it in a striking degree from any other continent, is undoubtedly true—one of the most noteworthy being the great flatness of large areas of its surface, and the moderate elevation of even its highest ranges. The absence of large rivers, and the frequent decrease in the volume of its interior waters as they flow onward, until finally absorbed in the light and porous surface-soil, is a consequence of the above condition. It is only in the south-eastern division of the continent that the streams belonging to the basin of the Murray make any pretension to rival the rivers of other lands; and it is in the cordilleras of the eastern coast—the most continuous and the most elevated of the Australian mountain-chains, that their sources are to be found. Nowhere but in the south-eastern corner does snow lie for any lengthened period upon the summits of the Australian mountains; and the moderate elevations of the vastly greater portion of the interior, taken in conjunction with the parallels between which it is comprised, render temperatures below the freezing-point of rare occurrence. Terrace-lands of

moderate height, exhibiting sufficient relief to diversify not only the surface, but also the climate, and to mitigate the otherwise intense heats of the southern tropic, are however, as we have seen, met with in many and widely-distant portions of the northern interior, both towards the eastern and the north-western coasts; and the basaltic ranges which are of frequent occurrence in those directions are uniformly accompanied by conditions of fertility.

Another result, and one of high interest to the physical geographer, as well as to the settler, consists in the large additions made by recent travel to the prior list of native produce—vegetable and animal, as well as mineral—proper to Australia. If the indigenous flora and fauna of that continent bear no comparison with those of other lands in respect of utility to man, they are at any rate much less restricted than has hitherto been supposed. Even of food-plants, Australia is far from being entirely destitute—though, with few exceptions, they have remained unimproved and even unutilized by its hopelessly degraded native race. Sturt found native wheat and oats, with rye-grass, in the distant interior (Cereal Creek), and, elsewhere, rice-grass. The same plants were seen by Stuart in his journeys across the centre of the continent. Leichhardt, in a widely-distant locality, noticed various eatable fruits—the pandanus and cycas amongst them—growing on tracts well stocked with game, where the air was fragrant with wild thyme and marjoram, and where honey 'sweet as that of Hymettus' abounded. Within the northern interior, again, Gregory found three varieties of indigenous fig, all well-flavoured, with a native grape, besides several other fruits used as food by the natives—particularly that of the Adansonia or gouty-stem tree. Wild yams were also found, and, on the banks of the Victoria, a plant of the potatoe kind, affording an edible tuber. The variety of the native woods is also much greater than had been supposed.

The formation of a settlement upon the northern shores of Australia, now (1865) in progress at the hands of the South Australian colonists, and as the immediate consequence of Macdonall Stuart's discoveries, cannot fail to exert an influence upon the future course of exploration in this great region of the southern hemisphere—full of promise to the future prospects of mankind. A vast portion of the Australian continent, however, is even yet unvisited by civilized man. The rapid extension of population on the side of Queensland and the eastern colonies in general is likely, at no distant period, to fill up the gaps that occur between the various routes of the explorer; but large spaces of the western interior are probably destined to remain long a blank upon the map.

AUSTRALIA (South), [add.] Population.—At the end of 1862 the province contained 135,329 persons (colonists), 69,608 males and 65,721 females, being an increase of 4702 over the previous year. By the census of 1861 the number of aborigines was found to be 5046 in the occupied districts; they are rapidly decreasing.

Agriculture.—From 1835 to 1862 inclusive, 2,510,315 acres of crown lands were sold for £3,150,216; of which 147,355 acres were disposed of in 1861 for £189,015, and 129,910 acres in 1862 for £152,659; 2,105,877 acres were inclosed; and the area under cultivation in 1862 was 494,511 acres, the crops being wheat, barley, oats, maize, and hay. The value of exports of breadstuffs, grain, &c., was £712,789 in 1861, and £633,241 in 1862; the quantities exported in the latter year being larger, but the value less. At the close of 1862 the colony possessed 56,251 horses, 258,342 horned cattle, and 3,431,000 sheep; the wool exported in the year having been 13,229,009 lbs. of the value of £635,270. The 'stations' or farming settlements now extend between 400 and 500 miles from Adelaide.

	Imports.	Exports.	Revenue.	Expenditure.	Public Debt.
	£	£	£	£	£
1861	1,976,018	1,838,630	558,586	482,951	—
1862	1,820,656	1,920,487	548,709	579,382	853,300*

* Being the amount of loans for public works.

The following table shows the rapid increase in the export value of the three staple productions of the colony:—

PERIOD.	Bread-stuffs, Grain, &c.	Wool.	Copper and other Minerals.	Miscellaneous.	Total.
	£	£	£	£	£
In 1853,	257,114	236,020	176,744	61,687	731,595
„ 1857,	755,840	504,520	458,839	24,985	1,744,184

Average of 5 years.,	424,394	323,720	258,402	44,187	1,051,104
„ 1853-57,	424,394	323,720	258,402	44,187	1,051,104
„ 1858-62,	580,959	547,401	446,125	59,956	1,638,131

Manufactures, &c.—In 1862 the towns of the colony contained 70 brick manufactories, and 42 manufactories of agricultural implements. In Adelaide there is an establishment for the artificial formation of ice, of which about three tons are produced daily, and supplied at a moderate rate to the public.

It is believed that gold exists in the mountains within sight of the capital, and explorations have been set on foot for its discovery.

In 1862 the colony possessed 582 places of worship, with accommodation for 78,616 persons, and 359 Sunday-schools, with 2840 teachers and 20,705 scholars; and there were 57 miles of railway open, and 1026½ m. of telegraph line.

AUSTRALIA (WESTERN), [add.]—The progress of this colony has not been so great or so rapid as that of the others in the continent, owing no doubt to the comparative scarcity of rich land, and to its having been to a great extent dependent on the labour of convicts. Under the strong remonstrances of the colonists, the home government has decided on using it no longer as a convict settlement; so that it may become hereafter more attractive to capital and energy.

The following table will exhibit the general position of the colony:—

Year.	POPULATION.			Revenue.	Expenditure.	Imports.	Exports.
	Males.	Fem.	Total.				
	£	£	£	£	£	£	£
1860	—	—	—	69,863	61,745	169,075	89,247
1861	9,852	5,839	15,691	67,261	81,007	147,913	95,789
1862	—	—	17,000	67,337	72,267	172,000	—

AUSTRIA [add.] In 1859 a rupture took place between Austria and Sardinia, and war ensued. The cause of Sardinia being espoused by the emperor of the French, Austria was compelled, after a brief but fierce campaign, and suffering a series of defeats, to submit to the surrender of the principal part of Lombardy, of which she retained only a very small part of the S.E. extremity. This surrender, involving the cession of nearly 8000 sq. m. of territory, and 2½ millions of inhabitants, was ratified by the treaty of Villafranca, July 11, 1859, and of Zurich, Nov. 10 of the same year, and received its final confirmation in the formal recognition of the kingdom of Italy by the Austrian government in 1865. Upon the conclusion of the Austro-Italian war, Austria applied herself to the work of internal reform; her finances were disorganized, and the imperial constitution too despotic. By a diploma dated October 20, 1860, and a patent of February 26, 1861, the present constitution, based upon the representative system, was established. Each of the provinces has a *Diet*, composed of the archbishop, bishops, and chancellors of the universities, *ex officio*, and certain elective members; the office of the Diet is to regulate the county and local administration. Every man above the age of 24 years, and paying 15s. a year direct taxes, has a vote in the election of members, who must be citizens at least 30 years old, and of 'irreproachable character.' Hungary, Croatia, and Transylvania have separate constitutions, allowing greater liberty of self-government. The Reichsrath, or Council of the Empire, consists of an upper and lower house; the former composed of the princes of the imperial family, nobles, archbishops and bishops, and life members nominated by the emperor. The lower house contains 348 members, elected by the provincial Diets from their own number, in the following proportion:—Hungary 85; Bohemia 54; Lombardy-Venice 20; Dalmatia 5; Croatia and Slavonia 9; Galicia 38; Upper Austria 10; Lower Austria 18; Salzburg 3; Styria 13; Carinthia 5; Carniola 6; Bukovina 5; Moravia 22; Silesia 6; Tyrol and

Vorarlberg 12; Transylvania 26; and Istria and Trieste 6. The duties of the Reichsrath are *consent, co-operation, and examination*, in the military, financial, and legislative business of the empire. The members of either house may propose new laws on matters within their competence; and the consent of both houses is required to give validity to any enactment. Another council, the Enger Reichsrath, or Partial

Council of the Empire, is formed by the combined houses, excluding the representatives of Hungary and Croatia; laws passed by this council have no force in the latter provinces, in order to allow them a greater share of self-government than the remaining provinces of the empire.

The latest census of Austria is that of 1857, of which the following are the chief facts:—

POPULATION AND RELIGIOUS PROFESSIONS OF AUSTRIAN EMPIRE IN 1857.

PROVINCES.	Population, 31st Oct. 1857.	Roman Catholic.	Greeks.	Armenians.	Non-united Greeks and Armenians.	Protestants.	Unitarians.	Jews.	Other Sects.

* The provinces thus marked (but of Galicia only the duchies of Auschwitz and Zator, pop. 196,339) form part of the Germanic Confederation. † The Lombard provinces ceded to Italy in 1859 are deducted.

More than two-thirds of the population of the empire are occupied in husbandry; but in Silesia, Lower Austria, and Moravia about one-half are employed in manufactures.

In 1857 the following cities and towns had the population annexed to them:—

Vienna,	476,222	Maria Thérésienstadt,	53,499
Prague,	142,588	Pressburg,	43,863
Pesth,	131,705	Cracow,	41,086
Venice,	118,172	Kezckemet,	39,434
Trieste,	65,874	Debreczin,	36,283
Lemberg,	70,384	Vicenza,	33,306
Gratz,	63,176	Mantua,	29,884
Szegedin,	62,700	Linz,	27,628
Verona,	59,169	Arad,	26,959
Brunn,	58,809	Kronstadt,	26,826
Buda,	55,240	Chioggia,	26,667
Padua,	53,584	Czernowitz,	26,345
		Udine,	25,201

At the end of 1864, Vienna had about 560,000 inhabitants.

Army and Navy.—The army, on the peace footing, numbered, at the end of October, 1863, 269,103 men, with 42,201 horses; on the war footing, the number is 570,027

men. The navy, in August, 1864, consisted of 39 steamers, with 639 guns, and 11,730 horse-power, and 20 sailing vessels, with 145 guns.

Trade and Commerce.—In mining and smelting operations there were engaged, in 1860, 107,334 work-people, consisting of 98,556 men, 4009 women, and 5269 children. The value of the principal products obtained in 1860 and 1861 was as follows:—

	1860.	1861.
Gold,	£215,370	£214,292
Silver,	306,820	303,334
Copper,	323,680	329,287
Lead,	183,489	—
Litharge,	31,175	253,445
Zinc,	25,745	—
Coal,	600,000	735,289
Brown Coal,	360,000	394,206
Iron,	1,983,000	1,945,728

The quantity of ordinary coal raised in 1860 was about 1,700,000 tons, and of iron 278,000 tons.

DOMESTIC AND FOREIGN SHIPPING IN AUSTRIAN PORTS IN 1861.

Shipping.	Entered.		Cleared.	
	Vessels.	Tons.	Vessels.	Tons.
Austrian. { Sailing,....	61,654	1,372,410	61,990	1,381,680
{ Steam,....	4,108	968,441	4,091	960,203
Foreign.... { Sailing,....	4,458	362,051	4,400	357,878
{ Steam,....	77	44,700	77	44,578
Total.... { Sailing,....	66,112	1,734,461	66,390	1,739,058
{ Steam,....	4,185	1,013,141	4,168	1,004,781
Total,.....	70,297	2,747,602	70,558	2,743,839

In June, 1862, the commercial marine of Austria consisted of 9703 vessels, of 349,157 tons, and manned by 34,664 sailors. Only 606 of these were for the foreign trade, the rest being small coasters.

There were 3450 miles of railway in Austria in June, 1864, constructed at a cost of £74,862,703, on rather more than half of which the government guarantees an interest of 5·2 per cent. per annum.

Finances.—The following table will show the national revenue and expenditure in the four years 1860-3:—

Year.	Revenue.	Expenditure.	Deficiency.
1860	£ 28,650,998	£ 32,732,660	£ 4,081,662
1861	82,523,222	36,005,926	3,482,704
1862	30,587,110	35,459,246	4,872,136
1863	33,221,497	38,442,715	5,221,208

Since 1789 the revenue has annually been less than the expenditure. At the end of 1860 the national debt amounted to £225,000,000. In addition to this is the debt of £6,000,000 of the Lombardo-Venetian kingdom, which, with subsequent loans and other liabilities, raises the total debt to upwards of £290,000,000.

AUTANCURRAY, a tn. India, presid. Madras, dist. Madura, at the mouth of the Vigay, in Palk's strait, 11 m. N.E. Ramnad. It has a spacious and well-built *chuttrum*, or travellers' bungalow, surrounded by a strong wall; and is inhabited chiefly by fishermen, who keep the market of Ramnad well supplied with white fish and excellent oysters. The tobacco grown at Ullaguncolum, about 2 m. N.W., is reckoned superior to any grown elsewhere in the provinces S. of Madras.

AUTHA LUNA, or **SPLIT ISLAND**, a small island or rock, S. Pacific, about 10 m. S. by W. of the usual anchorage in Rotuma Island; about lat. 12° 20' S.; lon. 177° 9' W. It is a wall of rock from 400 to 600 ft. high, shaped like a horse-shoe, and having on its S.W. side a narrow passage from the open sea into its seething interior. It is accessible only in very calm weather, when the adventurous natives of the small adjacent island of Wea shoot their canoes through the passage, and afterwards climb to the top of the precipice.

AUTLAN, or **AUTLAN DE LA GRANA**, a tn. Mexico, Jalisco, 102 m. S.W. Guadalaxara. Its inhabitants are chiefly employed in the culture of sugar, and in carrying on a trade in the salt made on the coast. A good deal of cochineal is produced. Pop. 3000.

AVATCHA, a bay, Asiatic Russia, on the S.E. coast of Kamtschatka. It consists of an extensive outer bay, which is formed by Capes Povorotnoi or Gavarea and Chipounski, and of an inner bay, which lies at the bottom of the former, and is entered by a channel 4 m. long and 1 m. wide. This inner bay is the principal port of the peninsula, and is so capacious and excellent that it would afford secure shelter for all the fleets in the world. On its E. side is the small, deep, and well-sheltered harbour of Petropaulovski, so called from the town of same name standing at its head. In the S.W. is the harbour of Tareinski, and S. of Petropaulovski that of Rakovya. On the E. and W. sides of the entrance there are lighthouses, and a third a little S. of the entrance to Rakovya, of the respective heights of 449, 294, and 378 ft. above the level of the sea.

AVE, a tn. Persia, 75 m. S.W. Teheran. It stands on the site of an ancient town of same name, of which only some slight traces remain, and has a mound on which once stood a Guebre castle.

AVILA, a tn. S. America, Ecuador, prov. Oriente, on a sandy plain watered by the Suno, 100 m. E.S.E. Quito. Like other places in the same country, it has lost everything which entitled it to the name of a city, and is now only a mean village, with 170 families of Indians for its inhabitants.

AVON, or **OPAWAHA**, a river, New Zealand, Munster or Middle Island, which takes its rise in a swamp in Canterbury Plains, and flowing E.N.E., has its mouth at the S. extreme of the sandy beach of Pegasus Bay, on the N.W. shore of Banks' Peninsula. From not being connected with the mountain ranges, it is less liable to sudden changes from swollen torrents, and flows on in a current which never exceeds 5 to 6 knots. In moderate weather its bar can be safely crossed by vessels drawing from 8 to 10 ft. The entrance is somewhat narrow, and sailing vessels occasionally find egress difficult.

AVZAPERT, a vil. Turkey in Asia, Koordistan, 67 m. S.S.W. Erzeroum, on the western edge of a plateau much broken by hills, and traversed from E. to W. by the Jerini-su. Pop. 300.

AWARUA, the native name of the bluff promontory, Otago, New Zealand, on which Campbell Town now stands, in lat. 46° 35' S. It stretches boldly out to sea from the New river, and ends in a steep eminence facing the S. The rocks which compose it are partly plutonic, partly aqueous, 'ranging from granite and gneiss to indurated and soft shales.' The harbour beneath is one of the best in New Zealand, the promontory protecting it to the W., while to the eastward a low tongue of shingle assists to nearly landlock the anchorage.

AWTON, a tn. W. Africa, Yoruba, lat. 8° N.; lon. 5° 10' E. It is entered by an excellent avenue-like approach, is surrounded by a very deep ditch, and pays tribute to Ibadan.

AXAMS, a tn. Austrian empire, Tyrol, circle and 6 m. W. Innsbruck. The inhabitants are chiefly employed in weaving and cultivating flax. Pop. 1200.

AYAGUS, a tn. Russian empire, Khirghis Steppe, 630 m. S.S.W. Tomsk, on a river of same name, which sends its water to Lake Tenghis or Balkash. It is the remotest Cossack settlement in this region, and consists chiefly of the government buildings on the S. side of the town, and the small wooden dwellings of the Cossacks, who are stationed here to the number of 900, most of them with families. Much of the country near Ayagus is of a sterile character.

AYLMER, a tn. British America, Canada E., cap. co. and 8 m. above Ottawa, on the Chaudiere lake. It was founded in 1830, and has since become a thriving place, with large lumber establishments. Pop. about 1500.

AYNTERAD, a small seaport, E. Africa, about 40 m. E.N.E. Berberah. Though consisting only of about 50 huts, built upon a bank of sand overlying limestone, it is a favourite roadstead, principally on account of its water, which is of excellent quality. It is supported chiefly by the slave-trade, the Arabs preferring to ship their purchases at some distance from the great emporium. The harbour is defended with a fort.

AYORU, or **AIRU**, a vil. W. Africa, Tawarek country, on a rocky island in the Niger, 80 m. S. Timbuctoo. It stands in a fertile district, and exhibits a good deal of cultivation, its fields extending for two miles along the river. In its vicinity the navigation is rendered difficult by numerous creeks, and small, but rocky wooded islands, on which tamarind and fig trees are conspicuous.

AYR, a vil. British America, Canada W., co. Waterloo, at the confluence of Smith and Cedar creeks, about 55 m. W. S.W. Toronto. It has a considerable trade in flour and lumber, and an important corn-market. Pop. about 1000.

AYUTHIA, **JUDDA**, **JUTRA**, or **YUTHIA**, [add.] (native, *Si-Ayo-Thaya*), a tn., formerly cap. Siam, r. bank of the E. branch of the Menam, about 45 m. above Bangkok; lat. 14° 19' N.; lon. 100° 37' E. The ancient city was about 10 m. in circumference. The spires of the pagodas and pyramids, blackened by age, tower above the magnificent trees. Amid the ruins of palaces and temples are colossal statues 50 to 60 ft. high, composed of brick, and covered with brass two inches thick; in founding one of them it is said that 20,000 lbs. of copper, 2000 lbs. of silver, and 400 lbs. of gold were used. About 3 m. from the city is a majestic edifice, erected in 1387; it is a pyramid 400 ft. high, with galleries reached

by staircases; upon the galleries rises a dome to the height of 150 ft. terminating in a gilded spire. The new city surrounds the site of the ancient one, and is now the second place of the kingdom; it is situated on a creek or canal, connecting the main river with its great branch, and is inhabited by a mixed population of Siamese and Chinese, with a few Burmese and natives of Laos, who are principally employed in shop-keeping, agriculture, and fishing, and live generally in floating houses on the river and canal. The city is ruled by a governor and deputy-governor, and is annually visited by the king, who has a palace near the river side; most of the principal merchants of Bangkok likewise have houses in the town, as shops or summer residences. The soil is extremely

RUINS AT AYUTHIA.—Mouhot's Travels in Siam.

fertile, producing rice, oil, and sugar, and abundance of indigenous fruits. Ayuthia was founded in 1350, on the site of a still older town, by the king Phra-Rama-thi-bodi, and became populous by the accession of immigrants from surrounding countries, and continued long to be the residence of the kings. In 1556 it was captured, after a brief siege, by the king of Pegu, but soon became again independent. In 1759 the Burmese besieged the city with an immense force, and at the end of two years, when the waters were shallow by reason of a drought, crossed the river, battered the walls, broke down the gates, and entered without resistance; the city and public buildings were fired, and the king killed. The country for some months was given up to plunder, and then the

invaders withdrew, leaving a Peguan officer as ruler over Siam. The succeeding king, of Chinese origin, for security settled upon Bangkok (the Burmese governor of which he surprised and slew) as the future capital, it having been fortified in an earlier age. Pop. 20,000 to 30,000.—(Sir J. Bowring and Mouhot.)

AZANGARO, a tn. and prov. Peru, dep. Puno. The prov., divided into 16 districts, contains 18 villages. The tn. stands 35 m. N. of N.W. point of Titicaca lake, and has a pop. of 54,333.

AZAWAD, a dist. N. W. Africa, comprising an extensive tract to the N. of Timbuctoo, and stretching N. W. to El Juf, the great receptacle or 'belly' of the desert. Though apparently a most sterile tract of country, it is a kind of paradise to the wandering Moorish Arab, who counts it his home. In its more favoured localities he finds plenty of food for his camels, and even a few cattle; while the salt with which it abounds, carried to Arawau and Timbuctoo, is easily sold or exchanged for corn or any other required commodity.

AZEEMABAD, a tn. India, N. W. Provinces, Sirhind, on a low plain which is inundated during the rainy season, 9 m. N. W. Kurnal. It is surrounded by a high brick wall, which is loopholed for musketry and flanked by bastions surmounted with towers; and possesses a large caravanserai, encircled with a deep ditch and lofty embattled wall.

AZIMGHUR, a dist. and tn. India, presid. Bengal.—The DISTRICT is bounded N. by Goruckpore, N. E. Sarun, S. E. Ghazepore, S. W. Jounpore, and N. W. Oude; area, 2520 sq. m. It is a low and remarkably level tract, sloping almost imperceptibly from N. W. to S. E., and is drained chiefly by the Gogra, which forms its N. E. boundary for 74 m., and the Tons, which, entering the dist. from Oude, and traversing it for 100 m., divides it into two nearly equal parts. The soil is generally fertile, and produces abundant crops, among which are sugar, opium, and indigo of fine quality. A few tracts, however, are rendered irreclaimably barren by the large quantity of saline matters with which the soil is impregnated. The manufactures, chiefly of cotton and silk, notwithstanding the formidable competition of the United Kingdom, are still important. Pop. 1,313,950.—The town, cap. of the above dist., 109 m. N. E. Allahabad, stands on the Tons, which is here navigable, and is crossed by a bridge of boats. Though a place of some importance, it attracted little notice till it became, and continued for some time to be, the head-quarters of a large body of insurgents during the mutiny of 1857.

B.

BAAN, name of two tns. Austrian empire, Hungary:—1, Co. Baranya, about 35 m. S. E. Fünfkirchen, with an old Gothic castle and 2039 inhabitants.—2, Co. Lower Neutra, on a height above a stream of same name, about 70 m. N. E. Pressburg, with a fine castle, and a trade in wool, corn, and iron. Pop. 2525.

BAASSEN, a tn. Austrian empire, Transylvania, circle and about 26 m. N. N. E. Hermannstadt, with a sulphur spring and a much-frequented bathing establishment. Pop. 1220.

BABAHAN, a tn. Persia, Khuzistan, near the sources of the Jerrahi, 45 m. E. Bussorah. It is a modern place, with about 10,000 inhabitants.

BABAHOYO, or **BODEGAS**, a tn. S. America, Ecuador, prov. and about 40 m. N. W. Guayaquil, N. bank of a river of same name, at its confluence with the Caracol and Seco. The site is low, so that the inundations of the rivers in the rainy season lay a large part of the place under water. As a security, the houses, which are all built of wood, are raised on

piles, or made so high as to afford a place of retreat to the inmates, who, while thus cooped up, amuse themselves, or help to eke out a subsistence, by fishing. The only buildings which stand so high as to be beyond the reach of the floods are the parish church and the custom-house, or salt-office. Singularly enough, Babahoyo, while thus endangered by water, has suffered much more severely from fire, which has repeatedly reduced the greater part of it to ashes. Among the articles of export are cacao, coffee, rice, timber, and mules, which last in excellence rival those of Andalusia in Spain.

BABALIYA, a tn. W. Africa, E. of Lake Chad, on the road from Gawi to Mawo, from the former of which it is distant a long day's journey. It was once the capital of an independent territory; but, having been captured and nearly destroyed, has never recovered. At present it is nearly deserted.

BABOCSA, a tn. Austrian empire, Hungary, co. Somogyh, r. bank Rinya, 42 m. W. Fünfkirchen, with the

ruins of a castle which figured much in the Turkish wars, and a trade in corn and wine. Pop. 1450.

BABOLNA PUSZLA, a tn. Austrian empire, Hungary, co. and 30 m. W.S.W. Gran, with a military stud, a fine castle with an English garden, breweries, distilleries, vinegar works, and a trade in honey and wood. Pop. 2016.

BABRIAWAR, a dist. W. India, peninsula Kattywar, prov. Guzerat, bounded by the dists. of Kattywar, Gohilwar, and Sorath, and the Arabian Sea. It contains 71 small towns and villages, the chief of which is Jafferabad. The pop. is estimated at about 18,500.

BACKMUTH, a tn. Russia, gov. and 130 m. E. by N. Ekaterinoslav, on the Backmutka. It has five churches, large tallow-smelting and other factories, an important yearly market, and a large trade in cattle, salt beef, and wheat. There are extensive collieries and alabaster quarries in the vicinity. Pop. 7156.

BADAMUNI, or **GADABUNI**, a tn. W. Africa, on the N.W. frontiers of Bornou, in an undulating and agreeably diversified country. The whole place forms a kind of shallow vale, surrounded on the W. N. and S. by hills from 100 to 200 ft. high, but terminating toward the E. in Mount Shedika, which rises 600 ft. above the level of the surrounding country. In the centre is a large and luxuriant plantation, on which cotton, pepper, millet, &c., are cultivated. The population, belonging to the Hansa race, reside chiefly in two villages—the larger on its N.W. and the smaller on its S.W. side. Many of them are employed in weaving. In the vicinity are productive natron lakes.

BADANJO, a vil. W. Africa, Adamaua, 60 m. N.E. Yola, picturesquely situated in a beautiful valley, so inclosed by hills that the interior of the village is seen from them. The environs are extremely fertile and well cultivated, yielding millet, sweet potatoes, yams, manioc, gunna, and calabash. The inhabitants belong chiefly to the Fali or Fari tribe, which has here its northernmost seat. The rugged nature of the country gives importance to Badanjo in a strategical point of view. Pop. 3000.

BADARAWA, a tn. W. Africa, Hausa States, Zanfara. Like most of the towns of this country, it is surrounded on all sides by a dense belt of timber, and is also inclosed by a wall. It has narrow streets, and when Dr. Barth visited it a market was held, attended by about 10,000 persons. It was well supplied with fresh butter, onions, which are extensively cultivated throughout the district, and beef; but millet and cotton, particularly the latter, seemed to be the staple commodities.

BADARKA, tn. Central India, in Onde, 4 m. E. I. bank of Ganges, and 42 m. S.W. Lucknow. Pop. about 8000, of whom only 50 are Mussulmans.

BADDA-BADDA, a tn. W. Africa, Hausa States, prov. Kebbi, in the vicinity of Mount Bobye. It is walled, and stands in a fertile district, almost entirely devoted to the culture of rice, for which it is well adapted. On a higher level negro corn is largely grown, and the pastures are full of cattle.

BADEN (GRAND DUCHY OF), [add.] From a recently compiled statistical account, it appears that the duchy has an area of about 3,820,000 acres, distributed as follows:—

	Acres.		Acres.
Water,	395,000	Meadows,	396,000
Arable land,	1,370,000	Pasture,	270,000
Vineyards,	54,000	Forests,	1,280,000
Gardens,	34,000	Barren land,	261,000

Manufactures.—The cotton trade has risen rapidly in importance and extent; and, notwithstanding the derangement caused by the civil war in America, new mills with new machinery have been erected. The number of people employed, which in 1849 was 17,105, had risen in 1861 to 64,862, working in 408 spinning and weaving establishments and in other factories. The manufacture of iron, however, from lying under local disadvantages and consequent dearth of the ore and coal, has not progressed, though the iron produced is of very superior quality. In 1861 106 iron-mines were in work, giving employment to 479 men; and there were 42 iron-foundries, &c., with 753 workmen. In coal-mines, only three in number, 130 persons were employed. One lead-mine employed 200 hands, and two of zinc had 123 hands; salt-works also occupied 153 workmen.

Population.—By the census of 31st December, 1861, the population, compared with that of 1858, was found to be as follows:—

Circles.	1858.	1861.
Lake Circle,	195,249	198,160
Upper Rhine,	436,465	345,913
Middle do.,	457,327	469,782
Lower do.,	346,911	355,436
Total,	1,385,952	1,369,291

The pop. of 1861 consisted of 896,683 Roman Catholics; 445,539 Protestants; 2970 Mennonites, &c.; and 24,099 Jews. Of the principal towns, Carlsruhe had 27,103 inhabitants; Mannheim, 27,172; Freiburg, 16,883; Heidelberg, 16,289; Pforzheim, 13,854; and Bruchsal, 8,270. In the 10 years 1852–62, 65,690 persons emigrated, of whom 34,265 were agriculturists, 15,649 artisans, and 15,776 other classes and professions; including government aid, they took with them about £1,200,000. Of the 273,180 families in the duchy, 42 per cent. are employed in agriculture and the forests, 37 in manufactures and mining, 7 in day labour, and 14 in other occupations.

BADKERT, a tn. Austrian empire, Hungary, co. Pesth-Solt, about 28 m. S.S.E. Keckemet. The inhabitants are mostly Protestants, and rear great numbers of horses and sheep of excellent breeds. Pop. 3656.

BADRINATH, tn. India, N.W. Provinces, dist. Gurwhal, r. bank Bishlungunga, in a valley of the Himalayas, 4 m. long, and 1 broad; lat. 30° 41' N.; lon. 79° 32' E. The town stands on a sloping bank, and in the highest part of it is the Brahmin temple of Badrinath, about 45 ft. high, and of conical form. It is of great antiquity as a religious establishment, but the present temple appears modern. The rajahs of Gurwhal made over to it, as security for loans at various times, 226 villages, which are still tributary. The temple is visited by large numbers of pilgrims in the summer, but is closed during the inclemency of winter. It stands 10,294 ft. above the sea.

BADRINATH PEAKS, Himalaya mts., about 12 m. W. of Badrinath. This remarkable group of peaks have the elevation respectively of 23,441, 23,236, 22,934, 22,754, 22,556, and 21,895 ft.; and 6 m. S.W. is another summit 21,385 ft. above the level of the sea.

BADSHAPOOR, tn. Central India, cap. pergunnah same name, 30 m. N.E. Allahabad; lat. 25° 40' N.; lon. 82° 10' E. It has a large bazaar, and is well supplied with water.

BADULLA [add.], a tn. Ceylon, cap. principality of Ouva, on an affluent of the Mahavellé Ganga, 40 m. S.E. Kandy. It stands in a beautiful valley, on one side of which rises Namooone-koolé, whose summit has a height of nearly 7000 ft. The valley has been so often desolated by war, that nothing remains of the ancient city except its gloomy temples and vestiges of a ruined dagoba. The ancient residence of the prince of Onva has been converted into a fort strengthened by earthworks, and the modern town gives evidence of growing prosperity in the activity of its bazaars and the apparent comfort of its dwellings, generally surrounded by gardens of cocoa nuts, coffee, and tobacco. In the immediate vicinity there is a hot spring, venerated alike by Buddhists, Hindoos, and Mahometans.—(Ceylon, by Sir J. E. Tennent.)

BAFK, a tn. Persia, prov. and 62 m. E.S.E. Yezd, on the eastern side of a great plain, and in every sense an oasis in a salt and sandy desert. It is surrounded by extensive date-groves, is supplied by twenty four canals with water slightly salt, but palatable; and has a climate which is mild in winter, and warm but salubrious in summer. It consists of about 700 houses.

BAGAMOYO, a tn. E. coast of Africa, opposite to and nearly due W. of the island and town of Zanzibar, at the mouth of the Kingane. It is garrisoned by a small body of Belooches, and is one of the great points of departure for the caravan trading to Unyamwezi. Notwithstanding its garrison it suffers much from the depredations of the Wazaramo tribe. The copal-tree occurs occasionally in the district.

BAGDAD [add.], pash. Turkey in Asia. The country is described as a 'howling wilderness;' and yet its teeming

soil, tropical climate, and illimitable supply of water, would render its resources almost unbounded. It is calculated that with a small outlay the old canals, which reticulate the country between the Tigris and Euphrates, and which, in some cases 200 ft. wide, require only their channels cleared and mouths reopened, would afford a perfect system of irrigation, and render the whole province enormously productive in cotton (for which it is peculiarly suitable), silk, sugar, indigo, opium, and coffee, and provide a vast increase in the annual revenue. The Arabs are prepared to rapidly exchange their nomad life for agriculture and fixed abodes; and British merchants have treated, in conjunction with native speculators, with the pasha for the cultivation of tracts of land at a fixed rental, but without success or encouragement.

BAGELE, a mountain district, W. Africa, Adamaua. It extends several miles from S.S.E. to N.N.W., and has a very rugged surface, strewn with great irregular blocks, chiefly of granite, from between which trees shoot up. There are, however, a good many spots of arable land, the produce of which, together with that of the pastures, suffices to support a considerable body of mountaineers; who, after long defying the whole power of Adamaua, were in 1853 reduced to slavery. They belong to the Batta tribe.

BAGESUR, a tn. India, N.W. Provinces, dist. Kumaon, at the confluence of the Surjoo and Goamah, 210 m. N.E. Delhi. It is a small place, inhabited according to local tradition by descendants of the Moguls left in Kumaon by Tamerlane's orders. Its bazaar contains 42 shops, and has two large annual fairs, at which a great amount of business is done with dealers from Tibet.

BAGHENA, a dist. N.W. Africa, which belonged to the now extinct kingdom of Ghanata, and comprised part of the territory in which its capital was situated. At present it is difficult exactly to define its character. From position and physical features it naturally forms part of the oasis of El-Hodh; but its population, consisting of Aswanek Arabs and Fellatahs, is so heterogeneous that it cannot be said to have any political existence. The Aswanek, Sebe, or Wakore are the original inhabitants; and, while the kingdom of Ghanata subsisted, formed the great bulk of its population. When the Songtray empire was broken up, mainly by the united efforts of the Arabs and the Bambara, one of the chiefs of the former, who had greatly distinguished himself, was rewarded with the lordship of Baghena, which was thus to some extent settled by his countrymen. The Fellatah, who had previously been in possession, and indeed claimed to be the lawful masters of the country, endeavoured to oust them; but not having succeeded, the whole district was and continues to be held by a kind of joint, though by no means friendly, occupancy. Baghena thus remains in a very unsettled position; but were this obstacle to its improvement removed, there cannot be a doubt that, as it is adapted alike for fixed settlements and nomadic wandering, it might soon attain a high degree of prosperity.

BAGHIN, or **BAGHUN**, river, Central India, territory Bundelcund, rising in the Pannu range, and flowing generally N.E. about 90 m. into the Jumna; lat. 25° 33' N.; lon. 81° 5' E. About 20 m. from its source it falls over a ridge in a cascade of 300 ft.

BAGIRMI, a territory, Central Africa, bounded N.W. by the Shari and Lake Chad, N.E. and E. Waday, S. independent pagan tribes, and W. Adamaua, the Musga country, and Bornou. Bagirmi proper is almost a continuous flat, with a general elevation of about 950 ft., inclining very gently toward the N., and then rising so as to form a watershed between Lakes Chad and Fittre. In the outlying provinces beyond the limits of Bagirmi, and particularly towards the S.E., the surface becomes rugged, and even mountainous; and the cold is so severe during the cold months that a fall of hail or snow is not uncommon. Much farther south there are said to be mountains of still greater height, in which the Benuwe, the Shari, and its tributary Logon, have their sources. The two last mentioned traverse the country in a N.W. direction, and are its only important rivers. The soil consists partly of lime and partly of sand; and according as the one or the other of these two predominates, it produces in abundance negro millet or sorghum—the most common article of food, not only in Bagirmi, but over the most of

Negroland. In addition to these principal crops, sesamum and beans are grown to a considerable extent. Rice, though not cultivated, grows spontaneously, and after the rains is collected in great quantities from the swamps and temporary pools. Water-melons are abundant, and in the vicinity of Masena, the capital, great quantities of onions are raised. The only crops for industrial purposes are cotton and indigo; both of them under the superintendence, not of the natives, but of immigrants from Bornou. The most useful trees are the tamarind, the date-palm, the doum-palm, and the monkey-bread tree, the leaves of which are used for vegetables. The inhabitants are a fine race of people, distinct from the Kanuri, and intimately related to the Kuka. Their conversion to Islamism is recent, and presumed to be more nominal than real. The government is an absolute monarchy, but the king is said not to rule oppressively. The tribute paid him consists partly in cattle, but principally in slaves, of whom great numbers are annually delivered to him by the chiefs of tributary provinces. The inhabitants are constantly engaged in predatory incursions upon their neighbours, and harassed by the retributive aggressions of the powerful states of Adamaua, Bornou, and Waday. Pop. estimated at 1,500,000.

BAGMA, a tn. Western Africa, Adamaua, in a mountainous district. It occupies both banks of a stream, meandering through the plain, and consists chiefly of huts of unusual dimensions, some of them being from 40 to 60 ft. long, 15 ft. broad, and from 10 to 12 feet high, narrowing to a ridge at the top, and thatched all over without distinction of roof and wall. One reason for making the huts so spacious is to employ part of them in inclement weather in sheltering cattle, which form the chief wealth of the inhabitants, who are all Mahometans.

BAGMUTTEE, or **VAGWATI**, a river, India, which rises in Nepal, on the N. declivity of Shipuri, in the Himalayas, about 18 m. N.E. Khatmandoo, flows S.W. past this capital; and then nearly due S., crossing the Nepaulese frontier, and entering the British dist. Sarun. After traversing this district, it turns S.E., and maintains this direction to its confluence with the Ganges, opposite to Mongheer. Its total length is about 285 m.

BAHAWULPOOR, or **BHAULPOOR** [add.], a tn. India, cap. state of same name, on a branch of the Ghara, about 2 m. from the main stream, and 50 m. above the point where by its junction with the Chenab it forms the Panjnad. It is surrounded by a ruinous mud wall, which is about 4 m. in circuit, and incloses an area which, not being wholly required for habitation, is partly planted. The houses—some of burned and some of sun-dried bricks—are very indifferent. The khan's palace is of the same character, and in a very plain style of architecture. The place has long been famous for its loongees, scarfs, and turbans. It also manufactures chintzes and other cottons. Its position at the junction of three routes from the S.W., S.E., and S., gives it great advantages for trade, which is carried on to a great extent, as the merchants are very enterprising, and send their wares into Central Asia, and even it is said as far as Astracan. The neighbouring country is very fertile, and raises in abundance grain, sugar, indigo, and other agricultural produce. Fruit, particularly mangoes, oranges, and apples, is abundant, and of excellent quality. Pop. about 20,000.

BAHR-EL-GHAZAL. See **GHAZAL** (**BAHR-EL**).

BAHUERACIC, a tn. Mexico, prov. Sonora, in a mountainous dist. celebrated for its mines of copper and silver. The inhabitants are mostly miners, who appear to be in great poverty. Those who work in the mines are almost exclusively Mexicans, but most of the outdoor work, such as cutting wood, making roads, bringing charcoal to the furnace, &c., is done by Indians. Pop. 500 to 700.

BAICULL, tn. and fort, India, presid. Madras, 480 m. S.E. Bombay, lat. 12° 24' N.; lon. 75° 6' E. The town is small and irregular, and stands N. of the fort, which is built on a lofty cliff projecting into the sea.

BAILUNDO, a territory, western part of S. Africa, Kimbunda country, between lat. 9° and 12° S., and lon. 16° and 17° E.; bounded N. by the Coanza, separating it from the Portuguese settlements, N.W. Hako, W. Kibala, S.W. Kiakka, S. Hambo and Sambos, and E. Bile, Ambulo, and Malemba; area about 30,000 sq. m. In the south it is tra-

versed by two mountain chains, which are about 100 m. distant from each other, and nearly parallel, stretching in a N.W. direction, the Lingi-Lingi on the W., and the Djamba on the E. Along the ridges of these two ranges are two plateaux, of which that on the W. has an elevation of 4000, and that of the E. of 6000 ft. The former has a temperate and healthy climate; the latter is cold, the thermometer often sinking in the winter nights nearly to the freezing-point, and the ground becoming covered with dense hoar-frost. The western portion is mountainous and stony, and extensively covered with forest; the eastern portion consists of finely undulating plains, on which forests of tall trees and grassy prairies alternate. The principal rivers are the Kupo, the Longa, and the Kutatu or Mungoya. The upper course only of the first two is within the territory, but the last waters the whole of its E. frontier, flowing almost due north to its confluence with the Coanza. Besides being thus fertilized by streams, it is copiously supplied with water by the periodical rains, and yields excellent crops of maize, manioc, tobacco, &c. The trade is chiefly in wax and slaves. Bailundo is the leading state in the Kimbunda country. Its inhabitants surpass all the other races in S. Africa in personal appearance and in prowess, and have made their name "Munano" dreaded far and wide. At one time their forays were often directed against the Portuguese settlements; but the Humbe and Kobale lands, situated to the S., now furnish more tempting objects of plunder in the number and excellence of their horned cattle. In the W. cannibalism is said to be common; in the E. it is practised on the celebration of festivities. At the head of the government is a chief, who nominally rules with absolute power, but there is also a kind of supreme council, called *impunga*, which may not only impugn his conduct, but compel him to abdicate in favour of the next lawful heir. Pop. about 450,000.

BAITOOOL, or **BEITOOOL**, a tn. India, N.W. Provinces, Saugor and Nerbudda territory, cap. dist. of same name, in a pleasant valley watered by the Machna, at the S. foot of the Satpoora range, 112 m. N.W. Nagpore. It is defended by a fort, and has in its neighbourhood some seams of coal of indifferent quality. Pop. of the dist. or pergunnah, 93,441.

BAJA [add.], a tn. Austrian empire, Banat, circle and 27 m. N.N.W. Zombor, on the Danube and the frontiers of Hungary, cap. dist. of same name; has several churches, handsome buildings for the circle, barracks, an asylum for children; various manufactures, vinegar works, calendering and oil mills; and much-frequented yearly markets. Pop. 18,621.

BAJNA, a tn. Austrian empire, Hungary, co. and 10 m. S.W. Gran, with a beautiful castle and several brandy distilleries. Pop. 2100.

BAKAA, a mountain range, S. Africa, stretching from S.S.W. to N.N.E., between lat. 22° and 23° S., and lon. 26° and 27° E. The principal part of the range, called the Bamangwato hills, rises about 700 or 800 ft. above the plains, and is composed of great masses of black basalt. At the E. end the hills have curious cup-shaped hollows, of a size suggesting the idea of craters. Within these are masses of rock in the columnar form. The tops of the columns are quite distinct and hexagonal, like the bottom of the cells of a honey-comb, but they are not parted from each other as in Fingal's Cave. In many parts the lava-stream may be recognized, for then the rock is rent and split in every direction. The mass of basalt, which is about 6 m. long, has tilted up the rocks both E. and W., and shown that they consist of ancient silurian schists. Several large masses loosened by the action of the elements have slipped down, and becoming jammed against each other have formed large cavities, in which the Bakaa, the tribe which gives its name to the range, used to find an asylum from their enemies. This resource, however, is no longer wanted, as they have abandoned their mountain home, and taken up their abode among the Bakwains at Kolobeng. The only tribes now inhabiting the range belong to the Bamaugwato and Makalaka. In the vicinity there is a hot spring called Serinane.

BAKADA, a vil. W. Africa, Bagirmi, in a fertile dist. 20 m. W. Masena. It consists of four distinct hamlets, the inhabitants of which are almost all employed in agriculture, raising heavy crops of millet, and especially of sorghum, in which they carry on a considerable trade. The

market, which is held every Sunday, is trifling, but is occasionally visited by caravans and merchants trafficking between Kano and Masena.

BAKALAHARI, a tribe, S. Africa, inhabiting the Kalahari desert, N. of Cape Colony. According to tradition they are the oldest of the Bechuana tribes, and possessed numerous herds of large horned cattle, till they were despoiled of them and driven into the desert, by a fresh migration of their own nation. Though they have ever since lived on the same plains, and under the same influences of climate as the Bushmen, they bear no resemblance to them, and possess as strongly as ever the Bechuana love for agriculture and domestic animals. "They hoe their gardens annually," says Livingstone, "though often all they can hope for is a supply of melons and pumpkins. And they carefully rear their small herds of goats, though I have seen them lift water for them out of small wells with a bit of ostrich egg-shell, or by spoonfuls." They are a timid race, with thin legs and arms, and large protruding abdomens. Their chief employment is in hunting, and selling the skins of the animals they kill, chiefly small carnivora of the feline species, in exchange for spears, knives, tobacco, and dogs. The skins made up by the Bakwains into a mantle, called *kaross*, form no small article of trade. During Livingstone's residence in the Bechuana country between 20,000 and 30,000 skins were made up into karosses, some of which found their way to China.—(*Livingstone*.)

BAKAU, a tn. Danubian Provinces, Moldavia, cap. circle of same name, near the confluence of the Bistritza with the Sereth, 42 m. S.W. Jassy. It is the seat of a civil and criminal court, has a normal school, and carries on an extensive trade with Galatz in cattle, salt, and corn. Pop. 2000.

BAKER'S ISLAND:—1, An isl. Pacific Ocean, one of the American Polynesia; lat. 0° 15' N. and lon. 176° 21' W. It is covered with a deposit of guano several feet in thickness.—2, An islet off Salem harbour, Massachusetts, U.S., 5 m. E.N.E. Salem.—3, One of the Georgian islands, in the Arctic ocean; lat. 74° 55' N.; lon. 97° 30' W.—4, *Baker's Dozen Islands*, a group in Hudson bay, in about lat. 57° 30' N.; lon. 81° W.

BAKHIRA, or **BAGNUGGUR**, a tn. India, N.W. Provinces, dist. and 19 m. N.W. Goruckpoor, on the W. shore of Lake Burra. It is surrounded by a ditch, rampart, and bamboo hedge, and contains about 250 houses. It has a market. The lake, called also the Bakhira Jeel, is said to be one of the finest pieces of fresh water in India. The plantations on its banks are numerous and beautiful, and its surface is constantly enlivened by fishing canoes and vast flocks of water-fowl. In the dry season, however, when its dimensions are much reduced, and it is only about 7 m. long by 3 m. broad, the water becomes dirty and rather offensive.

BAKONYBEL, a tn. Austrian empire, Hungary, co. and 15 m. N.W. Veszprim, in the Bakony forest; with an old Benedictine abbey, suppressed by the emperor Joseph II., glassworks, and a potash refinery. Pop. 1050.

BAKOW, a tn. Austrian empire, Bohemia, circle Buzlau, l. bank Iser, with two churches, and a trade in fruit. Pop. 1100.

BAKU, or **BADKU** [add.], a seaport tn. Russia, Caucasia, cap. khanate of Shirvan, S. shore of the peninsula of Apsheron, W. coast Caspian Sea, of which it is one of the most frequented ports; lat. 40° 21' 20" N.; lon. 49° 51' 6" E. Baku is the city of the Guebres, or fire-worshippers, who regard it with as much veneration as the Mahometans do the sacred Mecca. It is surrounded by flaming wells of naphtha, and the entire soil on which the city stands is so saturated with this liquid bitumen, that if a stick be thrust a sufficient depth into the ground, and a light applied to the orifice so made, a jet of gas will immediately blaze forth. The neighbouring sea partakes, it is said, of the inflammable properties of the earth, and if a light be applied to the bituminous surface it bursts into a vast sheet of flame that spreads for a considerable distance, and produces a strange and imposing spectacle. In the surrounding country vegetation is shrivelled and parched for want of water. At a short distance from the city is situated a Parsee or Guebre temple, the famous Atesh-Gah, where is said to burn the eternal fire. It is attended by three priests only, who are brought from Delhi. The temple stands in a vast plain; fires escape from openings placed at

irregular distances; in the centre rises a crenelated edifice, from each of whose turrets or pinnacles springs a volume of flame, while a larger volume, composed of five separate fires, crowns the loftiest cupola. The scene in the interior is

THE FIRE-TEMPLE OF ATESH-GAH, NEAR BAKU.
From a View by M. Moynet.

equally imposing. The ground is full of jets of flame, and under this central cupola stands the altar, seemingly alive with fire.

BAKWAIN, or **BAKUENA**, a country, S. Africa, which takes its name from its inhabitants belonging to the Bechuana tribe. It lies between the country of the Bakatli on the S. and that of the Bamangwato on the N., with the Transvaal republic on the E., and the Kalahari desert on the W.; and has a surface diversified by plains and hills and valleys. The vegetation has a vigour seldom seen towards the S. of the African continent. The hills are clothed with trees to their top, and the valleys are often of the most lovely green. The country, however, often suffers severely from drought, continued without interruption for several successive years. The Bakwains have a remarkably accurate knowledge of cattle, sheep, and goats, and of the kind of pasturage proper for each; and show great judgment in selecting the soils best adapted for the different varieties of grain. They are also particularly successful in ensnaring wild animals, by means of an ingeniously constructed trap fence, called a *hopo*. In some of these traps, placed near some fountains at Kolobeng, it was not uncommon to take 70 head of large game in a single week. Dr. Livingstone took up his residence among the Bakwains, and having purchased a piece of ground formed a missionary station at Kolobeng. The chief Sechele publicly embraced Christianity, and many of the tribe have followed his example; but the hostile interference of the Boers with the education of the natives, the unhealthiness of the locality, and the long droughts rendered it necessary to break up the establishment at Kolobeng.

BALAKLAVA [add.], during the siege of Sebastopol, from which it is about 8 m. distant, Balaklava was occupied by the British army as a base for their operations, and a port of entry for troops and stores. At a late period of the siege a railway was constructed between it and the camp before Sebastopol, by which munitions of war and supplies were conveyed from the harbour to the besieging army. On 25th October, 1854, an attack was made by the Russians on the British lines near Balaklava, but was gallantly and successfully repulsed; and on the same day the famous, but disastrous, Light Cavalry charge was made against the enemy's artillery.

BALANGUINI, an isl. Indian archipelago, belonging to the Sooloo group, but claimed by Spain as a dependency of the Philippine isl. Mindanao. It lies in lat. $5^{\circ} 57' 30''$ N.; lon. $121^{\circ} 39'$ E.; and though only 3 m. long by less than 1 m. broad, has acquired notoriety from having long been the resort and stronghold of the most daring pirates of the archipelago. It was attacked by the Spaniards in 1848, who took 124 cannon, burned 150 praus, slew 450 of the pirates, and released 200 captives. They afterwards completely demolished the houses and forts, and took effectual means of rendering the island uninhabitable.

BALASHEV, a tn. Russia in Europe, gov. Saratov, cap. circle of same name, l. bank Khover. It contains two churches, a circle school, and a charitable institute. Two important yearly markets are held within the circle. Pop. 4814.

BALASINORE, a petty state and tn. India, pres. Bombay, Gujerat. The state, bounded N. by the Myee Caunta, S.E. by the Rewa Caunta, and S.W. and W. by dist. Kaira, has an area of about 258 sq. m., and a pop. of about 19,000.

—The town, cap. of above state, situated 48 m. N. Baroda, is surrounded by a wall, and appears a thriving place.

BALASZEK, a tn. Austrian empire, Hungary, co. Tolna, 10 m. S. Szegsard, 90 m. S. Pesth, on the Sarvis, in a district remarkable for its fertility. It has extensive vineyards, from which excellent wine, both white and red, is obtained. Pop. 5778.

BALÉ, a tn. S.W. Africa, Kimbunda country, territory Balé; lat. 11° S.; lon. $17^{\circ} 10'$ E. It stands on the stream of same name, inclosed by a palisade and a ditch, and has a pop. of about 2000.

BALI (**PULO**), or **HOG ISLANDS**, a group, Indian archipelago, off the N.W. coast of Sumatra. It consists of one large and a number of small islands. The large island, lat. (N. end) $2^{\circ} 50'$ N.; lon. $95^{\circ} 32'$ E., is nearly in the form of a parallelogram, 60 m. long N.W. to S.E., by 10 to 15 m. broad, and has an area of 480 sq. m. Cocoa-nuts and buffaloes furnish the subsistence, and constitute the wealth of the inhabitants, who are Mahometans, and speak a peculiar language.

BALICE, a tn. Austrian empire, Galicia, circle and 7 m. W.N.W. Cracow, with a remarkable old castle, and 1000 inhabitants.

BALJIK, or **BALTSCHIK**, a tn. Turkey in Europe, Bulgaria, eyalet Silistria, on a bay of same name on the Black Sea, 20 m. N.E. Varna. Its harbour is capacious and deep enough to accommodate a fleet; and though open to the S.E. and S. is practically completely sheltered, as the wind never blows violently from these quarters. It has a custom-house, a quarantine, and extensive warehouses for its large and rapidly increasing trade. Its annual horse, cattle, and sheep market is very important. A great quantity of excellent honey is obtained in the district by the rearing of bees, and sent chiefly to Constantinople.

BALKANY, a tn. Austrian empire, Hungary, co. Szabolcs, 20 m. N.N.E. Debreczin, with a trade in wheat, tobacco, cattle, and honey and wax; and 3379 inhabitants, mostly belonging to the Reformed church.

BALKASH TENGIS, AK-DENGIS [*White Sea*], or **ALA-DENGIS** [*Coloured Sea*], a large lake, Central Asia, on the boundary of the W. Siberian prov. of Semipolatinisk and the Siberian Kirghis steppe of the Great Horde, and, after the Caspian Sea and Lakes Aral and Baikal, the largest lake in Asia. It extends between lat. 45° and 47° N., and lon. $73^{\circ} 40'$ and $79^{\circ} 50'$ E., first in the direction of S. to N., and then from W. to E., and has a length of about 300 m. and a breadth of 10 to 60 m., and an area of 6400 geo. sq. m. It appears to lie about 500 ft. above sea-level, to be deeper on the N. than on the S. side, but nowhere to exceed 66 ft. in depth. The N. and W. banks, with their sharply-defined contour, are terrace-formed and precipitous; the plateau above them, covered with desert sand, is without streams, or has only such as lose themselves in the sand. The character of the S. side is quite different. Here the shore has no sharp outline, but, on the contrary, presents a number of sinuosities and peninsular promontories, and passes gradually into a great low steppe, which, stretching away for 70 m. to the spurs of the Alatau range, is crossed by sand-hills and covered with a scanty vegetation, and forms a large portion of the

circle of Alatau, also named The Land of Seven Streams, after the seven steppe-rivers, as the Great Ili, the Karatal or Kartal, Lepsa, Aksu, &c., which partly join the lake with extensive deltas, and partly do not reach it at all or cannot be ascended direct from it. The country to the E. of the lake has the same steppe character. Here lie the remains of a former continuation of the lake—the Sassyk-kul and the Ala-kul or Ara-kul; the latter with the small island Aral-Tube, formerly but erroneously supposed to be volcanic. The numerous bays of Lake Balkash are grown over with reeds often 20 ft. high. Among its numerous islands, which are all far from the shore, the largest is Uz-Aral, about 10 m. long, which has a good harbour on its N.W. side. The water of the lake is clear; but, especially near the shore and in the bays, brackish and undrinkable. From the end of November till April it is covered with ice. Only the smaller kinds of fish are found in it. By command of the governor-general, the navigation was opened in 1852, first from the N. shore to the mouths of the Karatal and Lepsa; in 1853 to the mouth of the Ili. In 1855 a Russian vessel went about 300 m. up the Ili; but this voyage has not had any practical result.

BALLSTON SPA, a vil. U. States, New York, cap. co and 7 m. S.W. Saratoga, on the Saratoga and Schenectady railway. It possesses a courthouse and several churches, and was celebrated for its mineral springs, which, however, in consequence of the superior attractions of Saratoga as a watering-place, are not now much frequented. Pop. 2285.

BALMEER, a tn, India, Rajpootana, state and 116 m. S.W. Joodpoor. It consists of about 600 houses, built chiefly of stone, and stands at the foot of a conical hill, which is 300 ft. high, and crowned by a fort. Government had for some time a military station and a cattle establishment here.

BALOMBA, a river, S.W. Africa, which rises on the heights of the Lingi-Lingi chain, flows nearly due W., receiving several streams and rivulets, traverses the mountainous district of Selles, and pours its water into the Atlantic, in lat. 11° S.

BALOTRA, a tn, India, Rajpootana, state and 55 m. S.W. Joodpoor, r. bank Loonee. Standing on the highroad to the pilgrim shrine of Dwarka, near the W. extremity of Kattewar, it is an important thoroughfare, and carries on a profitable trade in supplying the wants of the pilgrims. It has also considerable manufactures of plain and printed calicoes, velvet shoes, and turnery in wood and ivory. The salt made at the neighbouring lake of Puchbudra is said to employ nearly 2000 persons in conveying it to market. Pop. 7275.

BALTIMORE [add.], U. States, Maryland, the third town in the states in respect of size and population, stands on an arm of the Patapsco, 12 m. above its mouth in Chesapeake Bay, 33 m. N.N.E. Washington; lat. 39° 17' N.; lon. 76° 37' W. From almost every point of view its appearance is striking and picturesque, and its general plan, though regular, is sufficiently diversified to avoid tameness and monotony. The streets, though sometimes uneven from following the original inequalities of the site, are of good width, well paved, and provided with excellent sewerage; the larger mansions generally in good taste, and with a good deal of open ground about them, suggest ideas of health and comfort, and the smaller dwellings occupied by the working-classes have this advantage that each is complete in itself, and accommodates only a single family. Every respectable tradesman owns his separate tenement, or is able to engage one at a reasonable rent, and hence long rows of modest but pretty cottages, occupying some of the highest and best localities of the town, form one of its distinguishing features. All the houses are substantially built of red brick. The principal public buildings and institutions are 50 churches, many of which are elegant structures, though perhaps the most imposing is the R. Catholic cathedral, built in the form of a cross, and surmounted by a dome and two towers; the exchange, a very extensive range, containing the custom-house, post-office, reading-rooms, a vast rotunda for public sales, &c.; a large and commodious court-house, and near it the record-office built of solid granite and fire-proof throughout; the atheneum, built in the Italian style, and containing the rooms of the Historical Society; Loyola College, under the exclusive charge of Jesuits, and intended as a substitute for St. Mary's College, which was

suppressed in 1851 by a mandate from Rome; a scientific institute accommodated in the buildings of the Maryland University, which, never flourishing, was finally abandoned in 1854; a medical school, which has always maintained a high name, and is the only portion of the so-called Washington University which has ever been organized; a large mechanics' institute; a college for women, which in its course of study and power of conferring degrees is similar to colleges for male students; a R. Catholic seminary; 2 nurseries with large schools attached to them; a penitentiary, a poorhouse, an infirmary, several hospitals, and a lunatic asylum. Several beautiful cemeteries have been formed in the outskirts of the town. Baltimore is one of the few places within the U. States where monuments deserving of notice have been erected. One of these, in honour of Washington, is a Doric column of white marble, which, including its base and the colossal statue of the hero at its top, is 175 ft. high; another, called the Battle monument, and erected to the memory of the citizens who fell in defence of the town in 1814, is also a column of white marble, with a sculptured griffin at each of the four corners of its pedestal, and a crowning figure intended to represent the genius of Baltimore.

The manufactures are not so important as might have been expected from the industrious and stirring character of the place, but there is at least one branch in which it still retains pre-eminence. The shipwrights are among the very first in the U. States, and from the dockyards here the famous Baltimore clippers have been launched. The staple articles of trade are coal, grain and flour, and tobacco. The assessed value of real and personal property in the city in 1863 amounted to 128,596,819 dollars; on which a levy was made of 321,492 dollars for the same year. The following table will give some particulars as to the trade and commerce of the port previous to the outbreak of the civil war:—

Year.	Imports.	Exports.	Receipts of Grain.	Flour, &c.	Exp. of Tobac.	Imp. of Guano.	Imp. of Coffee.
	dollars.	dollars.	bushels.	brls.	hhds.	tons.	bags.
1858	7,954,422	10,235,890	7,995,048	1,019,747	66,534	28,143	188,019
1859	10,408,993	8,724,261	7,786,000	939,975	55,974	63,206	230,984
1860	10,271,818	10,968,599	7,085,559	1,029,206	67,142	71,614	181,292

The number of vessels arrived at the port in the three years 1858, -9, -60, were 2387, 2373, and 2426, of which 204, 203, and 182 respectively were foreign. The two smelting establishments produced upwards of 10,000,000 lbs. of ingot copper in 1860, of which 547,500 lbs. were exported, chiefly to Bremen and Holland. Of bituminous coal from Cumberland, 351,821 tons were received in 1859, and 397,684 tons in 1860, via the Baltimore and Ohio railroad; and of anthracite, 268,189 tons and 325,129 tons were received by railway and canal in 1859 and 1860 respectively. The oyster trade is

also very extensive, employing 3500 people and several hundred vessels, the number of bushels packed in the season of 1860 being 3,000,000, of the total value of \$1,800,000. After the outbreak of the war between the Northern and Southern states the trade and commerce of Baltimore greatly declined. Its inhabitants displayed strong secessionist proclivities, and the town was long occupied by a Federal garrison, and ruled by military law. On the trade in the item of tobacco the prosperity of the town mainly depends, and the vast warehouses which the state has provided for its reception are not the least interesting of its sights. In carrying on the various branches of its trade, Baltimore possesses ample means of transport. The harbour, formed by the arm of the Patapsco, which has a length of 3 m., with an average breadth of more than 1 m., is capacious enough to admit 2000 vessels. Its depth, however, is not in proportion to its capacity. Its upper part, forming what is called the inner bay or basin, has a depth of only 12 ft., and is used only by small vessels. The outer bay, extending between Fell's Point and Canton on the N. and E., and Whetstone Point on the S., is capable of floating the largest merchant ships. Even it, however, has been gradually silting up, and has shallowed so much in certain parts, that Congress voted a sum for the purpose of deepening it, so as to admit ships of the line and war-steamers of the largest class. The communication by railway is very complete, including the Baltimore and Ohio, the Baltimore and Susquehanna, and the Philadelphia, Wilmington, and Baltimore railways. By the census of 1860 the pop. was 212,418.

BALUMBRA, a tn. Western India, peninsula Kattywar, prov. Guzerat, 139 m. W. Ahmedabad. It stands about 8 m. from the shore of the Gulf of Cutch.

BALZORAH, or **BALCHORAH**, a tn. India, Oude, near its N. frontier, on a low swampy island, formed by a river from Nepal, 120 m. N. Lucknow. It consists chiefly of a fort, and is an important trading station, a mart being held every summer for two months, during which the mountaineers and the dealers from the plains meet and exchange their commodities.

BAMBA, or **KASBAH**, a tn. Western Africa, Tawarek country, 120 m. E. Timbuctoo, l. bank Niger, where it is contracted to about 700 yards, and shut in between steep banks; lat. 17° 46' N.; lon. 1° 10' W. It was anciently so important as to be repeatedly mentioned in history; but now, besides a mosque and two or three clay magazines, contains only 200 oval-shaped huts.

BAMBARA, a tn. Western Africa, forming the most S. of the fixed settlements of the Songhay among the creeks and back-waters in this part of the country, 115 m. S.S.W. Timbuctoo. It stands in front of a chain of hills, and consists partly of huts, which alone are inhabited as dwellings, and partly of low, oblong, flat-roofed, clay buildings; used as store-rooms or magazines. The inhabitants, almost all Fellatah of indifferent reputation, possess numerous cattle, and also cultivate a large extent of ground, the produce of which finds a ready market in Timbuctoo, to which the inland navigation, formed by the many back-waters and branches of the Niger, affords a cheap and easy means of transport.

BAMOURI, or **BUMBOOREE**, a tn. India, N.W. Provinces, 42 m. S. Bareilly, r. bank of the Goula, which here passes through an extensive ravine; lat. 29° 13' N.; lon. 79° 35' E. It is a police and trading station, on the road from Bareilly to Almora. The town stands upwards of 1700 ft. above sea-level.

BAMUNWAS, a tn. Central India, Rajpoot state Jeypoor, 102 m. S.W. Agra; lat. 26° 34' N.; lon. 76° 37' E. It is a place of considerable size.

BANAJOA, a tribe, S. Africa, inhabiting the banks of the Malabe and Tamunakle, north of Lake Ngami, and a large tract of country to the eastward. They cultivate the millet (*Holcus sorghum*), but depend partly for subsistence, particularly when the crop of corn fails, on a root called *tsilla*, a species of aroidea, which contains a very large proportion of sweet-tasted starch, and when dried, pounded into meal, and allowed to ferment, is not unpalatable. Their huts are built on poles, and a fire is made beneath at night that the smoke may drive away the mosquitoes. A still worse plague is the *tsetse*, a fly whose sting is fatal to cattle. The Banajoa women shave all the hair off their heads, and seem darker than the Bechuanas.

SUPP. IMP. GAZ.—VOL. I.

BANAS, a river, India, Rajpootana, which rises on the W. frontier of Oodeypoor or Mewar, amidst a cluster of summits of the Aravulli range, in lat. 24° 47' N.; lon. 73° 28' E.; flows N.E. to Tonk, where it changes its direction, proceeding first E. and then S.S.E., to its junction with the Chumbul, in lat. 25° 54'; lon. 76° 50'. Its whole length is about 320 m. At Tonk, 85 m. above its mouth, its bed, consisting of heavy sand, is a mile wide, but even here in the dry season it is a narrow shallow stream.

BANASA, a vil. Upper India, Gurhwal, in the valley and near the source of the Jumna; lat. 30° 56' N.; lon. 78° 27' E. Its situation is very grand, on one of a series of rocky ledges on the mountain side. A great part of the village was overwhelmed by the fall of a precipice in 1816. There are hot springs in the neighbourhood.

BANAWARAM, a tn. Southern India, pres. Madras, territory Mysore, 280 m. W. Madras, stands in a fine open country, on the edge of a large tank, and formerly contained 2000 houses; most of the inhabitants, however, were removed by Hyder Ali to Nagapuri, but were afterwards allowed to return.

BANAY, a tn. W. Africa, on a tributary of the Niger, 60 m. S. Timbuctoo; lat. 16° 50' N.; lon. 3° 10' W. The chief part of the town stretches along a bay in the river, which is bordered by a rich belt of vegetation; but there is also a suburb of detached huts. The former is inhabited by Tawarek, the latter by Fellatah, who possess numerous flocks and herds.

BANCALIS, an isl. Indian Archipelago, near the S.E. extremity of the Straits of Malacca; lat. 1° 25' N.; lon. 102° 15' E. It is one of a group of four low islands of considerable size, which are separated by narrow channels from each other, and from the N.E. coast of Sumatra. It is about 35 m. long by 10 m. broad, belongs to the Malay state of Siak in Sumatra, is thinly peopled, and is covered for the most part with dense forests.

BANCOORAH, a dist. and tn. India, presid. Bengal.—1, The DISTRICT, called also sometimes W. Burdwan, lies between lat. 22° 53' and 23° 46' N., and lon. 87° and 87° 39' E.; and is bounded N. by Beerbloom, E. Burdwan, S. Midnapore, and W. Pooralia and Pachete; length, N. to S., 60 m.; breadth, 40 m.; area, 1476 sq. m. The surface is generally level, but undulates gently, and slopes gradually to the S.E. The only locality at all elevated is Chatna on the W. frontier, where an insulated group of granite hills descends N. towards the valley of Damoodah. The principal streams are the Hadjee and Damoodah, both of which flow through a mineral field, which is rich both in coal and iron, and is wrought to some extent, particularly at Raneegunje within this district. As often happens where minerals are found, the soil is of indifferent fertility. In the S. and S.W. it consists of a coarse earth, formed by disintegrated granite overlying a slaty gneiss, which seldom appears above the surface. In the more immediate neighbourhood of the coal-field the country is jungly and neglected. Where cultivation prevails the principal crops are rice, wheat, barley, grain, and some other sorts of pulse, oil-seeds, sugar-cane, indigo, and cotton. Pop. 480,000.—2, The TOWN, cap. of the above dist., l. bank Dalkisore, 98 m. N.W. Calcutta, contains barracks, a government English school, accommodated in a large airy building, and attended by about 100 pupils; an hospital, a jail, a bazaar, and a spacious public bungalow for the accommodation of travellers.

BAND (Mezö), a tn. Austrian empire, Transylvania, circle and about 7 m. N. Maros Vasarhely; with an evangelical, a Greek R. Catholic and a Greek non-united church. Pop. 2224.

BANDAH [add.], a dist. and tn. India, N.W. Provs. Bundelcund.—1, The DIST. lies between lat. 24° 53' and 25° 54' N.; lon. 80° 3' and 81° 35' E.; and is bounded N. by Futtehpour, N.E. Futtehpour and Allahabad, S.E. Rewah, S. and S.W. some petty Bondela states, and W. and N.W. Humeerpoor; area, 2878 sq. m. The principal rivers are the Jumna, which forms the N. and N.E. boundary for 130 m., and its affluents the Cane or Keyn, the Rungy or Baghin, and the Pysunnee. The surface W. and S.W. of the Jumna is an extensive alluvial plain, rising gradually towards the S.W. and S., and terminating in the Bindachal range, some of whose summits have a height of 2000 ft. The soil of the plain is a black friable earth, composed mainly of disintegrated basalt with a large

mixture of decayed vegetable matter. It is of course highly fertile, and produces in abundance wheat, barley, maize, millet, and pulse. Sugar-cane and indigo are also cultivated, but of commercial crops by far the most important is cotton, which bears a high name, and is mostly exported up the Jumna, by way of Calpee. Pop. 552,526.—2, The town, cap. of the above dist., on the r. bank of the Cane, 95 m. W. by N. Allahabad, occupies a striking site at the foot of a pyramidal hill of red granite, which rises nearly 400 ft. above the plain. It is a large, but straggling, ill-built place, with houses of mud, though building stone abounds in the vicinity. The only edifice worthy of notice is the palace of the nawab or titular prince, a modern structure, spacious and solidly built, but deficient in taste, Indian and European styles being strangely commingled. The trade is chiefly in cotton, for which Bandah is a great and celebrated mart. Government has a cantonment here, usually occupied by about 440 native troops. It stands on the E. or r. bank of the Cane, on what seems to be a favourable site. Experience, however, proves the contrary, for fever is so prevalent that few escape it. In 1857 the nawab rebelled, but was defeated by Sir H. Rose, who took possession of the place. Pop. 33,464.

BANDO, a river, S. America, New Granada, prov. Choco, which rises in a cordillera of same name belonging to the W. Andes, flows W. past the vil. of Bando, and falls into the Pacific, in lat. 5° S.; lon. 77° 35' W., after a course of 46 leagues, of which 23 are navigable for the ordinary barks of the country.

BANFFI-HUNYAD, a tn. Austrian empire, Transylvania, circle and 29 m. W.N.W. Klausenburg, cap. dist. of same name, near the source of the Rapid Körös. It was once a flourishing place, but was almost destroyed in 1600 by the Walachian wojwod Michael, during the Transylvanian war. It has a castle, marble-quarries, and large annual markets. Pop. 2160.

BANGKOK, or **BANKOK** [add.], a city, cap. of the kingdom of Siam, extending for 3 or 4 m. on both sides of the Menam, 15 m. above its embouchure in the Gulf of Siam, and 45 m. S. Ayuthia or Siam, the former capital; lat. 13° 58' N.; lon. 100° 34' E. The city, properly so called, occupies an island 7 or 8 m. in circuit, and is surrounded with crenellated walls, flanked by towers or bastions at certain distances. Situated in the midst of immense gardens, adorned with luxuriant and perpetual verdure, it presents a very picturesque appearance. Its shores are lined with ships and glittering junks; above its walls arise a crowd of gilded spires, and domes, and pyramids; the many-storied pagodas, enriched with gilding and covered with polished tiles, reflecting the rays of the sun; the winding river is gay with floating shops and a thousand barks; the barbaric magnificence of the royal palace dazzles the eyes of the spectator. There is not a single carriage or vehicle in the city, all trade and intercourse being carried on by water. Canals traverse every quarter, and it is only in the recesses of the interior, and at the bazaars and public markets, that any paved streets can be discovered. The principal objects of interest at Bangkok—which its inhabitants call *Krung-thèpha-mahanaikhon-si-ajutha-maha-dilok-raxathani*, &c., that is, the great royal city of the angels, beautiful and impregnable—are the palace and the royal pagodas. The palace stands on an island from 2 to 3 m. in length, but very narrow, and is surrounded by lofty walls. The whole area within these is paved with slabs of beautiful marble or granite; military posts and batteries of cannon are placed at various points, and on every side glitters a multitude of elegant little edifices adorned with gold and colours. In the centre of the great court majestically rises the Mahaprasat, with its four sides covered with polished tiles, decorated with superb sculptures, and crowned by a lofty gilded spire. It is here that the king receives ambassadors, and that the remains of deceased kings are placed in golden urns, for the twelvemonth previous to their cremation; here also the priests discourse in the presence of the queen and the concubines, who are concealed by lattice-work. The great hall, or audience chamber, is next arrived at; gigantic statues of granite, brought from China, keep guard at its gates; the walls and columns of the chamber are gay with paintings and magnificent gildings; the throne, fashioned like an altar, is placed upon a platform of seven stories. Adjoining are the king's apartments, and beyond the queen's palace, the houses of the concubines and maids of honour, and a vast garden of

extraordinary magnificence. A tribunal, a theatre, the royal library, immense arsenals, stables, and stalls for the white elephants; a superb pagoda, and a new pavilion of marble in the Italian style, are also included within the precincts of the palace. The royal pagodas are indescribably splendid. Eleven are within the city walls, and twenty without. The principal is that of Wat-Chan, built in the form of a pyramid, and surmounted by a spire 200 ft. high, which is the first indication to the voyager of his approaching the capital of Siam. It stands on the r. bank of the Menam, facing the king's palace. Two other pagodas of great magnificence are named Xetuphon and Bovoranivet. Each accommodates four or five hundred talapoins, or priests, with a thousand children to wait upon them. The houses of Bangkok are of three kinds: the best are of brick, and very elegant; others are built of timber, and those of the poor of bamboos. Fires are consequently very frequent and disastrous, and a conflagration will often destroy as many as 500 houses. But in seven or eight days all are again rebuilt, thanks to the generous help of the friends and relatives of the sufferers.

In the year 1864 there entered the port of Bangkok 457 vessels (aggregate tonnage, 158,849); of which 147 vessels (tonnage, 54,645) were British, and 134 vessels (tonnage, 51,849) Siamese;—there cleared in the same year 422 vessels (aggregate tonnage, 171,335), of which 148 vessels (tonnage, 54,771) were British, and 101 vessels (tonn. 62,348) Siamese. The value of the imports in the same year amounted to £1,167,697, and of the exports to £1,317,922. The quantity of rice exported during the year was 125,507 tons, the demand being principally for China. The trade in teak timber is likely to be much increased, in consequence of all obstructions in the way of it having been removed by the Siamese government; so that foreigners are now allowed to visit and work the jungles in the interior. The production of sugar in Siam has decreased, owing to the heavy taxation to which it is subjected at every stage, dues being levied even on the boats in which it is conveyed to Bangkok. The cultivation of cotton has been carried on, though to no great extent; about 20,000 piculs were brought down to Bangkok in 1864.

Though the city is not more than a century old, it has a pop. of 400,000 to 500,000, of whom (in 1865) 200 were Europeans and Americans.—(*Description du Royaume Thai ou Siam*, Pallegoix; and Mouhot's *Travels in Siam, Cambodia, and Laos*.)

BANGO, a tn. S.W. Africa, Portuguese settlements, prov. Angola, 95 m. E. by S. Loanda. It stands in a magnificent valley, containing 4000 'hearths,' and was once famous for its convent of St. Hilarion, which, though deserted, is as entire externally as on the day when it ceased to be occupied. The garden, the church, and the dormitories are still kept in good repair. The furniture, couches, and large chests for holding provisions remain, but all the books and sacred vessels have been removed to Loanda. The *sova* or native chief of Bango resides here, and exercises authority under the Portuguese. As a *sova* or chief he has his councillor, and maintains the same state as when the country was independent. The male natives, trusting to their wives to supply them with food, spend most of their time in drinking palm-toddy. This liquor, which when tapped yields a sweet clear liquid, which may be drunk with safety, becomes highly intoxicating if left to stand for a few hours. It thus becomes the source of many crimes, and is the bane of the country. Pop. 20,000.

BANG-PA-KONG [add.], a river, Siam, which rises in the mountains to the N.E. of Moang-Kabin, flows circuitously W.S.W., and falls into the Gulf of Siam about 40 m. S.E. Bangkok. About 20 m. above its mouth it is joined by a canal from Bangkok, which is 55 m. long, and passes through a flat alluvial country entirely devoted to the culture of rice. A short way from the sea the river becomes narrow and winding, and cultivation is restricted to occasional strips of land on either bank. The inhabitants are few and poor, and nothing like a village is met with before reaching Pachim, which, in 1857, was nearly destroyed by a fire from the prairie. At Pachim the river is about 40 yards wide, and during the rainy season, from July to November, runs at the rate of 5 m. an hour. During the rest of the year there is here a regular rise and fall of the tide. Above Pachim the navigation is rendered tedious during the wet season by the strength of the current, and at other times is impracticable

from the narrowness of the channel and numerous obstructions. The country along the river is generally level and densely wooded.

BANG-PA-SOE [add.], a tn. Siam, in the E. bight of the Gulf of Siam, about 6 m. S. of the mouth of the Bangpakong, where there is a tolerable harbour for vessels of moderate draught. It is the residence of the governor of the district, and is an entrepôt for the produce of the large and fertile district along the banks of the Bangpakong. Many of the inhabitants are employed in catching and curing the fish which abound in the gulf, and find a ready market at Bangkok. Pop. 3500, of whom 2000 are Chinese.

BANGUNGA, two rivers, India:—1, The one rising in the Himalayas, on the N. frontier of Nepal, flows S. into dist. Goruckpoor, and joins, or is joined by, the Boree Raptee, whose volume it more than doubles. Immediately below the confluence the united stream has a width of 100 yards, and is scarcely fordable even in the dry season; above the confluence the Bangunga is navigable, and a considerable quantity of wood is floated down by it.—2, The other Bangunga rises in Rajpootana, near the N.W. frontier of Jeypoor, about lat. 27° 30' N.; lon. 76° 10' E. It flows first S., then circuitously E., and joins the Gumbea, an affluent of the Jumna. Its whole course is about 140 m., but, except during the wet season, it carries very little water. At Maanpoor, 80 m. from its source, it was found in August, after the rainy season had commenced, with a channel 600 yards wide and nearly dry, and a few days later, after heavy rains, it was fordable for camels at a point 40 m. lower down.

BANJA, or **ILDSHE**, a vil. Turkey in Europe, Bosnia, on the road from Mostar to Sarajevo, about 6 m. from the latter. It is finely situated, has a pleasing appearance, and possesses sulphur springs, which are said to be very efficacious in cases of rheumatism. A wooden but tolerably well-arranged bathing-house has been erected by order of Omar Pasha, and several khans furnish good accommodation for visitors.

BANKS, an island, Australia, Torres Strait, lat. (Mount Augustus), 10° 10' S.; lon. 142° 19' 15" E. It is about 26 m. in circuit, and appears to be divided by the natives into two distinct portions—an E. called Mooa, which is hilly, and a W. called Eet, which is low, and near the shore is covered with mangroves. In the N.E., where the island is loftiest, two of the summits, Augustus and Banks' Peaks, attain the respective heights of 1310 ft. and 1246 ft. Between these ridges are two deep valleys, moderately wooded, and covered with a green vegetation, betokening great natural fertility of soil. Narrow coral-reefs extend along the shores.

BANKS' PENINSULA, New Zealand, a remarkable projection on the E. side of the Middle Island, about 30 m. long from W.N.W. to E.S.E., and 20 m. broad, and attached to the mainland by a narrow isthmus; the S.E. point is in lat. 43° 52' 15" S.; lon. 173° E. It forms a part of the province of Canterbury, and consists almost entirely of steep rugged hills covered with wood. Several harbours indent it on all sides, and near the N. side of the isthmus is the town of Lyttelton, the principal port of the province.

BANKS' STRAIT, a strait, Arctic regions, on the N. of Baring Island, and separating it from Prince Patrick and Melville Islands; lat. (Cape Crozier), 74° 30' N.; lon. 120° 30' W. It was navigated by Captain Sir R. McClure, of H.M.S. *Investigator*, in 1851, who thereby established the existence of a second N.W. passage, in addition to that discovered by him a short time previously through Prince of Wales' Strait.—(Armstrong's *Narrative of Discovery of N. W. Passage*.)

BANLOK, a tn. Austrian empire, Temesvár Banat, circle Gross Beskerek, 12 m. S.E. Modos, on the Berzava, with a castle. Pop. 2351.

BANOS, a tn. S. America, Ecuador, in a break or opening in the chain of the Andes, nearly equidistant from Ambato and Rio Bamba, on an affluent of the Pastaza, one of the largest tributaries of the Amazon. Steamers drawing from 4 to 6 ft. of water ascend to within 50 m. of Banos, after a river navigation of about 3000 miles.

BANOW, a tn. Austrian empire, Moravia, circle and 10 m. from Hradisch; with a trade in drier fruit and nuts, and 1200 inhabitants.

BANSDA, or **BAUNSDA**, a petty native state, India, bounded W. and N. by the British collectorate Surat, E. the

Daung, and S. the native state Durrumpore; area, 325 sq. m. The revenue amounts to £4700, under deduction of £780 payable as tribute to the British government. The state is under the political superintendence of the Bombay presidency, and is managed by the governor's agent at Surat, from which Bansa, the capital, is distant 45 m. S.E. P. 24,050.

BANSEE, or **BANGSI**, a tn. India, N.W. Provinces, dist. and 64 m. N.W. Goruckpoor, r. bank Raptee, which is here 200 yds. wide. It consists of about 600 houses, for the most part very poorly built. The only edifice of any pretensions is the palace of the rajah, to whom the pergunnah of Bansee belongs; but even it is little better than a collection of mud-walled quadrangular towers, connected by huts of one story, with windows towards the interior.—There is another Bansee, of still less importance, dist. and 23 m. S. Allahabad.

BANSWARA, a native state and tn. India, Rajpootana, between lat. 23° 10' and 23° 48' N.; lon. 74° 2' and 74° 41' E.; bounded N. by Dongerpoor and Oodeypoor or Mewar; N.E. and E. Pertaubgurl; S. by an isolated portion of Holkar's Dominions and Jabooa; and W. the Rewa Caunta; length, N. to S., 45 m.; breadth, 33 m.; area, 1440 sq. m. The annual revenue is about £30,000, under deduction of about £3000 payable as tribute to the British government. Pop. about 144,000.—The town, cap. of the above state, situated 110 m. N.E. Baroda, is surrounded by a rampart inclosing a large area, of which a considerable portion is laid out in gardens. The principal buildings are the palace of the chief, a large battlemented and turreted structure seated on a rising ground overlooking the town; several handsome Hindoo temples; and an extensive bazaar. Near the palace there is a beautiful tank, overlung with trees, and edged with a fine ghaut, or flight of steps, leading down to the water.

BANYA (LITTLE), a tn. Austrian empire, Transylvania, circle and about 14 m. S.S.W. Klausenburg, with gold and silver mines. Pop. 1300.

BANYALUKA, a tn. Turkey in Europe, Bosnia, on the Verbas, 72 m. N.W. Bosnia Serai. It is one of the largest towns in Bosnia, is the seat of the kaimakan, and extends for a considerable distance along the banks of the river, which divides it into two unequal parts. It is defended by a citadel, contains a large number of mosques, and has mineral springs. A number of Roman antiquities exist within it. Pop. about 15,000.

BAP, a tn. India, Rajpootana, state and 98 m. N.E. Jessulmeer. Owing to the arid desert around it, it derives much importance from the possession of a fine tank close to the town, and of several wells of fresh water nearly half a mile to the S. On the W. side of the tank is a small shrine, which is visited under the idea that the presiding god is able to cure barrenness.

BAPUGENI, or **PUGENI**, a native vil. S. Africa, Transvaal Republic, among the Magliesberg mountains. It is the chief place of the tribe of the Bapugeni, and consists of about 300 huts, a number of which lie along the foot of a mountain spur, while others are situated at some distance. Each hut—is of a circular shape, built of stone plastered over with clay, and in the better class polished inside and out with bees' wax—is 20 or 30 ft. high, has a conical roof thatched with straw or reeds, is surrounded by a broad eave or verandah, and divided from the other houses by a fence or wall. In the formation of the streets there is no appearance of any regular plan, but additions seem to have been made as occasion required, the shape assumed being that of a series of circles surrounding the cattle-kraals. One of these kraals, inclosed by a wall of dry stones 4 ft. in thickness and the same in height, and as well built as any European mason could have done, forms an oval measuring 93 ft. on its longest axis. The general cleanness of the native kraals ought to shame the Dutch boers.

BARA, a vil. E. Africa, Kordofan, about 200 m. from Khartoom, in the heart of a beautiful oasis embosomed among tall and graceful date-palms. It stands on the slope of a hill, and consists of a number of mud houses and straw huts, mean and paltry in themselves, but rendered attractive by their well-stocked gardens, which contrast strikingly with the sterile sand-hills of the surrounding country. During the possession of this part of Kordofan by Darfur, Bara became the favourite residence of its *melek* or sovereign,

who did much to adorn it. During the invasion of the Turks it suffered severely, and since their conquest of the country it has little importance beyond that which it derives from being a military station.

BARAHAUT, or **BARAHAT**, a vil. India, Gurhwal, r. bank Bhagerettee or Ganges; lat. 30° 43' N.; lon. 78° 29' E. The houses are built of large stones, and are covered with slabs, or coarse slates, laid on strong timbers. In 1803 an earthquake laid great part of it in ruins, and killed 200 or 300 of the inhabitants, besides great numbers of cattle. This disaster was a serious blow to its prosperity; but it has in a great measure recovered, in consequence of the advantages which it derives from its position at the junction of the principal pilgrim routes leading to the sources of the Ganges. Pilgrims proceeding to Gangotri, which is about seven days' journey to the N., must here lay in their supplies. Near the village there is a remarkable trident set up, doubtless in honour of Siva, whose emblem it is. The base, made of copper and 3 ft. in circuit, supports a brass shaft 12 ft. high, terminating in three prongs 6 ft. in length. The Brahmins maintain that the trident is miraculously upheld on its narrow base; but it is really fixed into the ground by an iron bar. A temple which once stood over it was thrown down during the earthquake.

BARAM, a river, Borneo, which has its mouth on the N.W. coast, 80 m. S. Labuan, in lat. 4° 30' N.; lon. 113° 50' E. Its entrance, which is about half a mile wide, is incumbered by a bar, on which there is only 9 ft. water; but within, the depth is increased to 4, 5, and even 10 fathoms, and continues so for about 100 m. In 1851 the iron war-steamer *Pluto* ascended it for 140 m. Coal and iron are found on its banks in the upper part of its course.

BARANOW, a tn. Austrian empire, Galicia, circle and 60 m. N.E. Tarnow, close to the Polish frontier. It contains an ancient, beautiful, and strong castle, with a valuable library and a picture gallery. This place was once an important entrepôt for the corn sent down the Vistula to Danzig. It was also the residence of many of the Polish literati, and the birth-place of the poet Baranowski. The Swedes were defeated here in 1656. Pop. 1500.

BARANQUILLA, a tn. S. America, New Granada, at the mouth of the Magdalena, prov. and about 5 m. from Sabanilla. It is separated from the river by a narrow belt of land, which during the rainy season becomes flooded, and thereby forms stagnant pools and swamps, which make it very unhealthy. Its chief importance is derived from its harbour, which makes it the common entrepôt for the traffic of the Magdalena. It is the only place on the Magdalena which has a dockyard for building and repairing vessels.

BARASET, a dist. and tn. India, presid. Bengal.—1, The DISTRICT lies between lat. 22° 16' and 22° 59' N.; lon. 88° 55' and 89° 22' E.; and is bounded N. by Nuddea; E. Jessore; S. the Sunderbunds; S.W. the Twenty-four Pergunnahs; and W. the Hooghly; length, S.E. to N.W., about 63 m.; breadth, 31 m.; area, 1424 sq. m. It is a flat alluvial tract intersected by numerous water-courses, offsets of the Ganges; and having thus a superabundance of moisture, with a tropical climate, is so insalubrious that its natural resources have never been developed. Pop. 522,000.—2, The TOWN, cap. of the above dist., situated 15 m. N.E. Calcutta, on the road to Dacca, is an insignificant place; it has, however, a civil establishment, consisting of a magistrate and collector, and other European and native officials.

BARATH (NAGY), a tn. Austrian empire, Hungary, co. and about 6 m. S.W. Raab, and 72 m. S.E. Vienna, with a trade in corn, wine, and fruit, particularly excellent cherries. Pop. 1140.

BARBARANO, a tn. Austrian Italy, prov. and 12 m. S. Vicenza, cap. dist. of same name, with a court of justice, several churches, a Franciscan monastery, and a mineral spring. Pop. 2186.

BARCA (LA), a tn. Mexico, Jalisco, at the entrance of the Rio Grande or Santiago into Lake Chapula, 60 m. S.E. Guadalarajara. It is a stirring place, with about 3000 inhabitants, whose chief employments are fishing, weaving, and the feeding of swine.

BARÉE, several places, India:—1, A vil. Gurhwal, l. bank Jumna; lat. 30° 55' N.; lon. 78° 26' E. It possesses a few patches of fertile soil, in which grain and potatoes are

grown, and has some manufactures of woollen cloth, in which the whole process, from the clipping of the wool to the spinning and weaving, is performed exclusively by the male inhabitants.—2, A tn. in the native state Dholpoor, N.E. corner of Rajpootana, 44 m. S.W. Agra. It stands in a hilly district, and is little known to Europeans. According to an old account, its streets are narrow; but many of its houses, built of red stone and two stories high, have a comfortable appearance.—3, A tn., territory and 44 m. S.E. Bhopal, in a mountainous country on the N. or l. bank of the Jamneer. It is the cap. of a pergunnah of same name, containing 220 villages, and is said to be a large and populous place.—4, A tn. N.W. Provinces, dist. and 18 m. E. Ghazeepoor, r. bank Ganges, at the confluence of the Karamnasa.—5, A tn. Oude, 29 m. N. Lucknow.

BAREILY [add.], a tn. India, cap. dist. of same name. On 31st May, 1857, the sepoy's stationed here broke into open mutiny, murdering their officers and other Europeans, and setting fire to the British quarters. They soon succeeded in gaining complete possession of the place, and afterwards formed part of the reinforcements which joined the rebels in Delhi. The town was recovered from the mutineers in 1858, after a sharp struggle, by the British under Lord Clyde. Pop. in 1853, 111,332.

BARING ISLAND or **LAND**, an isl. Arctic Ocean, N. coast of America, lat. 71° 5' to 74° 37' N.; lon. 114° 20' to 125° 30' W.; is separated on the N. by Banks' Strait from Prince Patrick and Melville islands, and on the E. by Prince of Wales strait from Prince Albert Land. It terminates on the S. in the lofty promontory of Nelson's Head; and from this point to Point Kellett, on its W. shore, the coast is bold and precipitous; but the surface affords good pasturage to various arctic animals, such as reindeer, foxes, and geese. Proceeding northwards, the coast subsides in elevation, but again rises at the N.W. extremity of the island, where it presents a scene of universal ruggedness and desolation. Baring Land was circumnavigated for the greater part by H.M.S. *Investigator*, which, in the search for the expedition under Sir John Franklin, passed the winter of 1851–2 in Mercy Bay, on its N.E. coast.—(Armstrong's *Narrative of Discovery of N.W. Passage*.)

BARITO, or **BANJAR**, a river, Borneo, which rising in a mountainous district, about lat. 1° 6' N.; lon. 114° E., not far from the sources of the Murong, unites with it in lat. 0° 16' N.; lon. 113° 58' E. The united stream, sometimes called the Murong, sometimes the Barito, or Dusso, pursues a tortuous course southward, hemmed in for the most part by lofty mountains. In lat. 2° 40' S. the river again separates into two branches, the W. of which, under the name of Kalor Murong, falls into the sea in lat. 3° 26' S.; lon. 114° 13' E., while the E., the Barito proper, has its mouth in lat. 3° 35' S.; lon. 114° 33' E., the two arms forming a delta of 38 geo. sq. m. The Barito at its mouth is nearly $\frac{1}{2}$ m. broad. The whole length of the river, both when united with the Murong and separated from it, is estimated at 570 m. Of these, 412 are navigable for large vessels. Nearly the whole kingdom of Banjarmassin is included in the basin of the Barito.—(*Zeitschrift für Allgemeine Erdkunde*, v. ii. 1857.)

BARKET (EL), a tn. N. Africa, Sahara, occupied by a tribe of Berber origin, but subjected to the Hagar or Azkar Tawareks, 5 m. S. Ghat; lat. 25° 0' N.; lon. 10° 30' E. It stands on a piece of open ground at the foot of a sandy eminence, and forms nearly a regular quadrangle, inclosed by a clay wall with four gates, and provided with square towers. The houses, about 200 in number, are well built of nicely polished clay, and are all of two or three stories. The only public building of much pretension is the mosque, which is of considerable size for so small a place, neatly whitewashed, and surmounted by a lofty minaret. The inhabitants carry on no trade, and have their chief wealth in their date plantations and gardens.

BARKFELD, a tn. Austrian empire, Hungary, co. Saros, on the Topla, 20 m. N. by E. Eperies. It was once a royal free town, and consists of an inner town surrounded by walls, and of three suburbs, has clean and well-paved streets, a R. Catholic church, and a townhouse—both of them handsome structures—a Franciscan convent, a high-school, good potteries, and a large trade in lace, linen, wine, hemp, and flax. The baths in the neighbourhood, situated on the S.

slope of the Carpathians, have been known for three centuries, and are much frequented by visitors from Hungary, Poland, and Russia. Pop. 4222.

BARMEN, a missionary station, S. Africa, Damaras Land, about $\frac{3}{4}$ m. from r. bank Swakop; lat. $22^{\circ} 8' S.$; lon. $17^{\circ} E.$ It has a rather dreary aspect when first beheld, but presents spots not devoid of interest and beauty. Immediately in front, towards the E., lies the river, whose course is conspicuously marked by the handsome black-stemmed mimosa; while behind, toward the W., rise irregular masses of low broken rocks, ending abruptly on one side in a bluff about 1000 ft. high, the whole covered with a profusion of shrubs and thorn-trees of the genus acacia, which, during the great part of the year, assume every shade of green. Bounding the horizon beyond the river is a noble range of picturesque mountains, rising nearly 7000 ft. above sea-level, and forming a prolongation of the chains which commence not far from Cape Town. Water is both abundant and good, and there is a warm spring with a temperature of 157° , which is used with success for irrigation, domestic purposes, and the seasoning of timber.

BARN, a tn. Austrian empire, Moravia, circle and 16 m. N.N.E. Olmütz; with two churches, extensive manufactures of linen, and establishments for preparing flax, which is very extensively grown in the district. Pop. 3185.

BAROACH, or **БРОАЧ** [add.], a dist. and tn. India, presid. Bombay. The district lies between lat. $21^{\circ} 22'$ and $22^{\circ} 11' N.$; lon. $72^{\circ} 30'$ and $73^{\circ} 10' E.$, and is bounded N. and E. by Guicowar; S. the Keem, separating it from Surat; and

W. the Gulf of Cambay; length, N. to S., about 57 m.; breadth, 41 m.; area, 1319 sq. m. The surface, belonging almost entirely to the deltas of the Nerbudda and Taptee, is generally flat, and covered by two classes of soil—a light brown and a black. The former, which is of very limited extent, is of superior fertility, but somewhat difficult and expensive to cultivate. Its chief crops are bagree and other kinds of grain. The black soil, forming at least 88 per cent. of the whole, is a rich mould, admirably adapted for jowaree (*Holcus sorghum*), the principal food of the inhabitants, and cotton, which now forms the great staple of the district, and furnishes a large proportion of what is known in the British cotton market by the name of Surat. Wheat and rice are grown to some extent, but the quality of both is said to be inferior. The manufactures, of which cotton cloth forms the staple, are unimportant. Pop. 290,984.—The town, cap. of the above dist., r. bank Nerbudda, 30 m. above its mouth, is a station on the Bombay, Baroda, and Central India railway, 200 m. N. (by rail) Bombay. It stands on an artificial mound, 80 ft. above the river, which is here 2 m. broad, but so shallow as to be navigable only by boats of 50 tons, and is crossed by a long viaduct of the railway. The principal buildings are an English church, consecrated in 1856, a Parsee hospital for animals, government school, the Silver Mosque, with a handsome fretted ceiling, the bazaar and cotton warehouses outside the wall. The wall which surrounds the town is very much dilapidated except on the river face, which has been repaired. Baroach was formerly a flourishing place for trade, and the manufacture

BAROACH, FROM THE MELON ISLAND IN THE CENTRE OF THE RIVER.—From Forbes' Oriental Memoirs.

of cloth checks, which were very skilfully woven, mostly by Parsees. About 17 or 18 m. distant are the carnelian mines of Ratanpur, large quantities of carnelian beads being exported from Baroach. The cotton trade has recently become the most important, Baroach being the shipping port for the cotton grown in Gujerat. The town contains about 3341 houses within the walls, occupied by 12,971 persons; the inhabitants of the suburbs are estimated at 18,361.

BAROTSE, a dist. Central Africa, between lat. $15^{\circ} 20'$ and $16^{\circ} 30' S.$; and lon. 23° and $24^{\circ} E.$ It is bounded on the W. by a range of hills, from which it descends gradually to r. bank Zambesi or Leeambye, crossing the river to another range of hills forming the E. boundary. The intervening tract, forming Barotse proper, is about 100 m. long, and 20 to 30 wide. As it is annually inundated by the river, like Egypt by the Nile, the villages and towns, of which Narielo, containing scarcely 1000 inhabitants, is the chief, are built on mounds, many of them constructed artificially. The plains are covered with coarse succulent grasses, on which large herds of cattle are grazed. Maize and Caffre corn are raised in abundance, and of excellent quality, on the inundated grounds; and on the ridges above are fruitful gardens, where sugar-cane, sweet potato, two kinds of manioc, two kinds of yam, bananas, millet, &c., are cultivated. These productions, with ample supplies of milk from the cattle, and fish from the river, justify the inhabitants in talking of their country as the land of

plenty. It has, however, one serious drawback. Fever, often of a fatal description, is prevalent. Dr. Livingstone during his visit had eight attacks of it, the last of them very severe.

BARRACKPOOR [add.], a tn. India, presid. Bengal, 10 m. N.N.E. Calcutta. Previous to the mutiny in 1857 six regiments of sepoy were quartered here, but upon its outbreak they became disaffected, and were on the point of marching upon Calcutta when they were disarmed and closely guarded by European troops. Subsequently extensive barracks for the permanent occupation of British troops were erected, and are now occupied by them. The government also has works here for the manufacture of gunpowder.

BARRACOUTA, **HAJI**, or **PORT IMPERIAL**, a harbour, Russian empire, Manchouria, on the W. shore of the Gulf of Tartary; lat. (Tullo Island), $49^{\circ} 1' 50'' N.$; lon. $140^{\circ} 19' E.$ It is formed by Freeman Point on the N., and Tullo Island on the S., which are $\frac{3}{4}$ m. apart; has depths varying from 5 to 15 fathoms, and contains several inlets, with shelter for all classes of vessels. It receives the river Haji or Ui, which forms some small alluvial islands. Its shores are covered with dense forests of pine, yew, and alder. The Russians founded the settlement Konstantinovsk here in 1853. It consists of a few log-houses, supplied with water from a well, and is defended by two batteries mounting eighteen guns.

BARREN [add.], an island, S. Pacific, off the N.E. coast of Tasmania, near the E. entrance of Banks' Strait. It belongs

to the Furneaux group, is about 24 m. long from E. to W., by about 18 m. wide, and has a high, rocky, and irregular surface, with a remarkable peak on its S.E. end, and on its N.W. side some round wooded hills.

BARREN [add.], an isl. in the S.E. of the Bay of Bengal, belonging to the Andaman group, 36 m. E. of the Middle Island of the Great Andaman; lat. 12° 17' N.; lon. 93° 54' E. It consists of a volcanic cone which rises to the height of 980 ft. above the sea, is about a mile and three quarters long, by less than half a mile broad, and is a link in the chain of volcanoes which extends in a curve from Java to the N.E. and N. Many violent eruptions must have taken place at a very early period. In 1795 the crater threw out red-hot stones of several tons weight, and immense volumes of vapour; and in 1803 a black pillar of smoke continued to rise from it at intervals of 10 minutes, while at night, on the E. side of the crater, a burning fire was distinctly visible. Since then the volcanic activity has gradually diminished.

BARRH, a tn. India, presid. Bengal, dist. and 33 m. E. Patna, r. bank Ganges, 363 m. (by rail) N.W. Calcutta, is a station on the East Indian railway. It occupies a large area, and carries on a considerable trade. Pop. 25,000.

BARRIE, a tn. British America, Canada West, cap. co. Simcoe, at the head of Kempenfeldt Bay, on Lake Simcoe, and on the Ontario, Simcoe, and Huron railway, 50 m. N. by W. Toronto. It has two bank agencies and a weekly newspaper, but its trade is chiefly local. Pop. about 2000.

BARUWA, a tn. Western Africa, Bornou, near the N.W. shore of Lake Chad, about 60 m. N. Kukawa. It is inclosed by clay walls, which can scarcely be distinguished, owing to high mounds of rubbish embedding them on all sides; and consists of closely packed huts, generally without a courtyard. The inhabitants are mostly of the Kanemba tribe. Fish, caught in great quantities in the lake, are at once the principal food and the only article of commerce.

BARWALD, a tn. Austrian empire, Galicia, circle Wadowice, in a mountainous district, 18 m. S.W. Cracow. It consists of the three distinct villages of Lower, Middle, and Upper Barwald, and has a fine mansion, and beautiful forest timber. Pop. 2000.

BARZDORF, a tn. Austrian empire, Bohemia, circle and about 33 m. N.E. Königgrätz; with a church, three mills, and 1700 inhabitants, employed in weaving and spinning.

BASARDJIK, a tn. Turkey in Europe, 120 m. W.N.W. Adrianople, on the Maritza. The Christians have three churches, and possessed several flourishing schools, which Turkish fanaticism has suppressed, substituting for them only one Bulgarian school. The trade is important. It contains about 25,000 inhabitants, of whom three-fifths are Turks, and the remainder Christians.

BASARTSHIK, or **BASARYIK**, a tn. Turkey in Europe, Bulgaria, eyalet Silistria, 24 m. N. Varna. It has in April an important annual fair, and contains 5000 inhabitants, almost all Mahometans.

BATCHAR-MAADEN, a tn. Turkey in Asia, prov. Kars, 45 m. N.N.W. Erzeroom, on the S. slopes of a mountain range near the l. bank of the Tchoru-su. It is celebrated for its copper mines.

BATCULL, a tn. India, presid. Madras, dist. N. Canara, on a small stream, about 2 m. from its mouth on the W. coast, 80 m. N. Mangalore. It stands in a beautiful valley, highly cultivated by means of irrigation, and inclosed by hills on all sides; and contains two mosques, though the majority of the inhabitants, about 3000, are Hindoos.

BATESVILLE, a tn. U. States, Arkansas, cap. co. Independence, 82 m. N.E. Little Rock, on the White River, which is navigated by steamboats at nearly all seasons. It occupies a healthy site in a dist. well wooded and amply provided with water-power, which enables it to carry on a considerable trade. Pop. about 1700.

BATH, or **BEKKLEY**, a vil. U. States, Virginia, cap. co. Morgan, on the Baltimore and Ohio railway, about 3 m. from the Potomac. It is much visited by invalids for its mineral springs, which have a temperature of 74°, and are considered efficacious in neuralgia, dyspepsia, and rheumatism.

BATH [add.], a tn. U. States, Maine, cap. co. Tagadahock, r. bank Kennebec, 4 m. below its junction with the Androscoggin, and on the Kennebec and Portland railway, 35 m. S. Augusta. It stretches 2½ m. along the river, and

about a mile back from it, and is very irregularly built, though most of the dwelling-houses display neatness and taste, and some of the few public buildings, including several of the ten churches, are costly and elegant. The custom-house is a granite structure of some pretensions. The public schools, consisting of primary, grammar, and high schools, are in great repute; and the literary character of the place is moreover maintained by a lyceum, an academy, and a public library. The principal business is shipbuilding, in which Bath is surpassed only by Boston and New York. The number of vessels built here in 1856 was 67, measuring in the aggregate 50,182 tons. A large proportion of these are owned by the inhabitants, who in 1854 possessed in all 164,000 tons, employed partly in foreign trade, and partly in coasting, and in cod and mackerel fishing. Pop. about 12,000.

BATH, a tn. Austrian empire, Hungary, co. Honth, 10 m. S.W. Schemnitz, cap. dist. of same name; with a court of justice and several public offices, a trade in excellent wine, and much-frequented yearly markets. Pop. 1280.

BATICALO [add.], a tn. Ceylon, on an island off its E. coast, in a singular estuary, where the confluence of several streams has formed a lake nearly 40 m. long, and not more than 1 or 2 m. broad; lat. 7° 42' 30" N.; lon. 81° 42' E. It consists of a town and a fort, both situated on an islet within the lake, and is called by the natives Poeliantiove, or the 'Island of Tamarinds.' The fort is a grim little quadrangular stronghold, with a battery at each angle, connected by a looped wall, and surrounded by a ditch swarming with crocodiles. The square within is surrounded by soldiers' quarters, and incloses a house for the commandant, a bomb-proof magazine, and a church. On the esplanade in front are the remains of a Dutch garden, with a reservoir abounding with tortoises and small fish, and frequented by great numbers of kingfishers. The approach to the town is extremely picturesque, thick groves of cocoa-nut palms forming an impervious shade above its white houses, each of which is surrounded by a garden of fruit-trees and flowering shrubs. The line of the coast, N. and S. of Baticalo, is for nearly 30 m. a belt of sand about 1½ m. wide, separating the lake or lagoon from the sea. This natural embankment is covered from end to end with cocoa-nut palms of remarkable luxuriance, and producing fruit of unusual weight and richness. The lake and other waters of the district are remarkable for the numbers and prodigious size of the crocodiles that infest them. Their teeth are sometimes so large, that the natives mount them with silver lids, and use them as boxes to carry the powdered chunam which they chew with betel-nut. The port is flourishing, having doubled its tonnage within a few years.

BATINA, a tn. Austrian empire, Hungary, co. Baranya, about 32 m. S.E. Pünfkirchen, on the Danube, over which there is here a ferry; it has a ruined castle, a sturgeon fishery, and a trade in corn and wine. Pop. 1524.

BATNA, a town, Algeria, prov. and 56 m. S.S.W. Constantine, on a plateau along which the route from Constantine to Biskara passes; lat. 35° 36' N.; lon. 6° 14' E. It consists of an Arab and a European town. The former is of mean appearance, but carries on an active trade with the tribes of the Sahara; the latter, founded in 1848, has already made considerable progress. The Arab weekly market is important. In the vicinity are numerous Roman remains, the most important of which belong to the ancient Lambessa. Among them are a temple of Victory, and a temple of Esculapius, both in good preservation; a circus, an amphitheatre, baths, aqueducts, &c. Government has here established a penitentiary for political prisoners. Pop. 1883.

BATOKA, a tribe, S. Africa, inhabiting large islands in the Leeambye or Zambesi, and a considerable tract of hilly country on its N. bank, in lat. 17° S.; lon. 27° E. The soil, though unequal and incapable of being advantageously cultivated from a want of perennial streams, is in some quarters so rich and so free from obstructions of any kind, that the whole surface might be converted into one great garden. The cattle of the Batoka are exceedingly small but very beautiful. One of the products of the country is iron, which is smelted to some extent, and employed chiefly in the manufacture of hoes. This manufacture is carried on chiefly by the Batoka and Banyeti, and to such an extent that most of the hoes in use at Linyanti, the capital of Makololo, are the tribute paid by the smiths of those tribes. All the Batoka tribes follow the sin-

gular custom of knocking out the upper front teeth, which is done to both sexes at the age of puberty, and produces an uncouth appearance. Those on the islands are very dark and negro-like, while those on the high lands are frequently of the colour of coffee and milk. They are both treacherous and cruel, and before they were subdued by Sedituane, the celebrated Makololo chief, used to be guilty of the most barbarous excesses, the different chiefs vying with each other who should mount the greatest number of skulls in his villages. Sedituane, when his fortunes were at a comparatively low ebb, undertook to subdue them, and near the great falls gained a complete victory, capturing so many cattle that his people were unable to count the number of the sheep and goats. He afterwards overran all the high lands towards the Kafue, and extended the limits of Makololo eastward, so as to include a fine pastoral country of gently undulating plains, covered with short grass and little forest. The Batoka inhabitants, having thus lost their independence, have been tributary to successive conquerors, and their country, which was once densely peopled, is now in many parts almost deserted.

BATON ROUGE [add.], a city, U. States, cap. Louisiana, 1 bank Mississippi, 129 m. N.W. New Orleans. Standing on the first high bluff up the river, it is considered one of the healthiest places in the south part of the Mississippi valley, and possesses a fine view of the majestic river and the highly cultivated district adjacent to it. Among its buildings are a handsome state-house, a college, several churches, an arsenal, barracks, and penitentiary; it has also two newspaper offices. Since it was made the seat of the state government it has become an active place, and the value of property has much increased. In 1862 the possession of it was contested between the Confederate and Federal forces, and on Aug. 5 of that year the Confederates under General Breckenridge suffered a severe defeat before it. Pop. 4500.

BATONYA, a tn. Austrian empire, Hungary, co. Bekes-Csanad, cap. dist. of same name, 12 m. N. Arad; with 8485 inhabitants, and a trade in cattle.

BATOPILAS (SAN PEDRO DE), a tn. Mexico, prov. and 120 m. W.S.W. Chihuahua, on a river of same name, in a mountain gorge at the foot of the W. ranges of the Cordillera. It has many good houses and shops, and has long been celebrated for its silver mines, which, though mostly abandoned, are supposed only to want proper skill and sufficient capital to be still successfully worked.

BATORKESEKI, a tn. Austrian empire, Hungary, co. Komorn, 4 m. S.W. Kis-Ujfala; with many handsome buildings, a fine baronial castle, and 2165 inhabitants, of mixed denominations, R. Catholic, Protestant, and Jewish.

BATTA, the most numerous among the native tribes of Adamaua, in Central Africa. Not only all the country on the middle course of the Benuwe, and along the Faro for some distance beyond Mount Alantoka, but also the whole region north of these rivers, as far as the S. boundaries of Bornou, is inhabited by them. They are divided into several great families, speaking dialects which in some cases differ very widely from each other, and are closely related to the Marghi. Previous to the conquest of the Fellata their chief was the most powerful in the country, and several of them still maintain their independence. It is their language that has furnished the name of Benuwe or 'Mother of Waters,' by which the E. branch of the Kwara or Niger is now generally designated.

BATTAMBONG, a prov. tn. and river of Cambodia, in the kingdom of Siam. Numerous memorials of antiquity are scattered throughout the prov., ruins of an unknown epoch, of an empire which long ago passed away, and a civilization that has wholly disappeared. At Bassette, Banone, and Wat-ék are remains of vast and splendid Buddhist temples, with lofty columns, richly sculptured ornaments, and massive towers. The prov. has been tributary to Siam for more than a century, spite of several determined efforts to shake off its thralldom. The majority of its population are Cambodians, who have preserved their ancient customs and usages, and, being exempted from the heavy taxation incumbent upon other parts of Siam, enjoy an extraordinary amount of prosperity. Their pursuits are wholly agricultural, and each cultivator has in the rear of his hut his little patch of rice-ground. They are strongly addicted to horse-racing and buffalo-hunting, pursuing the latter pastime

on ponies of great strength and remarkable speed.—The town of Battambang, on a river of the same name, which does not exceed 50 ft. in breadth, and whose mud-banks are haunted by alligators, is a long straggling place, of little commercial importance; lat. 12° 50' N.; lon. 104° 30' E. It is commanded by a small fort, pompously called the citadel, but built only of baked clay. The bamboo and timber huts have each their plot of garden ground, adorned with superb plantations of the banana, and the deep-green foliage of the mango. —(Mouhot, *Travels in Cambodia, Siam, and Laos*.)

BATTANITZA, a tn. Austrian empire, Peterwardein Military Frontier, about 30 m. S.S.E. Peterwardein; with a large trade in silk, and 1760 inhabitants.

BATTELAU, a tn. Austrian empire, Moravia, circle Iglau, on the Iglawa, near the frontier of Bohemia; with a beautiful parish church, a large castle, manufactures of cloth, and an iron-mill. Pop. 2314.

BATTLE, a harbour, British America, on the N.E. coast of Labrador, near the N.E. entrance of the Strait of Belle Isle. It is formed by an island-group of same name, of which the S.E. island is in lat. (N.E. point) 52° 15' 36" N.; lon. 55° 32' 20" W., and by the Great Caribou, which, having a circuit of about 9 m., is the largest island on this part of the coast. It is fit only for small vessels, being only 60 yards wide at the entrance, and 150 yards wide within, and is usually crowded with the boats of the fishermen, while the shores are covered with their houses and stages. It is secure during the summer months, but in the fall of the year is subject to a heavy ground-swell, called by the fishermen the *undertow*, which rolls in between the islands, and damages the vessels and fish-stages. This swell, which at times rolls in from the E. into St. Lewis Sound, round the River Islands, and up the bays of the main to the W. of them, is thus described in the *St. Lawrence Pilot* (vol. i. p. 117, ed. 1860): 'Perhaps there is not anything more grand and wildly beautiful than the tremendous swell which often comes in without wind, rolling slowly but irresistibly in from the sea, as if moved by some unseen power; rearing itself up like a wall of water as it approaches the craggy sides of the islands; moving on faster and faster as it nears the shores, until at last it bursts with fury over islets 30 ft. high, or sends up sheets of foam and spray, sparkling in the sunbeams, 50 ft. up the sides of the precipices. The roar of the surf in a calm night can be compared to nothing less than the Falls of Niagara.'

BATTLE CREEK, a vil. U. States, Michigan, on a stream of same name, at its junction with the Kalamazoo, 60 m. E. Lake Michigan. It possesses several churches, an academy, machine shops, several woollen factories, and a number of saw and flour mills. There are quarries of excellent sandstone in the vicinity. Pop. about 2000.

BAU, or **AMBAU** [add.], an isl. S. Pacific, Feejee group, on the E. of Viti or Naviti Levu, with which it is connected by a long coral flat, in some places bare at low water; lat. 17° 34' S.; lon. 178° 24' E. It is only about 2 m. in circuit, but contains a town of same name, and is the residence of a chief, who at one time assumed the title of King of Feejee, and is still the most influential Feejee chief. Bau continued to be one of the strongholds of heathenism till April, 1854, when its chief, Thakombau, and his subjects embraced Christianity. Pop. 1500.

BAUGLEE, a tn. India, Scindia's Dominions, 54 m. S.E. Oojein. It is situated on the Kalee Sind, has a well-built fort, and contains about 3000 inhabitants.

BAUSKE, a tn. Russia in Europe, gov. Courland, on the Memel, 25 m. S.E. Mitau. It contains a Lutheran church, a R. Catholic chapel, a synagogue, two schools, two charitable endowments, and the ruins of an ancient castle. In the vicinity there is a R. Catholic monastery, and also mineral springs, pleasantly situated in a valley. Pop. 3752.

BAUTZEN, a tn. Austrian empire, Bohemia, circle and N.E. Bunzlau; with a parish church, a townhouse, and a corn-mill. Pop. 2091.

BAWEAN, an isl. Indian Archipelago, about 50 m. off the N. coast of Java; lat. (centre) 5° 49' N.; lon. 112° 44' E. It has an area of about 350 geo. sq. m., and is surrounded by reefs and rocks affording scarcely any safe anchorage. It seems to be of volcanic origin, and has a rugged surface, with peaks rising to the height of 2000 ft. above the sea. Hot springs, some of them with a temperature of 125°, are found

throughout the island. The principal cultivated product is rice, raised by means of irrigation; but the quantity grown falling short of the consumption, is supplemented by an annual import of about 1500 tons from Java and Bali. The inhabitants prefer fishing to agriculture; and at times 800 small canoes, each carrying only a single fisherman, may be seen off the coast. Their principal exports, which they exchange for iron and clothing, are mats made of pandanus leaves, horses, and trepang. Pop. 30,000.

BAYA, a tn. W. Africa, cap. dist. of same name, 210 m. S.S.E. Yola; lat. 6° 50' N.; lon. 13° 42' E. It lies between a forest on the one side and mountains on the other, and consists entirely of huts. The inhabitants go with no covering but a leaf, tattoo their bodies, and make a small hole in the left nostril. They have neither horses nor neat-cattle, but abundance of asses, sheep, and poultry. Parrots and elephants are numerous. The latter they catch in pits, and feed on their flesh.

BAY VERTE, British America, lying between New Brunswick on the N. and Nova Scotia on the S.; opens into Northumberland Strait. It is 9 m. wide at its entrance, and penetrates between the two provinces from E. to W. for 11 m. At its head—where the isthmus, 20 miles broad, which connects the provinces begins, dividing Northumberland Strait from Cumberland Basin, in the Bay of Fundy—it receives the Tignish, which is of some commercial importance, as about 100,000 deals are annually floated down it, and thereafter conveyed in rafts or small schooners to Pugwash, on the N.W. coast of Nova Scotia, for shipment to the British market. There are thriving settlements on either side of Bay Verte, and especially at its head, where extensive tracts of meadow land have been gained by warping and diking.

BEAGLE VALLEY, N. Australia, Alexandra Land, about lat. 15° 30' S.; lon. 130° 30' E., near the banks of the Victoria River. It has a fertile soil, and produces abundance of high grass, but is thinly wooded; the few trees consisting of bauhinia, acacia, and small eucalypti. With the adjoining valley, it has an estimated area of 160,000 acres, well watered, and suited for pasture.

BEAR RIVER, U. States.—1, A river, Utah, which, rising in a spur of the Rocky Mountains about 75 m. E. of the Great Salt Lake, flows first N.W., then S.E., and falls into the Great Salt Lake after a course of about 400 m. Its valley is about 6000 ft. above the sea. On its banks are several remarkable hot springs, some of which throw up vapour like the geysers.—2, A river, which rises on the W. slope of the Sierra Nevada, in California, flows successively W. and S., and joins the Feather River below Marysville.

BEAUFORT [add.], a port, U. States, N. Carolina, cap. co. Carteret, l. side of mouth of Newport River, a few miles from the sea, 168 m. E.S.E. Raleigh, the railway from which runs to Fort Macon, on the opposite side of the river. The harbour is the best in the state, and is accessible by steamboats from Albemarle Sound; and the trade is considerable in turpentine, resin, &c. A lighthouse stands on Cape Look-out, and Macon Fort defends the entrance to the harbour.

BEAUHARNOIS, a tn. Canada E., cap. co. of same name, r. bank St. Lawrence, here called Lake St. Louis, 20 m. S.W. Montreal, with which it communicates by steam. It has a church in connection with the Church of Scotland, a manufactory of reaping and thrashing machines, a tannery, and a pottery. The trade is chiefly local. Pop. about 1000.

BEAULIEU, a liberty, England, in the union of the New Forest, co. Southampton, 6½ m. N.E. Lymington; is situated on a river of the same name, which rises in the New Forest and flows into the Solent a short distance below the town. On the eastern side are the ruins of Beaulieu Abbey, founded in 1204 by king John for thirty Benedictine monks. The abbey-refectory, a plain buttressed building of stone, enlarged in 1840, now forms the parochial chapel. About 2 m. distant is Park Farm, a grange formerly belonging to the abbey, and still presenting some indications of its ancient splendour. Beaulieu has long been noted for its sacking manufacture, and shipbuilding is also carried on to some extent. Its abbey afforded sanctuary to Margaret of Anjou, wife of Henry VI., after the battle of Barnet, and to Perkin Warbeck, in the reign of Henry VII. Pop. (1861), 1176.

BEAUMONT, a tn. U. States, Texas, cap. co. Jefferson, r. bank Neches River, 20 m. from its mouth in Sabine Lake.

It is a junction on the railway between New Orleans and Galveston, &c., there being a branch from it to Sabine city. Small vessels ply regularly to and from Galveston. The chief business of the inhabitants is the rearing of cattle on the vast prairies, over which immense herds find pasture.

BEAVER, a tn. U. States, Pennsylvania, cap. co. same name, r. bank Ohio River, 28 m. N.W. Pittsburg, on the railway from Pittsburg to Cleveland. It is pleasantly situated in a plain, and has several factories driven with water-power.

BECAL, a tn. Mexico, Yucatan, 45 m. S.E. Merida. It is a decayed place; with a parish church, and 1446 Indian inhabitants.

BEÇANCOUR, a vil. British America, Canada E., co. Nicolet, r. bank St. Lawrence, 85 m. N.E. Montreal; with a R. Catholic chapel, manufactures of mill-wheels and carriages, a tannery, and a trade in lumber. Pop. about 1000.

BECHI, or **BESHU**, a tn. W. Africa, Hausa States, lat. 12° 15' N.; lon. 8° 2' E.; 20 m. N.W. Kano. It lies embosomed in a luxuriant mass of vegetation, from which on approaching it the high clay walls seem suddenly to start forth. It has but one gate. Though belonging to the Hausa States, it is possessed in part by the Tawarek tribe of Itisan, whose *bugage*, or serfs, live within the town, and cultivate the adjoining fields for their masters. Beyond the town the country becomes less cultivated, and is mostly covered with the wild gonda-bush, which bears a most delicious fruit.

BECSE, two places, Austrian empire, Banat:—1, *New or Turkish Becse*, circle and 16 m. N.W. Gross Beckerek, on the Theiss, cap. dist. of same name; is the seat of several public offices, carries on a very extensive trade in corn, and contains 6472 inhabitants.—2, *Old or Serbian Becse*, circle and 24 m. N.E. Neusatz, cap. dist. of same name, on the Theiss. Three battles have been fought here—one in 1551, and the other two during the Hungarian insurrection in 1848 and 1849. It contains 11,222 inhabitants, a large proportion of whom live by fishing.

BECZKÓ, a tn. Austrian empire, Hungary, co. and 10 m. S.S.W. Trencsin, on the Waag. It is surrounded by walls and otherwise defended; has a Franciscan monastery, a mountain castle, and a castellated mansion; and contains 2250 inhabitants, who are chiefly employed in mechanical operations.

BEDFORD:—1, A tn. U. States, Pennsylvania, cap. co. of same name, on a branch of the Juniata and of the Harrisburg and Pittsburg railway; 80 m. S.E. Pittsburg. It is celebrated for its mineral springs, which, together with scenery around it, have made it a favourite watering-place. Pop. 1203.—2, A vil. Indiana, near E. bank of White River, 75 m. W.S.W. Indianapolis, on the railway from New Albany to Chicago. It is pleasantly situated on high ground, and is a thriving place.

BEDNORE, **BEDNORE-NUGGUR**, or **HYDER-NUGGUR** [add.], a tn. India, presid. Madras, Mysore, cap. dist. of same name, beautifully situated in the hollow of a rugged table-land of the W. Ghats, at the height of 4000 ft. above the sea, 130 m. N.N.W. Seringapatam. Originally a village, it became in 1645 the capital of an independent prince, who assumed the title of rajah of Bednore. In consequence of this event it advanced with rapid strides, and ranked as one of the wealthiest and most splendid cities in the Deccan. Its prosperity had lasted for a century, when it was suddenly arrested in 1763 by Hyder Ali, who took and pillaged it, obtaining a booty estimated at the incredible amount of £12,000,000 sterling. In 1783 a large British force, under Gen. Mathews, was obliged to surrender to vastly superior numbers under Tippoo, and all the principal officers were put to death, the rest of the force being cruelly treated. The town does not seem to have been ever regularly fortified, its principal defences consisting of a line of posts erected on the summits of the surrounding hills. It had, however, a citadel, which stood on a bold eminence and contained the rajah's palace. The latter is now in ruins, but the former is still tolerably entire. All other signs of grandeur have disappeared, and the place has dwindled down to a mere village. Bednore is remarkable for the humidity of its climate. According to Wilks, nine months' rain are expected every year; and the country becomes so completely flooded that the inhabitants lay in a store of six months' provision. The excessive

moisture and heat produce a very luxuriant vegetation, and the surrounding district is covered with magnificent forests, with a dense and tangled undergrowth, which makes them almost impenetrable.

BEEL, a tn. Austrian empire, Hungary, about 35 m. S. Grosswardain; with the ruins of an old castle and glass-works. Pop. 1430.

BEEMA, a river, S. India, which rises in the table-land of the W. Ghauts, 3090 ft. above the sea, about 50 m. E. Bombay, flows circuitously S.E., receiving the Neera on its r. and the Seena on its l. bank; and after a course of about 500 m., joins the Kistna in lat. 16° 24'; lon. 77° 20'.

BESULNUGGAR, or **BISNAGAR**, a tn. India, Gujerat, 120 m. N.N.W. Baroda. It has manufactures of cotton cloths, and a considerable transit trade in forwarding iron and other heavy goods to Marwar. Pop. 18,000.

BESULPOOR, two places, India.—1, A tn. Rajpootana, state and 18 m. E. Joodpoor. It is supplied with water from seventy wells, possesses a bazaar of 100 shops, and has a pop. of about 4000.—2, A tn. N.W. Provinces, Rohilcund, dist. and 25 m. S.W. Bareilly, in an open, fertile, and well-cultivated country. It possesses a good bazaar. Pop. 7245.

BEISHÉ, or **BISH**, a tn. Arabia, Yemen, in a large valley, well watered by streams and wells, and abounding with gardens, 180 m. N.W. Sana. It is regarded as the key of Yemen, and is a place of some strength, surrounded by lofty walls and a ditch, and defended by a strong castle. Its houses are well built. The environs are covered with groves of date-trees.

BEIT SAKARIEH, a vil. Palestine, about 10 m. S.W. Jerusalem, on a high and almost isolated promontory overlooking the western region of lower hills. It appears to have been once a strong and impregnable fortress, and is believed both from its name and position to be the *Beth-Zacharia* of Josephus and the Maccabees.

BELA, two tns. Austrian empire, Hungary:—1, Co. Zips, 6 m. N. Kesmark. It is one of the Zips royal towns; and has important manufactures of linen, a trade in flax, a sulphur spring, gin distilleries, and five yearly markets. Pop. 2167, mostly Lutherans.—2, Co. Abauj-Torna, 7 m. N.N.W. Kaschau; with 1000 inhabitants, employed in mining iron, silver, and copper ore.

BELAT, a vil. Palestine, near the S.E. extremity of Lebanon, on the edge of a precipitous bank 800 ft. above the Litany, which has its course in the chasm below. In its vicinity are the columns and architrave of an ancient temple.

BELBEK, or **KABARTA**, a river, Russia, in the S. of the Crimea, rises in a slope of the Yaila Mountains; flows first N.W., then turns gradually W.S.W., and falls into the Black Sea, 3 m. N. Sevastopol. In its upper course it forms small cascades among densely-wooded valleys, and is usually called the Kabarta. At Albat, where the Belbek proper commences, it rushes between a continuous chain of wild ravines and calcareous heights of fantastic shape. Near its mouth these heights terminate in abrupt capes.

BELCHERTOWN, a vil. U. States, Massachusetts, in the E. part of co. Hampshire, 70 m. W. by S. Boston. It possesses a classical school, and has a carriage factory of some celebrity. P. 2698.

BELEL KOLÉ, a tn. Central Africa, near the S.E. frontier of Bagirmi. Native information describes it as a place of extraordinary natural strength. It stands in a kind of circle inclosed by rocky ridges, abutting on each other in such a way as to leave only a single approach. The inhabitants, belonging to the Sokorro, dwell between the rocky ridges, and their prince on an eminence near the centre of this remarkable basin, which is well supplied with water.

BELGAUM [add.], a town India, presid. Bombay, 250 m. S.S.E. Bombay, 47 m. N.W. Darwar, 2500 ft. above the sea. Great improvements in the roads of the town and neighbourhood were undertaken by the inhabitants, aided by the government, in 1848, and others have been progressing under sanction

of the authorities. A church for the camp, additions to the European hospital, and a dispensary are among them. A college for the sons of the upper and middle classes of the natives was founded by government in 1850, and has advanced favourably in both numbers and efficiency, the pupils being 96 in 1860, against 63 in the previous year. The fort, which is of an oval shape, is about 1000 yds. long and 700 yds. broad, and contains an arsenal, and the various military quarters and stores, in which improvements have been made; one of the old barracks has been converted into a library and school-room.

BELGIUM [add.] *Population*.—The population of Belgium has increased very steadily since the establishment of the kingdom in 1830; the tendency, apparent in most European countries, to an aggregation of people in large towns, being very visible in Belgium. The following statistics exhibit this:—

Provinces.	Population.	
	1856.	1862.
Antwerp.....	434,415	465,003
Brabant.....	748,840	825,124
W. Flanders.....	624,912	647,371
E. Flanders.....	776,960	810,583
Hainault.....	769,065	835,822
Liège.....	502,662	545,882
Limbourg.....	191,708	197,916
Luxembourg.....	193,753	204,597
Namur.....	286,175	304,268
Total...	4,529,560	4,836,566*

* On January 1, 1864, the population was estimated at 4,894,071; so that, the area being 11,359 sq. m., the density of the population, 440 per sq. m., is greater than that of any other country in the world.

Amongst the population there were, according to the census of 1856:—

French.....	31,400	British.....	4,092
Dutch.....	49,223	Other nations...	4,823
Germans.....	15,242		

About 2,500,000 are Flemish.

According to a semi-official statement in 1857, there were 908,000 families in Belgium, of which 89,630 were in good circumstances, 373,000 in straitened (*pénible*) condition, and 446,000 in poverty; the 'known beggars' were said to amount to 88,019, of whom 48,041 were males.

The following towns had the population annexed in 1863:—

Brussels*.....	181,799	Tourmay.....	31,115	Lokeren.....	17,327
Ghent.....	121,255	Verviers.....	29,284	Ypres.....	17,190
Antwerp.....	117,324	Mons.....	26,943	Ostend.....	17,159
Liège.....	99,905	Namur.....	25,883	Lierre.....	14,791
Bruges.....	50,647	St. Nicholas.....	23,881	Charleroi.....	13,084
Malines.....	34,455	Courtrai.....	23,382	Turnhout.....	13,002
Louvain.....	82,371	Alost.....	19,383	Roulet.....	12,433

* With its adjacent communes Brussels had 239,961 inhabitants.

Trade and Commerce.—The merchant service of the kingdom numbered, on 31st December, 1862, 138 sailing vessels, of 39,279 tons, and seven steam vessels, of 5771 tons. In 1863 it fell lower still, viz. to 103 vessels, measuring 27,247 tons. The following tables will show the condition of commerce in the years 1859-61:—

	1859.		1860.		1861.	
	No.	Tons.	No.	Tons.	No.	Tons.
Imports (including Transit):—						
By sea.....	...	11,196,715	...	13,454,444	...	13,454,444
By land and river...	...	24,358,626	...	23,498,366	...	23,498,366
Total.....	...	35,554,341	...	36,952,810	...	36,952,810
Exports (including Transit):—						
By sea.....	...	11,042,658	...	11,811,959	...	11,811,959
By land and river...	...	23,094,898	...	23,370,392	...	23,370,392
Total.....	...	34,137,556	...	35,182,351	...	35,182,351
Vessels entered at Belgian ports:—						
Belgian.....	470	74,396	462	73,796
Foreign.....	2,939	502,141	3,818	593,491
Total.....	3,409	576,537	3,780	667,287
Vessels cleared from Belgian ports:—						
Belgian.....	474	74,533	487	81,521
Foreign.....	2,844	491,351	3,472	612,704
Total.....	3,318	565,884	3,959	694,225

The general commerce of the year 1863, *i.e.* the imports of all kinds, whether for home consumption, transit, or entrepôt, in conjunction with the exports of all kinds, whether of Belgian or foreign produce, amounted to an aggregate value of £82,400,000, exceeding by 14 per cent. that of 1861. The imports and exports show a constant progression, the former being uniformly in excess of the latter. The commerce of 1864 is known to have surpassed that of any former year. In that year the quantity of salt imported from England was 22,368 tons; from France, 16,480 tons; and from other countries, 1375 tons; total, 43,223 tons. The produce of sugar from beet-root has rapidly increased, the quantity manufactured in 1863 being upwards of 420,000 cwt., of which 96,490 cwt. was exported to England. In 1862 and 1863 respectively, the number of vessels entering Belgian ports was 3629 and 3893, about one-half of which were British and from English ports; the tonnage in each of the two years being 694,800 and 712,373. Two new lines of steam packets, from Newcastle and Hartlepool, were opened to Antwerp in 1863.

The commerce of the kingdom was greatly relieved by the redemption of the Scheldt toll by the treaty of July 16, 1863. The maritime nations combined to relieve the Belgian treasury of an annual charge of about £76,000 by a contribution raised among themselves—England's quota being £349,000. At the same time the tonnage duty was abolished, and the pilot dues were reduced, rendering Antwerp one of the least expensive ports for shippers. In the same year commercial treaties were concluded with all the most important foreign nations; and on April 12, 1864, a law was promulgated admitting the free importation of foreign-built vessels, and remitting all duties on timber used in shipbuilding; and on Nov. 8, 1864, a convention was framed between Belgium, France, Great Britain, and the Netherlands, revising the system of duties on refined and unrefined sugars, with a view to the relief and expansion of the sugar trade.

Finance.—The budgets of 1863 and 1864 estimated the total revenue at 156,946,790 francs, and 157,782,790 francs respectively, and the total expenditure at 151,120,344 francs, and 151,778,575 francs respectively. The state is the proprietor of 467 miles of railway, being nearly one-half of the whole length in the kingdom; the other half is in the hands of companies whose rights will lapse to the state after specified terms of years. The net revenues of the state lines are devoted to the gradual redemption of the debt incurred in their construction, which, with the current rate of profit, is estimated to be effected in about twenty years from this time (1865).

BELLARY [add.], a tn. British India, presid. and 272 m. N.W. Madras, cap. dist. of same name. It consists of two forts, a cantonment, and a pettah or native town. The upper fort crowns a bare granite hill, of an oblong or rather semi-elliptical form, which rises abruptly from the plain to the height of 450 ft., and is about 2 m. in circuit. It is surrounded by a stone rampart, but has no accommodations for a garrison. The other fort, seated lower down, near the base of the same rock, between its S.W. and N.E. angle, has a dry ditch and covered way in front, and is inclosed by a wall surmounted at intervals by low turrets. It is of a quadrangular shape, about half a mile in diameter, and contains the arsenal and commissariat stores, barracks, a Protestant church, and a number of bungalows intended for officers, but seldom used by them. The cantonment occupies the plain around the rock. The bungalows of the officers are neat white buildings, with tiled roofs, and the bazaar is ornamented with rows of trees. The courthouse, jail, and hospital are situated in one large compound, about half a mile E. of the fort. In the same locality, on the S.E., is the native town, which is spacious, and possesses a good bazaar. It is mostly of recent origin, and had no proper existence till 1816, when the native population previously inhabiting the forts were removed to it at the expense of government. Pop., exclusive of military, about 31,000.

BELLA VISTA, a tn. S. America, La Plata, prov. and 70 m. S. Corrientes, l. bank Parana, on an elevated flat overlooking the river; lat. 28° 30' S.; lon. 58° 55' W. It is the cap. of a dist., and possesses a church and a plaza. Oranges and peaches of excellent quality abound. Immediately above and below Bella Vista the navigation of the Parana is ob-

structed by numerous islands. Pop. 1000, chiefly engaged in agricultural pursuits.

BELLEFONTAINE, a tn. U. States, Ohio, cap. co. Logan, 116 m. N.N.E. Cincinnati, and a junction on the Cincinnati and Sandusky railway. It is an increasing place, containing steam-mills, foundries, and has a considerable trade in the produce of the surrounding district. The name is taken from some fine springs of water in the vicinity.

BELLEFONTE, a tn. U. States, Pennsylvania, cap. co. Centre, 86 m. N.W. Harrisburg, on Spring Creek. Situated at the foot of Bald Eagle Mountain, it is surrounded with hills, and takes its name from a large spring from which water is supplied to all parts of the town. The creek also affords abundant water-power, which is applied to various manufactures. A canal carries iron and grain to the Susquehanna River, and iron is wrought in foundries and other works.

BELLE ISLE [add.], an isl. and strait, British America:—The ISLAND, situated in the N.E. entrance of the strait, 2 m. E. of the coast of Labrador, and 3 m. N. of that of Newfoundland, is about 9½ m. long in an E.N.E. direction, and 3 m. wide. It is composed of a range of hills, which are bare of trees, and rise to the height of 700 ft. These hills are chiefly of granite, alternating with clay and slate, and have steep sides which dip into the sea at every part, except the N.E. end, where the convergence of two low points forms Blackjoke Cove, which shelters small fishing vessels during the finest months of summer. On the S. side there is hardly a creek where a boat might be saved. On this side the bottom is always rock, but on the N. side it is sometimes sand. On the S.W. point of the isl. there is a circular stone lighthouse faced with white fire-brick, and 62 ft. high. This height added to that of its site makes the total elevation 470 ft. above the sea, and renders the light—a fixed white—visible in clear weather at the distance of 28 m. The great height of the light has been complained of as a serious defect, on the ground that it is often obscured by land-fog when lower down the horizon is clear. In foggy weather a gun is fired from the lighthouse.—The STRAIT, separating the coast of Labrador from that of Newfoundland, and connecting the Gulf of St. Lawrence with the ocean, is, at its N.E. entrance, between York Point and Cape Bauld, 26 m., and at its S.W. entrance, between Greenly Island and Ferolle Point, nearly 21 m. wide. At Amour Point, in Forteau Bay, where it is narrowest, its width is only 9½ m. Its total length is 65 m. On the Newfoundland side the strait is a low coast of limestone, partially wooded with spruce trees, and with no good anchorage for large ships except in St. Margaret's Bay. The Labrador side has steep granite shores as far W. as Cape Diable, where sandstone commences, and continuing to Grand Point, at the W. entrance, occasionally forms magnificent cliffs several hundred feet in height. On this side to the water is deepest, varying from between 60 and 70 to 20 fathoms, and there are several good roadsteads. The strait is much encumbered with ice, which is carried into it by an irregular current, and which often reduces the water in summer to the freezing-point. The current and icebergs render the navigation very difficult and dangerous.

BELLEVILLE, a tn. U. States, Illinois, cap. co. St. Clair, 16 m. S.E. St. Louis, with which it is connected by a branch railway. The district is very fertile, and there are beds of stone-coal, said to be 30 ft. in thickness, in the vicinity. The town is active in trade and manufactures, and is rising in population and importance.

BELLEVILLE, a tn. British America, Canada West, cap. co. Hastings, on both sides of the Moira, near its mouth in the Bay of Quinte, and on the Grand Trunk railway, 100 m. E.N.E. Toronto. It has three churches—Episcopal, Methodist, and R. Catholic; a grammar school, a literary association, a mechanics' institute, three bank agencies, and two weekly newspapers. The principal industrial establishments are saw-mills, an iron-foundry and machine-works, tanneries, and soap and candle factories; and there is a considerable trade, both import and export, the staple articles of the latter being lumber, flour, and other agricultural produce. Marble quarries have been opened in the vicinity. Pop. about 7000.

BELLOT, a strait, Arctic regions, situated about lat. 72° N.; lon. 95° W.; is 12 m. long, and is named in honour of Lieutenant Bellot, a French naval officer, who had generously volunteered to assist in the search for Sir John Franklin,

and unfortunately perished, by falling between two hummocks of ice, while engaged in performing an important and arduous service. The strait possesses a further interest, from the two facts—first, that, separating Boothia Felix on the S. from N. Somerset on the N., it forms the extreme N. boundary of the American continent; and that, connecting Prince Regent Inlet with the sea to the W., it forms part of the channel by which the north-west passage, now ascertained to exist, must be actually navigated. The possibility of navigating it was proved by Sir F. L. McClintock, in 1857, though the task is doubtless of a very formidable description, in consequence partly of the high granite rocks which line its shores, and the strong tides which sweep through it.

BELLOWS FALLS, a village, U. States, Vermont, co. Windham, 80 miles S. by W. Montpelier, right bank Connecticut River, in which, opposite the village, are several falls, having a total descent 44 ft. in half a mile. Around the falls a canal has been cut in the rock, and a bridge spans the river. The village, situated at the intersection of the railway from Boston to Montreal, has beautiful scenery, and a medicinal spring.

BELLYE, a tn. Austrian empire, Hungary, co. Baranya, 40 m. S.E. Fünfkirchen, near the frontiers of Slavonia and the Banat; with a castle built by Prince Eugene, a trade in corn and cattle, and a sturgeon fishery.

BELOIT, a vil. U. States, Wisconsin, on a beautiful plain, ascending gradually from l. bank Rock River, 40 m. S. Madison. It is well built, containing several handsome streets, and possesses several fine churches, a college, and several other schools; manufactures of woollen goods, reaping,

winnowing, and other machines; tanneries, saw and flour mills, and a considerable trade. By means of railways it communicates both with the Mississippi and Lake Michigan. Pop. 4247.

BELZI, a tn. Russia, gov. Bessarabia, cap. circle Jassy, on the Reub, an affluent of the Dniester, 60 m. N.N.W. Kichinev. It has two churches, a circle and a Lancasterian school, several manufactures, and a yearly market. Pop. 5331.

BENEDETTO (SAN), a tn. Austrian Italy, prov. and 10 m. S.E. Mantua, near r. bank Po, in a marshy district. It is the seat of a court of justice, and has several churches. Pop. 8000.

BENESCHAU, two vils. Bohemia:—1, Circle Budweis, with woollen spinning. Pop. 2074.—2, Circle Tabor, seat of the district courts; with a Piarist college, and manufactures of excellent paper and leather. Pop. 3169.

BENEST, a vil. France, dep. Charente, near Confolens, surrounded by chestnut woods. Here Charlemagne gained an important victory over the Saracens. Pop. 1410.

BENGAL [add.], presidency, India. *Commerce and Trade*.—The extinction of the rule of the East India Company, and the assumption of the supreme power by the British government in 1858, consequent on the rebellion of 1857–8, introduced great changes in the policy of the administration. Many important alterations in the commercial relations were introduced, and extensive works for the development of the resources of the country were instituted. The statistics which follow are therefore of more than ordinary interest, as showing the progress of this change:—

Railways.—On 31st December, 1863, there were 1151 m. of railway completed, and 565 m. more in course of construction, in Bengal and the N.W. Provinces. Upon the 903 m. open for traffic in the year ending 30th June, 1863, 3,473,650 passengers were conveyed, and the receipts for passengers were £337,510, and for goods traffic, £496,790; together, £834,300. The working expenses, £434,870, leaving a surplus revenue of £399,430. The cost of construction up to the end of 1863 was £23,204,710.

BENGUELA [add.], a tn. S.W. Africa, Portuguese settlement, cap. dist. of same name, in a large plain on a bay of the Atlantic; lat. 12° 36' S.; lon. 13° 22' E. It consists of well-built houses, for the most part of a single story, and roofed with tiles. The streets, unpaved, but clean, are wide and regular, generally intersecting each other at right angles, and lined on both sides with fine trees, which afford an agreeable shade, and give the place a pleasing appearance. The principal public buildings are the church, with two towers, the governor's palace, the townhouse, and custom-house. Trade is very limited, and only shows some activity from time to time when the caravans arrive, bringing ivory, wax, gum copal, and urzella, a dye-weed, which form the principal exports. The climate is very unhealthy. The pop., which has greatly diminished since the abolition of the slave trade, is estimated at 3000, all natives, except a few mulattoes, and still fewer whites.

BENICIA [add.], a tn. U. States, California, cap. co. of same name, on the Strait of Karquenas, between the Pablo and the Suisun Bays. It once ranked as the capital of California, and was then provided with several large hotels and some important public buildings. Among the latter, the capitol, a brick building faced with stone, and situated on a slope, still makes a conspicuous appearance. The other buildings, all of wood, have a neat appearance. The works of the Pacific Mail Steam Company, a navy station, and an arsenal, are within the town, or in its vicinity. The harbour admits vessels of the largest size. Pop. about 2000.

BENI-FERRAH, a tn. N. Africa, Algeria, picturesquely situated near the summit of a steep rock, prov. Oran. It is built in the form of an amphitheatre, but very irregularly, and consists of about 500 houses, constructed partly of earth and partly of stone, with flat roofs formed of scantling, with a coating of gypsum. It is entered by three gates, one at the foot of the precipice, and the other two opening respectively on the E. and W. slopes. The streets are extremely narrow, having often a breadth of not more than 4 ft. To make matters worse, the roofs project so far as nearly to meet, and thus leave beneath a mere lane which neither air nor light can enter. The inhabitants, about 2000, confine themselves almost exclusively to agriculture and the rearing of bees

BENIOLID, a valley, N. Africa, gov. Tripoli, near the commencement of the desert. It is about 14 m. long from W. to E., and has both its slopes covered with villages, while the bottom is covered with forests of palm and olive trees. The eastern outlet is defended by a castle. Its inhabitants, about 5000 Arabs of the Urñilla tribe, possess 12,000 head of camels.

BENISCH, a tn. Austrian empire, Silesia, cap. dist of same name, 12 m. N.W. Troppau; with manufactures of cotton and linen goods, a trade in linen and yarn, and four yearly markets. There are mines of lead and silver in the vicinity. Pop. 3319.

BENSEN, a tn. Austrian empire, Bohemia, circle and 16 m. N.N.E. Leitmeritz, r. bank Pulsnitz; with a parish church, two castles, two hospitals, a brewery, and a cotton and a paper mill. Pop. 1500.

BENTON, a vil. U. States, Wisconsin, co. Lafayette, 13 m. N. Galena. It is a flourishing place, which owes its prosperity to the lead mines which are extensively worked in the surrounding districts. Pop. 2218.

BENUWE, or **BENUÉ**, a river, W. Africa, forming the E. branch of the Kwara or Niger. It for some time bore the name of the Chadda, apparently for no better reason than that it had been erroneously represented as an outlet of Lake Chad; but now that the error has been discovered, the name of Chadda will doubtless be abandoned, and only that of Benuwe or Benué, used by the natives, and meaning the 'Mother of Waters,' be retained. The source of the Benuwe is yet unknown; but Dr. Barth, who came upon it in 1851, while travelling in Adamaua, near the confluence of the Faro, which joins it on its l. bank about lat. 12° 30' E., was told that it comes from the S.E. a distance of nine days' journey. In consequence of this discovery, an expedition was fitted out by the British government for the purpose of exploring the Kwara from its mouth upwards, and thereafter tracing the course of the Chadda, then only conjectured, but not actually known, to be identical with the Benuwe. Captain Beecroft, already known as an African traveller, was appointed to the command of this expedition; but, in consequence of his death, the command devolved on Dr. William Balfour Baikie, whose previous appointment was that of medical officer and naturalist. The exploration was made in a small steamer called the *Pleiad*. After reaching the point of confluence of the Benuwe with the Niger, about lat. 7° 40' N., Dr. Baikie followed the former eastward for a direct distance of about 370 m. The point thus reached was about lat. 9° 25' N.; lon. 11° 30' E., and 50 m. below the junction of the Faro. He had been obliged to leave the steamer, and perform a few of the last miles in the gig; but there was sufficient depth of water, though the river was only rising, to allow a still further exploration. The natives, however, had begun to display their hostility in such a manner as made it necessary to return. The result has been to prove that a large, fertile, and populous tract of a region of Africa, hitherto in a great measure unknown, is accessible by means of a navigable river.

BERAR [add.], a large prov. Hindoostan, in the Deccan, was incorporated into the British dominions in the year 1854, on the death of the rajah Bajee Rao Booslah.

BERBERA, **BERBER**, or **EL-MAKRIF**, a tn. N. Africa, Nubia, cap. prov. of same name, r. bank Nile; lat. 17° 58' N.; lon. 34° E. It stands on a slope, on a spot which is gravelly and sterile, with the exception of a narrow strip close to the river. This is laid out in gardens, well-stocked with the date-palm and various other fruit-trees—the orange, lemon, lime, fig, pomegranate, vine, and banana. The houses, generally built of sun-dried bricks, and plastered over with a composition of manure and sand, to protect them against the rain of the wet season, consist for the most part of one large lofty room, with a wooden column in the centre, on which the large transverse beam carrying the roof rests, and of one or two small rooms on either side of it, used for stores. The windows are merely small apertures high up in the walls. Even these are often wanting, and then the door is the only opening for access, light, and air. Among the more substantial classes, the kitchen is in a separate hut. The only public buildings worthy of notice are the *divan* or government house, a spacious building of red brick, flat-roofed like the other houses, and containing a number of apartments all on

one floor, which is raised about three feet above the level of the ground; and the bazaar, consisting of a long row of small uncovered shops on each side of the principal street, and abundantly supplied with every necessary. The usual food of the natives is *assida*, consisting of maize or millet flour boiled into thick porridge, and turned out into a wooden bowl, heaped up into a cone, and surrounded with a sauce made of a powdered gelatinous vegetable called the *baymech*, and pounded dry beef, highly seasoned with salt, peppers, spices, and aromatic herbs. This compound is served first to the male part of the family, and not till they have finished to the female. In eating it they sit on the ground in a circle, and use only the fingers, each morsel of the porridge being dipped in the sauce. Pop. variously estimated from 10,000 to 20,000.—(*Petherick*.)

BERCHSEL, a tn. Austrian empire, Hungary, co. Neograd, N. Balassa-Gyarmath, in a fertile district; with 1500 inhabitants, who are mostly employed in the culture of the vine.

BEREE, a tn. India, N.W. Provinces, dist. and 22 m. S.S.W. Rohtuk, and 45 m. W. Delhi. It was made over by the Mahrattas to the adventurer George Thomas, who took forcible possession of it, and exterminated the Rajpoot garrison. The roads are good, and there is an ample supply of water. Pop. 9397.

BEREMEND, a tn. Austrian empire, Hungary, co. Baranya, about 18 m. S. by W. Fünfkirchen; with lime-kilns, and a trade in corn, wine, swine, and horned cattle. Pop. 1270, Hungarians, Germans, and Serbs.

BERENY (**CSAK**), a tn. Austrian empire, Hungary, co. and 3 m. N.N.W. Stuhlweissenburg; with 1700 inhabitants, who are mostly Protestants, and engaged in weaving, or in cultivating the vine.

BERGHOLTZ, or **NEW BERGHOLTZ**, a vil. U. States, New York, about 15 m. N. Buffalo. It was settled in 1843 by Lutheran emigrants from the town of same name in Prussia. Pop. about 2000.

BERGSTADT, a tn. Austrian empire, Moravia, circle and 20 m. N. Olmütz; with cattle and other yearly markets, linen weaving, and iron mining. Gold and silver were once worked here. Pop. 1500.

BERHAMPORE, a tn. India, presid. Madras, dist. and 23 m. W.S.W. Ganjam; lat. 19° 20' N.; lon. 84° 50' E. It stands on a rocky ledge, surrounded by an extensive cultivated plain, and consists of a cantonment and a native town. The former occupies a dry and gravelly soil, pierced in all directions by rocks of granite; but the only buildings of importance are the officers' houses, which, though built of mud, plastered over wattle, and thatched, are comfortable dwellings, and particularly cool; the bomb-proof magazine, and the hospital. The native town consists of narrow dirty streets, and houses built occasionally of brick, but for the most part only of mud. Its bazaars are well supplied with all sorts of grain, meat, fish, &c.; and its manufactures, which are extensive, consist chiefly of silk and cotton tissues, sugar, and sugar-candy. An excellent macadamized road has been made from it to Russellcoonda, a distance of about 45 m., at a cost of £15,000. The climate is generally healthy, but in April and May fevers and rheumatism prevail. Pop. of native town 20,000.

BERHOMETH, a tn. Austrian empire, Bukowina, dist. and about 28 m. W.S.W. Czernowitz, on the Sereth; with rich seams of iron-ore. In the vicinity there is an establishment for the cold-water and the milk cure. Pop. 2108.

BERI, the name of two places Central Africa, prov. Kanem, on the N. shore of Lake Chad; lat. 14° 40' N.; lon. 13° 40' E. The one place, from being the more important of the two, is called Beri-kura, or the Great Beri; and the other, which has been greatly reduced, is called Beri-futé, or Western Beri, from its position relatively to the other. The greater part of the inhabitants are Kanemba, of the Sugurti clan. The situation of Beri gives it importance as a military station, as troops proceeding from Bornou into Kanem generally make a long stay at it to regain strength for the ensuing march, and lay in a stock of fresh provisions.

BERIZINA, a tn. N. Africa, Algerian Sahara, on the S. slope of the Ueled Sidi Sheikh Sheraga, 190 m. S. Orleansville; lat. 33° 24' N.; lon. 1° 15' E. It is the largest place in the district, containing 1500 houses, is surrounded by a

crenellated wall, and has a public square, on which a market is held. Agriculture is the chief employment; but some of the inhabitants manufacture gunpowder.

BERLAT, or **BYRLAT**, a tn. Turkey in Europe, Moldavia, cap. circle Tutova, on a stream of same name, 62 m. S. Jassy. It is the seat of a civil and criminal court, has a normal school and an hospital, and is an important entrepôt for the corn trade with Galatz. Pop. 4000.

BERLOG, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ottochatz, 42 m. S.S.W. Karlstadt; with a Greek non-united church, a trivial school, and a castle; and 1500 inhabitants.

BERNARDO (SAN), a tn. Chili, prov. and 12 m. S.S.W. Santiago; lat. 33° 35' S.; lon. 70° 40' W. It is built with considerable regularity along the sides of the public road, with considerable intervals between the houses for flower-gardens, and has its public square, municipal buildings, and alameda. The only industrial establishments are some small flour-mills driven by water. Pop. 2500.

BERNAU, a tn. Austrian empire, Bohemia, circle and 20 m. N.N.E. Eger, on the Erzgebirge, with 1550 inhabitants, the greater part of them employed in lace-making.

BERNSDORF, a tn. Austrian empire, Bohemia, circle Gitschin, on a stream of same name; with a parish church and three mills. Pop. 1000.

BERNSTEIN, a tn. Austrian empire, Hungary, co. Eisenburg, 20 m. N.W. Steinamanger; with an old castle seated on a rocky height, and once a place of strength, alum and vitriol works, manufactures of cinnabar, and a mine of copper. Pop. 1159.

BERRY, a group of islands, West Indies, Bahamas. It consists of a number of small narrow wooded cays, which lie to the N. of Andros and New Providence, and sweeping round to the eastward form nearly a semicircle 23 m. in diameter. Great Harbour Cay, the largest of the group, is 5 m. long by 1 m. broad, and has a few inhabitants.

BERSETZ, a tn. Austrian empire, circle Istria, on the Bay of Quarnero. It is seated on a lofty height, and has an endowment for the poor, and a harbour with some trade. Pop. 1100.

BERSIMIS, a river, British America, Canada East, which, issuing from a lake in lat. 50° N., lon. 70° W., flows S.S.E., and falls into the estuary of the St. Lawrence on its N. shore. It is nearly a mile wide at its mouth, but so shallow that this wide mouth is closed by sands, which dry at low water, and leave only a very narrow channel. There is also a bar of sand, which shifts frequently, but over which, provided the proper channel is kept, a depth of 6 ft. can be carried at low water, and from 13 to 18 ft. at high water, according as it may be neap or spring-tides. Within the entrance the width of the river varies from 200 to 600 yds., and the depth from two to five fathoms. The navigation is practicable for 30 m. of direct, and nearly 40 m. of indirect distance, and is then stopped by falls, which have a descent of 30 to 40 ft. over rocks of granite. The Bersimis discharges a large volume of water, especially in spring.

BERTHIER, two vils. British America, Canada East:—1. *Berthier-en-Haut*, co. of same name, l. bank St. Lawrence, 45 m. N.N.E. Montreal; with an English Episcopal and a R. Catholic church, a foundry, a tannery, and an active trade in grain, flour, and hay. Pop. about 1800.—2. *Berthier-en-Bas*, co. Montmagny, r. bank St. Lawrence, 25 m. E.N.E. Quebec; with a R. Catholic chapel, and a trade in flour and lumber. Pop. about 1500.

BERZENCZE, a tn. Austrian empire, Hungary, co. Somogy, 32 m. S.W. Kaposvar, near l. bank Mur; with a beautiful church, a fine modern mansion; the ruins of an old castle, and a large fish-pond. Pop. 2213.

BERZEVICZE, a tn. Austrian empire, Hungary, co. Saros, on the Tarcza, N.W. Eperies; with four chateaux, and several flour and saw mills; and 1460 inhabitants.

BESHENNEF, a tn. Syria, Hauran, in the ancient land of Bashan, beautifully situated on the border of a wide glen leading into the great plain below, near the mountain chain of Jebel-ed-Drúz. Its ancient importance is indicated by its elaborately ornamented house-doors, a beautiful temple, and numerous deeply cut Greek inscriptions; but it had long been uninhabited, till a body of Druses recently arrived and entered into possession. On this occasion it was shown by an inter-

esting example how perfectly ready the old houses of Bashan are to receive new tenants. 'All that the Druses had to do,' says Mr. Graham, 'was to throw down a piece of matting, or, those who could afford it, a piece of carpet, and to bring with them the few cooking utensils of which they had need. This formed the entire furniture of the houses; they then shut their stone doors, and were secure against any sudden attacks of the Arabs.'

BESIKA BAY, Asiatic Turkey, coast of Asia Minor, immediately N. of isl. Tenedos, and S. of the Dardanelles. It is neither very commodious nor well sheltered, but was for some time the station of the allied British and French fleets, before their entrance into the Black Sea, at the commencement of the Russian war.

BESSARABIA [add.] By the treaty of Paris, of 1856, a rectification of the frontiers of Bessarabia took place, by which, with the view of excluding Russia from the future control of the navigation of the Danube, a cession was obtained of the southern portion of its territory to Turkey. The new frontier between Russia and Turkey extends from the Black Sea, at the E. entrance of Lake Bourna Sola, northwards to the Akerman road, follows the latter to the Wall of Trajan, passes to the north of the town of Bolgrad, ascends the river Ialpuch to Saratsika, and terminates at Katamori, on the Pruth. By this arrangement the mouths of the Danube are wholly within the Turkish territory, and that river now forms the boundary between Moldavia and Bulgaria.

BESTENA (NUOVA), a tn. Austrian Italy, prov. and N.E. Verona; with a fine waterfall on the Alpon, and coal-mines. Pop. 2561.

BETHEL, a tn. U. States, Missouri, on the N. fork of North River, 98 m. N.N.E. Jefferson. It contains 1000 inhabitants, almost all Germans, who have erected a handsome church, and possess a glove-factory, and several mills.

BETLER, a tn. Austrian empire, Hungary, co. Gömör, about 6 m. N.N.W. Rosenau; with a beautiful castle and park belonging to Count Andrássy; ironworks, and mines of iron and antimony. Pop. 1000, mostly Lutherans.

BETTIAH, or **BETTYAH**, a tn. India, presid. Bengal, dist. Sarun, 95 m. N.W. Patna. It is a considerable place, and possesses a large stone fort with ditches and towers.

BETWA, or **BETWANTI**, a river, India, Malwa, which rises a little to the S. of Bhopal, flows N.E. into Scindia's Dominions, enters Bundelcund, and proceeding through it in a very tortuous course, joins the Jumna on its r. bank at Humeerpoor. Its total length is about 360 m., but its channel is so obstructed by loose rocks and stones that it is nowhere navigable. During the rainy season it is from a mile to two miles wide, and runs with a velocity varying from 6 to 9 miles an hour. Even during the dry season it is half a mile wide at its junction with the Jumna, but so shallow as to be generally fordable.

BEYPOOR, a seaport tn. India, presid. Madras, dist. Malabar, r. bank estuary of the Sharapoya, 405 m. (by rail) S.W. Madras. It is the terminal station of the Madras railway. The situation of the town is very beautiful, and endeavours have been made to give it importance as a port, but a bar at the entrance of the river, over which vessels drawing more than 12 or 13 feet of water have to be floated, is a great impediment. The chief exportation is that of the timber brought down the river from the teak forests in the ghauts of the interior; iron ore has also been found in the neighbourhood, and smelted in furnaces that have been erected for the purpose, producing iron of good quality. The railway has added greatly to its activity and importance.

BEZAU, a tn. Austrian empire, Vorarlberg, circle and 18 m. S.E. Bregenz, in a valley; with a Capuchin monastery founded in 1656, an infirmary, a poor-house, an orphan asylum, and manufactures of cotton cloth. Pop. 1000.

BHANPOORA, a tn. India, Holkar's Dominions, 38 m. E. Neemuch, on the Rewa, at the foot of a ridge of hills. It is surrounded by a wall, and has a stone fort, with a palace inside, but both unfinished. In the palace there is a fine marble statue of Jeswunt Rao Holkar, by whom both the palace and the fort were commenced. Pop. about 20,000.

BHEEM GHORA, India, presid. Bengal, prov. and 106 m. N.E. Delhi, and 1 m. N.E. Hurdwar (*which see*). It is a place famous for the religious ceremony of bathing in the Ganges, a pool being supplied with water from a small

branch of that river, in a small recess of the mountain bounding the Dehra Doon on the S. An indentation in the rock, about 5 ft. sq., occupied by a fakeer, is said to have been formed miraculously by a kick of the horse on which Bheema was mounted when placed here to prevent the Ganges taking another course.

BHILSA, or **BILSA** [add.], a tn. India, Scindia's Dominions, on a trap rock, r. bank Betwa, 280 m. S.W. Allahabad. It consists of a town, a fort inclosed by a ditch and by a stone wall surmounted by square towers, and a suburb which has some spacious streets lined with good houses. One of the curiosities of the place is a gun of the finest brass, measuring $19\frac{1}{2}$ ft. in length, with a bore of 10 inches; elegantly proportioned, highly ornamented, and said to have been made by order of the Moghul emperor Jehangir. The finest tobacco in India is produced in the vicinity of Bhilsa. On an isolated hill $4\frac{1}{2}$ m. to the S.E. are some very large and remarkable ancient monuments. One of the principal is a hemisphere 70 or 80 ft. in perpendicular height, constructed of thin layers of freestone uncemented; but it stands upon a circular base 554 ft. in circumference, and 12 ft. high, overlaid with a coat of mortar. Its summit, a flat horizontal space 35 ft. in diameter, is surmounted with the ruined fragments of a cupola. It is surrounded with four gateways, opposite each of which is a colossal statue of Buddha. On many parts of the building are inscriptions in the Pali character.

BHIND, a tn. India, Scindia's Dominions, 49 m. N.E. Gwalior. Though now decayed, it was once an important and populous place, with a fort inclosed by a double rampart, the inner of masonry, and the outer of mud, and flanked with towers. In a pleasure-ground near the town are three fine buildings, supported on columns and arches of stone.

BHOJPOOR, two places, India:—1. A tn. N.W. Provinces, dist. and 9 m. N. Moradabad. It was once a flourishing place, but was ruined during the Rohilla war. It possesses a mosque and a bazaar, and still manufactures cottons, plain and dyed, to a considerable extent. Sugar-cane is extensively grown in the vicinity.—2. A town presid. Bengal, district Shahabad, 59 m. W. Dinapore. It is the capital of a pergunnah of same name, and contains about 1000 inhabitants.

BHOPAL [add.], a state and tn. India. The STATE, presid. Bengal, under the political superintendence of the governor-general, lies between lat. $22^{\circ} 32'$ and $23^{\circ} 46'$ N., lon. $76^{\circ} 25'$ and $78^{\circ} 50'$ E.; length, E. to W., 157 m.; breadth, 76 m.; area, 6764 sq. m. The Vindhya range, which traverses the state from N.E. to S.W., divides it into two unequal portions. The latter and more southerly portion belongs to the valley of the Nerbudda. The far larger portion, situated on the other side of the range, is a table-land sloping northward, and is drained chiefly by the Betwa and its tributary Deesa, the Parbutti, and the Newnj. The prevailing geological formation is trap, overlying sandstone, and containing some indifferent iron ore; but, so far as known, no other minerals of any importance, except rock-salt, which is met with in the vicinity of the town of Bhopal, and coal found in the S. The soil, formed chiefly of disintegrated trap, is very fertile. Pop. 662,872.—The town, capital of the above state, situated 100 m. E.N.E. Oojein, is surrounded by a stone wall about 2 m. in circuit, inclosing a fort also of stone, but in a dilapidated state. Outside the town, on a large mass of rock, is another fort, with square towers, containing the nabob's palace. The commercial quarter of the town has wide streets, but presents few indications of activity, and tells rather of a past than of a present prosperity. During the mutiny in 1857–9 the rebel sepoys several times attempted to occupy the town, but were successfully repelled by the inhabitants.

BHORE GHAUT, a mountain pass, 6 m. long, India, presid. Bombay, dist. N. Concan, about 40 m. S.E. Bombay, being midway on the direct route from Bombay to Poonah. It was formerly considered the key of the Deccan, and a proposal was made to fortify the pass: but an excellent road has since been made to traverse it, affording great facilities to both travellers and commerce, which are again greatly enhanced by the Ghaut being upon the line of railway which is opened from Bombay to Poonah and Solapoor, the former a distance (by rail) of 112 m., and the latter 276 m., with a probability of further extension.

BHUNEEANA, a tn. India, Rajpootana, state and 22 m. S. Joodpoor, in a depression traversed by a nullah, which is dry in summer, but becomes a large torrent in the rainy season. It possesses a fort of sun-burnt brick, with four bastions. Pop. 2000.

BIALYKAMIEN, a tn. Austrian empire, Galicia, circle and about 12 m. N.N.E. Zloczew; with manufactures of beet-root sugar, chocolate, and chicory. Pop. 2743.

BIARMI, or **BEARMA**, a river, India, which rises among the Vindhya Mountains, in the Saugor and Nerbudda territory, at the height of 1700 ft. above the sea, flows N.E. for about 110 m., and joins the Sonar on its r. bank, about 10 m. above the junction of the latter with the Cane. Its total descent during its course is 700 ft.

BIC, or **ST. CECILE DE BIC**, a tn. British America, Canada East, co. Rimousky, r. bank St. Lawrence, 160 m. N.E. Quebec. It is a well-built place, with a R. Catholic chapel, and a commodious harbour, at which a great deal of lumber is shipped. Pop. about 8000.

BIC, an island, British America, about $2\frac{1}{2}$ m. off Cape Arignole, on the r. bank of the St. Lawrence, 165 m. N.E. Quebec. It is only about 3 m. long and 1 m. broad, nowhere rises higher than 150 ft. above the sea; is composed of slaty rocks, of which sections are seen on its shores, and is densely wooded, but not inhabited. Lying nearly in the fair way of the navigation of the St. Lawrence, it attracts attention, in consequence partly of the many dangers which surround it, and partly of the excellent anchorage which it affords under either extremity, and also between it and the mainland, according to the wind. About $\frac{3}{4}$ m. to the N. is another island called Biequette, or Little Bic, about $\frac{1}{2}$ m. long by $\frac{1}{4}$ broad. Sunken reefs and rocks above water contract the intervening channel. A lighthouse has been erected on the W. point of Biequette, showing a white light, which is visible at the distance of 17 m. in clear weather. During fogs and snow-storms a gun is fired every hour.

BICSE, a tn. Austrian empire, Hungary, co. and 32 m. N.N.E. Trencsin, at the confluence of the Kollarovska with the Waag. It has a district court, a castle, numerous potteries, and an important trade in wood. Pop. 2483.

BIDDEFORD, a tn. U. States, Maine, on the Saco, close to the falls, and about 6 m. above its mouth, on the Portland, Saco, and Portsmouth railway, 12 m. S.W. Portland. It possesses several churches, an academy, and other excellent schools, a large iron foundry, numerous cotton, flour, and saw mills, and carries on an extensive trade, particularly in lumber. The falls, though furnishing valuable water-power, seriously obstruct the navigation of the river, and thus limit the foreign trade. So rapid, however, has been the progress of the place, that it nearly doubled its population in seven years, from 1850 to 1857. In the former year it was 6095; in the latter 12,000. As Saco lies immediately opposite on the river, the two towns may be considered as one.

BIDJAN, a river, Chinese empire, Manchooria, which rises in the Hingan or Kingan Mountains, and flows S. to the Amoor, which it joins on its l. bank, above the confluence of the Songari. On the banks of the Djujur, one of its principal affluents, lamellæ of silver are found.

BIECS, a tn. Austrian empire, Galicia, circle and 11 m. W. by S. Jaslo, cap. dist. of same name, on the Ropa; with a parish church in the old German style, with fine monuments; a large and ancient townhouse, a castle, a Franciscan monastery, a richly endowed institute for the poor, and a tolerably active trade in corn, flax, and linen. It was once surrounded with strong walls, of which portions still remain; and under the Polish kings enjoyed many privileges, which procured for it the name of *Parva Cracovia*. Pop. 2300.

BIELEBEI, a tn. Russia, gov. Orenburg, cap. circle of same name, on the Bielebeika, 85 m. S.W. Ufa. It has a church, a charitable institute, and an important annual market, which lasts six days. Pop. 1393.

BIELEF [add.], a tn. Russia, gov. and 65 m. S.W. Tula, cap. circle of same name, on a height above l. bank Oka. It has nineteen churches, two monasteries, a circle and a parish school, four benevolent institutes, several manufactures, and an active trade. The empress Elizabeth died here on her return from Taganrog. The house where she died has been converted into a widows' home, and a monument has been erected to her. Pop. 7843.

BIELITZ [add.], a tn. Austrian empire, Moravia, cap. dist. same name, at the foot of the Carpathians, on the Biala, opposite to the town of that name in Galicia, 221 m. (by rail) N.E. Vienna. It consists of the town proper and two suburbs, is the seat of several important public offices, and has Protestant and R. Catholic churches and schools, a beautiful castle, with a park, belonging to Prince Sulkowsky, an hospital, an infirmary, an orphan asylum, manufactures of woollen and linen cloth, machines, and liquours, dyeworks, spinning mills, a trade in wool, cloth, and Hungarian wine, and several important yearly markets. It is the principal entrepôt of the rock-salt of Galicia for the supply of Moravia and Galicia, and has recently acquired great additional facilities of transport by the construction of a branch communicating with the Oderberg and Cracow railway. Pop. 8699.—Old Bielitz, in the vicinity, has a castle, and 3206 inhabitants.

BIGA DE LA PAZ, a tn. S. America, La Plata, prov. and 80 m. S.E. Mendoza, near l. bank Tunuyan, an affluent of the Desaguadero, 1630 ft. above the sea; lat. 33° 30' S.; lon. 67° 50' W. It is a considerable place, with spacious streets and many good houses. The most conspicuous building is the barracks, with a tower at one of its angles, apparently intended for defence, but evidently in such a state that a cannon-ball striking it would lay it in ruins.

BIG BLACK RIVER, U. States, Mississippi, rises in co. Chocktaw, near the centre of the state, flows S.S.W. for about 200 m., and enters the Mississippi on its l. bank by two mouths, near Grand Gulf.

BIG BONE LICK, a salt spring, U. States, co. Boone, in the S.E. of Kentucky, is famous for the number of fossil bones of the mastodon and other mammalia found in its vicinity, in a dark-coloured bed, generally overlaid with gravel, and resting on blue clay.

BIHÉ, a territory, S.W. Africa, Benguela, between lat. 11° and 13° S., and lon. 16° and 18° E.; area about 11,000 sq. m. The surface is generally undulating, and exhibits an alternation of forests and grassy plains. The most elevated portions are towards the N. and W. In the former direction the Kenye Mountains attain the height of nearly 7000 ft., and in the latter is the remarkable plateau or steppe of Bulumbulu. The principal rivers are the Coanza, on the E. frontier, with its tributary Kokema, which flows northward, dividing the territory into two unequal portions, and the Cutato on the W. frontier. In the E. portion are several extensive pools or lakes, formed by the inundations of the Coanza. Most of these become nearly dry in the hot season, but one, called Lake Oviva, inclosed by the Demba and Kenye Mountains, has a considerable depth of water during the whole year, and abounds with crocodiles. The climate is healthy, and on the whole temperate, rather cold than hot; but subject to sudden changes, which are trying to feeble constitutions. The inhabitants have few manufactures, the only ones deserving of notice being coarse cottons, neat parti-coloured mats, and smith work. In the last they excel, and among other articles make muskets, which are well finished in everything but the bore. Trading is the favourite occupation, and is carried on to an extent, and with a skill and enterprise, not surpassed by any other people of S. Africa. The Bihé traders penetrate into the remotest parts of the interior, carrying with them European products, which they exchange for ivory, wax, and slaves. These, at least the two former, as the last are now interdicted, they dispose of in the markets of Loanda or Benguela. The religion is a gross fetichism, in which the good and evil principles are represented and worshipped under the form of lions, panthers, hyenas, serpents, crocodiles, &c. The government is an absolute despotism, the sovereign disposing at pleasure of the lives and property of his subjects, though there are some old customs or laws which it would be dangerous for him to violate. Not his own, but his sister's son, is heir-apparent. Pop. about 120,000.

BIJNOUR, a dist. and tn. India, N.W. Provinces, Rohilcund. The district lies between lat. 28° 54' and 29° 58' N.; lon. 78° 1' and 78° 53' E.; and is bounded N. by Gurwhal, E. and S. Moradabad, and W. Meerut, Mozuffurnugur, and Saharunpore; area, 1904 sq. m. The surface is generally level; in the N., where it rises gradually towards the Himalaya, its greatest height does not exceed 1400 ft. above the sea. The soil is for the most part light and sandy, but along the E. bank of the Ganges, and in the N., where it forms part of the

Terai, there is much rich marsh land. The principal crops are maize, millet, pulse, wheat, cotton, and sugar-cane. Pop. 620,546.—The town, cap. of the above dist., and the residence of the British authorities, is situated near l. bank Ganges, 70 m. N.E. Delhi, and has an estimated pop. of 9280.—There is another Bijnoor in Oude, 14 m. S. by W. Lucknow, with a large bazaar.

BIKHOV, a tn. Russia, gov. and 35 m. S. Mogilev, cap. circle of same name, on the Dnieper, in lat. 53° 20' N.; lon. 30° 25' E.; with six churches, a Lancaster school, a charitable endowment, several manufactures, and a pop. of 6310.

BIKIN, a river, Russian empire, Manchooria, which flows W. in an undivided stream through a valley about 2 m. wide, and joins the Usuri on its r. bank, 180 m. above the junction of that river with the Amoor. Its whole course is about 165 m. It appears to be navigable. Its valley is bounded on both sides by picturesque mountains, and on its banks are six villages inhabited by a people called Orochi.

BIKUMPOOR, a tn. India, Rajpootana, state and 92 m. N.E. Jessulmeer; lat. 27° 43' N.; lon. 72° 16' E. It consists of about 220 houses, inhabited chiefly by Brahmins, who carry on an active trade between Scinde on the one hand, and Jessulmeer and Bekaneer on the other, and have 250 camels employed in conveying goods. The principal buildings are two temples, of very great antiquity. Nearly contiguous to the town, on the N.W., is a fort seated on an eminence. It is about 100 yards square, and is inclosed by a wall of rubble stone 25 ft. high, with very small bastions. At the N.E. angle a round tower of considerable height overlooks the surrounding hills. Though of imposing appearance, the fort is of little real strength, as a range of sand-hills at a short distance completely commands it. It is, however, mounted with four guns, and garrisoned by 100 men.

BILCZE, a tn. Austrian empire, Galicia, circle and about 16 m. S. by E. Czorikow, with an ancient castle. In the neighbouring mountains are several remarkable caverns with walls of pure alabaster. In some of them human bones, as well as those of wild animals, and Roman coins of the time of Hadrian, have been found. In the vicinity there is an institute of the Sisters of Mercy, and an old castle, which was once the residence of a Russian prince. Pop. 2810.

BILEDJIK, a tn. Asiatic Turkey, Anatolia, 100 m. S.E. Constantinople. It is finely situated on the side of a deep valley, and contains about 800 houses, most of them of three stories, but by no means substantially built. The culture and preparation of silk is carried on to a great extent, and is exclusively in the hands of the Armenians, who form the main bulk of the population. There is also an extensive trade in meerscham, the material for which is obtained from pits situated at some distance, in the direction of Ssewri Hissar. The 10 per cent. ad valorem duty, levied by government, yields a considerable revenue.

BILHOUR, or **BLOUR**, a tn. India, N.W. Provinces, dist. and 30 m. N.W. Cawnpore. It is the cap. of a pergunnah of same name, and contains 5045 inhabitants.

BILKE, a tn. Austrian empire, Hungary, co. Ugocs or Beregh-Ugocs; with iron mines and limestone quarries, and 2031 inhabitants.

BILNITZ, a tn. Austrian empire, Moravia, circle and 14 m. N.E. Hradisch; with glass-works. The so-called Wlärer Pass in the Carpathians, through which most of the irruptions of the Turks and Hungarians were made in the seventeenth century, is situated in the vicinity. Pop. 1500.

BIMLIPATAM, a tn. India, presid. Madras, dist. and 16 m. N.E. Vizagapatam, near the mouth of a small stream in the Bay of Bengal; lat. 17° 53' N.; lon. 83° 30' E. It was once a Dutch settlement, the existence of which is still attested by an old cemetery, with well-engraved tombstones, bearing the date 1623, and was long celebrated for its cotton piece goods, which were largely exported by the E. India Company. Its trade, now limited, is chiefly in the hands of native merchants. In the vicinity are three indigo factories, and at Chittawals, about 3 m. distant, extensive sugar-works, with the most improved machinery.

BING-BONG, or **PING-WANG**, a tn. China, prov. Kiang-soo, on the Soochou branch of the Yang-tze-kiang, W. of Shanghai. It occupies a central position on the shores of one of a chain of lakes, and has fine navigable canals leading from it to all the important towns of the large and fertile plain

where it is situated. It is, however, a small place, though exhibiting many signs of commercial activity.

BINGHAMPTON, a tn. U. States, New York, cap. co. Boone, at the junction of the Chenango and Susquehanna, and on the New York and Erie railway, 140 m. N.W. New York. It is a well-built stirring place, containing eighteen churches, and superior and ordinary schools, and carrying on an extensive trade in flour and lumber. Pop. 8818.

BINTENNE, a tn. Ceylon, cap. dist. of same name, on a wide level plain, in an angle formed by the Mahawelle Ganga, where it turns suddenly N. in the direction of Trincomalee, 30 m. E. by N. Kandy; lat. $7^{\circ} 21' N.$; lon. $81^{\circ} 4' E.$ It is among the most ancient places of Ceylon, and began to flourish under the name of Mahayanagana at least three centuries before the Christian era. At present it is a mere village, consisting of about thirty miserable houses. The only ruin of any consequence which remains to attest its former greatness is that of a very ancient dagoba, in the form of a huge semicircular mound of brickwork, 360 ft. in circuit, and still 100 ft. high, but so much decayed at the top that its original outline is no longer ascertainable. It has still priests attached to it, who occupy a large dwelling or pansela, in which visitors are sometimes lodged.

BIRKADEM, a tn. N. Africa, Algeria, prov. and 8 m. E. Algiers, beautifully situated in a valley inclosed by hills. The vine and mulberry thrive well in the vicinity. P. 1107.

BIRMANDREIS, a vil. N. Africa, Algeria, prov. and 6 m. S. Algiers, in a pleasing valley at the extremity of a ravine. The inhabitants cultivate aromatic plants with success. Pop. 929.

BIRMENAWA, a tn. W. Africa, on the N.W. frontiers of Bornou, 60 m. N.E. Kano. It is a small place, but strongly fortified with an earthen wall and two deep ditches, one within it and the other without. Its only gate is on the W. side. The interior is tolerably well inhabited by natives of the Hausa and Kanuri races, and there is a good deal of cultivation in the environs.

BIRMINGHAM, two places, U. States:—1, A vil. Connecticut, on a commanding height at the junction of the Housatonic and the Naugatuck, opposite to Derby, with which it is connected by a bridge, 10 m. N.W. New Haven. It consists of well-formed streets, and a handsome square, which is occupied chiefly by churches and schools; and possesses numerous industrial establishments, including manufactures of pins, carriage springs and axles, bolts, augers, &c., rolling-mills for copper, iron, and steel, flour and saw mills, and a large trade in coal and lumber. The value of the manufactures is estimated at £300,000. Pop. 2500.—2, A tn. or bor. Pennsylvania, on the Monongahela, opposite to Pittsburg, of which it may properly be considered a suburb, being connected with it by both a suspension bridge and a steam-ferry. It contains several churches, and possesses manufactures of iron railing, screws, and machines, glass-works, a pottery, a planing-mill, and several breweries. Pop. 3742.

BIRSILPOOR, a tn. India, Rajpootana, state and 118 m. N.E. Jessulmeer. It consists of a town and a fort. The town contains 400 houses, many shops, and eleven wells, 60 ft. deep, which yield very brackish water. The fort, seated on an eminence on the N.W. side of the town, is about 90 yds. square, and is inclosed by a wall 30 ft. high, with four or five bastions on each face. It is solidly constructed of a calcareous stone, common in the country, but a sandhill about 1 m. distant completely commands it. Its interior is crowded with buildings.

BISKOWICE, a tn. Austrian empire, Galicia, circle and 2 m. N.W. Sambor; with a beautiful monastery, and 2000 inhabitants.

BISZTRA:—1, A tn. Austrian empire, Transylvania, circle and about 30 m. N.W. Carlsburg, in a romantic mountain district; with 3168 inhabitants, many of whom are employed in the neighbouring gold mines.—2, *Distrizs-on-the-Waag*, a tn. Austrian empire, Hungary, co. and 22 m. N.N.E. Trencsin; with an old castle on an almost inaccessible height, and numerous potteries. Pop. 2400.

BITESCH (GREAT), a tn. Austrian empire, Moravia, circle Iglau, 20 m. N.W. Brünn. It has an ancient and strongly built parish church, soap-works, potteries, and six annual fairs. Pop. 3038.

SUPP. IMP. GAZ.—VOL. I.

BITHOOR, a tn. India, N.W. Provinces, dist. and 12 m. N.W. Cawnpore, r. bank Ganges. It contains several Hindoo temples, and has an annual fair, at which Brahma is especially venerated. There are also numerous flights of steps, or ghauts, leading to the river, for the purpose of the Brahmins performing their religious ablutions. The pin of Brahma's slipper, dropped after the sacrifice of a horse upon the conclusion of his work of creation, is professed to be shown in one of the steps. But the place has acquired a more signal and infamous reputation as the residence of Dhuna Paut, or 'Nana Sahib,' the adopted heir of the Maharajah Bajee Row, whose instigation of the atrocities perpetrated at Cawnpore on the outbreak of the Sepoy mutiny in 1857, has won for his name a perpetuity of execration. General Havelock gained a brilliant victory over the rebels in the vicinity, and subsequently quantities of treasure belonging to the Nana were discovered by the troops in a well close to the palace.

BITISCHKA-EICHORN, a tn. Austrian empire, Moravia, circle and 8 m. N.W. Brünn; with an old castle and large foundries, and 1200 inhabitants.

BIYU, a tn. W. Africa, about 160 m. N.E. Yakoba, cap. of the Babir tribe, who bound with the Marghi on the E., and have to a certain extent preserved their independence in the face of a very unequal struggle with their Mahometan assailants. Scarcely anything is known of Biyu, but it is reported to be of large size, and to be the only town of importance which the Babir possess, the rest of the tribe occupying small hamlets scattered over a mountainous district, where the prevailing mineral is basalt.

BLACK HILLS, a mountain range, U. States, which, branching off from the Rocky Mountains on the W. frontiers of Nebraska, about lat. $42^{\circ} N.$; lon. $110^{\circ} W.$, stretches N.N.E. to lat. 47° . Laramie Peak, its culminating point, is 8000 ft. above the sea. The drainage of its W. slope is carried to the Yellow Stone, that of the E. slope to the Missouri.

BLACK RIVER, or **BIG BLACK RIVER**, U. States, rises in the S.E. of Missouri, flows circuitously S. to its frontier, enters Arkansas, changes its direction to S.S.W., and after a course of about 400 m., joins the White River on its l. bank, 40 m. below Batesville. It is closed for three winter months, but during the remainder of the year is navigable for 100 m. above its mouth.

BLAGOVESCHENSK, a tn. Russian empire, Manchouria, l. bank Amoor, at the mouth of the Zeya. It was founded by the Russians, and, though still a small place surrounded with palisades, and consisting of a citadel with a few mud cottages, may be expected to assume importance, as an ordinance of the emperor has made it the seat of government.

BLAIRSVILLE, two places, U. States:—1, A post bor. Pennsylvania, on the Conemangh, here crossed by a handsome bridge, and on the Pennsylvania canal, 70 m. from Pittsburg. It is substantially built, possesses about half a dozen churches, and carries on an active trade in grain, pork, lumber, and coal. Pop. 1135.—2, A tn. Georgia, cap. co. Union, in the midst of the magnificent scenery of the Blue Ridge. It possesses a court-house and a school, valuable quarries of marble and iron, and some traces of gold.

BLAKELY, a vil. U. States, Alabama, cap. co. Baldwin, on the Tensaw, just above its mouth in Mobile Bay. It contains some handsome buildings and numerous stores; and possessing a harbour at once deeper and more accessible than that of Mobile, was expected to become a formidable rival to it. This expectation has not been realized.

BLANCO, commonly called South Cape Blanco, to distinguish it from another cape of same name, considerably to the N., on the W. coast of Africa; lat. $20^{\circ} 46' 30'' N.$; lon. $17^{\circ} 4' W.$ It is a white cliff, which competent judges have estimated variously at 150, and at only 80 ft., above sea-level, and terminates a sandy promontory about 23 m. long. It is composed of a calcareous grit, and rises vertically with a white and barren surface from a sloping beach. With its E. side it forms the large Bay of Levrier, 25 m. long by 20 wide. With its W. side it forms West Bay, which is much resorted to by Canary fishermen.

BLANSKO, a tn. Austrian empire, Moravia, circle and 12 m. N. Brünn, on the Zwittawa, and on the Vienna and Prague railway. It has a castle belonging to the prince of Salm, blast furnaces, and other ironworks, at which machinery, locks and various articles of hardware are manufactured on

a large scale. At a short distance, on a steep height, stand the picturesque ruins of the old castle of Blansko. Pop. 2304.

BLAS (SAN) [add.], a tn. Mexico, possessing the most important harbour of state Jalisco, on a bay of the Pacific, near the mouth of the Rio Grande or Santiago, 130 m. N.W. Guadalupe. It has a deep, spacious, and well-sheltered harbour, at which, during the Spanish rule, an extensive trade was carried on with the Philippine Isles and other parts of Asia. Since 1821, when the Spanish cortes declared it an open port, its trade has rapidly increased. Some ships have been built, and a good deal of salt is made in the vicinity. The great obstacle to its prosperity is the unhealthiness of the climate, which, during the rainy season, from June to the end of November, becomes so pestilential, that all its inhabitants who are able to leave it take refuge chiefly in Tepic. During the dry season, which is healthy, though swarms of fleas and mosquitoes make life anything but comfortable, the pop. amounts to about 3000.

BLATTA, a tn. Austrian empire, Dalmatia, in the N.W. portion of the island, and about 18 m. W. of the town of Curzola. It contains 3600 inhabitants, who are mostly employed in cultivating the ground and in fishing.

BLATNITZ (GREAT), a tn. Austrian empire, Moravia, circle and 10 m. S. Hradisch. On the summit of a neighbouring mountain, commanding a beautiful and extensive view, there is a pilgrimage chapel. Pop. 1500, chiefly employed in the culture of the vine.

BLAUDA, a tn. Austrian empire, Moravia, circle and 30 m. N.W. Olmütz; with a parish church, and two castles, one in ruins, and the other with fine gardens. Pop. 2409.

BLEISTADT, a tn. Austrian empire, Bohemia, circle and 13 m. N.E. Eger, r. bank Zwoda; with a parish church, a brewery, several mills, and establishments connected with the lead mines in the vicinity. Pop. 1100.

BLIND BAY, an extensive opening, New Zealand, in the N. of Munster or Middle Island, has a width of 36 m. between D'Urville Island, on the E., and Separation Point, forming its N.W. extreme, and a depth within these limits of 25 m. The depth of water in the outer parts varies from 25 to 28 fathoms, and shoals gradually to 12, 9, and 5 fathoms, within 2 m. of its head. It is entirely free from danger, and so well sheltered toward its head, that at Nelson Haven, which lies there, it is frequently fine and calm weather when a strong N.W. gale is blowing in Cook's Strait. On its E. shore is Croiselles harbour, which is of easy access, and gives good shelter in all weathers; and on the W. shore are several good anchorages, partly in roadsteads, and partly in the mouths of the rivers Motueka, Motuere, and Waimea. The land towards the head of the bay presents some remarkable white cliffs, but is generally low; on the E. and W. shores, on the contrary, it is mountainous, rising to heights which vary from 3000 to 4000 ft.

BLOOMBURG, a tn. U. States, Pennsylvania, cap. co. Columbia, 1 m. from N. branch of the Susquehanna, and 78 m. N.N.E. Harrisburg. Iron-ore and limestone abound in the vicinity, and the N. Branch canal aids the activity of the trade of the place. Pop. 3500.

BLOOMINGTON, a tn. U. States, Indiana, cap. co. Monroe, on a ridge between the E. and W. forks of White River, and on the railway from New Albany to Michigan, 40 m. S.W. Indianapolis. It consists of houses partly of brick partly of wood, is the seat of the state university, which is attended by about 175 students, and possesses several churches, a female academy, and other schools. Pop. 3000.

BLOSSBURG, a vil. U. States, Pennsylvania, on the Tioga, and on the Corning and Blossburg railway, 20 m. N. Williamsport. It stands in the centre of a very important mining district, which is rich both in coal and iron. A blast-furnace is in operation in its vicinity. Pop. 850.

BLOWITZ, a tn. Austrian empire, Bohemia, circle and 12 m. S.E. Pilsen, cap. dist. of same name; with a parish church, a townhouse, a benevolent institute, a brewery, and three mills. Pop. 1200.

BLOXWICH, a chapelry dist. England, in par. and union of Walsall, co. Stafford, 2 m. N.N.W. of Walsall, in whose manufactures and trade it participates to a considerable extent. The surrounding country is level, and the soil gravelly and sandy. Extensive coal-mines are in operation, and bridle-bits and awl-blades are manufactured in large quanti-

ties. The church is a neat edifice with a square tower, enlarged in 1833. There are also places of worship for Roman Catholics, Wesleyans, and other denominations.

BLUDOWITZ, a tn. Austrian empire, Silesia, dist. Teschen, 33 m. E.S.E. Troppau; with a parish church of the Augsburg Confession, and 3318 inhabitants.

BLUE LICK SPRINGS, U. States, Kentucky, 70 m. N.E. Frankfort, is celebrated for the mineral waters from which its name is derived, and which form an article of traffic in various parts of the country.

BLUFF, or **AWARUA**, a harbour, New Zealand, in Foveaux Strait, on the S. shore of Munster or Middle Island. At full tide it is an extensive sheet of water stretching in two arms, one to the N. for 4 m. and the other E. for 5 m. The space for anchorage is, however, narrow and confined, the whole of the expanse, from a mile beyond the entrance, being flat and shallow, and mostly uncovered at low water. The tides also run very strong. Bluff harbour was formerly a large whaling station.

BLUNDA BAY, N. Australia, Alexandra Land, at the mouth of the Victoria River; lat. 20° 15' S.; lon. 129° 40' E. It is not considered safe for vessels entering the Victoria River and Queen's Channel to proceed farther up than Blunda Bay.

BOBRO, a tn. Austrian empire, Hungary, co. Arva-Thurocz, 50 m. N.E. Neusohl. It contains 1600 inhabitants, who are partly employed in working a coal-mine in the vicinity, and have a considerable trade in lace and linen.

BODAJK, a tn. Austrian empire, Hungary, co. and 13 m. N.N.W. Stuhlweissenburg; with a church to which pilgrimages are made, tileworks, and a mineral spring. Pop. 1900.

BODHANETZ, a tn. Austrian empire, Bohemia, circle Chrudim, 6 m. W.N.W. Pardubitz; with a parish church, a townhouse, an hospital, manufactures of alcohol, and three mills. Pop. 1400.

BODONY, a tn. Austrian empire, Hungary, co. Heves, near the Matra Hills; with copper and silver mines, and 1300 inhabitants.

BOGAT, a tn. Austrian empire, Hungary, co. Szabolcs, 27 m. N.E. Debreczin; with a distillery and an oil-mill. Pop. 2097, mostly belonging to the Reformed church.

BOGDOL, a mineral spring, Siberia, Trans-Baikal province, near the source of the Gorbiza, an affluent of the Shilka, on the l. bank. It has acquired some celebrity by its fair, which is attended by Russian and Cossack merchants, who ascend the Amoor from Aigoon in large boats, bringing printed cottons, silk, tobacco, and brandy, which they barter with the Manchocs for glassware, soap, and the horns of the *maral*, a species of large stag.

BOGHAZ, or **BOGHAZDERE**, a vil. European Turkey, at the foot of the Hæmus or Balkan, 12 m. S.W. Varna. It stands near the entrance of a wild mountain gorge, and its vicinity is supposed to have been the scene of the battle which Alexander the Great fought with the Thracians before he crossed the Hæmus, on his march from Amphipolis to the Danube.

BOGHAZ-KOEI [the anc. *Pteria*], a tn. Turkey in Asia, near the E. frontiers of Anatolia, 300 m. E.S.E. Constantinople. It lies at the N.W. foot and on the first slopes of a rugged limestone ridge, and is a very straggling place, containing about 150 houses. The rocks are full of caverns, which are partly used by the inhabitants as magazines. In the vicinity is a remarkable ruin, as to which archaeologists are divided in opinion, some regarding it as a temple and others as a palace. The only existing public building of any consequence is a mosque. Close to Boghaz-Koei is another place called Yakbas. Regarding them as one town, we may estimate their united pop. at 1800.

BOGOORAH, or **BOGRAH**, a dist. and tn. India, presid. Bengal, between lat. 24° 36' and 25° 19' N.; lon. 88° 45' and 89° 48' E.; and bounded N. by Dinapore and Rungpore, E. the Konaie, a branch of the Brahmappootra, separating it from Mymensing, S. Mymensing and Pubna, S.W. Rajeshaye, and W. Dinapore; area, 2160 sq. m. The surface, a level alluvial tract, has a very gradual slope southwards, as indicated by the course of its rivers. These are very numerous; but by far the most important is the Konaie. Among the others are the Gogot, the Kurateea, the Jamuna, and the Atree. The principal crop is rice. Sugar-cane is extensively grown, as is also indigo and cotton. The mulberry, to rear silkworms,

forms large plantations. Hemp is cultivated only for its narcotic properties. Pop. 900,000.—The town, cap of the above dist., situated on the Kurateea, 165 m. N.N.E. Calcutta, possesses a well-supplied bazaar, but has no other importance than that which it derives from being the seat of the British civil establishment.

BOGOROSLAN, a tn. Russia in Europe, gov. and 100 m. E.N.E. Samara, on both sides of the Tarchanka, at its confluence with the Kinel; lat. 53° 36' N.; lon. 52° 20' E. It has two churches, a circle school, a charitable institute, several manufactures, a much-frequented annual market, which lasts from the 1st to the 8th of September; and a trade in cotton, woollen, and silk goods. Pop. 5903.

BOGOS, a territory, E. Africa, Abyssinia, situated between lat. 15° 35' and 16° N.; lon. 38° 20' and 38° 35' E.; and bounded, N. by Habab, E. Mensa, S. Hamasen, and W. Barea. It is mountainous, particularly in the S., where some of the summits attain a great elevation, but towards the N. descends gradually to a fertile plain, watered by the Ain-Saba. It is rich in metals, and also raises large quantities of grain, particularly the *Holeus sorghum*, which is celebrated for its quality.

BOGSAN (DEUTSCH), a tn. Austrian empire, Temesvar Banat, circle and 23 m. S. Lugos, cap. dist. same name, on the Berzava; with iron-works, including two blast-furnaces, naileries, a brewery, and tileworks. Pop. 2390.

BOGUTCHAR, a tn. Russia, gov. and 135 m. S.S.E. Voronej, on a river of same name; with two churches and two charitable institutes. Near the castle of Slobodka, within the circle, there is an important yearly market. Pop. 1976.

BÖHEMKIRCHEN, or **BÖHKIRCHEN**, a tn. Austrian empire, Lower Austria, on an affluent of the Danube, 26 m. W. by S. Vienna; has two saw-mills and a trade in wood. The vine is extensively cultivated in the vicinity. Pop. 2040.

BÖHMISCHKRUT, a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, on the Poibach, 30 m. N. by E. Vienna. It contains 2510 inhabitants, chiefly employed in agriculture, for which the district is well adapted.

BOHUSLAWITZ, a tn. Austrian empire, Bohemia, circle and 12 m. N.N.W. Königgrätz; with 1300 inhabitants, and a Protestant and a R. Catholic church.

BOIKOWITZ, a tn. Austrian empire, Moravia, circle Hradisch, on the Ossawa, 7 m. E. Hungarian Brod. It has a beautiful castle, and contains 2000 inhabitants, who are chiefly employed in weaving.

BOLARUM, a military cantonment, India, Nizam's Dominions, dist. and 11 m. N.N.E. Hyderabad; lat. 17° 30' N.; lon. 78° 35' E. It stands on a granite ridge 1890 ft. above the sea, has lines for two battalions of infantry, a risallah of irregular horse, and 250 artillery; and possesses a handsome little church, of Gothic architecture, with coloured glass windows, a well-constructed hospital, and productive gardens, in which European vegetables, as well as the ordi-

nary Indian fruits, are grown. The station is so healthy that invalids often derive benefit from resorting to it.

BÖLCSKE, a tn. Austrian empire, Hungary, co. Tolna, 29 m. N.E. Szegsard, r. bank Danube; with some handsome buildings and a trade in corn and wine. There are many Roman remains in the vicinity. Pop. 4217.

BOLGRAD, a tn. Turkey, Moldavia, on the Yalpoock, 32 m. N. by W. Ismail. It is built almost entirely of stone, and was included in those parts of Bessarabia which the Russians, by the treaty of Paris, ceded to Turkey, in order to place the Danube entirely beyond their control. Pop. 8300.

BÖLÖN, a tn. Austrian empire, Transylvania, circle and 22 m. S.S.E. Udvarhely; with an Evangelical, a non-united Greek, and a Unitarian church. Pop. 2211.

BOLSZOWCE, a tn. Austrian empire, Galicia, circle and 20 m. S.S.W. Brzezau, in a fertile district, on an affluent of the Dniester, with 1700 inhabitants. At the village of Poplawniiki, in the vicinity, the Tartars sustained a complete overthrow from the Poles in 1624.

BOMBAY [add.], presid. India.—*Statistics*:—The area of the presidency is 142,043 sq. m., and the pop., according to the latest estimates, 12,802,544.

At the end of December, 1863, 738 miles of railway were completed in the presidency, and 839 miles more remained for completion. In the year ending 30th June, 1863, over the 652 miles then open 3,756,121 passengers had been conveyed, and the receipts from them were £211,786; the receipts from goods traffic were £278,759; together, £490,545. The working expenses were £285,176, leaving net receipts, £205,369. The amount expended upon the lines up to 31st December, 1863, was £15,226,544.

The troops in the presidency, on 30th April, 1862, consisted of 13,841 Europeans and 31,016 natives; total, 44,857; being composed of staff and staff corps, 711; engineers, &c., 751; artillery, 3443; cavalry, 5988; infantry, 33,964.

BOMBAY [add.], a city and port, India. In 1859 a university was opened for students, who are matriculated after an examination, and in due course are admitted to degrees in arts, for which periodical examinations are held. The number of students has progressed very favourably, and several schools and colleges have been affiliated to the university, the principal of which are the Elphinstone, Poona, and Grant Medical Colleges, and the Free General Assembly's Institution of Bombay.

The commercial activity of the port has materially increased, owing very much to the rapid growth of the cotton exports, which have passed largely through Bombay. The completion of the Bombay, Baroda, and Central India railway will afford additional facilities for this important branch of trade. At present (1865) the line is open only to Grant Road, a distance of 3½ m. from the port; but it is expected that the completion of the line to the harbour at Colaba will not be long delayed. The length now open, from Bombay to

Ahmedabad, is 306 m. The value of the imports and exports is shown in the following figures:—

	Imports.	Exports.
1860....	£16,584,671....	£13,381,961
1861....	14,988,009....	17,323,431
1862....	18,471,435....	18,774,371

BOMOREE, or BHAMOREE, a tn. India, in the N.W. of Bundelcund, raj Oorcha or Tehree, 172 m. S.S.E. Agra. It stands on a rising ground, consists of wide and clean streets, and possesses a fine jeel or lake, about 4 m. long by 2 m. wide, deep and clear, and abounding with fish. This lake, formed by a vast artificial mound constructed across the mouth of a valley, is extensively used for irrigation. On a rocky ridge overlooking it is the ruined palace of the rajah who made the embankment.

BONCZHIDA, a town Austrian empire, Transylvania, circle and about 10 m. N.N.W. Klausenburg, cap. dist. same name; with a remarkable castle, with fine gardens, belonging to Count Banffi. Pop. 1820.

BONYHAD, a tn. Austrian empire, Hungary, co. Tolna, 8 m. S.W. Szegsard; with a district court and several public offices, some fine castellated mansions; manufactures of tobacco-pipes, a steam-mill, a trade in corn, wine, and tobacco; and a mixed population of Lutherans, R. Catholics, and Jews, amounting to 6903.

BOODHANUH, a town, India, N.W. Provinces, dist. Muzuffurnugur, 45 m. N.N.E. Delhi, is a considerable place, with a well-supplied bazaar. Pop. 5559.

BOOLUNDSHUHUR, a dist. and tn. India, N.W. Provinces, Doab, between lat. 28° 3' and 28° 43' N.; lon. 77° 28' and 78° 32' E., and bounded N. by Meerut, E. Moradabad and Budaon, S. Allygurh, and S.W. and W. Goorgaan and Delhi; length, S.E. to N.W., 80 m.; breadth, 57 m. The surface, generally level, has a gradual slope S.E. at the average rate of only a foot and a half per mile. The principal streams are the Ganges, the Jumna, the Hindon, and the E. Kalee Nuddee. The district, situated near the centre of the Doab, has a full share of the fertility for which this tract is celebrated, and produces in abundance millet, wheat, barley, various kinds of pulse, sugar-cane, tobacco, and indigo. By far the most important commercial crop however is cotton, for which the soil is admirably adapted. There are no minerals of any consequence. Pop. 699,393.—The town, cap. of the above dist., and known also by the name of Burrun, situated r. bank Kalee Nuddee, 40 m. S.E. Delhi, has a well-supplied bazaar. It was one of the centres of revolt during the Sepoy mutiny. Pop. 12,049.

BOORANPOOR, BURHAMPOOR, or BURHAMPORE, a tn. Hindoostan, presid. and prov. Bengal, dist. and 5 m. S. by W. Moorsshedabad, l. bank Bagerathy, a large offset of the Ganges, on a rich alluvial flat, covered with luxuriant and almost tropical vegetation, and, though once extremely unhealthy, said to have been so much improved by sanitary measures, as to be second to no locality in Bengal for salubrity. It is the seat of a civil establishment, consisting of the usual European and native functionaries; and, beside many stately houses in its vicinity, giving it an air of grandeur and im-

portance, has splendid military cantonments, in which the quarters of the European officers, composed of long ranges of edifices, built of brick and stuccoed, and the grand square, inclosing an excellent parade-ground, have a striking appearance.—(Thornton's *Gaz. of India*.)

BOOREAH, a tn. India, Sirhind, cap. of a protected Sikh state of same name, on the canal of Feroz Shah, 116 m. N. Delhi, is now a small place, though there are indications of its having been large and populous. It possesses a bazaar, and derives some commercial importance from its proximity to a ferry across the Jumna, in the line of road leading from Umballa to Saharanpoor. Besides a fort within the tn. there are five others in the neighbourhood.—The DISTRICT is fertile and well cultivated, and is both adorned and enriched by luxuriant and productive mango groves.

BOOREE DEHING, a river, India, which, thrown off by the Brahmapootra on the E. frontiers of Assam, flows W. for 121 m., and again joins the parent stream in lat. 27° 15'; lon. 94° 41'.

BOOS, a tn. Austrian empire, Hungary, co. and 18 m. S.W. Pressburg, on the Estlitz arm of the Danube, is an ancient place, with a castle flanked by towers and otherwise defended. The Hungarian insurgents were defeated here on June 16, 1849. Pop. 2029.

BOOTAN [add.], an independent state, India. Between the hills which traverse the state from E. to W. and the British frontier are several districts or provinces, taking their names from the *Doars*, or mountain passes, eleven of which are on the Bengal frontier, and seven on that of Assam. The central government at the capital, Tassisudon, exercises a generally effective control over the subordinate provincial governments, but from the contentions which occur among the latter its influence is sometimes powerless.

The aspect of the Bengal Doars is that of a low marshy expanse of sandy land, closed abruptly on the N. by the ranges of the Bootan mountains, for the most part uncultivated and covered with coarse vegetation, with occasional thick woods, and a belt of dense forest along the foot of the hills. This tract is intersected with countless streams, which are ever changing their channels; and, water lying everywhere within a few feet of the surface, suggests the idea of one vast river-bed, choked rather than clothed with the most luxuriant vegetation, engendering a deadly atmosphere. The outlying lands of the Assam Doars are of a higher level, and are more consolidated with a gravelly soil and plains of short grass, apparently pleasant and salubrious, but really deadly in the extreme with miasmatic exhalations. The passes through the mountains are very rugged and difficult of access.

The Booteas paid tribute for the Assam Doars, which they held in a kind of joint tenure with the Assam government. After the annexation of Assam, this tribute, amounting to about £305 annually, was paid to the British government, the system of joint occupation being still maintained. In 1828 there began a series of aggressive outrages upon the British frontiers from the Assam Doars, which resulted in the annexation of three of them to the British territory in 1841, with the condition of a payment of £1000 per annum to the Booteas, as part of the net revenue of the districts. In 1855 a demand was made by the Booteas for an increase in this amount, which was refused; and subsequently fresh outrages were committed, and the Dewangiri rajah was reported to be building forts and preparing roads for a continuance of the aggressions on the British frontiers. Sikkim and Cooch Behar likewise became subject to incursions; and the Indian government, finding remonstrances vain, at length made preparations for enforcing them, which were interrupted by the outbreak of the mutiny in 1857. In 1860–3 negotiations with the Booteas were resumed, and in the latter year a mission with much difficulty reached the Bootan court, after discovering that a revolution had just taken place. The mission was entirely unsuccessful, was treated with insult and injury, and was only allowed to depart after signing articles of humiliating submission to the Booteas' demands.

In 1864 active measures were adopted; bodies of British troops entered the Doars, and occupied some of the passes most important in a strategical point of view. From one of them, Dewangiri, however, they were disastrously dislodged by the Booteas, but it was subsequently reoccupied; the

Doars were permanently held and annexed to the British territory, and measures taken (1865) for organizing a proper governmental administration. The extreme unhealthiness of the districts makes their acquisition one of doubtful value, except as a means of checking the Booteas' aggressive propensities.

BOOTHBAY, a tn. U. States, Maine, on the Atlantic, where its harbour is one of the best on the coast, 40 m. S.S.E. Augusta. It possesses a Congregational church, several large saw and grist mills, building yards, and a considerable coasting trade. Many of the inhabitants—who are estimated at 3000—are employed in the fisheries.

BORGO-BESTERCZE, a tn. Austrian empire, Transylvania, circle and about 15 m. N.E. Bistritz, not far from the mountain pass of same name leading into Moldavia. It has a Greek non-unionist parish church. Pop. 1450.

BORISLAV, or **BERISLAVL**, a tn. Russia, gov. and 40 m. E.N.E. Kherson, r. bank Dnieper, has three churches and a parish school. A number of Swedish and German colonies have been settled in the district. Pop. 5532.

BORJA (**SANTA**), a tn. Brazil, prov. São Pedro-do-Sul, on a height in a bleak and rugged dist., at a short distance from l. bank Uruguay, 310 m. W.N.W. Porto Alegre; lat. 28° 40' S.; lon. 56° 10' W. It consists of regular streets, but gives no signs of industrial activity, and has on the whole a dull and melancholy appearance, partly owing to the number of ruinous buildings within it, and the manner in which the more ancient materials have been employed in the erection of modern houses. The Jesuits had here one of their principal missions, and many memorials of their presence still remain. In the centre of a large public square stand the remains of their fine church. Pop. above 2000.—(Lallemant's *Reise*.)

BORODINOS, the name of two isls. of the N. Pacific, situated about 5 m. apart, and lying between N.N.E. and S.S.W.; lat. (S. extremity of S. isl.) 25° 47' N.; lon. 131° 19' E. They seem to be of coral formation, rise to the height of about 40 ft. above the sea, and are crowned by trees, the size of which indicates that the islands themselves cannot be very recent.

BOROVITCHI, a tn. Russia, gov. and 95 m. E. by S. Novgorod, cap. circle of same name, r. bank Msta, which here forms numerous rapids. It has nine churches, secular and religious schools for the circle and the parish, three charitable institutes, and various industrial establishments. Coal is found in the vicinity. Pop. 5892.

BOROVO, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 17 m. S.E. Eszeg, on the Danube; with 1850 inhabitants, chiefly employed in fishing.

BORSNA, a tn. Russia, gov. and 29 m. E.N.E. Tchernigov, cap. circle of same name. It has four churches, a circle school, and a charitable endowment. Excellent tobacco is the staple product of the circle. Pop. 4927.

BORSZCZOW, a tn. Austrian empire, Galicia, circle and S.W. Czortkow, cap. dist. of same name; with a ruined castle, and 3436 inhabitants.

BORZARI, a tn. Western Africa, Bornou, prov. Manga, 190 m. E.N.E. Kano, is a place of considerable size, surrounded by a crenellated wall and a ditch, and is well built. The market is very indifferent, and there is no appearance of industry. Water is supplied from wells 10 fathoms deep. Estimated pop. 7000 to 8000.

BORZ BÖRSZEK, a tn. Austrian empire, Transylvania, circle and about 45 m. N.N.E. Udvarhely; with mineral springs, which are famous for their cures, and the water of which is largely exported.

BORZSONY, a tn. Austrian empire, Hungary, co. Honth, 10 m. S. Ipoly Sagh, with 1490 inhabitants, half Lutherans, half R. Catholics, who cultivate the ground and feed swine in their extensive oak forests.

BOSANCZE, a tn. Austrian empire, duchy Bukowina, 47 m. S. by W. Czernowitz; with a large trade in excellent fruit. Pop. 3528.

BÜSING, a royal free tn. Austrian empire, Hungary, co. and 10 m. N.E. Pressburg, on the Tyrnau tramway. It has a magistracy, a Protestant and a R. Catholic church, a synagogue, a Capuchin monastery, a castle belonging to Prince Palffy, an institute for the poor, and an asylum for children. The Büsing white table-wine is famous. In the

vicinity sulphur-stone is mined, and there are works for making sulphur and muriatic acid. Pop. 4275.

BOSOVICZ, a tn. Austrian empire, Banat Military Frontiers, on the Monis, at its confluence with the Nera, 70 m. S.S.E. Temesvar. It has a R. Catholic and a Greek church, a trivial school, and a copper mine. Pop. 2470.

BOTUSHANI, a tn. Turkey in Europe, Moldavia, cap. circle of same name, on the Sikna, 48 m. N.W. Jassy. It is irregularly built, is the seat of a court of primary jurisdiction, contains one Armenian and fourteen Greek churches, several synagogues, a normal and an Armenian school, and carries on an important trade, particularly in horned cattle sent from Moldavia and Bukovina into various parts of Austria. Pop. nearly 20,000.

BOUCHTARMA, a tn. Russian empire, W. Siberia, on a river of same name, on the S.E. frontiers of Tobolsk, 450 m. S. Tomsk. It was formerly a place of much more importance than at present, and contains several large buildings, which give it a rather imposing appearance. In some ancient tumuli in the vicinity gold and warlike implements have been found. The surrounding steppe or valley is of considerable extent, and pastures large herds of horses and cattle. The river, which falls into the Irtysh about 2 m. below the town, is a considerable stream.

BOUFARIK, a tn. N. Africa, Algeria, prov. and 20 m. S.W. Algiers, in a fertile and well-cultivated district. It contains a church and a caravanserai, and has an important Arab market every Monday. Pop. 3838.

BOULARDRIE, an isl. British America, on the E. coast of Cape Breton, where it forms by its opposite sides the two channels of the Great and Little Bras d'Or, leading to the Bras d'Or Lake. Its length from N.E. to S.W. is 22 m., and its extreme breadth 5 m. Sandstone, containing in some parts coal shale, limestone, and gypsum, is found on its shores. Its interior, which rises to the height of 400 ft., is thickly wooded.

BOURBON ISLAND [add.], Indian Ocean, 400 m. E. Madagascar, belonging to France. In consequence of exorbitant dues exacted from shipping, and the failure of crops and commercial depression, the trade of the island has greatly declined. In the year 1864, 265 French vessels entered, and 258 cleared from the various roadsteads, while only 40 British ships arrived at, and 41 departed from the island. The sugar crop had been very small, and only 32,213 tons were exported in the same year, chiefly to France. The other exports in 1864 were of coffee, 33 tons; cocoa, $\frac{1}{2}$ ton; cloves, 42 $\frac{3}{4}$ tons; mace, $\frac{1}{2}$ ton; nutmegs, 2 $\frac{1}{2}$ tons; vanilla, 12 $\frac{1}{2}$ tons; cotton, 8 $\frac{1}{2}$ tons; rum, 18,572 gallons; the cotton crop having proved an almost total failure. The prosperity of the island is hindered very much by the want of a safe harbour, and it is proposed to raise a loan for the formation of one at St. Pierre, in the S.W. part of it. Pop. (1863), 183,471.

BOURBON-VENDÉE [add.] Since the accession of Louis Napoleon to the empire, the name of this town has been again changed to Napoleon-Vendée.

BOVANI, or **BOWANY**, a tn. and river, India, presid. Madras. The town, dist. and 36 m. N.E. Coimbatore, at the confluence of the Bovani and Cauvery, both of which are here crossed by bridges—the one of 9 and the other of 26 arches. It is a neatly built and populous place, much visited by Hindoos on account of the sacredness which they attach to the locality.—The river rises among the S. spurs of the Koondah range, belonging to the Neilgherries, flows E. across the district of Coimbatore, and joins the Cauvery on its r. bank, at the town of Bovani, or Bhovanikudal, after a course of about 120 m.

BOVOLENTA, a tn. Austrian Italy, prov. and 10 m. S.S.W. Padua, l. bank Bacchiglione; with a parish church, an academy Dei Concoridi, divided into two sections, one for science and the other for the fine arts; beautiful gardens, and good wine. Pop. 2922.

BOVOLONE, a tn. Austrian Italy, prov. and about 13 m. S.E. Verona, on the Menago; with several churches, a palace built by Christofoli, and a fine country seat of the Bishop of Verona. Pop. 3510.

BOWDOINHAM, a tn. U. States, Maine, on the Kennebec, at the junction of the Cathans, and on the Kennebec and Portland railway, 35 m. N.N.E. Portland. It possesses

three churches and important building-yards, being accessible by vessels of 1000 tons. Pop. 2382.

BOWEN, an isl. Australia, New South Wales, off the E. coast, where it forms the S. entrance of Jarvis Bay. Its sea-face is formed of high vertical rocks, in many places deeply rent. From these it slopes gradually towards the bay, where its shore, though intermixed with rocks, is low and sandy. On the W. side it is separated from the mainland by a breach not more than 200 yards across, which appears as if some sudden and violent wrench had torn the cliff to pieces, and left here and there a straggling rock to indicate its former condition. Bowen is moderately wooded, has much clear ground covered only with long grass, and displays beautiful scenery.

BOWLING GREEN, a tn. U. States, Kentucky, cap. co. Warren, at the head of navigation of the Barren, which has been made accessible at all seasons by steamers of 200 tons, and on the Nashville and Louisville railway, 100 m. S.S.W. Louisville. It contains four churches, a college, a female academy, and other schools, a court-house, a woollen and a candle factory, an iron foundry, and several mills. The trade is chiefly in pork and tobacco. Pop. 2500.

BOWMANVILLE, a tn. British America, Canada West, co. Durham, on the N. shore of Lake Ontario, and the Grand Trunk railway, 36 m. E.N.E. Toronto. Its advantageous position, with a great command of water, an excellent haven, and a district remarkable for fertility, has led to its very rapid increase. It is well laid out, possesses six churches—Church of Scotland, English Episcopal, Free, Congregationalist, and Primitive and Wesleyan Methodist, a grammar-school, a mechanics' institute, and a weekly newspaper; and has large flour-mills, a pottery, tanneries and other industrial establishments, and considerable trade. Pop. about 4000.

BOW RIVER, British America, which contributes with Belly River to form the S. branch of the Saskatchewan, rises in the Rocky Mountains, in lat 51° 40' N.; lon. 117° W., and flows circuitously S.E. As it is much larger and more important than the Belly, it is sometimes regarded as not an affluent, but a prolongation of the Saskatchewan, and takes its name.

BOYDTOWN, a tn. U. States, Virginia, cap. co. Mecklenburg, 70 m. S.W. Richmond. It is the seat of Randolph Macon College, which belongs to the Methodists, and is attended by about 80 students.

BRAD, a tn. Austrian empire, Transylvania, circle and 25 m. N.W. Broos, near the sources of the White Körös; with an active trade in corn. In the vicinity are mines of gold and silver. Pop. 1740.

BRAMPTON, a tn. British America, Canada W., co. Peel, on the Grand Trunk railway, 20 m. W. by N. Toronto. It possesses five churches—Church of Scotland, English Episcopal and Episcopal, Wesleyan, and Primitive Methodist; a grammar school, two weekly newspapers, a large retail country trade, and an important corn market, at which wheat is extensively purchased for the mills in the vicinity, and also for export. Pop. about 2000.

BRAND, a tn. Austrian empire, Bohemia, circle and 18 m. S.S.E. Eger, in the Böhmerwald, on the frontiers of Bavaria; with a church, two mills, and 1000 inhabitants.

BRANFORD, a port, U. States, Connecticut, co. New Haven, about 8 m. E. by S. New Haven, on the railway from it to New London. It has a well-sheltered harbour, adapted for vessels of 300 tons, and a substantial wharf. At one time it rivalled New Haven as the centre of a considerable foreign trade.

BRANNA, a tn. Austrian empire, Bohemia, circle and 22 m. N.E. Gitschin, on the slopes of the Riesengebirge. It is the seat of the finest linen manufacture in the N.E. of Bohemia, and has a parish church, a castle, an hospital for the poor, and a brewery. Pop. 2262.

BRANTFORD, a tn. British America, Canada W., cap. co. Brant, on the Grand River, where it ceases to be navigable, and on the Buffalo and Lake Huron railway, 55 m. S.W. Toronto. It has five churches—Church of England, Free, Congregationalist, and Primitive and Wesleyan Methodist; several schools, four newspapers, three bank agencies, tanneries, potteries, factories for steam engines and agricultural implements, and other industrial establishments; and a large trade in flour, facilitated by a canal which communicates directly with Lake Ontario. Pop. about 8000.

BRAS D'OR, a lake, British America, forming a large expanse of very irregular shape, in the southern portion of Cape Breton. It consists of two distinct parts, which open into each other, the one on the N. side called the Little, and the other on the S. the Great Bras d'Or. The former is of comparatively limited dimensions, but the latter is 37 m. long and 12 m. wide. Its depth varies exceedingly, in some parts amounting to 50 fathoms, and in others, from the prevalence of shoals, not exceeding a foot. The entrance to both lakes from the sea is by two channels, one on the N.W. and the other on the S.E. side of Boulardrie Island. The settlers in the vicinity are chiefly of Highland descent, and, though much isolated from old country associations, retain the best qualities of the Highland character.

BRATTLEBOROUGH, a tn. U. States, Vermont, Windham co., r. bank Connecticut River, on the Connecticut River railway, 100 m. S. Montpelier. It consists of an E. and a W. village; and contains six churches, an academy, a lunatic asylum, a paper-mill, and an extensive printing establishment. A covered bridge across the Connecticut connects it with Hensdale, in New Hampshire. Pop. 3816.

BRAUNSBURG, a tn. Austrian empire, Moravia, circle Neutitschein, on the frontiers of Silesia; with an ancient parish church, extensive cloth manufactures, and 2933 inhabitants.

BRAZIL [add.], empire, S. America.

Finance.—Since the year 1857–58, when the revenue reached the highest point ever attained, and the treasury held a considerable balance in its coffers, the receipts have diminished, while the expenditure has increased, to meet which loans and debts of various kinds have been contracted, and as a natural consequence, the finances of the country have fallen into a state of embarrassment. The balance of revenue and expenditure in the four years 1859–63 shows an aggregate deficiency of 14,405,243 milreis. The budget for 1864–65 estimates the total receipts at 52,000,000, and the total expenditure at 56,588,818 milreis, showing a probable deficiency of 4,588,818 milreis. The foreign debt amounted on December 31, 1861, to £7,432,100, of which £2,736,200 was for loans for the construction of railways; the internal funded debt was £7,588,192; and other internal liabilities amounted to £7,680,524 more.

In 1862, a new state department, under the title of Ministry of Agriculture, Commerce, and Public Works, was established, with the view of giving special attention to the development of agricultural industry, by the construction of roads, canals, and public works of various kinds.

Commerce and Navigation, &c.—

Countries.	Imports, 1860–61.		Exports, 1860–61.

Total, 1860–61	119,326,901	127,293,599		
„ 1859–60	111,622,686	112,950,010		
Increase	7,703,615	14,343,589		

The principal exports were coffee, 81 millions of milreis; sugar, 11 millions; hides, 9½ millions; and cotton, 4¼ millions. The chief imports were cotton manufactures, 33½ millions; woollen and other textures, 12¼ millions; flour, 7 millions; and iron, 6½ millions. [The Brazilian milreis = 2s. 3d.]

In the year 1862–3, the imports were of the value of 99,072,713 milreis (£11,145,680), and the exports 122,479,996 milreis (£13,778,999).

* The new province of Amazonas is formed of some parts of Para, and that of Parana of some parts of S. Paulo.

† Rio de Janeiro had 296,136 inhabitants in 1855.

BREGANZE, a tn. Austrian Italy, prov. and 10 m. N. by E. Vicenza, on the side of a hill. It is famous for the sweet white wine grown in its district, and contains 3432 inhabitants.

BRENTT-PORITSCHEN, a tn. Austrian empire, Bohemia, circle and 10 m. S.E. Pilsen, on a small stream; with a deanery church, a castle, an hospital, a brewery, and two mills. Pop. 1400.

BRENTINO, a tn. Austrian Italy, prov. and about 20 m. N.N.W. Verona, r. bank Adige; with a famous pilgrimage church, situated on a precipice of Mount Baldo, to which the ascent is made by 790 steps.

BREZA, a tn. Austrian empire, Hungary, co. Arva-Thurocz, at the confluence of the Mulinka with the Arva. It contains 1100 inhabitants, who are chiefly employed in the adjoining forests in felling and sawing timber.

BRIBIE, an isl. Australia, Queensland, forming the W. side of the N. entrance of Moreton Bay. It is 15 m. long, by 3 to 4 m. broad, of moderate elevation, and separated from the mainland by Pumice-stone Strait, which being only a mile wide at its entrance, and nearly filled with mangrove islets and muddy flats, was mistaken by Captain Flinders, its first discoverer, for a river.

BRIDGETON, a tn. and port of entry, U. States, New Jersey, cap. co. Cumberland, on Cohansey Creek, over which there is a drawbridge connecting the two parts of the town, 40 m. S. Philadelphia. It is a well-built place, and possesses an active trade, employing 15,000 tons of small vessels; it has also an iron-foundry and several factories of hardware. Pop. 2446.

BRIGHTON, a tn. British America, Canada W., co. Northumberland, on Presquille Bay, on the N. of Lake Ontario, and on the Grand Trunk railway, 82 m. E.N.W. Toronto. It possesses two Wesleyan churches and two weekly newspapers; and, being a port of entry, carries on a considerable trade. Pop. about 1500.

BRISAU, a tn. Austrian empire, Moravia, circle and 28 m. N. Brünn, near the Bohemian frontiers, on the Zittawa, and on the Vienna and Prague railway. It has two churches; manufactures of cloth and paper, and five annual horse and wool markets. Pop. 1200.

BRISBANE, a tn. Australia, cap. Queensland, picturesquely situated on the banks of a river of same name, which falls into Moreton Bay 17 m. below; lat. 27° 30' S.; lon. 153° 2' E. It is surrounded by hills, many of them adorned with handsome villas, and is a well-planned, flourishing town, containing many substantial private dwellings, shops, and warehouses, several elegant churches, an hospital, barracks, mechanics' institute, club-houses, and other public buildings, where literary, philosophical, agricultural, horticultural, acclimatization, and other societies meet. The river, which is about a quarter of a mile broad, is encumbered at its mouth by a bar, which vessels drawing more than 9 or 10 ft. cannot

pass; but measures are in contemplation for removing the bar and deepening the channel, so as to allow large vessels to come up to the town. A regular steam communication is established between Brisbane and Sydney, which has recently been extended to the more northern ports of Maryborough, Gladstone, and Rockhampton. There is also telegraphic communication with all the southern cities and towns of Australia. A railway is in progress of construction from Brisbane to Toowoomba, a distance of 80 miles, on the Darling Downs, to connect this outport with the wool-growing districts of the interior. Brisbane was established as a penal settlement in 1825, as a subsidiary place of punishment for incorrigible offenders at Sydney and Parramatta. In 1842 the convict establishments were closed, and the settlement thrown open to free colonists. On the separation of the Moreton Bay district from New South Wales, and the foundation of the colony of Queensland in June, 1859, this town became the capital and seat of government. Here are the governor's residence, with the offices of the executive, and two houses of legislature forming the local parliament. Although the latitude of Brisbane is four degrees S. of the tropic of Capricorn, yet its climate is tropical, and subject to the humidity of the S.E. trade-winds. Hence there is no true winter, while the heat and humidity of summer is unsuitable to European labourers in the fields. In the botanic-garden may be seen growing the bamboo, banana, pine-apple, and other tropical plants, in the open air; while the grape, pear, plum, apple, and other temperate fruits and cereals, fail to produce edible crops from the excessive heat and damp. Hence it is not so healthy for the British emigrant as the towns of Sydney and Melbourne, situated in the drier localities of the

temperate regions of Australia. The population is fluctuating, according to the arrival of emigrants, and their departure for the interior. In 1861 the census returns gave a total of 5225; which has been more than doubled in subsequent years, and may be calculated approximately in 1865 at 12,500.—(M. L. Nalis; Colonial Blue-Books, &c.)

BRISTOL, a tn. U. States, Pennsylvania, r. bank Delaware, about 19 m. N.E. Philadelphia, and on the Philadelphia and New York railway. It is a well-built, cheerful-looking place, with four churches, a flour-mill, and a mineral spring. Pop. 2570.

BRITISH COLUMBIA. See COLUMBIA (BRITISH) in *Sup.*
BRITISH EMPIRE [add.]. The prosperity of the British Empire has advanced of late years with unprecedented rapidity. Its commerce has been developed to an immense extent, and has received fresh impulse not only from the increase of home resources and requirements, but also from the expansion and growing importance of its colonial possessions. The Australian colonies, New Zealand, and the newly formed province of British Columbia in the W. of N. America, have furnished vast fields for the exertion of energy and labour, which have been speedily occupied by a continuous influx of emigrants from the mother country, and present vast openings for commercial enterprise. The momentous events of the war with Russia in 1854-5, the Indian mutiny in 1857-8, and the American civil war of 1861-5, calculated as they were to affect and seriously impede the pursuits of commerce, and the internal and external resources of the empire, seem to have had no permanent influence upon them, but, on the contrary, appear to have given additional impetus to the activity which had begun previously to manifest itself. The statistics of the series of years from 1850 or 1854, to 1864, exhibit a course of unvarying progress in almost every particular, and most unmistakably so in all that concerns the substantial interests and resources of the empire. This will be best perceived from the statistical accounts which are subjoined, and are for the most part so arranged that they may exhibit a ready means of comparison.

Population, &c.—The details of the population of the British isles will be found in the tables prepared to accompany this supplement; so that here only the totals will be given of the census of 1861, the summary of the colonial possessions being taken from official returns and estimates in 1862.

United Kingdom.	Population, 1861.
England and Wales,	20,228,497
Scotland,	3,096,808
Ireland,	5,850,309

The number and tonnage of vessels registered as belonging to the United Kingdom in 1864 was 26,142 sailing vessels, of 4,930,210 tons, and 2,490 steam vessels, of 697,281 tons; being a total of 28,632 vessels, and 5,627,500 tons. The total tonnage of British and foreign sailing and steam vessels entered at ports in the United Kingdom during the year 1864 was 9,028,100 tons British, and 4,486,911 tons foreign—total, 13,515,011 tons; and of vessels cleared, 9,173,575 tons British, and 4,515,923 tons foreign—total, 13,689,498 tons. The following table shows the British shipping (exclusive of river steamers) and men employed in the home and foreign trade in the same year:—

It was estimated that in the year 1863 there were the following number of mines at work, and of persons employed in them:—

	No of Mines.	Persons Employed.
Coal Mines	3000	250,000
Iron do.	?	27,000
Copper do.	167	22,000
Tin do.	148	14,500
Lead do.	390	21,500
Zinc and others	—	1,000
Total	—	336,000

BRITSHANY, a tn. Russia, gov. Bessarabia, circle Khotin, 30 m. S.S.E. Kamenetz; with two churches, and a pop. of 4417.

BROAD RIVER, U. States, rising at the foot of the Blue Ridge, in the W. of N. Carolina, enters S. Carolina, and flowing S. through a fertile country, covered with fields of maize and cotton, unites with the Saluda in forming the Congaree at Columbia.

BROCKPORT, a vil. U. States, New York, Monroe co., on the Erie canal, and on the Rochester and Lockport railway, 20 m. W. Rochester. It contains several churches, an academy, and several mills and factories. Pop. 2143.

BRONNITZ [add.], a tn. Russia, gov. and 22 m. S.S.E. Moscow, cap. circle of same name, on the Moskva and the Lake of Bieloija. It has three churches, a school for the circle, two benevolent endowments, cotton-mills, soap-works, and manufactures of cloth and candles. Within the circle lies the village of Gshelsk, where articles of ordinary earthenware are made to the number of several millions of pieces annually. Pop. 2357.

BROOKLINE, a township, U. States, Massachusetts, 5 m. S. W. Boston, which contains six churches and a number of schools. It may be considered a suburb of Boston, as it is mainly occupied by the country seats of many of its wealthier citizens. Pop. 3472.

BROOKLYN [add.], a tn. U. States, New York, near the W. extremity of Long Island, opposite to New York, from which it is separated by the East River, and at the terminus of the Long Island railway. Its extreme length from N. to S. is 7½ m., and its extreme breadth 5 m.; but, owing to the irregularity of its outline, the average breadth does not exceed 3½ m. Except a comparatively small portion, it stands at a considerable height above the water, and presents great advantages as a residence, being open on all sides to the sea and land breezes; and is laid out in wide regular streets, well shaded with trees, but nowhere so crowded with them as to obstruct a free circulation of air. At the W. extremity in particular, facing the river, where the ground is so high as to have received the name of the Heights, magnificent views of New York and its shipping are obtained. Proximity and its many other advantages have made Brooklyn the favourite residence of the merchants of New York, who are rapidly

conveyed to and fro by a number of steamers constantly plying. The number of churches, now amounting to about 130, gives to the place one of its most striking features, while several of the edifices rank among its greatest architectural ornaments. Among others may be mentioned the church of the Pilgrims, a beautiful structure of gray stone, with a tall tower and spire forming a landmark to mariners; and Grace church, the church of the Restoration, the church of the Holy Trinity, and the Unitarian church, all built of brown stone in the Gothic style. The other principal buildings and institutions are the city hall, an edifice of white marble, with a portico of Ionic columns, and a dome the apex of which is 153 ft. high; the lyceum, a fine granite building, with a spacious lecture-room; the atheneum, the collegiate and polytechnic institute for boys, the Packer collegiate institute for girls; the city, college, and marine hospitals, the city and R. Catholic orphan asylums, the eye and ear infirmary, and many other benevolent institutions. The other leading objects of interest are the Atlantic dock, constructed by a chartered company with a capital of £200,000, and having a basin of rather more than 40 acres; the navy yard, inclosing an area of 45 ac. by a high brick wall, and containing a naval lyceum, with a large collection of curiosities and valuable geological and mineralogical cabinets; two immense ship houses, and the largest dry dock in the country, and several beautifully laid out cemeteries. The manufactures are very important; among the leading articles are beer, spirits, and liquors, iron, copper, brass and bronze castings, gold and silver refineries, silver and plated ware, tin and sheet iron, dressed flax, paper, ropes and cordage, clocks, plate and common glass, refined sugar and syrup, leather, camphine, chemicals, oil-cloth, linseed and other oil, steam-engines, cabinet ware, cut stone, porcelain, tobacco, and cigars. Ship building and repairing are also carried on to a considerable extent. The total value of real and personal property amounted, according to the city comptroller's report, in 1857, to £19,795,205. Pop. in 1810, 4402; in 1820, 7175; 1830, 15,396; 1840, 36,233; 1850, 96,838; 1860 (including the towns of Williamsburg and Bushwick incorporated with it), 266,661.

BROUGHTON BAY, or **COREA GULF**, Chinese empire, Sea of Japan, on the E. coast of the peninsula of Corea, is 93 m. wide between Capes Duroc on the S. and Petit Thouars on the N., and extends westward for 55 m. Its shores are winding and mostly low, and are generally well wooded, with occasional waste places and rocky cliffs. Inland ranges of lofty mountains rise both on the N. and S. In the latter direction, about 15 m. off, the Belavenz Mountains attain the heights of 6092 and 5884 ft.; and in the former, Mount Hienfung, situated about 24 m. in the interior, is seen towering to the height of 8113 feet. Within the bay are a number of small islands, and at its head the two harbours of Yang-hing and Port Lazaref. The latter, in particular, which is formed on the W. side of Nakkino or Bosquet Peninsula, which shelters it from the E., affords excellent anchorage, having a mud bottom with a depth of 7 to 10 fathoms. It is 2 m. wide at its entrance, and trends N. for about 6 m. On the left bank of a river, which falls into it on the N.W., there is a large village, apparently the port of a considerable town in the interior.

BROWNSVILLE, three places, U. States:—1. A tn. Tennessee, cap. co. Haywood, 55 m. N.E. Memphis, on the Memphis and Trenton railway. It stands in the midst of maize and cotton plantations, possesses a superior female academy, and carries on an active trade. Pop. 1000.—2. A tn. formerly called Fort Brown, Texas, cap. co. Cameron, 1. bank Rio Grande, opposite to Matamoros, and about 40 m. above the mouth of the river in the Gulf of Mexico. It contains three churches and a custom-house, and has rapidly risen to be one of the largest and most important towns in the state, carrying on a very extensive trade. It made some figure in the war between Mexico and the U. States, and has since been the starting-point of several filibustering expeditions into the Mexican territory. Pop. 5000.—3. A tn. Pennsylvania, Fayette co., r. bank Monangahela, 40 m. S. Pittsburg. Steamboats ply from Pittsburg up the river, over which is a handsome bridge. An abundance of bituminous coal in the vicinity has given rise to manufactures of iron, glass, cotton, and paper. Pop. 4500.

BRUCK (Str.) [add.], a tn. Austrian empire, duchy Styria, cap. circle of same name, on the South railway, at the confluence of the Murz with the Mur, 25 m. N.N.W. Grätz. It consists of the town proper, surrounded by walls, and of three suburbs, and has two churches, one of them with the tomb of the Iron- duke Ernest, a superior and a common school, a townhouse, town hospital, theatre, and barracks. Above the town stand the ruins of the feudal castle of Landskron. Pop. 3000.

BRUGINE, a tn. Austrian Italy, prov. and 8 m. S. by E. Padua, with a palace built by Palladio, and possessing paintings by Paul Veronese, an old English garden, and manufactures of cotton. Pop. 2922.

BRUMER, a group of islets, Coral Sea, off the S.E. coast of Papua or New Guinea; lat. 10° 35' S.; lon. 150° 30' E. It consists of six small islands of basaltic formation. The westernmost and largest is only 2½ m. long, by ¼ to ¾ m. broad, and rises to a steep ridge, terminating in a peak 665 ft. high. Though thus precipitous, it is covered with vegetation—the effect not only of natural fertility, but of careful cultivation, as extensive plots of ground are seen along the slopes of the hills. The chief products of the island are yams, bananas, cocoa-nuts, and breadfruit, which are bartered for iron hoop, &c. The inhabitants have catamarans and canoes, the latter fitted with single outriders and mat sails; and seem to reside chiefly in two populous villages, the houses of which have sharp gables, and are built upon piles. Notwithstanding their progress in civilization, the natives are inclined to treachery.

BRUMOW, a tn. Austrian empire, Moravia, circle and 16 m. N.E. Hradisch, in a pleasing valley; with a parish church, a castle, and glass-works. On a hill in the immediate vicinity are the ruins of the old castle of Brumow, which is said to have been built as early as A.D. 830. Pop. 1600, many of whom are employed in rearing cattle.

BRÜNDEL, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ogulin, in a valley of same name, 38 m. S.S.W. Karlstadt. It has an elegant parish church, a castle commanding a magnificent view, a school, and a large magazine. Pop. 2480.

BRUNI [add.], an island off the S.E. coast of Tasmania, between Storm Bay on the E. and Entrecasteaux Channel on the W., and immediately S. of the estuary of the Derwent. It is about 27 m. long, and of singularly irregular shape, being cut up by numerous indentations, and divided into two distinct portions—a N. and a S.—only connected by a very narrow isthmus. The surface is unequally elevated, the higher parts presenting remarkable geological features. Fluted Cape in particular, and the part of the coast joined to it southward, has the appearance of an abrupt cut, composed of immense basaltic columns. The vigorous vegetation everywhere visible proves the fertility of the soil. On Cape Bruni, the S.W. extremity of the island, is a lighthouse with a revolving light 340 ft. above the level of high water, and visible in clear weather at the distance of upwards of 21 m.

BRUNSWICK, two places, U. States:—1. A vil. Maine, r. bank Androscoggin, at the head of tide-water, and on the Kennebec and Portland railway, 30 m. N. Portland. It possesses six churches, Bowdoin college, and a number of excellent schools, a cotton factory, a machine-shop, numerous saw-mills, and important building-yards. Much of the wealth of the place is invested in shipping. Pop. about 4500.—2. A tn. and port of entry, Georgia, cap. co. Glynn, pleasantly situated on a height above Turtle River, 80 m. S.S.W. Savannah. It is the terminus of a branch railway from Waresboro; and its harbour, at once spacious and secure, with 13 ft. of water on the bar at low tide, furnishes considerable facilities for trade.

BRZYSKA, a tn. Austrian empire, Galicia, circle Rzeszow, 9 m. from Lezaisk. In the vicinity are seven earthen mounds, which, according to tradition, contain the bones of an army of Tartars who perished here. Pop. 1550.

BUCHA, a tn. Austrian empire, Bohemia, circle and 32 m. E.N.E. Eger, cap. dist. of same name; with a parish church, a town hospital, a ruined castle, three mills, and a mineral spring. Pop. 1400.

BUCIN, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 17 m. N.W. Poshega, cap. dist. of same name, in a romantic valley. It has a baronial castle with large gardens, and a mineral spring. Pop. 1270.

BUCKEA, a river, India, which rises in Nepal, on one of the lower ranges of the Himalayas, in lat. 27° 6' N.; lon. 85° 40' E.; flows first S. into the British territory, after forming part of the boundary between the two states, then S.E. through dist. Tirhoot, and joins the Bhagmuttee on its r. bank, in lat. 26°, lon. 85° 56', after a course of about 105 m.

BUCSUM, a tn. Austrian empire, Transylvania, circle and about 23 m. N.W. Karlsburg, in a mountainous district, with 3796 inhabitants, mostly miners.

BUCYRUS, a tn. U. States, Ohio, cap. Crawford co., on Sandusky River, and Indiana and Ohio railway, 62 m. N. Columbus. The adjacent country is level and fertile, and contains several mineral springs. A fine specimen of the mastodon was found in 1838 embedded in a marsh near the town. There are several mills in the place. Pop. 2500.

BUDAKESZ, a tn. Austrian empire, Hungary, co. and 4 m. E. Pesth. The inhabitants live by raising wheat, fruit, and wine, and rearing cattle. In the vicinity, in a high valley inclosed by forests, are the ruins of an ancient monastery. Pop. 2783.

BUDAON, a dist. and tn. India, N.W. Provinces, Rohilcund. The district, between lat. 27° 38' and 28° 29' N.; lon. 78° 21' and 79° 35' E., is bounded N. by Moradabad; N.E. Bareilly; S.E. Shahjehanpore; S. Furruckabad and Mynpoorie; and W. Allyghur and Boolundshuhur; area, 2368 sq. m. The surface, low, flat, and generally fertile, is watered in the S.W. throughout its whole length by the Ganges, in the E. by the Ramganga, and in the intervening space by the Yarwuffadar, or Sote, and the Muhawa. Part of the district is still wild and uncultivated, and wolves are very numerous. Pop. 825,712.—The town, cap. of the above dist., on an affluent of the Ganges, 30 m. S.S.W. Bareilly, became the head-quarters of a body of mutineers during the sepoy mutiny, and was in consequence wrested from them on the 19th of April, 1858, after a defeat which cost them four guns and five hundred men. On the 30th of same month, a second defeat was inflicted on them in the same locality. Pop. 21,369.

BUDA-ORS, a tn. Austrian empire, Hungary, co. and 4 m. S.E. Pesth. The inhabitants are almost all employed in cultivating the vine. On a hill in the vicinity numerous rocky caverns have been converted into wine-cellars. Pop. 2855.

BUDFALVA, a tn. Austrian empire, Hungary, co. Marmaros, about 17 m. S. Szigeth, in the midst of extensive forests; with 1600 inhabitants, who are employed in felling and sawing timber and in making charcoal.

BUDIN, a tn. Austrian empire, Bohemia, circle and 10 m. S. Leitmeritz, on the Eger; with a deanery church, a town-house, a castle, an hospital, and a brewery. Pop. 1200.

BUDUA, a tn. Austrian empire, Dalmatia, circle and 10 m. S. by E. Cattaro. Though a small place it is surrounded by walls, and defended by a castle, and has a R. Catholic and a non-united Greek church. Pop. 900.

BUDZANOW, a tn. Austrian empire, Galicia, circle and 10 m. N. Czortkow, cap. dist. of same name, on the Sereth; with a fine castle, an institute of the Sisters of Mercy, an infirmary, an orphan asylum, and an extensive trade in corn. Pop. 4189.

BUENO, a river, Chili, prov. Valdivia, which, issuing from Lake Ranco, flows W. in a very serpentine course for about 30 m.; is then augmented first by the Pilmayquen coming W.N.W. from Lake Puyehue, and next by the Rahue from Lake Llanquihue, and still continuing to flow nearly due W. falls into the Pacific. It is navigable at all seasons from the junction of the Rahue, a distance of about 20 m.

BUENOS AYRES [add.] The disturbed state of the Argentine republic, caused by the internal dissensions and conflicts of the members of it, has greatly obstructed its prosperity. Buenos Ayres has suffered especially, having recently more than once been subjected to invasion and siege. The exports from the port of Buenos Ayres in 1860 were:—

454,903 salted ox hides, valued at 25s. each,	..	£567,878
1,217,771 dry	20s. "	1,217,771
285,099 salted horse hides,	" 8s. "	114,059
60,048 dry	" 5s. "	15,012
11,593 pipes of tallow,	" £25 per pipe,	231,860
8,757 boxes	" £16 per box,	140,012
48,766 bales of wool,	" £25 per bale,	1,210,150
3,046	" horse hair,	152,300
8,951	" sheep skins,	268,530
499,788 quintals of jerked beef,	10s. per quintal,	249,894

£4,176,466

The militia and national guard of the province number 19,867 men, besides the quota of the federal army. The public debt of the province upon British loans is £2,285,000. The estimated population of the city and province is as follows:—

Nationalities.	City.	Province.
Argentines	75,000	130,000
Spaniards	10,000	15,000
English and Irish	5,000	20,000
French	15,000	15,000
Italians	20,000	10,000
Americans	2,000	1,000
Germans	2,500	1,000
Portuguese	1,500	1,000
Montevideans and others	9,000	7,000
Indians	—	20,000
Total	140,000	220,000

Since 1856 from 6000 to 8000 immigrants have annually entered the province; about 12,000 Irish have acquired settlements.

BUENVENTURA, a river and tn. S. America, New Granada. The river, rising in the W. slope of the W. Andes, flows N.N.W. and falls into the Bay of Choco, in lat. (Basan Point) 3° 49' 27" N.; lon. 77° 10' 50" W. It is a broad deep stream, and is navigable for 10 m. above its mouth by vessels drawing 24 ft.—The town, situated on the l. bank of the river, at the point where, as already stated, it is navigable for vessels of large burden, possesses great natural advantages as a port, and promises to become an important emporium for the state of New Granada, as all the W. foreign traffic of Bogota, the capital, must pass through it, there being no other practicable communication with the Pacific. The great drawback is the want of good roads, and hence the town is as yet a comparatively poor place, consisting of mean houses inhabited chiefly by negroes and mulattoes. It is however the residence of a governor, is defended by a battery; possesses a custom-house, and carries on a considerable trade, exporting rum, sugar, and tobacco, and importing salt, garlic, straw hats, and hammocks. The climate is considered unhealthy. Pop. 1000.

BUFFALO [add.], a tn. U. States, New York, cap. co. Erie, at the E. extremity of Lake Erie, where the Niagara issues from it, and on the New York Central, and various other lines of railway; lat 42° 53' N.; lon. 78° 55' W. It consists principally of wide and straight streets, which cross at right angles, but partly also of others, which meet the main street obliquely, and prevent monotony of aspect. The whole site is a plain, with a gentle descent towards the lake, and well covered with houses, except in a few localities, where open spaces or squares have been left for ornament and ventilation. The climate is said to be more equable than that of any other place within the States of the same latitude, and this, combined with an admirable system of sewerage, has proved so conducive to health that the yearly mortality is only 2 per cent. The principal public buildings are a large and handsome edifice, erected by the general government, and containing a courthouse, custom-house, and post-office; 4 excellent market-houses, and 57 churches, among which particular notice is due to the Episcopal churches of St. John and St. Paul, the former built in a kind of transition style from the early English to the Gothic, the latter remarkable for its picturesque appearance and the variety of its outlines, and to the R. Catholic cathedral, an imposing structure of decorated Gothic, flanked on its E. front with two towers, and adorned with a window of stained glass from Munich. The other buildings and institutions of note are Buffalo university, occupying a fine building, but as yet confined entirely to the medical department; a liberally endowed and flourishing female academy, a young men's literary association, with a library of above 9000 vols.; an orphan asylum; a general hospital, and a fine cemetery, situated in the suburbs, and covering about 76 acres. Manufactures are numerous, and produce annually to an amount exceeding £2,000,000; but the only one of much importance is ship-building. For it there are seven yards, from which, in 1857, there were launched 18,256 tons of shipping. The trade, greatly favoured by the harbour, which, by means of breakwaters, has been rendered safe and capacious, and by the

various railways, is largely developed. The chief articles are flour and grain. Pop. (1860), 81,129.

The imports by lake in the year 1861, were of wheat, 26,585,723 bush.; corn, 20,872,860 bush.; flour, 1,909,557 barrels; oats, 1,703,188 bush.; lumber, 49,075,393 ft.; and of staves the number was 23,707,120, besides considerable quantities of articles of minor importance. Adding to the foregoing the amount received by railway, it was estimated that the total, reducing the flour to bushels, was about 62,000,000 bush. The storage capacity of the port was estimated at 3,500,000 bush. in 1861; and new stores were erected in 1862, furnishing still greater accommodation.

The lake shipping at the port in 1861 is stated to have been as follows:—

	Entered.		Cleared.	
	Vessels.	Tons.	Vessels.	Tons.
American.....	1134	1,107,327	1123	1,100,637
Foreign.....	631	53,140	602	49,952
Coasting.....	5201	1,826,253	5175	1,825,935
	6966	2,986,720	6900	2,976,524

BUGAS-BOCSARD, a tn. Austrian empire, Transylvania, circle and about 17 m. N.E. Karlsburg; with a fine castle, a salt spring, and a trade in wine and fruit. P. 1530.

BUGHAZ, a defile, N. Arabia, Hejaz, about 50 m. S.W. Medina, where the Egyptians under Tussum Bey were totally defeated by the Harbi Bedouin and the Wahabees in 1811.

BUGOMAN, a tn. Central Africa, nominally belonging to Bagirmi, but virtually independent; 60 m. W. Masena, l. bank Shari, which is here about 500 yards wide, and has a low sandy bank, which it overflows during the rains so as to inundate a large extent of country. Though rather in a state of decay, the town, on approaching it, has a pleasing appearance, produced by the variety of trees by which it is adorned. Its market presents a busy scene, to which additional interest is given by the number of boats crossing the ferry. When the sultan of Bagirmi stopped Dr. Barth on his journey to Masena, he ordered him to wait at Bugoman; but when the doctor sent a messenger to the governor to intimate his approach, that functionary showed how little he valued the sultan's authority by peremptorily refusing to admit him.

BUI, a tn. Russia, gov. and 50 m. N. by E. Kostroma, cap. circle of same name, on the Kostroma, where it receives the Weksa. It has four churches, a circle and a parish school, and three benevolent institutions. Pop. 2073.

BUJAK, a tn. Austrian empire, Hungary, co. Neograd, 19 m. N.W. Balassa Gyarmath; with the ruins of an old castle seated on a wooded hill, and a trade in excellent wine. Pop. 1850.

BUKOWINA, a tn. Austrian empire, Galicia, circle New Sandec, about 40 m. S. by W. Cracow, in an alpine district, at the height of 3600 ft. above the sea. To the S. of it is a wild and romantic district, containing one valley with seven lakes, another with five lakes, and a waterfall which plunges over a precipice between perpendicular walls of granite, and a third containing the great Fish Lake, the largest of all and the source of the Bialka. From the borders of this lake rises the Kriwan, the loftiest summit of Mount Tatra. Pop. 1050.

BUKTERIMA, a river, Siberia, one of the affluents of the Irtish. It is the W. commencement of a line of demarcation, by which, in accordance with a treaty concluded between Russia and China in 1728, the frontiers of the two countries were defined. This line, which had its E. termination in the Sea of Okhotsk, was 3000 m. long.

BULKUN, a river, Amoor-land, an affluent of the Amoor, which it joins on its l. bank above the confluence of the Kumara. Its course is upon the whole S.E. On arriving at the Bulkun from the W., the country watered by the Amoor assumes a more pleasing character. The plains become wider, the meadows are covered with a nourishing grass, and trees of poplar, ash, and wild apple occur, with shrub of red-berried elder, sand-willows, &c.

BULLER, or **KAWATIRI**, a river, one of the largest in New Zealand; has its sources in Lakes Rotuaro and Rotuiti, in the N. of Middle Island, or Munster, 40 m. S.W. Nelson; flows W.S.W. through an extensive gap in the mountains which bound it on either side, and, augmented by several smaller streams, reaches the ocean on the W. coast 7½ m. E.

of Cape Foulwind. It varies in width from a quarter to a third of a mile; but, being subject to very heavy freshes from the mountain torrents, and rising with great rapidity, frequently between rocky gorges and cliffs so perpendicular as to be in places inaccessible, and having, moreover, a shallow bar at its entrance, it is not likely ever to possess importance as a navigable stream.

BULL RUN, a stream, U. States, Virginia, crossed by the railway from Alexandria to Manassas, and flowing through a range of hills and ravines, between high and wooded banks, into the Occoquan River, 14 m. from its mouth. It is memorable as the scene of the first great encounter of the civil war, on July 21, 1861, between the Federal and Confederate armies, in which the former, after maintaining their ground for some time, were seized with a sudden panic, which impelled them to retreat in the most disorderly and precipitate manner towards Washington.

BULRAMPOOR, a tn. India, Oude, near the frontiers of Nepal, 89 m. N.E. Lucknow. It stands on a beautiful plain on the Raptée, and is a place of considerable size, consisting of mud houses covered with thatch. Being situated on one of the most frequented routes from Lucknow to Nepal, it is visited in spring and summer by great numbers of traders from the mountains and the low country, who meet here to exchange their products.

BULSAR [add.], a tn. India, presid. Bombay, dist. Surat, at the mouth of a small stream of same name in the Gulf of Cambay, and on the Bombay and Baroda railway, 169 m. N. Bombay. Though ill-situated on rugged ground close to insalubrious swamps, and possessed only of a harbour across the mouth of which there is a rocky bank with not more than 6 ft. at low water, it is a thriving place, with manufactures of cloths, and a considerable trade in salt, grain, and sugar. Pop. 7000.

BULUBGURH, **BALLANGARRH**, or **FURREEDABAD**, a tn. India, N.W. Provinces, cap. jaghire of same name, 29 m. S. by E. Delhi, in a pleasing and well-cultivated district. Though small, and crowded into narrow streets, it is not ill built, is inclosed by a deep ditch and a high brick wall with mud bastions, and contains many good houses and several temples. The rajah's palace is a neat edifice, arranged around a small court, with a marble fountain in its centre and an open arched hall. The jaghire, of which this town is the capital, extends 26 m. along the r. bank of the Jumna, and has an estimated pop. of 57,000. The rajah revolted in the mutiny of 1857, but was speedily captured, and the insurrectionary movement suppressed.

BULUM-BULU, a plateau or steppe, S.W. Africa, Kimbani country, territory Bihé, consisting of a long and comparatively narrow tract bounding or forming an outlying portion of Bihé on the S. and W., and stretching for a long distance N., near the r. bank and almost parallel to the course of the Kutalu. Its whole length is estimated at 160 m., and its height above sea-level not less than 6000 ft. Several rivers, great and small, have their sources upon it. It is covered with long grass, but over the whole not a single tree or prominent object of any kind meets the eye. The surface, however, being undulating, has a number of small depressions, in which springs of water are found, and it appears not wholly destitute of human habitations. Storms of hail, in stones as large as a hazel-nut, sometimes occur. Ladislaus Magyar encountered one of them, which in a few minutes covered the whole steppe as far as the eye could reach with a mantle of white.

BUMM, or **BAM**, a tn. Persia, prov. and 100 m. S.E. Kerman, on the Tehrud; lat. 29° 8' N.; lon. 58° 15' E. It is an ancient place, and said to have been once as large as Kerman. It now consists of a small square fort, crowning a lofty mound and rock, and a number of houses clustering round its foot. The fort appears to have been built with care, and has a small garrison with a few guns. The town is little better than a ruin, and the inhabitants, estimated at about 400 families, live almost entirely outside the walls, in houses scattered among gardens and groves of palm, pomegranate, and other trees. Though the trade is trifling, the products of the British loom were observed among the articles exposed for sale in the shops.

BUNAE, or **BHINAY**, a tn. and fort, India, dist. and 30 m. S.S.E. Ajmere, cap. pergunnah of same name; lat.

26° 8' N.; lon. 74° 47' E. The town stands at the foot of an isolated steep craggy hill, covered with cactus, and is a good-sized place, with two very elegant little temples. —The fort crowns the summit of the hill, and is the residence of the rajah, who belongs to the Rahtore tribe of Rajpoots. The pergunnah contains 93 villages and 27,340 inhabitants.

BUNARHISSAR, a tn. European Turkey, 85 m. W.N.W. Constantinople, on a stream of same name, supposed to be the ancient Tearus; contains 120 Turkish, 120 Greek, and 130 Bulgarian houses. Its ancient importance is still indicated by scattered fragments of ancient walls, three ruined towers, and the remains of a Byzantine castle, which was taken and destroyed by sultan Murad I. in 1371.

BUNASS, two rivers, India:—1, *E. Bunass*, which rises on the S.E. frontier of Bundelcund, flows N.W., and after a course of 70 m. joins the Sone in lat. 24° 14' N.; lon. 81° 33' E., near Rampoor.—2, *W. Bunass*, which rises in the Aravulli Mountains, in Rajpootana, on the confines of Joodpoor and Mewar, flows S.W. into Gujerat, and after a course of 180 m., dividing into several small and intricate channels, is lost in the Rann of Cutch.

BUNDER DELIM, a small seaport on the Persian Gulf, 85 m. N.N.W. Bushire. Though now only a miserable fishing village, it was once the site of a Dutch factory, which is still pointed out, and a place of considerable trade.

BUNDER KHIL, a tn. Persia, Khuzistan, 38 m. N.E. Bosrah. It is walled, but derives its chief importance from its admirable military position, at the junction of the Karun and Abzul, or Dizful, commanding both rivers.

BUNDER REIG, a small seaport in the Persian Gulf, at the mouth of Khisht, 30 m. N.N.W. Bushire. It was once the stronghold of the celebrated pirate Meer Mahura, who was the terror of the gulf. When the place was taken he retired to Karaki, from which he was driven out by the British fleet. The fortifications of Bunder Reig being razed, it lost most of its importance, though it continues to be the residence of the principal Arab chief on the coast.

BUNDI, a tn. W. Africa, Bornou, cap. prov. of same name, 115 m. W. Birni. It is a place of tolerable size, surrounded not only with an earthen wall and ditch, but with a dense thorny fence. The town, as well as the whole province, exhibits many symptoms of decay, produced mainly by misgovernment. There is no market of any importance, though the inhabitants, who belong to the Manga nation, the chief element of the Kanuri, amount to about 8000.

BUNE, the name of two nearly contiguous towns, W. Africa, Bornou, prov. Muniyo, 135 m. W.N.W. Birni:—1, *Old Bune*, which is built in a recess among the rocky cliffs of a mountain at a height of about 1130 ft. It had been nearly destroyed by a conflagration, but some progress had been made in rebuilding it at the time of Dr. Barth's visit. Its prosperity has been seriously affected by the foundation of—2, *New Bune*, which has in a great measure eclipsed its predecessor, and carried off its trade.

BUNGANAPILLY, a tn. India, presid. Madras, dist. and 64 m. N.W. Cuddapah, and about 200 m. N.W. Madras. It stands on a plain, near the entrance of a broad defile, and is intersected by different branches of a small stream called the Zurairo. It is defended by a fort, surrounded by a loopholed wall flanked with round bastions, but presents an antiquated and ruinous appearance. The only edifice of any consequence is the palace of the nabob, who holds Bunganapilly in jaghire. The diamond-mines, which have given it celebrity, are situated about half a mile from the town, near a low range of hills.

BUNIC, a tn. Austrian empire, Military Frontiers, Croatia, dist. Ottochatz, 58 m. S. Karlstadt; with a Greek non-united parish church, and the ruins of a strong castle, built by the Turks in 1555. There is a remarkable cavern in the vicinity. Pop. 1720.

BUNKA, a tn. W. Africa, Hausa states, prov. and about 45 m. W. Katsena, is surrounded by a half-natural, half-artificial stockade of dense forest, and a clay wall 12 ft. in height. It consists of the town proper and a suburb; and the inhabitants are industrious and sociable. Gray monkeys abound in the neighbourhood. Pop. about 5000.

BUNTAWAL, a tn. India, presid. Madras, dist. S. Canara, r. bank Nettrawully, which descends from the W. Ghauts,

and falls into the sea at Mangalore, 17 m. below the town. It consists of about 1000 scattered houses, and is an active entrepôt for the trade between Canara and Mysore. One of its staples is coffee. The town was nearly destroyed by Tipoo Sultan during the Mysore wars in the eighteenth century.

BURAZJUN, a tn. Persia, 25 m. N.E. Bushire. It is a large place, the cap. of a dist., and has a fort with walls and towers of mud. In the vicinity date-palms are very numerous.

BURDEKIN [add.], a river, N.E. Australia, Queensland, which, rising about lat. 18° S.; lon. 144° W., flows S.S.E. along the W. slope of a lofty range, running nearly parallel to the coast, and on reaching Mount Mc'Connell near the point where it receives the Sutton and the Beylund, forces its way through the granite of the range, and turning N.E., pours its waters into the bays of Upstart, Bowling Green, and Cleveland, about lat. 19° 30' S., forming a delta which extends over 60 m. With its affluents it waters a large extent of country, much of which is well adapted for settlement, and it was hoped that it might prove navigable from the coast, and thus afford ample facility for reaching the interior. It was ascertained, however, by careful exploration in 1860, that of the numerous branches into which the Burdekin divides in forming its delta, there is not one fit for navigation.

BURDWAN [add.], a dist. and tn. India, presid. Bengal. The district, between lat. 22° 52' and 23° 40' N.; lon. 87° 21' and 88° 23' E., is bounded N. by Beerbhoom; N.E. and E. Nuddea; S. Hoogly and Midnapore; and W. Bancoorah; length, N.E. to S.W., about 70 m.; breadth, 60 m.; area, 2224 sq. m. The surface, with the exception of some slight jungly eminences in the W., is flat, little elevated above the sea, and watered by numerous streams, of which the most important are the Bhagutee, the Hoogly, formed by it and the Jellinghee, the Hadjee, and the Damoodah. All these streams are navigable, but the district is provided with additional means of conveyance by the East Indian railway. Burdwan owes much of its importance to its mineral field, which is rich in both coal and iron, and has for some time been worked to a considerable extent. The whole district, except a few spots, is well cultivated, and raises good crops of rice, sugar, potatoes, indigo, oilseeds, tobacco, and cotton. Pop. 1,854,152.—The town, cap. of the above dist., situated 67 m. (by rail) N.N.W. Calcutta, on the l. bank of the Damoodah, and on the East Indian railway, consists of a town and suburbs, both composed for the most part of mud huts, covered with thatch, and intermingled with a number of good houses. The only building of any pretensions is the residence of the titular rajah, placed in the midst of extensive gardens, but presenting the appearance, not so much of one regular and symmetrical structure, as of a conglomeration of buildings of various sizes and colours. One of the greatest ornaments of the place is an artificial lake covering about thirty acres, surrounded by a causeway formed of the earth thrown out in digging it, and giving access through an ornamented porch to the numerous bathers who descend into its waters. There are here two English schools, one established by government, and the other belonging to the Church Missionary Society. Pop. about 54,000.

BUREJA, or **BURIYA**, or **NUMAN-BIRA**, a river, Siberia, Manchooria, which, rising about lat. 52° N.; lon. 134° E., in a mountain range which furnishes the sources of several rivers, flows tortuously S.W., and joins l. bank Amoor, considerably below the Zeyor, about lat. 49° 30' N.; lon. 129° 40' E. The tract between these rivers is said to resemble the middle zone of European Russia, and to be capable of sustaining a large population. The valley of the Bureja is very picturesque, and in its upper part is much frequented by hunters for its excellent sables.

BURGBERG, a tn. Austrian empire, Transylvania, circle and 19 m. N.E. HERNANNSTADT; with a Protestant, a R. Catholic, and a non-united Greek church. Pop. 1900.

BURICA, a territory, Isthmus of Panama, prov. Chiriqui, between lat. 8° and 9° N., and lon. 82° 50' and 83° 10' W. It extends from the coasts of the Pacific to the summit of the N. Cordillera, and has an estimated area of 800,000 acres. It has three ports on the Guanavano coast, an extensive region of cocoa-nut trees, 21 to 25 m. long, and an unusual abundance of other valuable products, including dyewoods.

It is understood also to be rich in auriferous and other minerals, though this is rather conjectured than ascertained. The railway across the isthmus has necessarily made a most important addition to its facilities for trade.

BURKE CHANNEL, inlet, British Columbia, 80 m. N. Vancouver Island. It runs inland for 50 m. and then divides into three arms, Dean's Canal, which trends nearly N. for 25 m., and North and South Bentinck Arms, from which a good available route is projected over a generally level country to the Caribou gold-fields.

BURLINGTON [add.], three places, U. States.—1, A tn. and port of entry, Vermont, cap. co. Chittenden, on a bay in Lake Champlain. It stands amidst beautiful scenery, occupying a slope which rises gradually from the lake, and commands one of the finest views in New England; is the largest place in the state, contains many spacious streets and avenues, planted with trees, and lined by elegant mansions; and possesses eight churches, a university with seven professors and ninety-eight students, numerous other schools, a courthouse and jail, a custom-house, and a marine hospital. The harbour, the best on the lake, is protected by a breakwater 900 ft. long, and additional means of transport in all directions are furnished by the Vermont, Central, and Canada, and by the Rutland and Burlington railways. Most of the shipping on Lake Champlain is owned by the inhabitants, who amount to about 8000.—2, A tn. and port of entry, New Jersey, on the Delaware, at the junction of the Assiunk Creek, 20 m. N.E. Philadelphia. It is one of the few places in the United States which has retrograded rather than advanced. Its decline may be traced to the rise of Philadelphia, which has carried off the greater part of its trade. The principal public buildings are nine churches, of which those belonging to the Episcopalians are well endowed, a college and a hall, both Episcopal, and attended by a large number of students, an ancient library, possessed of many rare and valuable works, and a large number of schools, partly supported by the liberality of an early settler. Pop. about 5000.—3, A tn. Iowa, cap. co. Des Moines, r. bank Mississippi, and on the Chicago and Burlington, the Peoria and Burlington, and the Burlington and Missouri River railways. It possesses eleven churches, a university occupying a conspicuous site, and said to be flourishing, and various other schools, several of them of a superior description. The extensive coal-fields in the vicinity afford great facilities for manufactures, which accordingly are numerous and important, including starch and soap factories, iron-foundries, breweries, pork-packing houses, and oil, flour, and saw mills. Pop. (1858), 16,000.

BURMAH, **BURISH**, a prov. British India, lying along the E. shore of Bay of Bengal, from the mouth of the Naf estuary, in about lat. 20° 50' N., to the Pak-chan River, in about 10° 50'. It possesses a direct line of sea-coast of not less than 900 m.; area, 90,000 sq. m. It is formed of three divisions, each of which possesses one principal seaport. Tenasserim has Moulmein; Pegu, Rangoon; and Arracan, Akyab; the first and last of which have risen entirely under British rule. Arracan, the N. division of the province, is separated to the E. from Pegu and Upper Burmah by a range of mountains, whose greatest elevation is about 7000 ft., and running nearly parallel with the coast, gradually lowering towards the S. The N. part of the country has a large area of alluvial soil in the lower course of the river Koladyn and

its numerous affluents. The breadth of the land there, from the sea-shore to the mountains, is from 80 to 90 m., and is generally hilly, covered with forest, and difficult of access. Between the range separating Arracan from Pegu and the sea, for a length of nearly 200 m., as far as Cape Negrais, the country is a mere narrow strip of land. Pegu and Martaban lie in the valleys of the Irawaddy and Sittang Rivers; these valleys, bounded E. and W. by mountain ranges, are narrow in the upper portion, but expand at the delta of the Irawaddy into a magnificent alluvial region, penetrated by a vast number of tidal creeks, and extending over 10,000 sq. m. N. Tenasserim is bounded on the W. by the last 100 m. of the course of the great river Salween, and here the breadth of land, from the sea-shore to the central mountain range, which divides the province on the E. from Siam, is about 80 m. This space is gradually narrowed to 40 m. at the S. extremity, in lat. 11° N. There is no river of any importance S. of the Salween. The interior is a wilderness of hills, densely wooded, with long narrow valleys. The country is generally peopled by various branches of the Indo-Chinese family. The Burmese are the most advanced race; and the Arracanese are of the same race, and speak the same language, though geographically isolated. The occupation is chiefly agriculture, which is rude in kind, but the fertility of the soil is very great; there is only one grain crop in the year and one cereal: rice is cultivated almost exclusively. On the hills the people clear a fresh patch of forest by burning the timber on the ground, and change their villages as the soil becomes exhausted. Usually they have plenty of food and clothes, and occupy houses of bamboo raised on platforms above the ground. The remote hill tribes are in a savage state, except in the district of Toungoo, in which education and Christianity have wrought an entire change. At the principal seaports Europeans and foreign Asiatics have settled in considerable numbers, and opened a trade for the timber, rice, petroleum, and other products of the country. The people generally, since the British occupation, have acquired a good deal of personal property; the small landed proprietors are independent and prosperous, and the labourers obtain wages sufficient for their comfortable subsistence.

In 1852, a war broke out between Great Britain and the Burmese empire, occasioned by the refusal of the government of the latter to give satisfaction for various insults and oppressions exercised against the British merchants at Rangoon. General Godwin having been thereupon sent with an army to the mouth of the Irawaddy, commenced hostilities by the siege and capture of the town of Martaban, on 5th April, and although our troops sustained afterwards a repulse at Rangoon, the expeditions against Prome and Pegu were more successful, resulting in the capture of both these places, and the consequent annexation of the province of Pegu to British India. The king of Ava shortly afterwards agreed to make the concessions demanded, and in June, 1853, the war was formally terminated by a proclamation of the Indian governor-general.

The maritime provinces, comprising the ancient kingdoms of Pegu and Arracan, with the long line of sea-coast known as Tenasserim, were united under one local administration under British rule, and called British Burmah, on January 31, 1862. Arracan and Tenasserim were acquired by treaty after the war of 1825-6. The following table gives the leading statistics of the province for the year 1861-2:—

DIVISIONS.	Area, sq. m.	Pop.	Acres cultivated.	Land Revenue.	Capitation Tax.	Customs, &c.	Fisheries, Opium, and Miscel.	Total Revenue.
Pegu	34,290	1,150,189	907,561	£139,885	£119,204	£156,875	£171,107	£587,021
Tenasserim	88,000	371,402	301,415	52,536	22,050	13,637	108,168	196,391
Arracan	17,780	376,306	390,132	75,299	32,048	35,996	38,003	179,346
Total	90,070	1,897,897	1,608,108	£265,670	£173,302	£206,508	£317,278	£962,758

In the same year (1861-2) 771 vessels, of which 539 were British and 108 American, entered the ports of British Burmah, and 735 vessels (508 British and 113 American) cleared from them; the respective tonnage being 401,499 and 387,617; in addition to which 508 native craft entered and 628 cleared, the tonnage being 36,684 and 33,830 respectively. The imports, still of the same year, amounted to £500 145 in

merchandise, and £33,645 in treasure; of the former £388,957 was from the United Kingdom; the exports were of the value of £1,422,275 in merchandise, of which £1,178,637 went to the United Kingdom; the principal articles of export being cotton, £12,093; drugs, £22,083; rice, £908,782; oils, £22,130; and timber and woods, £417,610.

The ports of British Burmah had the following amount of

foreign commerce in the year 1862:—Moulmein, imports, £54,626; exports, £437,908; Rangoon, imports, £464,643; exports, £533,723; Akyab, imports, £3212; exports, £347,722.

BURNAH, a river, India, which rising about 13 m. E. Allahabad, flows first N.E. for about 25 m., then S.E., forming for 50 m. the boundary between districts Mirzapore and Jounpore, and continuing the same direction for other 25 m., through dist. Benares, joins the Ganges on its l. bank in lat. 25° 18' N.; lon. 83° 7' E. During the rains it is navigable by large boats.

BUROONDA, a vil. India, Rajpootana, state and 59 m. N.E. Joodpoor. It is situated in an open grassy plain, forming a pleasing contrast to the general aridity of the surrounding country, and is supplied with good water from a tank and four wells. Pop. 1645.

BURKAMPOOR, or **BERHAMPORE**, a tn. Hindoostan, presid. Madras, dist. Ganjam, 335 m. S.S.W. Calcutta. It consists of a town and a military cantonment. The town has narrow dirty streets, mean houses, mostly of mud, with a few of brick; bazaars well supplied both with necessaries and luxuries, and manufactures of silk and cotton goods, and of large quantities of sugar and sugar-candy. The cantonment is situated on a rocky ledge, in the midst of a large cultivated plain studded with numerous tanks, but not watered by any perennial stream. Pop. of tn., exclusive of cantonment, about 20,000.

BURKARD, inlet, British Columbia, Western N. America, 14 m. N. entrance Fraser River. Coal has been found on its shores; and in the winter, when the Fraser is sometimes frozen up, the only access to the interior of Columbia is by this inlet and Port Moody, to which steamers have to bring their passengers, mails, and cargoes, which are then transported by a good road to the cap., New Westminster, distant 5 m.

BUR-SIN, a kingdom, W. Africa, lying to the N. of the river Gambia; lat. 14° 5' N.; lon. 16° 40' W. The chief town is Joal, 26 m. S. Goree. The men are tall, muscular, warlike in appearance and manner; the women above the ordinary stature, full, well-made, with small high features, and sparkling eyes. The exports are gum, corn, rice, lime, cattle, hides, and ivory.

BURWA SAGOR, a tn. India, Bundelcund, 83 m. S.E. Gwalior. It lies at the base of a lofty rocky ridge, overlooked by a picturesque old fort, which crowns one of the summits, and possesses a bazaar. To the E. of it is a fine sheet of water, abounding with excellent fish, and formed by damming up the lower gorge of a valley with a masonry embankment, 1 m. long and 60 ft. broad.

BU-SAADÄ, **BOU-SADA**, or **BOUCADA** [add.], a tn. N. Africa, Algeria, Constantine, on the central plateau in the basin of the Hodna, at the height of about 2000 ft. above the sea, 160 m. S.W. Constantine; lat. 35° 10' N.; lon. 4° 14' E. It was taken by the French in November, 1849, and immediately converted by them into an important military station. Before the capture it was the centre of a considerable trade, and the principal entrepôt for the products of the surrounding district. It has been somewhat improved by the settlement of a number of European merchants, and by the houses which they have erected for their residence. The town however presents almost as much of the Arab type as ever. It is surrounded by beautiful and productive gardens, and divided into eight quarters, consisting of houses built mostly of earth. The principal buildings are five mosques, one of which is a very handsome structure. The inhabitants, about 3600, are very industrious, and employ themselves partly in manufactures, as armourers, dyers, and weavers, or in trade, in which the principal articles are the products of the Tell and of Soudan, including wool and silk. The importance of the latter article may be inferred from the fact that the town contains forty silk factories.

BUSCO, a tn. Turkey in Europe, Walachia, cap. circle and on a river of same name, 60 m. N.E. Bucharest, on the road leading from it to Jassy. It is the seat of a court of primary jurisdiction and the see of a bishop, and has an ecclesiastical seminary, a normal school, and important weekly markets. Pop. 8200.

BU-SEMGRUN, a tn. N. Africa, Algerian Sahara, on a rivulet of same name, 190 m. S. by E. Oran. Though only a small place containing about a hundred houses, it is

surrounded by a wall with three gates. The springs in the neighbourhood furnishing the means of irrigation, the surrounding district is remarkable for its fertility, and gives full employment to the greater part of the inhabitants, the remainder working at the ordinary handicrafts. In the large gardens of the environs from 3000 to 4000 date-palms are growing.

BUSSAHIR [add.], a hill state, N. India, between lat. 30° 56' and 32° 8'; lon. 77° 34' and 78° 52'; is bounded, N. by the British dist. Spiti; E. Chinese Tartary; S. Gurwhal; and S.W. and W. several adjacent hill states; length, N.E. to S.W., about 95 m.; breadth, 55 m.; area, 3000 sq. m. It is one of the loftiest and most mountainous tracts in the world, being nearly in the line of the principal axis of the Himalaya. Its lowest elevations, as determined by the points at which the Sutlej and Pabar quit it in their descent, are respectively 3087 and 4932 ft. above the sea, and its highest summits rise from 19,000 ft. upwards to the culminating point of 21,178. At least five peaks exceed 19,000 ft. Nearly the whole drainage is received by the Sutlej and the Pabar, part of it directly, and part by numerous affluents and mountain torrents. Copper is found near Ropay, in the Darbung valley. The vegetable productions vary, from the inter-tropical character which they present on the banks of the Sutlej, in the lowest part of its course within the state, where bamboos and some tropical fruits thrive, to that of expiring vegetation on the borders of perpetual snow. The deodar, which is one of the most magnificent of the Himalayan pines, and promises to become acclimatized in our own country, is found at elevations varying from 6400 to 12,000 ft. The vine (of which 6000 acres were under cultivation in 1860) ripens its fruit as high as 8000 ft. Where it fails the currant and raspberry commence. Apricots thrive and yield abundance of fruit at 11,000 ft., wheat and barley are cultivated at 13,000, and vegetation is not entirely extinct at 17,000. In the less elevated regions upland rice is the standard crop. Potatoes, first introduced by Gerard, are now so extensively grown as to form an important article of export to the lower country. Of some articles two crops are matured in a single year, and the interval between them is so short that the reaper and the sower are often seen at work together in the same field. The inhabitants, according to one account, bear a bad name, and are said to be vindictive, treacherous, and addicted to all the worst vices. According to others, they are a fine athletic race, hospitable, trustworthy, honest, and truthful, the higher classes being of Caucasian descent. In several districts, manufactures, including woollen textile fabrics, are carried to considerable perfection, and traders traverse the country with their goods, and do extensive business at the public fairs. The state is governed by a rajah of Rajpoot extraction, as a tributary of the British government. His annual revenue, paid principally in kind, and consisting of agricultural produce, metals, blankets, and other coarse manufactures, is estimated at £150,000. The amount of tribute is only £1500. Estimated pop. 150,000.

BUSTEE, a tn. India, W. Provinces, dist. and 43 m. W. Goruckpore, is inclosed by a ditch and a bamboo hedge, and has a mud fort and a well-supplied bazaar. It is however a poor place, about half a mile square, consisting of about 500 huts huddled together in narrow lanes.

BUTE, an inlet, British Columbia, E. side Gulf of Georgia. It is long and narrow, stretching to the N.E., and from the head of it a company have undertaken to construct a route of 241 m., of which 83 m. are by lake and river, to Alexandria, on the upper Fraser River, for the Caribou gold-fields.

BUTSCHKOW, a tn. Austrian empire, Bohemia, circle and about 15 m. W. Prague; has a castle, finely situated on a commanding height, a chapel, a brewery, and a distillery. Pop. 2600.

BUTTYEN, a tn. Austrian empire, Hungary, co. and 34 m. N.E. Arad, cap. dist. of same name; with an infirmary, a court of justice, and a mill. Pop. 3149.

BUTUAN, a tn. Philippine Isles, cap. dist. and near a bay of same name, on the N. coast of the isl. of Mindanao, about lat. 8° 45' N.; lon. 125° 12' E. It stands about 4 m. above the mouth of a branch of the river which proceeds from Lake Sapongan, and is here navigable for vessels of 100 tons burden. The only important product of the vicinity is the sago-palm. It contains, with its dist., a pop. of 9804.

BUYUK ALADIN, a vil. European Turkey, Bulgaria, 6 m. W. Varna. The battle between Alexander and the Triballians was fought in its vicinity.

BYAN-KENO, a vil. Russian empire, Trans-Baikal prov., on the Shilka, below Nerzhinsk. It is a large place, containing two churches, the one of wood, and the other of brick, and is inhabited partly by Cossacks and partly by convicts.

BYETURNEE, a river, India, which rises near Lohadugga, in Orissa, in lat. 23° 29' N.; lon. 84° 55' E., flows very circuitously, first S.S.W., and then S.S.E., through Cuttaek, and falls into the Bay of Bengal, after a course of about 275 m., during the last ten of which it takes the name of the Dhumra. It is held in great veneration by the Hindoos, especially at its source.

BYGHOOLOO, or **BIAGUL**, a river, India, which rises in dist. Pilleebheet, in Rohileund, flows S. for about 130 m., and joins the W. Ramgunga on its l. bank. It is much used for irrigation.

BYRON, an isl. British America, Gulf of St. Lawrence, about 10 m. from the N. cape of the Magdalen group. It is rather more than 4 m. long and 1 m. broad, and is formed of alternating and nearly horizontal strata of red sandstone, red ochreous clay, and shelly gray sandstone. These rocks form perpendicular or overhanging cliffs all round the shores, and being soft and friable, are broken in holes and caverns, and fast giving way to the action of the waves. A large upland tract is covered with good native grass, but a great part of the surface is wooded with dwarf spruce. The isl. is uninhabited.

C.

CABANGO, a tn. S.W. Africa, on the W. frontiers of the country of Londa or Balonda; lat. 9° 31' S.; lon. 20° 31' E. It is situated on the Chibombo, is the residence of a native chief subordinate to Matiamvo, and consists of about 200 huts and a dozen square houses, constructed of poles interwoven with grass. The latter are occupied by half-caste Portuguese, agents of the Cassange traders. Provisions are here very abundant and cheap.

CAÇAPAVA, a tn. Brazil, prov. Rio-Grande-do-Sul, beautifully situated on a mountain about 2500 ft. above the sea, 130 m. W.S.W. Alegre; lat. 30° 30' S.; lon. 53° 30' W. It consists of several well-formed streets, with some substantial and even elegant houses; but derives its chief claim to notice from having been at one time selected as an important military station and the site of a citadel. This selection was afterwards abandoned, but in the meantime the works had been commenced, and the consequence is that the greater part of the place is occupied by unfinished buildings, evidently intended to be of a magnificent description, on which, from the progress made in their erection, a very large sum must have been expended. Among these unfinished buildings, which have very much the appearance of ruins, the most conspicuous are the church, the barracks, the house of correction, and large portions of an octagonal citadel. P. 700.

CACARANA, a river, La Plata, which, rising in the prov. and the Sierra of Cordova, at first pursues an E. course, under the name of Tercero. On receiving the Quarto, which doubles its volume, and entering the prov. of Entre-Rios, it becomes the Caracana, which thereafter has a circuitous course for 120 m., and joins r. bank Parana. Its fall, at the rate of 2½ ft. to the mile, is too great to admit of its successful navigation, either in its natural state or by the appliance of artificial means.

CACOUNGA, a tn. British America, Canada E., co. Temiscouata, beautifully situated on a height above r. bank St. Lawrence, 100 m. N.E. Quebec. It possesses a R. Catholic chapel, and having a fine beach for bathing has become a very fashionable watering-place; steamers ply regularly in summer between it and Montreal and Quebec. Pop. about 1000.

CADEREYTA-XIMENES, two tns. Mexico:—1, Nuevo-Leon, in a fertile district, 33 m. E. Monterey; lat. 25° 44' N.; lon. 99° 48' W. It is a well-built handsome town, with about 2000 inhabitants, most of whom are engaged in agriculture.—2, A tn. state and 22 m. E. Queretaro, in the valley of San Juan, and at the foot of the Sierra Gorda. It is a well-built place, which long owed its prosperity to the richness of its mines, but now depends on agriculture and grazing. Pop. 4000.

CADING, a tn. China, prov. Kiangsoo, on the Soochow branch of the Yang-tze-kiang, about 35 m. from Shanghai. It is an ancient city, surrounded by walls, and situated in the midst of an undulating and very fertile plain, on which indigo is grown to a very large extent. Among the manufactures is paper, made from the bamboo, by saturating it with lime and water, and then converting it into pulp. So

abundant and cheap is this paper, that a coarse description is made for the sole purpose of being mixed with the mortar used by bricklayers.

CAHAWBA, a RIVER, U. States, which rises in co. Jefferson, Alabama, flows through a valuable coal-field, and joins the Alabama at the village of its own name. It is navigable for about 100 m.—A VILLAGE, Alabama, at the confluence of the Cahawba with Alabama River. It contains several churches, and is the shipping point for the cotton produced in the district.

CAICOS [add.], a group of isls. West Indies, situated among the eastern portion of the Bahamas, on a large shallow sand-bank of same name, which stretches 58 m. from E. to W., and nearly the same distance from N. to S. The principal islands, proceeding from E. to W. in an irregular curve, are East Caicos, Grand Caicos, North Caicos, Providenciales, and West Caicos. They are wooded and tolerably fertile, and at one time produced cotton, but at present the inhabitants, who are few in number, and mostly fishermen and wreckers, employ the land merely for the rearing of stock and the cultivation of vegetable produce.

CAIRO, a tn. U. States, Illinois, Alexander co., on a low point at the junction of the Ohio with the Mississippi, 170 m. S. by E. Springfield. The site, though commercially advantageous, was so injudiciously chosen, that it became necessary to protect it from inundation by means of an embankment 50 ft. wide and 10 ft. high. Even this proved insufficient, and during a remarkable flood in the summer of 1858 nearly the whole town was swept away. Previous to this catastrophe Cairo consisted of about 470 houses, and possessed five churches, two bank agencies, eight hotels, an iron-foundry, two railway depôts, and three mills.

CAISA, a small tn. S. America, Bolivia, prov. and 30 m. S.S.E. Potosi, in a mountain recess. It consists of mud houses, and has a public square, a church, and a superior post-house.

CALAIS [add.], a tn. U. States, Maine, on the St. Croix, at the E. extremity of the state, opposite to St. Stephen, in British America, the river here forming part of the boundary between the two countries. It contains eight churches, an academy, a high-school, and sixteen school-houses; and besides possessing an iron-foundry, a dry dock, a building-yard, and a large establishment for calcining and grinding plaster-of-Paris, is largely engaged in the lumber trade, which employs no fewer than sixty-three mills and forty lath and shingle machines. In 1857 the export of sawed lumber amounted to 65,000,000 ft., of which about 30,000,000 went to foreign ports, chiefly Great Britain and the West Indies, while the remainder was carried coastwise as far S. as the Potomae. The other exports of that year were 68,000,000 laths, 17,000,000 shingles, 2,000,000 pickets, 90,000 clapboards, 8000 sugar boxes, 4000 hackmatack ship-knees, and 1400 cords of wood and bark. Pop. 6119.

CALAMA, a tn. S. America, Bolivia, prov. Atacama, 45 m. E. Cobija, on a stream of same name, at the height of

7800 ft. above the sea. It possesses a number of good houses and a handsome church, and is the entrepôt for the goods sent from Cobija to the mining districts of Potosi. The inhabitants, about 600, are mostly merchants and carriers.

CALAMARCA, a tn. S. America, Bolivia, prov. and 30 m. S. La Paz. It consists chiefly of mud hovels, which, clustering round the church, strikingly contrast with its imposing dimensions and white-washed façade. The post is a large building forming three sides of a square.

CALAVINO, a tn. Austrian empire, circle and about 8 m. S.W. Trent; with a beautiful parish church built of red sandstone, and 1500 inhabitants.

CALBUCO, a tn. S. America, Chili, dist. Araucania, on the N.W. shore of the Gulf of Anud, and at the base of the volcano Purarrague, 140 m. S.S.E. of Valdivia; lat. 41° 50' S.; lon. 73° 18' W. It contains a mixed population of Spaniards, creoles, and Indians, and possesses two convents and a parish church.

CALCUTTA [add.], a city, India. The sanitary condition of Calcutta, especially of the northern districts occupied exclusively by the natives, has long been very unsatisfactory, and a subject of much anxiety. Some idea of it may be formed from the facts, that the streets are all bordered with large open drains or ditches, in which almost all the filth and nightsoil of the city stagnates and putrefies, and that more than 5000 human corpses have annually been thrown from Calcutta into the river, 1500 corpses having been so cast into it from the government hospitals alone. The latter practice was summarily suppressed by the government in the beginning of 1864; and by a new act, in 1863, for reforming the municipal administration of the city, the corporation are empowered to deal effectively with the whole sanitary question, by the removal of the excessive pollutions, the construction of an efficient system of drainage and sewerage, and the provision of an adequate supply of water for the use of the inhabitants. The dead level of the site of the city presents great difficulties in the way of effectual drainage, which, however, are surmountable by the means of pumping stations and high-level works which have been for some time in progress of construction.

In the year 1861-2 (ending April 30), before the passing of the new municipal act, the total income of the municipal department was £67,602, out of which £18,000 were devoted to the construction of new drainage, and £3000 to water supply. In 1864, the first year of the new system, this outlay was increased 50 per cent.

Many improvements have been carried out in other ways; a square has been made between the theatre and Circular Roads, and thrown open to the public; the botanic gardens also have been better arranged, and the extensive library connected with it increased.

The commerce of the port has largely increased, the tonnage of vessels in 1861-2 being nearly double of that in 1850-1, as the following table shows:—

In October, 1864, dreadful devastation of shipping on the river, and of lives and property on shore, was caused by an almost unprecedented hurricane. Nearly 200 vessels, with their crews, were destroyed, and the shore along the city was everywhere strewn with wrecks and debris of every kind.

The value of the commerce, in respect of the imports, suffered a diminution in the year 1861-2, owing to the derangement of the cotton trade by the American civil war, and consequent falling off in the export of cotton manufactures from England to Calcutta, the chief export of India for those goods. The imports and exports for the three years 1860-2, ending respectively on April 30, were as follows:—

	1860.	1861.	1862.
Imports.....	£20,240,943.....	£15,024,075.....	£14,294,987
Exports.....	12,125,807.....	12,577,760.....	12,704,931

The net revenue derived from customs in the year 1861-2 amounted to £2,697,237. In April, 1862, the duties on cotton manufactures, tobacco, and malt liquors were largely reduced. The extension of railway communication between Calcutta and the interior of the country has had great influence upon its commercial activity and importance, which, however, is likely to be somewhat affected by the construction of a short line of 28 m. from it S.E. to the river Mutlah; on which a new port has been lately established, with the name of Port Canning. The new port, situated at the junction of the three rivers which united form the Mutlah, about 50 m. distant from the sea, and easy of approach, the channels being clear and permanent, and not obstructed by shifting sands as those of the Hoogly, is anticipated to absorb the bulk of the produce of the eastern district and the Sunderbunds, and to become the entrepôt of the Mauritius, Bourbon, Colombo, and other grain trades, as well probably as the trade in salt. The cost of shipping is calculated to be less than at Calcutta, with which the railway will supply cheap and rapid communication.

The population of the city is estimated to reach nearly 500,000, covering an area of about 8 sq. m. Emigration has gone on to some extent, the numbers in 1862 amounting to 22,600, who sailed from Calcutta in 60 ships. Of them, 6936 went to the Mauritius, 5333 to Réunion Island, 4366 to British Guiana, the remainder to Jamaica and other islands of the W. Indies.

CALDERA, a tn. and port, Chili, prov. Atacama, 50 m. (by rail) N.W. Copiapo; lat. 27° 2' S.; lon. 70° 52' W. It stands upon a tolerably well-sheltered bay, the bottom of which is low and sandy, but hills rise a little inland, and the ranges become higher as they recede from the coast. The town is of very recent formation, the only inhabitants in 1850 being "the myriads of fleas that lived in the sand, and the flies which infested the air." Without a blade of vegetation, without water, a desert of sand through which here and there black rocks protrude, the site was unpromising enough; but the necessity for an outlet for the ores and

minerals in the neighbourhood of Copiapo, and the energy of one or two persons, led to the establishment of the port, the construction of a line of railway to Copiapo, with an extension to Sabellon and Chancillo, and a proposed branch to Tres-Puntas N.E. of Copiapo, and to the organization of a line of steamers. The treasures of copper thus brought within reach, and the unexpected richness of the mines of Tres-Puntas, have caused Caldera to rise and flourish with most extraordinary rapidity. The town is well laid out, and has some large and handsome houses and buildings, though of course others are not of this character. A fine mole has been run out from some rocks at the S.E. angle of the bay into deep water, and the rail is continued to the pier-head. The privation of water is the great drawback, and has to be provided for by distillation, which is even used to supply the locomotives and other engines; but this may be remedied, as it is proposed to convey water from the upper country through pipes.

SHIPPING in the PORT of CALCUTTA.

Total	1033	356,502	979	688,448	1030	358,155	998	672,049

The number of vessels entering the port in 1859 was 248, of 96,846 tons; in 1860, 379, of 150,365 tons; in 1861, 391, of 185,175 tons; and in 1862, 399, of 142,655 tons. Of vessels cleared from the port the number was in 1859, 223, of 84,737 tons; in 1860, 377, of 151,941 tons; in 1861, 395, of 192,012 tons; and in 1862, 402, of 144,138 tons.

CALDIERO, a tn. Austrian Italy, prov. and 8 m. E. Verona, on the railway to Venice. It occupies the S. slope of a mountain ridge; and has two parish churches, and thermal springs, which were known to the Romans. The environs were the scenes of bloody conflicts between the French and Austrians, on the 12th November, 1796, and the 29th, 30th, and 31st October, 1805.

CALDWELL, a vil. U. States, New York, in a beautiful district at the S. end of Lake George, 58 m. N. Albany. It is much visited by tourists for its picturesque scenery, and contains the ruins of Forts William and Henry, which figure much in the French and revolutionary wars. P. 1064.

CALEDONIA, 1, A tn. British America, Canada W., co. Haldimand, on the Great River and the Buffalo and Lake Huron railway, 47 m. S.W. Toronto. It possesses three churches—a Church of England, a Free, and a United Presbyterian; and carries on a large trade in flour and lumber. Pop. about 1300.—2, A tn. U. States, New York, on the Genesee; with iron mines, and saline and sulphureous springs. Pop. 2013.—3, A lake and river, N.W. America, on the British and U. States frontier. From the lake in a S.W. direction flows the river of same name. It ultimately forms two branches, one of which falls into Admiralty Inlet, and the other into the Gulf of Georgia.

CALICUT [add.], a tn. India, presid. and 330 m. S.W. Madras, dist. Malabar, on a flat of the Malabar coast, little raised above the sea. It consists of a principal street, about three-fourths of a mile long, and several small cross streets leading from it. The houses are built chiefly of laterite, and are partly covered with tiles, partly thatched with cocconut leaves. Of the four quarters into which the town is divided, that to the S. is densely peopled by Moplas, and contains numerous mosques; and that to the N.W. or Portuguese part contains a R. Catholic church, and a large jail capable of receiving 600 prisoners. The principal European residents dwell in houses facing the sea; the custom-house is in the same locality. The other principal buildings are two hospitals, the cutcherry, and the Talli Devassam, a celebrated Hindoo temple. Calicut has no proper harbour, and very little trade; but possesses historical interest as the first spot in India on which Vasco de Gama landed in 1498, and subsequently as the scene of many struggles between the Portuguese and the natives. Pop. about 15,000.

CALIFORNIA [add.], one of the U. States. The resources of this rich and productive country continue to be developed at a rapid rate, and appear still to be far from reaching their limits. The gold mines naturally hold the first place in importance, and the quantity of the precious metal shows generally an annual increase. The application of machinery, and improved methods of mining, enable those engaged in the work to turn to good account vast deposits which would otherwise have remained unproductive. Thus in Nevada, Amador, Mariposa counties, and elsewhere, mills have been erected which crush the quartz rock at a trifling expense—12s. or 14s. per ton; so that rock yielding not more than 23s. to 40s. or 60s. of gold per ton can be worked to advantage, which in former years was considered almost valueless. The consequence is, that an almost inexhaustible source of profit is opened to industry. In other places, where gold was found near the surface of the soil, and after a time appeared to be exhausted, new veins of ore have been discovered at a greater depth, and thus by successive sinkings fresh supplies have been obtained. The shafts are now in many instances of considerable depth, in one case 1000 ft. The quantity of gold and silver received at San Francisco from the interior of the state, and from Nevada state, during the year 1864, amounted to £9,092,100; and in the same period arrived £1,260,475, the produce of Oregon state and the territories of Washington and Idaho, and £350,000 from

British Columbia. The exports of treasure during the five years, 1860-64, were as follows:—

Destination.	1860.	1861.	1862.	1863.	1864.
	£	£	£	£	£
England	534,600	812,350	2,590,030	5,693,450	6,887,800
New York	7,132,300	6,525,600	5,233,805	2,077,865	2,463,225
China	674,900	708,200	632,150	841,275	1,577,775
Panama	60,100	70,000	86,900	500,660	75,750
Other Countries	57,600	19,200	64,460	115,535	137,400
Total	8,459,500	8,135,350	8,512,345	9,228,785	11,141,450

Copper mining also has been carried on in various parts of the state; the ore is found in deposits, and about 15,000 tons of it were shipped in 1864, containing from 15 to 20 per cent. of copper. Within the last three or four years several quicksilver mines have been discovered, but the 'New Almaden' is the only one as yet producing any great quantity of metal; from that mine over 40,000 flasks (75 lbs. each) were extracted in 1864, of which 36,927 flasks were exported, one-half of them to China. Coal mining has also been put in active operation at Mount Diablo. There are indications of petroleum springs in several parts of the state; but it has yet to be ascertained if the oil can be obtained in sufficient quantity to be remunerative.

A new branch of profitable industry has been discovered in the suitability of the soil and climate of the state to the cultivation of the grape vine. The growth of the vine was formerly confined to the county of Los Angeles, 350 m. S. of San Francisco, but is now carried on all over the state. By a perhaps too sanguine estimate, it is calculated that the state contains twice as much land adapted to the culture of the vine as there is in France, and that the produce will exceed that of the latter in both quality and relative quantity. In 1862 official returns report that there were 10,592,688 vines growing in vineyards, and that the number was increasing annually and very largely. It is said that there were made in 1864 between 3,000,000 and 4,000,000 gallons of wine, and from 150,000 to 200,000 gallons of brandy; but probably this is beyond the reality. The produce is all absorbed by local consumption.

Agriculture generally is receiving more attention in both the mining and other districts, and in some of them farming and stock-raising are already equal in importance to the mining interest. This attention to the cultivation of the soil; the vast improvement everywhere in the style of building in the towns and villages throughout the mining districts, and the ameliorated condition of the miners and their families generally, show how much of the capital raised in the state, that used to be sent for the support of relatives in distant countries, is now retained and invested on the spot. The value of the cereal productions exported in 1864 was not large, the produce of the land being mostly required for home use; but it comprised, of wheat, £156,700; barley, £11,700; beans, £13,900; oats, £9450; and flour, £106,050. The season, however, had been very unfavourable to the crops. Of wool about 8,000,000 lbs were grown in 1864, being about 400,000 lbs. more than in 1863; but the drought of the previous winter had destroyed vast numbers of sheep as well as of cattle.

In the year 1864 the following ships arrived from various countries:—

Nationality.	Vessels.	Tons.
Atlantic Ports of the Union	116	120,064
Pacific Ports of the Union	1523	283,389
Great Britain	44	86,505
Australia	35	17,769
Calcutta	2	900
New Zealand	1	659
Vancouver Island	61	54,746
Falkland Islands	2	1,309
China	36	23,110
France	18	7,453
Hamburgh	9	4,104
Japan	7	2,098
Manilla	12	6,558
Java	1	350
Siam	1	294
Spain	2	677
Brazil	10	3,532

Ships arrived from various countries in 1864—Continued.

Nationality.	Vessels.	Tons.
Chili	10	4,943
Peru	6	1,529
Ecuador	1	131

Sandwich Islands	48	18,495
Georgian Islands	11	1,940
Central America	10	10,145
Russian America	8	3,998
Russian Asia	2	407
Whaling	30	9,573

A large part of the imports are received through the eastern ports of the Union, and consequently a correct statement of them cannot be arrived at. Of manufactured goods of linen, wool, cotton, &c., very small quantities have been received since the introduction of the Morrill tariff in 1861, which amounted almost to a prohibition of them; the demand for such goods is now met to a great extent by home productions. The import of lumber is very considerable. It amounted at San Francisco in 1864 to 117,915,000 ft. of boards; of laths, 15,379,400 ft.; shingles, 12,343,450 ft.; piles, 515,196 lineal ft.; maple, 300 tons; and cedar logs, 245 tons. Of coffee, 9,626,176 lbs., and 1,477,723 lbs. of tea from China and Japan, were imported in the same year, as well as 5909 tons of rice, 12,240 tons of sugar, and about 2,000,000 lbs. of tobacco.

The value and destination of the exports, exclusive of treasure previously specified, was in the same year as follows:—

To Eastern Ports of the Union	£1,033,250
Great Britain	191,170
Australia	125,950
Vancouver Island and British Columbia	302,150
Mexico	443,125
Peru	29,500
China	274,820
Sandwich Islands	131,900
Japan	9,900
Other Countries	102,500
Total	£2,644,265

The length of railway existing in California is as yet not great. A few short lines have been, and are being constructed, chiefly in the Sacramento district; but new lines, and extensions of present ones, are in contemplation, and when effected, will aid greatly in developing the resources of the country. Telegraphic communication also is rapidly being opened in various directions; one line, already partially constructed, being continued to Vancouver Island and British Columbia, under an arrangement between the governments.

The population of the state of California, according to the census of 1860, was 379,994, being an increase of 310 per cent. upon that in 1850; comprised in it were 34,919 Chinese, and 17,562 Indians. It has since continued to increase, the net accession of emigrants alone amounting in 1864 to about 10,000.

CALINGAPATAM, a tn. India, presid. Madras, dist. and 94 m. S.W. Ganjam, S. bank Vomshudara. Under Mahometan rule it was a place of great size and importance, and possessed many mosques, of which the remains are still seen. After a long decline it is again rising into importance in consequence of its harbour, which, with the exception of Coringa, affords the best anchorage on the coast during the S.E. monsoon. Its principal exports are rice, gingely seeds, wheat, grain, hides, timber, and bees'-wax.

CALLAO [add.], a tn. and port, Peru. A railway has been opened between Callao and Lima the capital, a distance of 7 m., much to the benefit and convenience of both places. The commerce of the port has steadily increased, the number of vessels and their tonnage entered and cleared in the three years 1861-3 having been as follows:—

	1861.		1862.		1863.	
	vessels.	tons.	vessels.	tons.	vessels.	tons.
Entered.....	1006	469,165	1231	701,880	1364	782,291
Cleared.....	1002	462,202	1188	678,350	1321	762,940

The value of the imports in the year 1862 amounted to £3,600,000, and of the exports to £4,560,000.

CALPEE, CALPI, or KALPY [add.], a tn. India, N.W. Provinces, cap. pergunnah of same name, r. bank Jumna, which has here a width of a mile and a half in the rainy, and only half a mile in the dry season, 140 m. W.N.W. Allahabad. It is situated among rugged ravines, and is meanly built, consisting for the most part of mud-houses, with a few of a better description, constructed of kunkur or calcareous conglomerate. It is defended by a fort situated on an isolated height between the town and the river, but so imperfectly constructed as to be incapable of resisting a serious

GHAT AT CALPEE.—From Bacon's First Impressions of India.

attack. It has manufactures of paper and refined sugar, the latter said to be the finest in the world, but too high-priced to be in general demand. During the sepoy mutiny Calpee became a principal rendezvous of the revolted Gwalior contingent, which, however, was signally defeated, first by Sir Colin Campbell in the vicinity of Cawnpore, on which it had previously made an unsuccessful attack, and afterwards at Calpee itself by Sir Hugh Rose, on the 26th May, 1858. Pop. 21,182.

CALTAGIRONE, a tn. Sicily, in a mountainous dist. in the S.W. of prov. Catania, 86 m. S.W. Messina. It is the

most important town in the interior of the island, but stands, in a manner, completely isolated, as there is no good road by which it can communicate with any town on the coast. Several roads in tolerable condition lead from its gates, but after a short distance become lost in swamps, or rise so steeply, that pack-mules only can be used upon them. The only manufacture for which the place has acquired any celebrity is terra cotta, which is moulded with much taste into articles of antique form, similar to those found in Pompeii. These articles, made chiefly here and in Catania, command an extensive sale. Pop. 28,000.

CALTURA [add.], a tn. on the S.W. coast of Ceylon, a little above the mouth of the Kalu-ganga, which is navigable by boats up to Ratnapoora, 24 m. S.S.W. Colombo. A fort built on a green eminence once defended the entrance to the river, but it has been dismantled, and now forms the residence of one of the civil officers. The only other buildings deserving of notice are a handsome Wesleyan church and school. The extensive cocoa-nut groves around the town make it one of the principal places for the distillation of arrack. From the climate and quality of the soil it was at one time expected that the sugar-cane might be successfully cultivated as a remunerative crop. The attempt has accordingly been made, but without the anticipated result. The Lake of Bolgodde, only a few miles inland, is frequented by prodigious numbers of wild-fowl, which roost and breed in the luxuriant forests by which its banks are encircled.

CALVADOS, a long group of high islands belonging to the Louisiade Archipelago, to the S.E. of New Guinea. It extends about 45 m. from Real E. to Flat Island, the central hill of which is in lat. $11^{\circ} 9' 30''$ S.; lon. $153^{\circ} 5' E.$ All the islands are well wooded, and of beautiful appearance, large groves of cocoa-nut trees occupying the low lands about the bays, while the hills above are covered with rich vegetation. The inhabitants are numerous, and appear to be careful cultivators, raising large quantities of yam and cocoa-nuts, together with Indian corn, ginger, and sugar-cane. Some of their canoes are of large size.

CAMBAY [add.], a dist. and tn. India, Gujerat:—The district, bounded N. by Kaira, W. by the Saburmuttee, S. by the Gulf of Cambay, and E. by the Mhye, has an area of 500 sq. m., and a revenue of about £30,000.—The town, on the N. shore of the estuary of the Mhye, occupies an uneven site on an eminence of inconsiderable elevation, and is surrounded by a brick wall, loopholed for musketry, and flanked by fifty-two irregular towers in bad repair. The whole place tells, by the number of uninhabited houses, and mouldering mosques and palaces, of a greatness which once existed, but has now passed away. The principal buildings are the nabob's palace, a large but tasteless structure; the principal mosque, a handsome building, which, originally a Hindoo temple, was converted to its present use when the Mahometans conquered Gujerat; a Jain temple, with a curious crypt, and a number of large and often beautiful mausoleums in the form of circular or octagonal temples. One of these tells of a frightful dearth, during which an eminent Mogul, whose remains it incloses, perished from starvation, after he had in vain offered a measure of pearls for one of grain. Cambay was long celebrated for its manufactures of chintz, silk, and gold stuffs, and had so large a trade that Tieffenthaler, in 1751, counted seventy vessels at anchor in front of it. Its subsequent decay is attributed partly to the oppressive exactions of its rulers, and partly to increased difficulty of access to its harbour. The only species of manufacture which now gives it any celebrity is the working of carnelians, agates, and onyxes into a variety of ornaments. The stones are found about 80 m. to the S.E. among the Rajpeepla Hills, on the banks of the Nerbudda. Pop. 37,000

CAMBODIA [add.], cap. of the ancient kingdom of same name, now mostly incorporated with Siam, stood near the N. extremity of King's Lake or Tale Sab, about lat. $13^{\circ} 45' N.$; lon. $104^{\circ} 20' E.$ The only trace of it now remaining is the Nokoia temple, which was spared when the city was taken by the Cochinchinese about A.D. 200, and is still too perfect to be called a ruin. It stands solitary in the midst of jungle, and is entered across a magnificent stone causeway a third of a mile long, leading through an ornamental entrance. The building is composed of three quadrangles, the outer one inclosing the others, which rise successively above it. The

outer and lowest quadrangle is 200 yards square, and has a broad verandah, with a double row of square ornamented pillars running all round, with large and elaborately ornamented entrances at the corners and centres. The whole is built of a hard gray sandstone, without wood, cement, or iron, and is covered within and without with carefully executed bas-reliefs of Buddhist idols. It is still visited as a shrine by the Cambodians, and several priests reside outside the walls.

CAMDEN [add.], four places, U. States:—1 A tn. New Jersey, cap. co. same name, on a plain, l. bank Delaware, opposite to Philadelphia, and on several lines of railway. It is laid out in regular streets, which cross each other at right angles, and possesses many fine buildings, ten churches, two literary associations, a courthouse, and jail. The chief industrial establishments are iron-foundries, glass-works, chemical works, several mills and building-yards. The communication with Philadelphia is kept up by means of five ferries. Pop. (1860) 13,580.—2, A tn. S. Carolina, cap. dist. Kershaw, in a fertile district on the Waterec, which is here crossed by a bridge, 110 m. N.N.W. Charleston. Having ample means of communication both by railway and by the river, which is navigable by steam-boats, it carries on a large trade, of which the principal exports are cotton and turpentine. Pop. 1621.—3, A vil. Alabama, cap. co. Wilcox, on a healthy and somewhat elevated site overlooking the Alabama River, 100 m. N.E. Mobile. It is a flourishing place, with an academy, two female seminaries, and an active trade. Pop. 800.—4, A tn. Arkansas, cap. co. Washita, on the slope of a range of hills above r. bank Washita, and at the head of navigation for large steamers, 90 m. S.S.E. Little Rock. It is a handsome place, in the planning and building of which considerable taste has been displayed. Pop. 2219.

CAMEROONS, or **CAMAROONS** [Portug. *Camaraõs*, shrimps], [add.], mountain, Western Africa, Bight of Biafra. The base of the mountain occupies an estimated area of 380 sq. m., about one-third larger than Madeira or the Isle of Man. It is bounded on the N. by the Rumbi Mountains, on the S. by the Atlantic, on the E. by a creek flowing into the Bimbia River, and on the W. by a branch of the Rio del Re or Rumbi River. It thus forms a parallelogram within lat. $4^{\circ} 20'$ and $3^{\circ} 57' N.$; and lon. $9^{\circ} 1'$ and $9^{\circ} 25' E.$ The mountain is of volcanic formation, and the upper region of it presents numerous extinct craters, often rising into elevated peaks. The summit—about 13 m. N. from Victoria, the settlement on Ambas Bay—is a cone crowned with two distinct peaks, the higher, named Albert Mountain, rising to the height of 13,129 ft. above sea-level, and the other, the Victoria Mountain, $\frac{1}{2}$ m. due S., is about 435 ft. lower. The Albert Crater is a "bowl" about 1000 ft. in circumference, and 150 ft. in greatest depth; its form is that of an inverted cone, with a slope varying to 45° ; the colours are red, white, and yellow, where stone occupies the surface, a deep blue shows the slides of scorix, and the bottom is black. Its outlet is to the south. It appears to be a more modern formation than Victoria Crater, which, though exposed to the furious N.E. wind, has an abundant growth of cryptogams, while the Albert is almost bare. The other principal elevations, mostly with craters at their summits, are Mounts Isabel and Helen, lying 4 to 5 m. S.W. of the great peak, the latter reaching the height of 9223 ft.; and several lofty peaks on the W. side, which have not hitherto been examined. Little Cameroons, upon the S.S.W. part of the mountain, and within 5 m. of the sea, is another of considerable magnitude, standing alone, and rising to a point. The volcanic character of the mountain is everywhere apparent; in some places the surface is studded with small craters, as many as 31 having been counted within a radius of 2 m., at a spot 6 m. S.W. of the summit, at the height of about 7000 ft. The craters are of two distinct formations. Those under the elevation of 6000 or 7000 ft. are monticules, covered with dense forest; those above that altitude are smooth, grassy, regular, and uniform. As may be supposed, the surface is everywhere largely covered with streams and beds of lava and scoriceous deposits. Some of the craters have the appearance of having been eruptive at no distant epoch, while others must have been long extinct. According to native accounts, about the year 1838 'fire came out of the ground;' but the only existing indication of volcanic activity observed by Captain Burton

in January, 1862, was on the northern counter-slope of the Albert Crater, where the 'surface is a convexity striated with alternate bands of bright green moss, white lime, and sulphurous marl, red and yellow. It was soft and yielding to the tread, and regular lines of smoke-jets and puffs rose in rings and curls from the stripes, smelling strongly of sulphur, and by the genial warmth attracting many small birds' to the vicinity.

Up to the altitude of 7000 or 8000 ft. the surface of the mountain is clothed with forest. In its lower part the vegetation consists of palms, cocoa, bamboo, and a variety of other trees of tropical growth. The soil stretching from the shore to 1500 ft. above sea-level is a rich yellow loam, admirably fitted for growing sugar-cane, tobacco, and cacao. At the height of 4500 feet the blackberry is seen, and the salvia, heath, and various flowering shrubs. There are also large tracts of fern, succeeded by forest growth to the level, as has been said, of 7000 or 8000 ft.; vegetation then becomes scanty. The mountain is sparsely occupied by natives, who have a few villages on its southern slope, the highest being that of Mapanya, 2650 ft. above the sea, and nearly 8 in. by the road N.N.W. from Victoria, the settlement on Ambas Bay. The climate naturally varies according to elevation from the tropical heat and fever-haunts at its base; to the temperate and healthful region of its middle altitude, and the cold and perhaps perpetual frost of its summit. Upon Albert Mountain the highest temperature registered in January, 1862, was 55°, and the lowest 27°; at 7500 ft. the temperature varied from 45° or 50°, to 70° or 75° at the same period, and was sensibly affected by the apparently constant N.E. wind, often blowing with great violence. The temperate regions of the mountain, above the range of fever, appear well adapted as a sanatorium, and a resort for Europeans from the unhealthy stations on the west coast of Africa; such a retreat in the malarious and hot seasons has long been felt to be a great desideratum.

CAMLAPOOR, a vil. India, presid. Madras, dist. and 32 m. N.W. Bellary. It is defended by a fort with a ditch and glacis; but the greater number of the houses, which in all amount to about 2000, are outside its walls. The ancient but ruined town of Beejanngur is in the immediate vicinity, and the descendants of the rajahs used to live at Camlapoor till 1820, when they removed to the other side of the Toombudra. Some iron is brought from the neighbouring hills and smelted here.

CANADA [add] The subject of the union of the North American provinces under one general government, which had been under consideration for some years, was brought more prominently forward in 1864, and in October of that year a meeting of delegates from Canada, Nova Scotia, New Brunswick, Newfoundland, and Prince Edward Island, was held, at which a scheme was drawn up and subsequently submitted to the English government, whose approval it conditionally received. Great advantages are anticipated from the consolidation of the provinces, in regard both to their internal economy and to their external interests. The resolutions adopted at the conference of delegates proposed that there should be a federal union under the crown of Great Britain, based upon the model of the British constitution; that the general government should be exercised by the sovereign or a duly authorized representative of the sovereign, and a parliament composed of a legislative council and a house of commons. The members of the legislative council are to be nominated for life, under certain restrictions, by the crown, the numbers being fixed and in proportionate representation of the several provinces. The house of commons is to consist of members elected upon the basis of population, as determined by every decennial census; the number, until after the census of 1871, to be 194, in the following distribution:—

Upper Canada,	82
Lower Canada,	65
Nova Scotia,	19
New Brunswick,	15
Newfoundland,	8
Prince Edward Island,	5

The house of commons is to be elected for not more than five years, and the parliament is to hold a session once a year at the least. The two houses conjointly are to enact, amend, or repeal laws, 'for the peace, welfare, and good government of the federated provinces, saving the sovereignty

of England.' Subordinate to the supreme government, each province is to have a lieutenant-governor and local legislature, constructed in such manner as the present legislature of the province shall provide; the provincial government to have authority in the regulation of certain local branches of administration, and within defined limits. Provision is made for the admission into the union, upon equitable terms, of the North West Territory, British Columbia, and Vancouver Island. This scheme of confederation has commended itself very generally to the approbation of statesmen, and representatives of the provinces came to England in the spring of 1865 to confer with the queen's government upon the subject, and it appears to be anticipated that it will be put into execution with no greater delay than is necessary for carefully maturing it.

Of late years the Canadas have progressed rapidly in material prosperity and importance, as the following statistics prove. The area and population in 1852 and 1861 respectively were:—

	Area in sq. m.	Pop. in 1852.	Pop. in 1861.
Upper Canada,	141,000	952,004	1,306,091
Lower Canada,	205,860	890,261	1,111,566
Total,	346,860	1,842,265	2,507,657

The estimated population at the beginning of 1864 was 2,783,079.

The sections of the population in respect of religion were in 1861 as follows:—

Denominations.	Upper Canada.	Lower Canada.
Church of England,	311,565	63,487
„ „ Rome,	255,141	943,253
Presbyterians,	303,384	48,735
Methodists,	341,572	30,660
Baptists,	61,559	7,751
Lutherans,	24,299	857
Independents,	9,357	4,927
Quakers,	7,383	121
Unitarians,	634	652
Jews,	614	572
'No religion,'	17,373	2,477
Minor Sects and 'Other } Creeds not classed, ' }	60,210	14,074
Total,	1,396,091	1,111,566

In 1859 the number of schools in Upper and Lower Canada respectively was 4,047 and 3,199; total, 7,246; and of scholars 307,346 and 168,148; total, 475,494.

The net revenue of the province amounted in 1862 to £2,235,841, and the expenditure to £2,389,185; the public debt in 1860, incurred chiefly for public works, being £12,144,264, bearing an annual interest of £656,608.

The trade of Canada has been increasing with great rapidity. In 1848 the total exports of home produce amounted to rather above £2,250,000. The following figures show the value of the exports of domestic produce in recent years, and of the goods entered for home consumption:—

	Imports.	Exports.
1860	£6,926,378	£6,885,324
1861	7,322,839	8,609,364
1862	6,719,225	9,720,126
1863	8,366,306	9,192,898

In the last-named year timber of various kinds figures for £2,280,297; wool for £200,208, and agricultural produce for £2,685,630.

CANAJOHARIE, a vil. U. States, New York, on the Mohawk River and the Erie canal, 55 m. W.N.W. Albany. It contains a number of churches, a bank, and an academy. Stone-quarries are worked in the vicinity. Pop. 4134.

CANAR, a tn. S. America, Ecuador, dist. Assuay, on an elevated and healthy site, 50 m. S.E. Guayaquil. It consists of well-formed streets, with many handsome houses, and carries on a considerable trade in wheat and other agricultural produce of the surrounding district. In the vicinity are some interesting ruins of the times of the Incas.

CANARAC, a tn. presid. Bengal, territory and 45 m. S.S.E. Cuttack, on the N.W. shore of the Bay of Bengal. About 5 m. to the S.W. are the remains of a celebrated temple of the sun, called by the natives Chunder Suraj Birinji Narayan, and by the British the Black Pagoda. Part of the great tower, still standing, is 120 ft. high, and the walls, which are in some parts 20 ft. thick, are covered over with mythological sculptures.

CANE, a river, India, which rises in the S. W. of Bundelcund, near the frontiers of the Saugor and Nerbudda district, at the height of 1700 ft. above the sea, flows circuitously N.N.E., partly along the base of the Bundari range, receiving the Putna, Sonar, Meerhauser, and several other affluents, and joins r. bank Jumna about 50 m. W. of Allahabad. Though it has a course of 230 m., it is so much encumbered by rocks and broken by cataracts, some of which are said to have a fall of 300 ft., that it is nowhere navigable. It abounds in fine fish; and beautiful pebbles, in great request for ornaments, are found in its bed.

CANFIELD, a vil. U. States, Ohio, cap. co. Mahoning, 65 m. S.E. Cleveland. It is neatly built among trees, and in a rich undulating country, which abounds in coal and iron-ore. Pop. 1091.

CANGOZIMA [add.], tn. and seaport, Japan. (See KAGOSIMA.)

CANNAH, KANA, or CALMINA [add.], a tn. W. Africa, Dahomey, 53 m. N. Whydah, on the N. edge of a valley, in a picturesque and cultivated district. It was of old a settlement of the Oyos, to whom the Dahomans were for a long time tributary. But in the early part of this century the Dahoman king, Gezo, expelled the Oyos, and Cannah became a sort of country residence of his court. The town, which covers about 3 m. of ground, is a straggling place of huts and thatch dwellings, inclosed in 'compounds' of mud-wall or palm-leaf, and detached. It stands 271 ft. above the sea. The climate is hot, humid, and unwholesome; the sea-breeze relieves the temperature in the day, but the nights are extremely oppressive, and during the rains fevers are rife. In the S.W. is an old palace of the Dahoman kings, in poor and patched condition. A sacrifice of human beings was established here by the late king Gezo, which precedes the 'customs,' or similar sacrifices, at Abomey the capital. That held in May, 1863, is thus described: 'Near the palace wall were eleven platforms on poles 40 ft. high. On each of these was the dead body of a man in an erect position, clothed in the native style, and having in his hand a calabash or similar vessel, filled with oil, grain, or some other produce. One was represented leading a sheep, also dead.' The victims are made to personate in dress and avocation Oyos, a pastoral and agricultural people, to whom the Dahomans were formerly tributary. Pop. 4000.—(Burton's *Mission to Dahomey*.)

CANNELTON, a tn. U. States, Indiana, Perry co., on the Ohio, 70 m. (by river) E. Evansville. Cannel coal, 4 or 5 ft. thick, is worked in its vicinity, and forms one of the main sources of its prosperity. It possesses a large cotton factory, which can produce 40,000 yards of sheeting weekly. Many of its private buildings are elegant, and its public edifices include several churches. Pop. 2155.

CANNING, PORT. See CALCUTTA in *Suppl.*

CANSO, or WILMOT, a vil. British America, near the E. extremity of Nova Scotia, on a fine harbour formed by Piscatiqui, and St. George isls. on the E., and the mainland and Durell Isl. on the W.; lat. 45° 23' N.; lon. 61° W. It is a long, straggling place, consisting of an ancient and a modern portion, the former standing on hills of red sand, clay, and large boulders, and containing the church, which, seated on a ridge 100 ft. high, is a most conspicuous object at sea; and the latter, which contains two chapels, built farther westward along a narrow channel called the Tickle. The harbour was much visited by the French fishermen and fur-traders as early as the sixteenth century, and was the scene of frequent contests between the French and British, till the supremacy of the latter was established. The position of the harbour at the S. entrance of the Bay of Chedabucto, through which numbers of vessels are continually passing to or from the Gulf of St. Lawrence, gives it an importance which it would not otherwise possess. Pop. about 600.

CANTERBURY [add.], a settlement, New Zealand, Middle Island or New Munster, E. coast, Port Cooper dist. Banks' Peninsula, is a level dist. from the coast to the base of the mountain ridge, whose highest peaks are usually crowned with snow, and reach an elevation of 6000 to 8000 ft. Mount Cook, the loftiest, is 13,200 ft. above the sea-level. It is watered by numerous rivers, which have been named after the distinguished individuals who interested themselves in the formation of the colony—Farquhar, Ashby, Eyre, Courtenay, Hawkins, Selwyn, Cholmondeley, Wynne, and

Ashburton. A large lagoon or lake, W. of Banks' Peninsula, called Waihora by the natives, has been named Lake Ellesmere. The most commodious harbour is Port Cooper. A charter having been granted by the crown, the colony has been settled under a regular government. The chief places in the prov. are Christchurch, the capital, and seat of a bishopric, on the river Avon; and Lyttleton, the post town, on Port Victoria, 8 m. from Christchurch. The breadth of the prov., from E. to W., is about 180 m.; and its length, from N.E. to S.W., about 250 m.; area, 21,875 sq. m., or 14,000,000 ac. The soil is well adapted for agricultural pursuits, and the climate is exceedingly healthy.

The revenue of the prov. of Canterbury, as of that of New Zealand in general, is principally 'territorial,' being derived from the sale of crown-lands, pasture licenses, and assessments. The ordinary revenue, in 1862, from customs, &c., amounted to £71,058, and the territorial to £223,514; total, £294,572. In 1861, the pop. was 16,040, of whom 8939 were males and 7101 females; the natives numbering, in 1858, 349 males and 289 females. For 1864 the census gives the pop. of the prov. at 32,253 souls, of whom 18,932 were males and 13,321 females; so that it has more than doubled in three years. The number of immigrants arriving in the prov. in each of the years 1860–2, was 1889, 996, and 2973 respectively; in the same years respectively 289, 226, and 205 persons left it. The total number of acres of land fenced in 1864 was 342,416, of which there were in wheat 13,328 ac.; in oats, 14,672 ac.; in barley, 2432 ac.; in maize, 107 ac.; in potatoes, 1572 ac.; in gardens and orchards, 220 ac.; in artificial grasses, 31,670 ac.; and other crops, 2564 ac. The stock returns of the prov. give 10,868 horses, 62 mules and asses, 45,263 cattle, 1,567,320 sheep, 769 goats, 10,228 pigs, and 73,745 poultry.

CANTON [add.] [name derived from the Portuguese manner of spelling the prov. *Quangtung, Kantao, or Cantong*]. From various drawbacks, the result of war, famine, rebellion, and tempest, to which this city has been subjected during the last twenty years, the population and commerce have not increased as in other cities in China open to foreign trade. In 1863, when affairs were in a state of comparative quietude, the population was estimated at 1,172,000, divided as follows:—

Boat population, resident	278,000
Within the old city wall	296,000
Within and without the new city wall	234,000
Western suburb	185,000
Eastern suburb	67,000
Southern suburb (Honam)	112,000

1,172,000

Though there are no bridges across the Choo-Kiang, yet there are numerous ferries, with crowds of san-pans plying continually day and night, that serve the purpose for traffic. In August, 1862, the boat population, as well as others, suffered severely from an unusually terrific hurricane or typhoon, when it was calculated by the Chinese authorities that not less than 60,000 people were drowned or killed by falling houses, during its continuance of fourteen hours. The actual known loss was ascertained to be 52,350, as a dollar was paid for every body found and buried. During the period that Commissioner Yeh held supreme power at Canton (1855–56), upwards of 70,000 real and suspected rebels were decapitated, about one-third of them being Cantonese. These calamities, together with the famine that succeeded the war with the British and French allied forces (1856–57), and the considerable reduction in foreign trade after that event, have seriously checked the increase of population during the past ten years.

Amongst this large native community there has been at no period any great number of foreign residents; but these are greatly diminished since the formation of the colony of Hong-Kong, and the opening of new ports in the northern provinces, whither commerce has induced them to remove. In 1864, according to the Hong list, including Whampoa, the foreigners of all nations and occupations numbered only 135:—

Consuls and Assistants	14
Merchants and Assistants	35
Customs Officials	44
Dock Employés	19
Missionaries and others	23

135

Of this number 72 were British, 36 American, and other nationalities, 27. In 1846 there were 357 foreign residents, exclusive of the families belonging to several of them. Up to 1856 this foreign population resided at the factories chiefly built by the East India Company, which at the bombardment and capture of Canton, at the close of that year, were burned and razed to the ground by the Chinese; and after peace was proclaimed, the merchants had to rent native tenements on the Honam side, while the consular and other officials were scattered over Canton city and western suburbs. This was exceedingly inconvenient and detrimental to trade, and therefore Lord Elgin obtained a concession from the Chinese authorities of the Sha-meen forts, which had been destroyed, and which were situated at a salubrious point of the west suburb, on the river's bank, where the water almost insulated the site. The area allowed for the foreign settlement has been filled up and levelled, giving an extent of 24 acres. On the river boundary it is protected by a granite wall, and there is sufficient depth of water for a vessel of 1000 tons to lie alongside; on the landward side it is separated from the Chinese dwellings by a canal having stone embankments, across which are three substantial bridges of hewn stone. Good roads are constructed along the margin of the concession, and that part facing the river is planted with trees and shrubs, forming a delightful promenade. Streets have been laid out, and the land parcelled into building lots, which realized £46,500 by auction in August, 1861; since when building has progressed but slowly. The British, American, and French consulates, however, and the chief mercantile firms in China, have erected spacious hongs and dwellings; and the residents have formed themselves into a committee for municipal purposes. Connected with this change of site and destruction of property at the old factories, there was a claim made against the Chinese government for the loss each resident sustained, which was to be paid out of the indemnity money. On the part of the British it amounted to £700,000, while the American and French claims were about a third of that sum.

Foreign vessels bound for the port of Canton generally bring up at Macao Roads, or Victoria harbour, Hong-Kong; there being an authorized body of Chinese pilots at hand to take them to either anchorage. From the strong eddies and intricate navigation in the estuary and inner waters of the Canton River (which is only one of several outlets of the Great West River and its affluents), it is necessary to take a second pilot as far as the Bocca Tigris, which is considered the limits of the port, and distant 45 m. from the city; thence a third pilot assists to the anchorage at Whampoa, which is the actual foreign port of Canton, although 12 m. distant from the Sha-meen settlement. By the treaty of Tientsin (1858) there are local consular regulations for the shipping, enforced by a resident British vice-consul and an American consular agent. From the rise of the tide, and nature of the ground here, it has been found most advantageous to construct docks for repairing ships, of which there were ten in January, 1864—two of stone, one wood, and seven earthwork—from 145 ft. to 550 ft. long; two being pumped dry by steam-engines. From these facilities of dock accommodation, a number of ships entered inwards and outwards have no traffic at this port, so that the shipping returns are in excess of the commercial tonnage.

SHIPPING in the PORT of CANTON in the years 1863-64.

Nationality.	1863.				1864.			
	Entered.		Cleared.		Entered.		Cleared.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.
British	96	57,425	95	56,885	99	50,762	100	49,979

Total	867	300,520	867	300,118	847	352,749	855	354,198

The trade of Canton has been known for three centuries throughout the civilized world, and the city continued the chief foreign emporium in China until 1850, when Shanghai

began to surpass it. In 1842 the northern ports were opened; in 1851 Chinese emigration to Australia and California was removed to Hong-Kong; in 1854 a serious insurrection, which destroyed the manufactories of Fatshan, happened; in 1856 the foreign factories were burned, and the river blockaded; and in 1857 the city was captured by the British and French: 'these misfortunes, joined to the previous drawbacks, completed the commercial decadence of the port.' Since then the opening of other ports for foreign trade has diminished the relative importance of Canton, and will continue to interfere with its prosperity. According to the latest consular returns, the following is the estimated value of the export and import trade:—

	1862.	1863.	1864.
Total Exports	£4,060,746	£3,862,039	£2,361,424
Total Imports	2,412,515	2,281,364	2,033,539

The import trade of Canton has suffered from the levy of additional imposts to meet the immense expenses caused to the Chinese government by the Taeping rebellion, as well as from a mercantile revolution that is taking place. The Chinese merchants, appreciating by degrees the value of foreign trade, are getting it more and more into their own hands, and now go to Hong-Kong to purchase what they require, importing the merchandise in native vessels to the various places on the coast. The consequence is, that the trade of Canton shows a great falling off in both cotton and woollen manufactures, and also in opium, the value of which in dollars (4s. 9½d.) in 1864 was 1,322,866, against 2,290,234 in 1863—a decrease of 967,368 dollars. In the export trade of Canton there has likewise been a falling off, affecting almost all the articles of export, as the following table shows:—

	1863.	1864.
Tea	5,662,268 dols.	3,344,678 dols.
Silk	2,766,567 "	1,571,670 "
Cotton	25,339 "	22,088 "
Chinese produce	7,628,888 "	4,875,275 "

The decrease in tea is attributed to its having been forwarded during the year 1864 to the Portuguese port of Macao, where it can be shipped duty free, and to the ports of Foo-chow and Hankow absorbing all that used to come down before they were opened.

From the spirit of commercial enterprise which is spreading among the native merchants, and possessing as they do considerable advantages over foreigners in buying and selling, it is probable they will gradually absorb both the import and export trade, as well as the extensive coast-carrying traffic.

Formerly the whole of the foreign trade was carried on in sailing ships, which received and discharged their cargoes through native junks at Whampoa. Since the establishment of the colony of Hong-Kong, there has sprung up quite a flotilla of river steamers, chiefly of American build, which ply daily between Canton, Hong-Kong, and Macao, and convey the greater part of the produce and merchandise, for native and foreign consumption. The traveller now visiting the far East can find in these steamers speed and accommodation equal, if not superior, to the best river boats in Europe. From Canton to Hong-Kong the distance is 96 m., which is ordinarily performed in 6½ hours. A large native passenger traffic is done, frequently carrying 500 to 600 at a trip.

Events of vital importance to the prosperity of this ancient

city, as well as to British and foreign relations with the empire at large, have occurred in the annals of Canton within the period of the last ten years. On the 8th October, 1856, a small vessel named the *Arrow*, having a Chinese crew, but owned by an English firm at Hong-Kong, and commanded by an Englishman, was seized upon some pretext by the native authorities; twelve of the crew were bound

and carried away, and the British flag was hauled down. Rear-admiral Sir Michael Seymour demanded satisfaction for the outrage and insult, but was refused by the notorious anti-

foreign mandarin Yeh, then at Canton as a special commissioner from the court of Peking. This was deemed a *casus belli*, and hostilities commenced on the 24th, by the capture of the river forts at Canton, and the entrance of a large force into the city, by blowing one of the gates to pieces. On the 12th November the fleet reduced the Bogue forts, 200 guns, and the Annunghoy forts, 210 guns, having complete command of the river. The expedition was then reinforced by two brigades of infantry and artillery, and a large contingent of French sailors and marines, beside their fleet under Rear-admiral de Genouilly. The combined forces made a grand attack on the 28th and 29th December, bombarding the city and carrying it by storm, while the stubborn Commissioner Yeh was taken prisoner, and afterwards deported to Calcutta, where he died. Meanwhile the allies held military possession of the city, without interfering with the peaceable inhabitants, who became excessively friendly towards their conquerors.

300 m., of which about 120 are navigable by steam-boats. It is the only river which has its course wholly within the state, and carries its waters directly to the ocean.

CAPE GIRARDEAU, a vil. U. States, Missouri, r. bank Mississippi, in a well-timbered and fertile county of same name, about 100 m. S.S.E. St. Louis. It is the seat of St. Vincent's college, and has a good landing on the river.

CAPE ISLAND, a vil. U. States, New Jersey, on the small island of same name, at the S. extremity of the state, 95 m. S. Trenton. It is one of the most fashionable watering-places in the States; and in summer, having daily steam communication with Philadelphia, is crowded with its citizens, for whose accommodation several hotels have been erected. Pop. 600.

CAPE NORTH, British America, forming the N.E. extremity of Cape Breton Island, is a bold and rocky headland, which rises abruptly from the sea to the height of 1100 ft., and is composed of slate in nearly vertical strata. Frequent and heavy squalls prevail in its vicinity. About 8 m. E. of it, the N.W. extremity of the island is formed by Cape St. Lawrence, composed also of slate rock, and so steep that except on its W. side there is no landing even for boats. About a mile S.E. a remarkable sugar-loaf peak, called Bear Hill, rises from the shore to the height of 750 ft. Still further E. towards North Cape is St. Lawrence Bay, which is 4½ m. wide and 1½ m. deep, and within half a mile of the shore affords an anchorage of 9 or 10 fathoms, with a bad bottom of rock or loose sand.

CAPE OF GOOD HOPE [add.], a British colony, S. Africa. In consequence of the anomalous position of the territory of British Kaffraria, which is administered by a lieutenant-governor subject to the direction of the governor of the Cape Colony, the inhabitants of it have agitated a demand for separate legislative powers of their own. It has, therefore, been proposed, and is contemplated by the home government, to annex the territory to that of the Cape of Good Hope, and give the inhabitants a share of representation in the Cape parliament. The Cape Colony will thus be increased by the accession of a population of 81,353, consisting of 6705 Europeans and 74,648 natives, amongst whom are 3418 native and European landholders, occupying 739,819 acres, of which 314,806 acres had been surveyed in 1861. The total revenue for the public service of British Kaffraria in 1861 amounted to £24,718, and the expenditure to £37,491; the deficiency having to be supplied by grants from the imperial treasury.

Finance.—Unfortunately the financial position of the Cape Colony itself appears to be somewhat similar, the revenue falling short of the expenditure, and requiring to be supplemented by loans; by which means a public debt has been created, first appearing at £80,000 in 1859, and then at £715,050 in 1863. The year 1862, however, had been a disastrous one for the colony, excessive drought and the ravages of insects having wrought serious damages to crops, cattle, vines, and almost every branch of colonial industry.

The state of the public revenue and expenditure in the years 1860–1862, is apparent from the following figures:—

	1860.	1861.	1862.
Revenue,	£742,771	£748,866	£716,489
Expenditure,	729,690	763,237	683,792

The apparent excess of revenue over expenditure in 1862 is accounted for by the fact that certain loans are reckoned under the head of revenue; the net amount being in reality £67,000 less than in 1861.

Commerce.—The condition of the foreign trade of the colony will be understood from the following table of shipping entered and cleared in 1860–62:—

	Entered.		Cleared.	
	Vessels.	Tons.	Vessels.	Tons.
1860	1014	329,934	1042	355,358
1861	976	322,057	951	306,451
1862	1044	363,537	1053	369,183

The place was occupied as a material guarantee for the payment of an indemnity of £666,000, in equal proportions to the British and French. For nearly four years the allies held supreme jurisdiction over the city, which at length was evacuated by them on the 21st October, 1861, and possession handed over to the viceroy of Quang-tung.—(Par. Blue-books; Williams' Chinese Commercial Guide; MS. Notes.)

CANTON, a tn. U. States, Ohio, cap. co. Stark, beautifully situated on the Nimishillen Creek, and on the Ohio and Pennsylvania railway, 75 m. N.W. Pittsburg. It stands in the finest wheat district of the state, and possesses an academy, gun-barrel factories, woollen factories, and iron-foundries. Bituminous coal and limestone are found in the vicinity. Pop. 4041.

CAORLE, a tn. Austrian Italy, prov. and 30 m. N.E. Venice, at the mouth of the Livenza in the Adriatic. It has a small fort and a fishery, and was once the seat of the patriarchy of Venice. Pop. 2152.

CAPE FEAR, a river, U. States, which is formed by the union of the Haw and Deep at Hlwood, co. Chatham, N. Carolina, flows tortuously S.E., and enters the Atlantic by two channels—one on each side of Smith's Island. Its whole length, including one of its head branches, is about

Of this shipping in 1862, 786 vessels (*entered*), measuring 237,277 tons, and 802 vessels (*cleared*), of 247,227 tons, were British. In the three years 1860-2, six vessels, of 460 tons in the aggregate, were built in the colony.

The value of the imports and exports in each of the years 1861, 1862, and 1863, was as follows:—

	1861.	1862.	1863.
Imports,	£2,605,305	£2,785,853	£2,275,833
Exports,	1,972,700	1,957,686	2,224,446

The principal articles imported and exported, and the value of them, are exhibited in these tables:—

Principal Articles of Import.	1861.	1862.	1863.
	£	£	£
Apparel,	134,280	138,740	117,753
Beer,	48,575	57,634	40,612
Cabinet and Uphol. Wares,	34,484	39,467	27,033
Coal,	16,570	25,383	20,473
Coffee,	161,632	145,082	170,280
Cotton Manufactures,	303,713	263,393	187,661

Population.—According to the last return, in the year 1856, the population and area of the colony stood thus:—

Population.				
White.	Coloured.	Aliens.	Various (Malays, &c.)	Area sq. m.
102,156	129,167	10,584	25,189	104,931
Making a total population of 267,096.				

CAPE VINCENT, a vil. and port of entry, U. States, New York, on the St. Lawrence, and on the Rome and Watertown railway, 160 m. N.W. Albany. It possesses a steam-boat landing, and a ship-yard. Pop. 3585.

CAPO DI PONTE, a tn. Austrian Italy, prov. and 4 m. N.E. Belluno, r. bank Piave. It possesses a splendid bridge, which is thrown across the river at a point where its stream is confined between rocky precipices. Pop. 3350.

CAP ST. IGNAZE, a tn. Canada East, co. Montmagny, r. bank St. Lawrence, 42 m. N.E. Quebec, on the railway to Trois-Pistoles. It possesses ship-building yards, and has an extensive trade in lumber. Pop. about 2800.

CARABALLOS (THE CORDILLERA OF), a mountain range, Philippine Isles, which stretches from N. to S. over the Island of Luzon, over 6° of lat., with a breadth which where greatest is about 45 m. Its culminating point, of which, however, the height is not stated, is in lat. 16° 7' N.; lon. 120° 50' E. From this point, as a common nucleus, it proceeds in three branches—two of them N., terminating respectively in Capes Engano and Pato; and the other S., terminating in the volcano of Bulusan.

CARACOLLO, a tn. S. America, Bolivia, prov. and 30 m. N.N.W. Oruro, near an affluent of the Desaguadero. It covers a large space, is of pleasing appearance, consists of houses of one story, but commodious, and has a spacious plaza or square, with a number of shops and a church.

CARAGA, a prov. Philippine Isles, forming the large projection in the N.E. of the island of Mindanao. Inland it is bounded by prov. Misamis, and the territory of the native sultan of Mindanao. On all other sides it is washed by the sea. Area about 7000 geo. sq. m. On its coast are several bays and indentations, affording tolerable anchorage. The

interior, comparatively unknown, is covered with mountains, apparently volcanic. Dense forests, containing much fine teak timber, clothe their sides and summit, but, owing to the impossibility of transport, possess no commercial value. Cultivation is confined to mere patches, and most of the rice consumed is obtained from Luzon and Zebu. The favourite employment is gold-washing, which is said to be more productive here than in any other part of the Philippines. The bulk of the population is Bisaya; but there are several wild tribes of unknown origin. Pop., exclusive of wild tribes, 31,963.

CARBONDALE, a tn. U. States, Pennsylvania, in a valley near the head of the Lackawanna, and on a railway which connects it with Honesdale, 140 m. N.E. Harrisburg. Its prosperity, which has grown very rapidly, is owing to its coal-field, the beds of which are said to be extremely rich, and to be 20 ft. thick. Pop. 5575.

CARDENAS, a tn. and bay on the N. coast of Cuba, 43 m. E. Matanzas; lat. 23° 12' N.; lon. 81° 5' W. It has a small shallow harbour, where the American filibuster, General Lopez, landed on the 17th May, 1850, and compelled the garrison of the fort to surrender; but was soon checked in his advance into the interior, and with difficulty accomplished his escape from the island. Pop. about 1200.

CARLETON, a vil. and township, British America, Canada East, co. Bonaventure, on the N. shore of a shallow lagoon in Chaleur Bay. It possesses a church, a school, and an excellent and capacious roadstead, safe in all winds. Immediately in rear of the village, Mount Carleton rises to the height of 1800 ft. Pop. of township, 1000.

CARLISLE, or **NEW CARLISLE**, a tn. British America, Canada East, cap. co. Bonaventure, dist. Gaspé, on the N. shore of Chaleur Bay. It contains two churches, a court-house, and jail, and is actively engaged in the fisheries; possessing in Paspebiac Bay, situated to the E. of it, an excellent roadstead, and the principal fishing establishment in Chaleur Bay. Pop. 500.

CARLOPAGO, a tn. Austrian empire, Military Frontiers, cap. dist. of same name, on the Strait of Morlaca, in the Adriatic, 65 m. S.S.E. Fiume; with a fine old parish church, a Capuchin monastery, a German trivial school, a free haven, and a large trade. Pop. 660.

CARLOS, (SAN), or **ANCUD**, a tn. and port, Chili. (See *ANCUD in Supp.*)

CARLOS (SAN), a tn. Chili, prov. Nuble, cap. dep. of same name, on the Nabotava Creek, 200 m. S. by W. Valparaiso; lat. 36° S.; lon. 72° 1' W. It contains about 300 houses, regularly arranged in a plaza, and in longitudinal and transversal streets, and has a church, a public and two private schools, and an alameda. The dep. was once celebrated for its gold-mines. Pop. 4250.

CARMEN, or **PUEBLA CARMEN**, a tn. S. America, r. bank Parana, on the S. frontiers of Paraguay; lat. 27° 12' 30' S.; lon. 56° 14' 21' W. It is a new place, built after government had thought proper to abandon the old and important settlement of Ytapua or Encarnacion, situated 12 m. farther up the river. The inhabitants, about 1000, carry on a considerable trade with the neighbouring districts.

CARRIACOU, an isl. West Indies, Windward Islands, the largest of the Grenadine group, 16 m. N.E. Grenada, is of irregular form, about 21 m. in circuit. Its S. and W. sides are so encumbered with shoals and small islets that none but small vessels can approach them with safety; but on the N. shore are two commodious anchorages. The island is inhabited.

CARRIZAL, a tn. Mexico, state and 126 m. N. Chihuahua, near the Carmen; lat. 30° 28' N.; lon. 106° 42' W. Being originally established as a presidio or military station, it is still surrounded by a wall, and provided with a small garrison. These however have failed to protect it from the incursions of the Indians, from whom it has repeatedly suffered severely. Though still well peopled, it possesses little importance, and is remarkable chiefly for the beauty of its site. A little to the S.W. of Carrizal are found the extensive ruins of an old Indian town, to which the name of Casas Grandes, or Casas de los Aztecas, has been given.

CARROLLTON, two vils. U. States:—1. A vil. Louisiana, l. bank Mississippi, 7 m. above New Orleans, with which it is connected by a railroad. It is the residence of many

persons who are engaged in business in New Orleans, and has pleasure-gardens which are much frequented by visitors. Pop. 1756.—2. A vil. Illinois, cap. Greene co., on the railway from Alton to Springfield, 70 m. S.W. the latter. In a fertile and populous district, and with coal and timber in its vicinity, it has several manufactories; and possesses four or five churches, and a free school. Pop. 2752.

CASA BLANCA, a tn. Chili, prov. and 20 m. S.E. Valparaiso, cap. dep. of same name, in the midst of a narrow valley, 790 feet above sea-level. It is built chiefly along both sides of the highroad to Santiago; has a considerable number of shops, supplied chiefly with such articles as are required by the constant stream of cartmen and muleteers moving to and from the port, and contains 2000 inhabitants, who find profitable employment in raising fruits and vegetables, and rearing poultry for Valparaiso.

CASALEONE, a tn. Austrian Italy, prov. and 22 m. S.S.E. Verona, on an unhealthy site; with a good church and numerous villas. Pop. 2400.

CASCADE COVE, New Zealand, on the S. side of Dusky Bay, near the S.W. extremity of Middle Island or Munster, has at its entrance a width of about $\frac{1}{2}$ m. with a depth of 26 fathoms; and stretches $1\frac{1}{2}$ m. in a S.S.W. direction. Within the entrance a sandy point projecting from the S. shore narrows the navigable space, but farther up the width increases, and gives good anchorage in 12 to 15 fathoms. A considerable stream at the head of the Cove forms the cascade from which it has derived its name.

CASCAPEDIAC, a river and bay, Canada East, dist. Gaspé.—The river, issuing from a lake in a mountainous district, flows circuitously S.E. for above 60 m., and falls into the bay of its name on the N. shore, not far from the head of Chaleur Bay. Though a considerable stream it can only be entered by boats in consequence of extensive shoals of sand and mud.—The bay, which lies between Black Point and Tracadigash Point on the W., is 13 m. wide, and 5 or 6 m. deep, and is much visited by timber ships. Immediately to the E. is the village of Richmond, rendered conspicuous by its church; while its W. shores are well settled, mostly by French Canadians and Acadians. Black Point, its E. extremity, is a bold and rocky promontory, rising 400 ft. above the sea.

CASSANGE, a tn. S.W. Africa, interesting as the farthest inland station of the Portuguese; lat. $9^{\circ} 37' 30''$ S.; lon. $17^{\circ} 49'$ E. It stands in a deep valley, about 40 m. W. of the Quango or Coango, and 310 m. nearly E.S.E. Loanda. It consists of about 40 or 50 houses belonging to Portuguese traders, all built of wattle and daub, and surrounded by plantations of maize, manioc, &c. Behind are kitchen gardens, in which grow the common European vegetables, potatoes, pease, cabbages, onions, &c. All the traders are officers in the militia, and many of them have become rich by sending out *pombeiros*, or native traders, with large quantities of goods to trade with on their account. The Portuguese government, fearing that cases of collision might thus occur and compel them to interfere, have prohibited their subjects from crossing the frontier; but the prohibition is little more than a dead letter, and the traders seem inclined to spread along the banks of the Quango. In addition to the traders there is a considerable coloured population in Cassange.

CASSERGODE, or **KASSERGODE**, a vil. India, presid. Madras, dist. S. Canara, 100 m. N.N.W. Calicut. It is scattered over a large area in the rear of a backwater, and contains an industrious and thriving population of Hindoos and Mahometans, who carry on an extensive trade in cocoanuts and rice, which constitute their principal produce.

CASTELMUSCHIO, a tn. Austrian empire, circle Istria, on the N. extremity of the island of Veglia, in the Bay of Quarnero; with an old castle, a charitable endowment, and a good harbour. Pop. 1400.

CASTLETON, a vil. U. States, Vermont, on a river of same name, and at the intersection of the Rutland and Washington, and the Saratoga and Castleton railways. It possesses a medical college in connection with that of Middleburgh. Pop. 2852.

CASTRIES, a bay, Russian empire, on the W. coast of the Gulf of Tartary, to the S. of Mania Strait; lat. $51^{\circ} 28'$ N.; lon. $141^{\circ} 49'$ E. The entrance, in the middle of which lies Danger Rock, is between Castries Point on the N., and Quoin Point or Klostercamp on the S. Although the greater part

of it is open to easterly winds, which throw in a heavy sea, there is good shelter behind some islands within it, particularly Observatory Island, where the depth is 3 fathoms. On Quoin Point stands a lighthouse, 250 ft. above the sea, showing a fixed light visible 18 m. The isthmus separating Castries Bay from the Amoor is only 40 m. across, and the distance between it and Lake Kyzi is not more than 15 m. It has hence been proposed to make this bay the great maritime outlet for the produce of the Russian territories on the Amoor. With this view the town of Sofyevok has been founded on the river, and a good road made to connect it with the bay. A railway also has been projected, and several magnificent works, which time may probably mature. The great drawback to Castries Bay as a port is its being frozen from the middle of November to April. The shores of the bay are surrounded by hills, which terminate in bold cliffs of trachyte and basalt. The loftiest of the hills, Mount Arbod, has an elevation of 1100 ft., and forms a good landmark. At the mouth of the Nally, a rivulet which enters the bay, the Russians have erected the port of Alexandrovski, defended by several batteries; and about $1\frac{1}{2}$ m. farther inland have established the military colony of Castries, consisting of a church, an hospital, and about 60 log-houses, inhabited by about 150 soldiers and their families.

CASTRO, a seaport tn. Chili, on the eastern shore of the island of Chiloe; lat. $42^{\circ} 28'$ S.; lon. $73^{\circ} 50'$ W. It stands on a steep hill, near the bottom of an island-locked bay, and consists of about 250 wooden houses, forming two or three streets. Of the two churches, one, built by the Jesuits, is becoming ruinous; the other, in the middle of the plaza, has a picturesque and venerable appearance. A model and two primary schools are supported by government. Under the Spaniards, the annual ships from Peru landed their treasures at Castro.

CATACAMAS, an Indian tn. Central America, Honduras, on a stream of same name, near its confluence with the Guayape, 10 m. W. Jutijalpa. It is regularly governed as a municipality, with an Indian at its head; consists of dwellings, most of them roofed with tiles, and many of them substantially built; possesses a handsome church, and contains about 2000 orderly and industrious inhabitants, all professedly Christian.

CATAMARCA [add.], a prov. La Plata, bounded N. by Salta, E. Tucuman and Santiago, S. Cordova and La Rioja, and W. La Rioja and Chili; area about 60,000 sq. m. The surface is very mountainous in all directions except the S., where it stretches out into a large plain of very indifferent fertility. The loftiest and best-known of the mountains is the Sierra de Aconquija, which stretches from S. to N. towards the frontiers of Salta, and attains in its culminating point near its S. extremity a height of more than 16,000 ft. Here Aconquija becomes linked with two other ranges—the Sierra del Alto, which stretches S.S.E., and is prolonged by the Sierra de Ancaste, and the Sierra de Ambato, which stretches S.S.W. into prov. Rioja, and is connected by other chains with the Cordillera of the Andes. The Santa Maria, flowing N. to its junction with the Huachipas, is the only river of the least consequence, but every valley having its stream or mountain torrent, the whole province is well watered. The only lake is the Laguna Blanca, which lies at the foot of Cerro Azul, in the bottom of one of four large valleys formed by the Sierra de Aconquija. It is very shallow, and though covering a large area during the rains, becomes almost dry in the hot season. The soil is tolerably fertile, producing large crops of maize and wheat, and rearing large numbers of live-stock, especially goats. The vine is also cultivated, and yields wine and spirits which bear a high name in the surrounding countries. The principal exports are beasts of burden, sent into Bolivia and Peru; horned cattle, which find a ready market at Copiapo in Chili; and hides and goat-skins, raw or tanned, sent in great numbers to Buenos Ayres. Other articles are wheat, capsicums, anise-seed, tobacco, wine, spirits, and dried figs. The principal mineral is iron, but gold, silver, and lead are also found. The political division of the prov. is into eight departments—El Rectoral, or dep. of Catamarca, the capital, pop. about 20,000; Piedra Blanca, pop. 10,000; Ancaste, pop. 16,000; Alto, pop. about 12,000; Fuerte de Andalgalá, pop. 140,000; Santa Maria, pop. 8000; Belen, pop. 7600; and Tingasta,

pop. 8900. Pop. of province about 80,000, chiefly of Indian extraction, with a considerable mixture of Spaniards.

CATAMARCA [add.], a tn. La Plata, cap. of above prov., on the W. side of Valle Viejo, at the foot of the mountains of Ambato, 170 m. W.N.W. Santiago; lat. 27° 40' S.; lon. 67° W. It extends over a large space, and consists of wide regular streets, with commodious whitewashed houses, presenting a pleasing contrast to the dark green of the orange gardens with which they are surrounded. The principal industrial establishments are flour-mills. There is also a considerable manufacture of woollen and silk hats. A little E. of the town excellent clay is found, and employed to some extent in making roofing tiles. The surrounding district, though both sandy and stony, is well cultivated, and in addition to ordinary crops of maize, wheat, and beans, yields excellent cotton to such an extent as to furnish a considerable export to Cordoba. Fruit also, particularly apples and water-melons, abound. Pop. 5150.

CATHARINES (Str.), a tn. Canada West, situated on the Welland canal, in the township of Grantham and co. of Lincoln, 12 m. from Niagara Falls, is beautifully situated on a plateau above the valley watered by the canal, and in the heart of a fertile and agreeable country. Its medicinal waters are held in high esteem, and during the summer months it becomes a favourite resort of travellers in search of health or pleasure. The manufacture of machinery and agricultural implements is carried on to a considerable extent. Pop. in 1858, about 6500.

CATORCE [add.], a tn. Mexico, state and 120 m. N. by W. San Luis Potosi, on a steep mountain, at the height of above 8500 ft. above the sea. It is very irregularly built, the streets, following the original inequalities of the ground, are in many places totally unfit for carriages, while the houses are so unevenly placed, as to be sometimes of three stories on one side and of only a single story on the other. The buildings for smelting silver ore and other purposes are at some distance S. of the town, and the mines lie scattered over the neighbouring mountains. Large fortunes were made up to the time of the revolution, but immediately thereafter, in consequence of the withdrawal of capital and the continued unsettled state of the country, the returns were soon reduced to a fourth of what they had previously been.

CAUGHNAWAGA, or SAULT ST. LOUIS, a town, British America, Canada East, co. Laprairie, r. bank St. Lawrence, 9 m. S.W. Montreal. It is entirely occupied by Indians of the Iroquois tribe, and governed by a council of seven Indian chiefs. Pop. about 1200.

CAUQUENNES, a tn. Chili, cap. prov. Maule, on a slope between a river of same name and Tutuben Creek, 200 m. S. Valparaiso. It consists of seven streets running N. and S., and six others intersecting them at right angles; and has a plaza, a public promenade, two churches, and seven schools. Pop. 3500.

CAVACO, KAVAKO, or MARIMBOMBA, a river, S.W. Africa, which forms the limit of the town of Benguela on the N., rises in the mountains of Ganda, flows N.N.W. through the scorching tract of Makango, and having entered the plain and formed a number of small lakes called Bimba, is lost in the sand. During the greater part of the year it exists merely as a sand-river, which becomes visible only when the sand covering it is dug through. There are many rivers of the same kind in Africa; but there is this peculiarity in the Cavaco, that its water is perfectly sweet, while the water obtained by digging into others has usually a mineral saline taste.

CAVAZZO, a tn. Austrian Italy, prov. and 26 m. N. Udine, r. bank Tagliamento; with a parish church and a sulphur spring. Pop. 2077.

CAWNPORE [add.], a dist. India, N.W. Provinces, Doab, between lat. 25° 53' and 27° N.; lon. 79° 34' and

80° 37' E.; is bounded N.W. by Etawah and Furruckabad; S.W. the Jumna; S.E. Futtehpore; and N.E. the Ganges; length, N. to S., 75 m.; breadth, 65 m.; area, 2337 sq. m. It is traversed by the Grand Trunk road and the portion of the East Indian railway between Allahabad and Agra. Lying between the Jumna and the Ganges, it forms a vast alluvial tract, raised from 60 to 120 ft. above these streams in the dry season, remarkably fertile, and for the most part cultivated like a garden, but with a surface so little diversified as to be monotonous in the extreme. The principal alimentary crops are wheat, barley, pulse, oil-seeds, potatoes, sugar-cane, and maize. The two last are particularly luxuriant, growing to the height of 8 or 10 ft., and so closely as to exclude the light of the sun. The principal commercial crops are tobacco, opium, safflower, indigo, and cotton. Almost the only exception to the general fertility of the district occurs in the vicinity of the cantonment of Cawnpore, where the soil is sandy, and during the season, when stifling hot winds blow, is carried aloft in clouds of dust, sometimes producing an almost midnight darkness. The means of education, though still very deficient, are more ample than those possessed by most districts of India. In 1848 the number of schools classed under the heads of Persian, Arabic, Hindee, Sanscrit, and English, was 540, with an attendance of 4700 pupils. Pop. 1,174,156.

CAWNPORE [add.], a tn. cap. of above dist., 120 m. N.W. Allahabad, on the E. Indian railway. The town, on the r. bank of the Ganges, was fatally distinguished in the Indian mutiny of 1857. In June the native regiments stationed here mutinied, and placed themselves under the Rajah of Bithoor, the notorious Nana Sahib. General Wheeler, with a small body of English troops, hastily intrenched himself, but was compelled by famine and loss of men to surrender, stipu-

THE 'SLAUGHTER HOUSE,' CAWNPORE, in which the Massacre took place.—From Green's Sketches in India during the Mutiny.

lating that he and his party should be allowed to leave the place uninjured. But after the troops, with the women and children, had been embarked in boats on the Ganges, they were treacherously fired upon; many were killed, and the remainder conveyed back to the city, where the men were massacred, and the women and children placed in confinement. On the approach of General Havelock the Nana ordered these helpless prisoners to be slaughtered, and their bodies to be thrown into a well (July 15th). On the following day the victorious progress of Havelock forced the rajah to retreat, and the British soldiery inflicted a terrible retribution on the sanguinary sepoys. For some time after these events Cawnpore was little better than a heap of ruins, but having been partly rebuilt it is beginning to resume its previous appearance. A church perpetuates the record of the Cawnpore massacre, and memorial gardens inclose the cemetery, the well, and other sites of the melancholy catastrophe. The approach to the gardens is exceedingly barren and uncultivated, but on entering the gates everything looks fertile and green. The gardens are beautifully laid out, and are irrigated by miniature canals conveying water to them

a distance of 15 m., so that their verdure is kept up even during the dry season. Close by the site of the bungalow or house in which the women and children were murdered is the well, over which an octagon building of beautiful architecture has been erected, entered by steps and a bronze gateway. In the interior is a kind of tomb, also octagonal, of carved stone, with an inscription round the base, and surmounted by a figure of Mercy in white marble. There is no roof to the building, the idea of a well being preserved as much as possible.

CAYENNE [add.], an isl., river, and tn. S. America, French Guiana:—The ISLAND, formed by the rivers Oyac and Cayenne, and a branch which unites them, so as to separate it entirely from the mainland, is situated on the N.E. coast of Guiana, and consists of an alluvial tract slightly raised above the level of the sea, and even somewhat depressed toward the centre, where it becomes swampy and very unhealthy; the N. parts, however, are mountainous, and the N.E. shore is formed of sandy bays, separated by bold rocky heights, which decline towards the S. and W. It is of an irregularly square form, and has a circuit of about 35 m. The soil is generally fertile, and produces in abundance maize, manioc, vanilla, sugar, rice, tobacco, indigo, pepper, cloves, cacao, and cotton.—The RIVER, rising in a mountainous district, flows N.E., and after contributing to form the island, by passing along its N. side, falls into the Atlantic. Its whole course is about 40 m.—The TOWN, which ranks as the capital of French Guiana, stands at the mouth of the river, on the N.W. extremity of the island. It consists of about 500 houses, constructed mostly of wood, and whitewashed or painted, so as to have rather a cheerful appearance. The older portion is very irregular in its form, but the more modern portion has spacious straight streets, generally well paved and clean, and lined with houses, of which a few are handsome. Between the two portions is the Place d'Armes, a large open space, planted with orange trees. The harbour, which is defended by a fort, is shallow, but otherwise commodious, and the roadstead immediately beyond it is the best on the coast. In 1826 the value of the imports was £56,000, and of exports £164,000. Cayenne, which had long been used as a penal settlement, has recently acquired additional notoriety from the number of political persons who have been banished to it, on the summary charge of disaffection to the existing French government. In 1857 the different penal colonies on the island contained 4000 persons who had been transported. Exclusive of them, the pop. of the town of Cayenne is about 6000.

CAYMAN [add.], the name of three islands, W. Indies, nearly equidistant from Jamaica on the S.E., and Cuba on the N.:—1, *Grand Cayman* is 17 m. long from E. to W., and varies in breadth from 4 m. at its E. to 7 m. at its W. extremity. It is low and sandy in the S.W., but both its N.W. and S.E. ends form rounded bluff cliffs, about 40 ft. high. It is almost everywhere thickly wooded. Owing to a reef, which skirts it on all sides but the W., great caution must be used in approaching it. In several places, however, on the S. side there are openings in the reef, in which the small vessels of the island find shelter. The only anchorage for large vessels is under the W. extremity. The inhabitants amounted in 1855 to 1978, partly occupying a village along the shore of a shallow lagoon on the N. shore, but settled chiefly at Bodden Town on the S. Turtle abounds on the island, and forms its principal article of trade.—2, *Little Cayman* is 9 m. long, by about 1 m. broad, and from 45 to 55 ft. high. Its S. coast, which is sandy, is skirted by a reef.—3, *Cayman Brac* is 10 m. long from E.N.E. to W.S.W., by 1 m. broad, well wooded, and, though low and sandy at its W. end, rises in the E. in a bold rocky cliff 100 ft. high. Its inhabitants, amounting only to two or three families, are chiefly employed in catching turtle.

CAYUGA, a lake, U. States, in the W. of the central portion of New York, is a long and narrow expanse, with a length of about 38 m., and an average width of not more than 2 m. It is shallow towards the N., but deepens towards the S., and is said to be in some places unfathomable. Its surplus water passes by an outlet into Seneca River. The shallow part only becomes frozen.

CAZENGO, a dist. S.W. Africa, Portuguese settlements, prov. Angola, on the Lucalla, 100 m. E.S.E. Loanda, famous

for the abundance and excellence of its coffee. On the sides of the several lofty mountains which cover the larger part of the district, coffee plantations exist. As these were not formed by the present Portuguese settlers, and there is no record of their original formation, some have maintained that the coffee plant is here indigenous. The fact, however, seems to be that the missionaries, to whom the country is much indebted, brought some of the fine old Mocha seed to Angola, and that to the plants thus propagated the excellence of its coffee is due.

CAZENOVIA, a vil. U. States, New York, on a small lake of same name, 120 m. E. Albany. It is the seat of an educational institute, called the Oneida Conference Seminary, which is attended by 300 to 500 pupils. Pop. 4495.

CEDAR LAKE, British America, lying with Lake Winnipeg on the E., and Lake Winnipegosis on the S., is properly only an expansion of the Saskatchewan, which enters it on the N.W., and issues from it on the N.E. It is nearly 30 m. long, and, where widest, 25 m. broad, and with its coast-line embraces an area of about 312 sq. m. Its height above Lake Winnipeg is upwards of 68 ft., and above the sea upwards of 688 ft. Its only feeder besides the Saskatchewan is a branch from Moose Lake, which enters it from the N. Its depth of water is sufficient for the largest craft, except on the N.W., where the quantity of alluvium brought down by the Saskatchewan is rapidly filling it up. Its N. coast is deeply indented, and forms the edge of a low flat, which extends far back into the country. At some points, and on many of the islands which dot its surface, horizontal beds of limestone are seen. Both the mainland and the islands are well wooded with balsam spruce, birch, poplar, tamarack, Banksian pine, and cedar, the last growing on its shores, particularly the N.W., and from its being somewhat rare in other parts of the country, giving it its name. The Saskatchewan, on issuing from the lake, is divided by an island into two branches. At the commencement of the S., and far narrower branch, the Indians have a fishing station, where white fish and sturgeon are caught in abundance. Cedar Lake is separated from Winnipegosis by a low isthmus, about 4 m. long, which, as the Hudson's Bay Company at one time sent their supplies to the Swan River district across it, bears the name of the Mossy Portage.

CENTREVILLE, a vil. U. States, Virginia, Fairfax co., 27 m. W. Washington, contains one church and a few stores, but is memorable for the series of battles fought in its vicinity on the last days of August, 1862, in which the Federal army, under General Pope, suffered heavy loss and a severe repulse.

CEREKWE (NEW, LOWER, and UPPER), three places, Austrian empire, Bohemia, circle Tabor:—1, *New Cerekwe*, 63 m. S.E. Prague; with a parish church, two mills, and 1100 inhabitants.—2, *Lower Cerekwe*, 26 m. E.S.E. Tabor; with a parish church, two mills, and 1100 inhabitants.—3, *Upper Cerekwe*, 22 m. E.N.E. Tabor, on the Iglau; with a parish church, a castle, a townhouse, a brewery, and saw and other mills. Pop. 1800.

CERHOWITZ, a tn. Austrian empire, Bohemia, circle and about 24 m. S.W. Prague; has a parish church, a townhouse, and a brewery, and contains 1300 inhabitants.

CERVIGNANO, a tn. Austrian empire, dist. Görz, on the frontiers of Venetia; with several public offices, and some trade. Pop. 1700.

CESIO, a tn. Austrian Italy, prov. Belluno, 6 m. N.N.E. Feltre; with a valuable mine of quicksilver. Pop. about 3400.

CEWKOW, a tn. Austrian empire, Galicia, circle Zolkiew, about 52 m. N.W. Lemberg; with manufactures of turpentine and pitch. Pop. 1830.

CEYLON [add.] The commercial activity of the island has advanced to a considerable extent of late years, but from the nature of the climate, which, though not generally unhealthy, is not suitable for Europeans, the commerce must necessarily be dependent in a great degree upon native energy. Coffee has become of rapidly increasing importance as an article of foreign trade, and the aggregate of exports has gradually, but not uniformly, risen in amount. The value of the imports, however, exhibits a steady annual growth for many years. The pearl-fishery on the Aripo banks was revived, after a long interval of suspension, in 1855, but

appears since to have declined, the total value of 'precious stones' exported in 1862 having been only £1427.

The general condition of the island may be gathered from the following statistical statements. The total value of the imports and exports, including specie and bullion, in each of the years 1861-63 was:—

	1861.	1862.	1863.
Imports	£3,663,749	£4,243,140	£5,443,807
Exports.....	2,706,207	2,494,120	3,587,234

The principal articles of import and export, and the value of them, in the same three years, were as follows:—

Principal Articles Imported.	1861.	1862.	1863.
Coal and Coke	£63,092	£39,490	£127,720
Cotton Manufactures	590,890	551,939	851,102
Cutlery and Hardware	19,723	17,385	66,547
Curry Stuffs	37,065	37,024	59,617
Fish	61,383	61,042	60,905
Paddy	65,871	90,378	119,742
Rice	836,219	1,265,581	1,324,746
Haberdashery, &c.	30,101	40,303	66,263
Specie and Bullion	1,871,290	1,510,418	1,842,974

Principal Articles Exported.	1861.	1862.	1863.
Areca-nuts	£52,168	£41,529	£51,304
Cinnamon	42,261	43,776	36,702
Coffee (Plantation)	1,397,248	1,292,312	1,809,186
Do. (Native)	265,626	254,149	317,034
Cotton Manufactures	161,281	167,554	399,368
Do. Wool	25,587	36,100	89,963
Cocoa-nut Oil	104,042	143,216	189,232
Specie and Bullion	421,921	238,153	408,050
Arrack	26,786	8,501	7,499
Tobacco	23,903	19,180	22,144

The portion of the above imports which went from the United Kingdom in the year 1862 was:—Of coal, £87,864; cotton manufactures, £471,257; cutlery, &c., £26,494; and haberdashery, £29,328; and among other articles so imported were—malt liquors, £21,206; oilmen's stores, £10,311; spirits, £24,713; sugar, £11,514; and wine (French and Spanish), £22,752. Of the exports from Ceylon there came to the United Kingdom in 1862:—Cinnamon, £42,100; coffee (plantation), £1,237,447; coffee (native), £205,846; cotton wool, £35,690; cocoa-nut oil, £128,762; specie and bullion, £286,153; tobacco, £14,366; and among other articles exported to the United Kingdom were—coir (rope and yarn), £20,049; gunnies and twine, £16,140; and plumbago, £110,83.

The amount of shipping frequenting the ports of the island has likewise increased, the tonnage entered in 1860 being 382,550; in 1861, 419,413; and in 1862, 447,481; the tonnage cleared was 407,699, 417,808, and 441,511 in the same years respectively. The number of vessels and their tonnage in the several ports in the year 1862 are given thus:—

Ports.	Entered.		Cleared.	
	Vessels.	Tons.	Vessels.	Tons.
Colombo	1,124	164,132	1,113	161,666
Negombo	52	2,345	56	2,310
Calpentyn	40	1,069	32	951
Pantura	10	464	7	272
Calura	13	714	20	1,077
Barberyn	31	1,567	28	1,394
Galle	322	196,160	310	192,768
Ballepitty	12	634	6	296
Dodandowe	6	294	6	320
Belligam	3	145	5	436
Gandurah	1	411	6	523
Hambantotte	1	51	1	63
Jaffna	347	14,531	349	15,126
Point Pedro	216	13,671	199	11,731
Kangasantore	—	—	70	2,391
Manaar	249	19,969	275	21,374
Tullernamaar	50	2,134	—	—
Trincomalee	46	6,534	60	6,626
Batticaloa	17	1,450	26	1,429
Passalo	210	17,244	195	17,131
Vangalle	28	3,792	27	3,627
Total	2,788	447,481	2,791	441,511

Of the vessels entered 304, of 233,392 tons, were British, and 2407, of 180,379 tons, were colonial. Of those cleared, 299, of 228,903 tons, were British, and 2423, of 181,187 tons, were colonial.

Agriculture.—The ensuing table exhibits the extent of agriculture in the various provinces of the island, together with the nature of the crops cultivated, and the produce of them, in the year 1862:—

	CENTRAL.		NORTHERN.		EASTERN.		SOUTHERN.		NORTH-WESTERN.		WESTERN.	
	Acres.	Produce.	Acres.	Produce.	Acres.	Produce.	Acres.	Produce.	Acres.	Produce.	Acres.	Produce.
Paddy	76,105	Bush, 1,188,244	71,691	Bush, 819,182	49,339	Bush, 481,855	79,227	Bush, 820,730	47,202	Bush, 644,817	194,514	Bush, 1,059,306
Fine Grain	9,436	140,434	21,647	175,022	1,500	9,395	25,417	94,027	15,779	210,768	31,057	102,629

Total	204,729	—	204,729	—	52,349	—	157,757	—	82,538	—	290,353	—

The island possessed, in 1862, 5296 horses, 672,313 horned cattle, 51,517 goats, and 44,391 sheep, the great majority of the sheep and goats being kept in the northern province.

Finance.—The customs produced in 1862 an income of £236,874, being nearly one-third of the whole revenue. The total amount of the revenue and expenditure in that and the two previous years was as follows:—

	1860.	1861.	1862.
Revenue.....	£767,101	£751,997	£759,136
Expenditure.....	705,440	635,230	626,654

Population, &c.—The following table shows the area and population of the several provinces, according to the last return in the year 1862. It reveals the curious fact that the males are considerably in excess of the females—a state of matters the reverse of what is usually the case in old countries:—

PROVINCES.	Area Sq. m.	POPULATION.								Per Sq. m.
		White.		Coloured.		Total.		Aliens and Strangers	Total.	
		Males.	Females.	Males.	Females.	Males.	Females.			
Western	3,820	4,180	4,680	398,953	312,929	403,133	317,609	5,070	725,812	190.00
North-Western	3,362	232	181	105,466	99,055	105,688	99,236	—	204,924	60.95
Southern	2,147	697	714	171,161	158,951	171,858	159,665	3,236	334,759	155.91
Eastern	4,753	395	403	42,132	40,424	42,577	40,827	334	83,738	17.61

CHAK-CHAK, the chief port, fort, and town of the island of Pemba, which lies off the E. coast of Africa, N.N.E. of Zanzibar. It is situated on the W. side, where the island is narrowest. The houses, generally containing only two rooms, are square wattle dab-huts, raised on platforms of tamped clay, generally with a deep verandah in front, where poultry, fruit, and fish are exposed for sale; the principal street, lined with huts of the above description, is merely a long narrow lane. By far the most prominent and attractive object is the fort, whose white walls and tall towers rise on a wooded eminence, and stand boldly out from its dark green back-ground, commanding the harbour and the creek leading to it. Its structure, consisting in front of a loop-holed curtain of masonry, flanked with turrets, was probably suggested by the Portuguese, who long made Pemba, the 'green island' of the Arabs, one of their principal slave-depôts, and traded regularly to Chak-Chak as late as 1822.

CHALEUR BAY [add.], British America, on the W. shore of the Gulf of St. Lawrence; has at its entrance a width of about 25 m.; a length from E. to W. of 75 m.; and a circuit, from Cape Despair round to the N. extremity of Miscou Island, of 185 m. It forms the boundary between the district of Gaspé in Canada East and New Brunswick. This magnificent bay, without rock, reef, or shoal, so swarms with fish during the summer months that it has among the natives the name of 'the sea of fish.' The scenery on its coast is very fine, the grand wave-worn cliffs near its entrance, and among them the Percé Rock, 280 feet high, through which a boat can pass, being noted and remarkable objects. Mont Percé, in the back-ground, rises to the height of 1230 ft., and forms a conspicuous landmark. The N. or Canadian shore is of moderate height, but a few miles behind it is an irregular range of hills of considerable elevation. The predominant features are red cliffs of sandstone and shale, with intervening shingle and sand beaches. The S. or New Brunswick shore is mostly composed of similar rocks, but is much lower, excepting between Bathurst and Carquette, where the red sandstone cliffs rise to the height of 200 ft. The sandstone belongs apparently to the coal-measures, and thin veins of bituminous coal are seen in many places. The chief rivers of the bay are the Ristigouche, which enters at its head with a broad estuary, forming the fine harbour of Dalhousie; and the Nipisighit, which, flowing E.N.E. through the N.E. of New Brunswick, falls into the large bay of its name at Bathurst. The navigation is by no means difficult, the fogs which prevail with S. winds on the banks of Miscou Island (on which there is a lighthouse) being of rare occurrence, and the weather within the bay being in general warmer and much finer than in the gulf outside. The bay, 110 m. from Rivière de Loup, where the Grand Trunk railway of Canada terminates, offers every advantage as a principal station for steam communication between England and Canada, the magnificent harbour at its head and at the mouth of the Ristigouche being open and accessible for at least ten months of the year. All around its shores are increasing settlements, with harbours, roadsteads, and rivers, which are much fre-

quented by vessels engaged in the lumber trade and the fisheries.

CHAMBA, a tn. Western Africa, Adamaua, finely situated on the Faro, near the S. foot of Mount Alantika, 50 m. S.S.E. Yola. It is a large place, and the residence of a powerful and warlike chief. The inhabitants are almost exclusively Fellatah.

CHAMBA, or JUMBO, a tn. N. India, near the S. frontier of Gholab Singh's Dominions, 130 m. N.E. Lahore. It occupies a beautiful and picturesque site on the Ravee, at the base of a snowy peak of the Himalaya, and consists of about 1000 houses, constructed of wood, and ranged along the sides of an open rectangular space.

CHAMBLY, a tn. Canada East, cap. co. of same name, on the Richelieu, 14 m. E. Montreal. Though it ranks as a single town, it consists of three distinct municipalities, called respectively the Basin, the Canton, and the Parish. Near the second of these, situated near the Rapids, the remains of a fort, erected by the French in 1711, may still be traced. Chamby possesses an English Episcopal, a Wesleyan, and a R. Catholic church, a R. Catholic college, a Protestant academy, a Canadian and a mechanics' institute, a deaf and dumb asylum, and a nunnery. Numerous flour and saw mills take advantage of its large supply of water-power, and an important market is held twice a week. Pop. about 1300.

CHAMPAGORE, a tn. W. Africa, Hausa States, prov. Gurma, 160 m. W. Sokoto; lat. 13° 13' N.; lon. 2° E. It is bounded on the N. by a wooded dell; and towards the S. by a small chain of hills, at the foot of which are the wells, 7 fathoms deep. The corn magazines or granaries of the inhabitants are peculiar, consisting of towers or quadrangular buildings, raised first 3 ft. clear of the ground, as a protection from the ants, and then continued with a gradual slope to the height of 15 ft., with an average diameter of about 6 ft., the only opening being a window-like aperture near the top, through which the corn is taken in and out. Every courtyard has one or more of these magazines, which consequently form more prominent objects than the low huts, of which the great part of the dwellings are composed. The only building of any pretensions is the residence of the governor, whose jurisdiction extends over a large district.

CHAMPANEER, two places, India:—The one is situated on the S. frontiers of the dist. and 30 m. S.S.E. Ajmeer, and possesses little importance. The other, in Gujrat, about 50 m. N. Baroda, consists of a tn. and fort; the former of which, once an important city, as indicated by the remains of fine houses, tanks, temples, and mosques, is now a poor straggling place in the midst of dense jungle infested by tigers and other wild animals. The fort, or rather two forts, an upper and a lower, are situated on an isolated rock of great height, and surrounded by walls inclosing an area about three-quarters of a mile long, and 660 yards broad. The upper, deemed by the natives impregnable, contains a famous Hindoo temple. The lower, which is also very difficult of access, and of great natural strength, contains some curious and very ancient Hindoo monuments. Pop. 2000.

CHAMPLAIN, a tn. Canada East, cap. co. of same name, l. bank St. Lawrence, 70 m. N.E. Quebec. It possesses a R. Catholic chapel and several tanneries, together with a large trade in flour and lumber. A lighthouse erected on a height near the bank of the river gives important aid to those navigating it. Pop. about 2000.

CHAMPOTON, or JAMPOTON, a tn. Mexico, state Yucatan, on the l. bank of a stream of same name, 12 m. N.N.E. Campeachy. It suffered much during the war with Mexico in 1840, and has lost much of the trade which it once carried on with the interior. Pop. 1600.

CHAMULA, a tn. Mexico, state Chiapas, about 6 m. N.W. S. Christoval; with 10,131 inhabitants.

CHANCELLORSVILLE, a vil. U. States, Virginia, Spottsylvania co., 60 m. N. by W. Richmond, and 10 m. W. Fredericksburg. It is memorable for the great battle which bears its name, and which was fought in its vicinity between the Federal and Confederate armies with great fury and pertinacity during the three days of May 2, 3, 4, 1863. The battle had no decisive result for either side, but during the night of May 4 the Federal army under General Hooker retired across the Rappahannock. An enormous loss in killed and wounded was suffered on both sides, the most serious casualty on the part of the Confederates being the death of their illustrious general, T. J. ('Stonewall') Jackson.

CHANDHAIREE, or CHENDAREE, a tn. India, Scindia's Dominions, in a hilly and jungly tract, 103 m. S. Gwalior. According to the Ayeen Akberry it contained '14,000 stone houses, 384 markets, 360 caravanserais, and 12,000 mosques,' and there are still ruins enough to attest its former extent and splendour, but Mahratta oppression and British competition have combined in destroying its prosperity. It was long famous for a fabric called *mukmoodie*, which was highly prized by wealthy natives for its lightness, pliability, and softness. The cotton yarn of which it was woven was so fine that single threads were almost invisible, and it was sold for three times its weight in silver. It seems still to be made, but costing ten times the price of the finest British muslin has a very limited sale. The fort, which figures much in the wars of the Mogul dynasty, is seated on a lofty hill, and is inclosed by a strong stone rampart, flanked with circular towers.

CHANDPOOR, several places, India:—1, A tn. N.W. Provinces, dist. Bijnour, 45 m. N.E. Delhi, stands in an open and partially cultivated country, and is a place of some importance, with an estimated pop. of 11,491.—2, A tn. Malwa territory, and 43 m. E. Bhopal.—3, A tn. Berar or Nagpore, 51 m. N.E. Nagpore.—4, A tn. N.W. Provinces, dist. Saugor and Nerbudda, 20 m. S.S.E. Saugor, at the height of 1575 ft. above the sea.—5, A tn. Scindia's Dominions, on the road from Gwalior to Saugor, 38 m. S.E. Gwalior, l. bank Sindh, which is here about 200 yards wide.

CHANDRA (THE), the second in importance of the five great rivers of the Punjab, British India, rises in the Bara Lacha Pass, lat. 32° 50' N.; lon. 77° 40' E., and flows in a south-westerly direction towards Koksar, where it attains a considerable size. At Tanda, about 25 m. below Koksar, it receives the waters of the Bhaga River, which also has its source in the Pass of Bara Lacha. From this point the united stream is called the Chandra-Bagha, or Chenab, and falls into the Indus at Ismail Khan, lat. 31° 10' N.; lon. 72° 15' E.

CHANG-CHOW [add.], a city, China, prov. Kiang-soo, near the east bank of the Imperial canal, 76 m. S.E. Nanking, and about 100 m. N.W. Shanghai. It was formerly an important commercial city, being situated between Soochow and the Yang-tze River, with numerous small canals leading from it into the Tai-ho, or Great Lake. It is adorned with several triumphal arches, and the sides of the canal leading to it are lined with hewn stone. A moat surrounds the walls, which are 25 ft. high, and pierced for guns. This city has recently become famous in the annals of the Taiping rebellion as one of the strongholds held by the insurgents for four years, and garrisoned by picked men, who gave a desperate resistance to the force of Anglo-Chinese, under the command of Major Gordon. After two assaults, which were repulsed with serious loss of officers and disciplined troops, the place was invested by 70,000 imperial soldiers; regular engineering operations were carried on up to the walls, where a breach

was made by the artillery as in European warfare, and after a sanguinary hand-to-hand conflict the city was captured on the 11th May, 1864. In it were 20,000 pressed inhabitants of the province, who were saved by wearing white turbans, while the Cantonese soldiery, 2000 strong, were put to the sword, among whom were four rebel chiefs.—(*North China Herald*; *Du Halde*.)

CHAO-CHOW, a departmental city, China, prov. Quangtung, 195 m. N.E. of Hongkong. It is the centre of an important maritime division of the province, on the frontiers of Foo-kien, up the river Han, near its embouchure, the tide flowing up to the walls. The channel leading to it is very shallow, in consequence of the waters of the river separating into several subsidiary streams before reaching the sea; so that foreign ships of large burden can sail up only at high water. There has been a large native trade carried on at this port for centuries, being the centre of a populous department, well watered and fertile, and there are nearly 4,300,000 inhabitants within a circuit of 50 miles; so that a considerable emigration of the surplus population takes place throughout the year to the Indian Archipelago, Cochinchina, Siam, and Singapore, where they constitute the most thriving portion of the Chinese populations, and are expert sailors. This city—locally called *Tiè-chiu*—was included in the treaty of Tientsin (1858) as a port open to foreign trade, although no foreign ships had proceeded up the river. However, unlike the people of the other twelve open ports, the inhabitants of Chao-chow refuse to have any direct intercourse with foreign traders, and have shown, up to the present time (1864), a decided repugnance to foreigners residing amongst them, or even entering the gates of the city. Consequently the British consul and others, together with the foreign residents, have refrained from taking up their abode there, and few visit the city. Hence the trade of this treaty port is now carried on at Swatow, where the foreigners are located, and all the foreign commerce is transacted.

The people of this city and department are noted for their independent and turbulent spirit, as well as their enterprise and industry. They rank among those who are sparing in their allegiance to the court of Peking, and seldom yield up the quota of revenue justly due to the emperor.—(*Gutzlaff's Journal*; *Williams' Com. Guide*; *MS. Notes*.)

CHAO-HING, prov. Che-kiang, China. See SHAO-SHING in *Supp.*

CHARCAS (SANTA MARIA DE LAS), a tn. Mexico, state and 80 m. N. San Luis Potosi. It was once an important mining town, and is still a handsome place, though the working of the mines has in a great measure ceased. The inhabitants now give their attention particularly to the rearing of cattle, for which the district is well adapted. P. 5000.

CHARITON, or GRAND CHARITON, a river, U. States, which, rising on the S. frontiers of Iowa, enters Missouri, flows nearly due S. towards the centre of this state, and joins the river Missouri on its l. bank, after a course of about 250 m., of which 50 are navigable. Its principal affluents are the East Chariton and the Middle Fork, the former joining it on the left, and the latter on the right bank.

CHARLES, an isl. Pacific Ocean, Galapagos group, about 600 m. W. of South America, Ecuador; lat. 1° 20' S; lon. 90° 30' W. It is 24 m. in circuit, and presents a singular appearance from the number of round-topped hills of similar shape, but different sizes, with which it is crowned. One of these hills is about 1500 ft., and another, the largest and loftiest, 1780 ft. high. Florian, the largest settlement in the Galapagos group, is situated among the high hills of this island, and has extensive plantations, on which every kind of tropical product is raised in abundance. In 1849, however, the number of settlers only amounted to 25, though the land uncleared appears to be as fertile as that which has already proved so productive.

CHARLESBOURG, a tn. Canada East, co. and 4 m. N.N.W. Quebec; with a R. Catholic church, and an extensive general business and trade in lumber. Pop. about 2500.

CHARLESTON [add.], a tn. U. States, S. Carolina, cap. co. or dist. of same name, on an estuary or bay of the Atlantic, formed by the confluence of the rivers Cooper and Ashley, and at the common terminus of a number of lines of railway; lat. 32° 46' 33" N.; lon. 79° 55' 38" W. It occupies the S. extremity of a tongue of land formed by the two rivers,

and so low and flat, that the town when approached from the sea seems to rise out of the water. The surrounding country is equally flat, and some want consequently is felt of a back-ground to set off a scene which is otherwise striking and beautiful; but the area occupied is far larger than the population would, under ordinary circumstances, require. This is owing to the manner in which the place is built. A large proportion of the houses belong to the planters of the adjoining districts, who are wealthy enough to have both town and country residences. Most of the houses occupied by these residents stand among open grounds, laid out in ornamental shrubberies or gardens, and are provided with ample piazzas and verandahs. The streets, where more closely built and densely peopled, are tolerably regular, and, with few exceptions, cross at right angles. One of them, Meeting-street, a fine avenue of 60 ft. breadth, stretches nearly across the city from N. to S., contains most of the public buildings, and is the chief centre of the wholesale trade. King-street, which runs nearly parallel to Meeting-street, but is much more limited in width, is the fashionable shopping locality. Several of the cross-streets are so narrow as to be unhealthy. The principal materials used in building are wood and brick.

civil war, to be one of the best-built forts in the U. States. A third fort called Castle Pinckney, stands about a mile in front of the city, covering the crest of a mud-shoal, and facing the entrance. In respect of trade Charleston is the greatest mart of the Southern States, and has large exports of cotton, rice, tobacco, indigo, grain, bacon, tar, pitch, turpentine, and lumber. In its immediate vicinity are grown the famous Sea Island cotton, and the largest rice crops within the limits of the U. States. In cotton and rice alone the exports previous to the outbreak of the war were as follows: cotton (Sea Island), 25,633 bales; do. (Upland), 391,705 bales; clean rice, 128,340 tierces. The tonnage of the port exceeded 43,000 tons. Some ship-building is carried on, and there are two dry docks for repairs, but the manufactures as a whole are insignificant.

Independently, however, of its commercial importance, Charleston has been made ever-memorable by the events of the civil war of 1861-5. On the 12th of April, 1861, the first shot of the war was fired by the Confederates upon the small Northern garrison which occupied Fort Sumter, within the harbour, and which surrendered on the 14th. Subsequently Charleston became a chief receptacle of the stores, civil and military, conveyed by vessels running the blockade which the Federals established. In 1863 the Federals made vigorous preparations to capture the place, but their naval attacks were repulsed, and Fort Sumter, though reduced to ruins, held out against a persistent and furious bombardment. The siege was protracted, with more or less energy, throughout the remainder of 1863, and into the year 1864. Then the issue of the war turned against the Confederates, and on the night of February 17, 1865, Charleston was evacuated by its defenders, when threatened by the advance of General Sherman from Savannah, and was immediately occupied by the Federals on the 18th. Previous to the evacuation the upper part of the city was set on fire, and in the conflagration 6000 bales of cotton were burned. Then followed the rapid collapse of the Confederate cause, and on April 14, exactly four years after it had been hauled down, and on the day of the assassination of President Lincoln, the U. States flag was formally and solemnly replaced on Fort Sumter. Pop. (1860), 40,194.

CHARLOTTETOWN, a tn. U. States, Virginia, cap. co. Jefferson, on the Winchester and Potomac railway, 60 m. N.W. Washington. It stands in what is called the valley of Virginia, in the centre of a beautiful and fertile district, and is built on land which once belonged to Washington's brother. Pop. about 1500.

CHARLOTTE, a tn. U. States, N. Carolina, cap. co. Mecklenburg, on Sugar Creek, and on the N. Carolina Central railway, 125 m. S.W. Raleigh. It stands on a range, on which from time to time considerable quantities of gold have been found, and is indebted for any prosperity which it possesses to the gold-mines and washings in its vicinity. In 1838 a branch mint for coining the produce was established here. Pop. about 2500.

CHARLOTTESVILLE, a tn. U. States, Virginia, cap. co. Albemarle, on Moore's Creek, 2 m. above its junction with the Rivanna, and upon the railway from Washington to Lynchburgh, 65 m. N.W. Richmond. Its only claim to notice is its being the seat of the university of Virginia, which was planned by Jefferson, and the buildings of which were erected at an expense of above £50,000. Pop. 2600.

CHARLOTTETOWN, or **CHARLOTTE** [add.], a tn. British America, cap. Prince Edward Island, advantageously situated on the N. shore of a long creek or bay, which has received the name of Hillsborough River. It is well laid out in a large square, and in wide streets which cross at right angles; but the plan contemplated is as yet very imperfectly filled up, and the population, though rapidly increasing, will not soon be able to occupy the space allotted to them. The only stone edifice in the place is the new provincial building occupying the centre of the principal square; about ten others are of brick; but, with these exceptions, all the other buildings, public as well as private, are of wood. The most conspicuous erections are the Scotch church, with a square white tower, and the Government house, distinguished by its colonnade. Prince of Wales College, supported from the public revenue, was established in 1860; there are also a private college, named St. Dunstan's, and a normal school for training teachers. There are also two banks in the town. The harbour is some-

According to a regulation rendered necessary by the frequency of destructive fires, no new buildings are to be of wood, but this regulation is understood to apply only to the old town, and hence beyond its limits wood is still generally used. The principal public buildings are 36 churches (among which particular notice is due to the Episcopal churches of St. Philip and St. Michael, the Baptist church in Citadel-square, and the R. Catholic cathedral), two Jewish synagogues, the college, high-school, and other educational establishments, the S. Carolina institute for the encouragement of the arts, the citadel, the courthouse, the old and new custom-house, the orphan asylum, and Roper hospital. Immediately outside the town there is a large and beautiful cemetery, with a number of fine monuments. The harbour of Charleston, formed by the estuary already mentioned, is of ample dimensions, and is landlocked on all sides except the E., where the sea pours in, and a troublesome bar has been formed, which is all the more dangerous that the sand-banks composing it are shifting, and leave only a few navigable channels of varying depth and width. The entrance to it is well defended. On the right is Fort Moultrie, on Sullivan's Island, and on the left, raised upon a mole in the harbour, and directly covering the channel, is Fort Sumter, said, before the

what difficult of access from the narrowness of its entrance, which shoals so much on either side as not to leave a navigable width of above a quarter of a mile; but beyond the entrance the channel expands into one of the finest natural harbours in the world, having depth and space sufficient for any number and description of vessels. Though entered from the S. coast, the distance from its head to Savage harbour on the N. coast is less than a mile. In 1862 the entrances were 624 vessels (49,611 tons), and the clearances 570 vessels (51,505 tons). Pop. (1861), 6706.

CHAROAMA, a vil. Arracan, dist. Rala, on a branch of the Koladyn, about lat. 21° N. It is composed chiefly of huts and *charas*, or serais, for the accommodation of the numerous pilgrims to the temple of Mahamsonnee. This temple, situated about $\frac{3}{4}$ m. E. on a mound, consists of a heavy solid dome, with a short turret or minaret at each corner. The worshippers are Buddhists.

CHATALCHA, or TCHATALDGE, a tn. Turkey in Europe, on the Attyras, 20 m. W.N.W. Constantinople, in a well-watered wooded valley of the E. slopes of the Little Balkan. The modern town, which possesses three mosques, consists of 120 Turkish and 180 Christian houses of comfortable appearance. The remains of fortifications prove the ancient town to have been a place of some importance.

CHATAUQUE, a lake, U. States, New York, in the centre of the co. of same name, about 18 m. long by 1 to 3 m. wide. It is said to be the highest navigable water on the N. American continent, being 730 ft. above Lake Erie, and 1290 ft. above the Atlantic. It is frequently covered by mists.

CHATEAU, a bay, British America, on the N.E. coast of Labrador, at the entrance of the Strait of Belle Isle, about lat. 52° N.; lon. 55° 50' W. It contains within it three harbours—Henley, Antelope, and Pitt's; the first fit only for small vessels, and frequented by the fishermen who have their huts and stages on its shores; the last two suitable for the largest ships, and quite secure, the depth varying from 4 to 18 fathoms over a mud bottom, while islands shelter them completely on the S.E. and W. The scenery of the bay is magnificent. Pitt's Hill, on the W. side of Pitt's Harbour, is 586 ft. above the sea; Beacon Hill, to the N. of it, is 725 ft.; and the High Beacon, to the N.W. of York Point, 959 ft. Castle and Henley Islands are capped at the height of 200 ft. by basaltic columns.

CHATEAU-RICHET, a tn. Canada East, co. Montmorency, 1 bank St. Lawrence, 16 m. N.E. Quebec; with a R. Catholic church, and a large trade in flour and lumber. Pop. about 1300.

CHATHAM, a tn. British America, New Brunswick, co. Northumberland, r. bank Miramichi, about 7 m. above its mouth. It is a straggling place, extending about $1\frac{1}{2}$ m. along the S. bank of the river, but is rapidly increasing; possesses some good houses, three churches, and two other small places of worship, a large flour and saw mill, and wharves with deep water close to them. All the buildings are of wood, neatly painted and finished. In 1862, 119 vessels (21,336 tons) entered, and 105 vessels (21,951 tons) cleared. Pop. 1500.

CHATHAM, two tns. British America:—1, *Chatham*, Canada East, co. Argenteuil, on the Ottawa, in a thickly settled district, 42 m. W.N.W. Montreal; with two churches—the one Baptist, and the other in connection with the Church of Scotland—and a number of flour, saw, and carding mills. Pop. about 3500.—2, *Chatham*, Canada West, cap. co. Kent, on r. bank Thames, about 18 m. above its mouth in Lake St. Clair, and on the Great Western railway, 43 m. W. Detroit. It is a large and well-built town, with a number of churches and schools, and other fine public buildings; a harbour accessible by vessels of the largest class; and building-yards, in which some of the finest sailing craft on the inland water of N. America were built; and a very extensive trade in wheat and other agricultural produce, oak and walnut timber, and W. India and pipe staves. Two steamers ply regularly between Chatham and Detroit. Pop. abt. 6000.

CHATHAM, an isl. in the Pacific, the easternmost of the Galapagos group, about 600 m. W. from the continent of S. America, Ecuador. It is 19 m. long by 8 m. broad, and has peaks at its S.W. end which rise to the height of 1650 ft. It has a fertile soil, several good anchorages, and abundance

of water, and seems better adapted for settlement than any other island of the group. Freshwater Bay, so called from a fine stream which falls into it from a lava cliff about 30 ft. high, affords secure anchorage in 20 fathoms. On two plantations, situated about 4 m. inland, most tropical productions are raised with ease.

CHATTAHOOGA, a vil. U. States, Tennessee, on the Tennessee River, navigable by steam-boats eight months in the year, and at the terminus of the Nashville and Chattanooga, and of the Western and Atlantic railways. It is advantageously situated for trade, is the shipping place for the surplus produce of E. and Central Tennessee, and possesses a number of mills and factories. Wood, coal, and iron abound in the surrounding country. In 1863 the town was occupied and fortified by a Confederate army, but in August was abandoned to the Federals. In September the Federals, being defeated in the battle of Chickamauga, retired to it, and were followed up by the Confederates. A memorable battle was fought in the vicinity of the town between the two armies, on November 23–25, in which the famous assault of Lookout Mountain was made by the Federals, and the Confederate forces were driven from their positions and routed. Pop. 3500.

CHAVALUNSK, a tn. Russia, gov. Saratov, cap. circle of same name, r. bank Volga. It stands amidst fruit-gardens, contains four churches, circle and parish schools, a charitable endowment, numerous manufactures, and has an extensive traffic on the river. Pop. 9200.

CHE-CHOW, or TCHU-CHOO, a tn. China, prov. Nganhwui, on a branch of the Yang-tze River, 153 m. S.S.W. Nanking. It is a large and important city, situated among hills, surrounded by a wall, and containing many handsome buildings—one of them a seven-storied pagoda, which forms a conspicuous object at a considerable distance. It had the misfortune, however, to fall into the hands of the rebels, who made it one of their strongly fortified positions.

CHE-FOO, or CHE-FOW, a harbour, China, prov. Shantung, on the N. side of the promontory of Shantung, in the prefecture of Tang-chow. This is one of several anchorages on the southern shores of the promontory frequented by native craft during adverse monsoons, where good shelter is found; and the favourite resort of the British and French ships of war for recruiting the health of the men. It is also a place of call for steamers plying between Shanghai and Tientsin. Its name has been adopted to designate the treaty-port of Tang-chow, opened to foreign trade by the treaty of Tientsin (1858), although it is 30 m. E. of that city. From some cause it was found more convenient for shipping than the harbour of Tang-chow; and the comparatively small town of Yen-tai on the shores of the bay was taken by the allies as the actual trading port. This arrangement emanated from the French, who have nominally considered the adjacent territory as held by them, as a material guarantee for the payment of the indemnity from the Chinese government, due on the capture of Peking. (See TANG-CHOW and YEN-TAI in *Supp.*—*North China Herald*; *MS. Notes.*)

CHELSEA, a tn. U. States, Massachusetts. It is in the immediate vicinity of Boston, and under the name of Wrensimet actually formed part of this city till 1738, when it received a separate charter of incorporation, and assumed the name of Chelsea. Though thus legally dissevered from Boston, it is still to all intents one of its suburbs, being little more than a mile distant, and in communication with it by ferry and omnibus. Pop. 12,400.

CHERALLA, a tn. India, presid. Madras, dist. and about 35 m. S. Guntoor, not far from the sea-coast, is inhabited chiefly by weavers, who manufacture coloured handkerchiefs and cloths to such an extent that after supplying the local demand, they send large quantities to Madras and other parts of the country.

CHERCHIL [add.], a tn. N. Africa, Algeria, prov. and 45 m. E.S.E. Algiers, advantageously situated on the coast of the Mediterranean. It is the Julia Casarea of the Romans, who, justly appreciating the importance of its position, made it the capital of Casarea Manritania. It in consequence became a large and populous city, with a circuit of nearly 5 m., and many splendid structures. It was destroyed by the Vandals, but rebuilt by the Greeks. By another vicissitude it became an asylum for the Moors expelled from Granada. In 1531 it was nearly laid in ashes by Andrew Doria, when

he destroyed the fleet of Barbarossa. Under the Romans the harbour was of great extent, and provided with jetties and a basin; but it had been nearly destroyed by an earthquake, and had almost ceased to be used as a harbour when the French obtained possession of the country. Since then much has been done both for it and for the town; which is assuming a handsome appearance, and contains, among other new edifices, a church, an hospital, and barracks. The trade, chiefly in grain, is important. Iron, copper, and gypsum are found in the vicinity. Pop. 3056.

CHESTER, a tn. U. States, Pennsylvania, on the Delaware, and on the Philadelphia and Wilmington railway, 15 m. S.W. Philadelphia. It possesses some interest as the oldest place in the state, having been founded in 1643 by Swedes, who gave it the name of Umland. Pop. 1667.

CHEYAIR, or **CHEY AUR**, a river, India, presid. Madras, which, formed by the union of the Punchee and Bauhoo from the S. of dist. Cuddaph, flows very circuitously, first N., then E., then N.N.W., and joins the Pennaar on its l. bank, 10 m. of direct distance above its mouth. Near Nundeloor, the Cheyair expands, so as to have a breadth of 1200 yards.

CHIAMPO, a tn. Austrian Italy, prov. and 14 m. W. Vicenza; with coal-mines worked on the banks of the Chiampo. Pop. 3212.

CHIAPAS and **SOCONUSCO**, forming by their union a single dep. Mexico, are bounded N. by Tabasco, W. Vera Cruz and Oaxaca, S. the Pacific, and E. Guatemala and Yucatan. This united dep. lies between lat. 15° and 17° N.; lon. 91° and 94° W.; and has an area of about 45,000 sq. m., with four cities, seven market villages (*villas*), 96 villages or hamlets (*pueblos*), and 591 domains or rural tenements (*fincas rusticas*). The surface is intersected from E. to W. by three mountain chains, of which that in the centre may be considered as the prolongation of the sierra. One of the loftiest summits is Huertepec, E from San Cristoval, which has an absolute height of 8500 ft. These ranges inclose valleys which, from their fertility and the excellence of their climate, have been denominated the paradise of Mexico. The drainage of the dep. belongs partly to the Pacific and partly to the Atlantic, but chiefly to the latter, all its larger streams falling into the Gulf of Mexico. Among these are the Chiapa, which, rising in the mountains of Chichumatanes, in Central America, traverses the dep. first in a W. and then in a N. direction, and quits it to enter Tabasco, where it takes the name of Tabasco or Grijalva; the Usumasinta, which, formed by streams from the mountains of Peten and Lake Punajachel, divides into three branches, which take different directions; and the Tulija, which ultimately joins the Tabasco. The lakes are also numerous, but small. The vegetable kingdom comprises almost all the productions both of the temperate zone and the tropics. Among them may be mentioned maize, rice, wheat, and barley, indigo, olives, dye-woods, mahogany and other timber for cabinet-work, wine, tobacco, cotton, cacao of the best quality, sugar, coffee, gum elastic or *ulé*, vanilla, and sarsaparilla. The animal kingdom is almost equally well supplied, and includes, besides the ordinary domestic animals of Europe, many singular denizens of the air, land, and water. The mineral kingdom furnishes rock-salt, soda, and sulphur; the precious metals occur only in too limited quantities to be of economical value; precious stones and valuable pebbles are not uncommon. The industry of Chiapas is still in its infancy, furnishing scarcely a single article worthy of notice; and trade, though not unimportant, is unable to develop itself in consequence of the want of any adequate means of transport. The cap. of the dep. is San Cristoval. Pop. 160,083, of whom about one-half are Indians, and the rest whites and mestzos, with a sprinkling of negroes.

of Chicago River, and on various lines of railway, which, in the aggregate, start 100 trains from it every day. It occupies a flat, which to the eye seems to be a dead level, though it rises gradually from 3 to 24 ft. above the lake. As a security from inundation, the principal streets have been raised from 2 to 8 ft. above the original surface, and are in general spacious, and either paved or macadamized. The

STREET IN CHICAGO.—From a photograph.

sudden rise of the place has made the public buildings more numerous than elegant. Among others are 70 churches, and two Jewish synagogues; a large and magnificent building for an exchange and chamber of commerce, opened in August, 1865; a medical college, a Methodist college and biblical institute, a mechanics' institute, a historical society, a high-school, various grammar and numerous primary schools. The manufactures, though still imperfectly developed, include steam-engines and other machinery, agricultural implements, stoves, brass and tin ware, carriages and waggons, soap, candles, and lard, furniture, barrels and wooden ware, leather, boots and shoes, bricks, beer, &c. The trade—chiefly in grain, provisions, and lumber—has increased with amazing rapidity. Up to 1830, in which year it had but 70 inhabitants, Chicago was merely a trading post and Indian agency, and the country W. and N.W. of it was almost a wilderness. It was not for ten years after that it began to assume any commercial importance, the means of transport being extremely limited. The first wheat exported from the place was in 1838, and then only to the extent of 78 bushels; in 1847 the aggregate quantity of corn was 67,135 bushels. Of provisions, 3000 barrels of pork were packed in 1835, and, three years later, 600 barrels of beef. The subsequent enormous increase in these branches of trade will appear from the following table:—

QUANTITY OF WHEAT, FLOUR, INDIAN CORN, and OATS (in bushels), sent forward to EASTERN MARKETS from CHICAGO, in each of the following years.

Years.	Wheat & Flour.	Indian Corn.	Oats.
	bushels.	bushels.	bushels.
1856 . . .	9,446,365	11,129,668	1,014,637
1857 . . .	11,144,292	6,814,615	506,778
1858 . . .	11,202,267	7,725,264	1,549,069
1859 . . .	10,596,853	4,349,360	1,185,707
1860 . . .	15,892,857	13,700,118	1,091,698
1861 . . .	23,855,553	24,372,725	1,633,237
1862 . . .	22,508,143	29,452,610	3,112,366
1863 . . .	18,298,532	24,996,934	9,900,175
1864-65 . .	16,687,655	14,182,664	16,470,929

In 1864, of live-stock, 586,437 hogs and 262,446 cattle were sent off; besides which there were packed 760,514 hogs and 92,459 cattle—the number of hogs, owing to the deficiency of the harvest, being 464,000 less than were packed and shipped in the preceding year.

CHICAGO [add.], a tn. U. States, Illinois, cap. co. Cook, on the S.W. shore of Lake Michigan, at the mouth

An idea of the number and capacity of the grain warehouses in Chicago may be gathered from the fact that, in 1861, they afforded room for the storage of 6,815,000 bushels. As a mart for lumber, Chicago is one of the most important places in the world, if in that article, as in grain, it does not indeed stand first. The following figures show the receipts and shipments during the last few years:—

Years.	RECEIPTS.			SHIPMENTS.		
	Lumber.	Shingles.	Lath.	Lumber.	Shingles.	Lath.
	ft.	No.	No.	ft.	No.	No.
1859 . . .	302,845,207	165,927,000	49,102,000	226,120,389	195,117,700	28,236,535
1860 . . .	262,494,626	127,804,000	36,691,000	225,372,340	168,302,525	32,170,420
1861 . . .	249,308,705	79,356,000	32,637,000	189,379,445	94,421,186	33,282,725
1862 . . .	365,674,045	121,225,000	23,830,000	189,277,079	55,761,630	16,966,600
1863 . . .	413,301,818	172,361,878	41,768,000	221,799,330	102,634,447	33,293,547
1864-65 . .	501,592,406	190,169,750	65,953,900	269,496,579	138,497,256	36,242,010

The population, which in 1830 was only 70, had risen to 4470 in 1840, and was estimated in 1861 at 160,000, with an annual increase of 20,000.

CHICHEROULY, a tn. India, Sirhind, cap. of a small protected Sikh state of same name, 27 m. N.W. Saharanpore, on the route from this town to Subathoo. It stands in an open, level, and well-cultivated country; is surrounded by a mud-wall, and possesses a well-supplied bazaar.—The state has an area of 63 sq. m., and a pop. of 9387.

CHICKAHOMNY, a river, U. States, S.E. part of Virginia, rises in Hanover co., and falls into York River about 8 m. above Jamestown, furnishing extensive water-power in its course. It was the scene of many of the military operations of the civil war, and is especially memorable for the battle or battles bearing its name, which occurred on May 31 and June 1, 1862, between the Federal and Confederate armies, and which, with the subsequent series of engagements, forced the Federals under General M'Clellan to withdraw from their attempt to reach Richmond, and to abandon the campaign.

CHICKAMAUGA, a creek or small stream, U. States; rises in Walker co., Georgia, and, flowing N.E., enters the Tennessee near Chattanooga. It has been made famous by being the scene of a prolonged and fiercely contested battle between the Federal and Confederate armies, on Sept. 19 and 20, 1863, which resulted in the line of the Federals being broken, and their consequent retreat to Chattanooga.

CHICOUTIMI, a river, Canada E., which rises in an elevated district, not far from the N. frontiers of co. Montmorency; flows circuitously N.N.E., and joins r. bank Saguenay, of which it is the largest tributary, at the town or trading-post of Chicoutimi. Though sufficiently wide and deep for navigation, an insuperable barrier is interposed, at a short distance above the point of confluence, by a series of rapids, through which the water rushes in a narrow, rugged, and rocky channel, with a descent which amounts in the aggregate to nearly 50 ft. In its course the Chicoutimi expands into a long and narrow lake, called Kiguami.

CHICOUTIMI, a tn. Canada E., cap. co. of same name, r. bank Saguenay, about 75 m. above its mouth, and 100 m. N. by E. Quebec. It has a R. Catholic chapel and several schools, and ships large quantities of lumber. Pop. about 1000.

CHICOVA, a dist. S. Africa, in the Banyai country, on the S. or r. bank of the Zambesi. It has attracted some attention in consequence of a tradition that silver-mines were once worked in it. If it was so, the natives have lost all knowledge of it, and there is nothing in the strata to indicate the presence of any precious metal. Dr. Livingstone, however, found a thin seam of coal or lignite underlying strata which consisted in descending series of coarse sandstone, sandstone flag, and shale. But the strata are so much intersected and tilted up by dykes of basalt as to make the working of the coal all but impossible.

CHIESCH, a tn. Austrian empire, Bohemia, circle Eger, on the Strzela; with a parish church, a castle, a townhouse, two breweries, vinegar works, manufactures of chicory, a paper and two other mills. Pop. 1900.

CHIFOWA, a tn. W. Africa, Bornou, dist. Gummel, 75 m. N.E. Kano. It is a considerable place, surrounded by a low earthen wall.

CHILAW, a tn. on the W. coast of Ceylon, near the mouth of the Dederoo-oya, 45 m. N. by W. Colombo. Its proximity to the pearl fishery gave it an interest which it did not otherwise possess, and made it repeatedly the object of a keen contest. The Tamils wrested it from the Singhalese in the 14th century, and it afterwards passed successively to the Moors, the Portuguese, and the Dutch. From the last

it was taken by the British in 1796.

In the forest to the E. of Chilaw, within a radius of 20 or 30 m., are contained the ruins of a number of ancient cities. The road leading from Chilaw southward to Negombo passes through almost continuous nut plantations.

CHILI [add.] The construction of railways has given a great impetus to the productive industry of several parts of the country. A new line,

connecting the mining districts of Copiapo and the adjacent country with the new port of Caldera, in the province of Atacama; another, 40 m. in length, connecting Coquimbo and Serena with Las Cardas and the mines in the interior, with an extension of 13 m. to Panulcillo; and another, proposed to be constructed from the port Taleahuano to Chillan, a distance of 108 m., running past Concepcion and the N. side of the river Bio-Bio, have opened, and promise to open, most important fields of mining and commercial enterprise. The total length of railway open in 1862 was about 338 m., viz. from Valparaiso to Santiago, 115 m.; Santiago to San Fernando, 83 m.; Caldera to Pabellon, 74 m.; Pabellon to Chanareillo, 26 m.; and from Coquimbo to Las Cardas, 40 m. The total cost of these lines was £427,215, and the receipts for passengers £123,015, and for goods traffic £222,271.

Copper mines are worked in the cordillera of San Carlos, N. of Chillan, by a British subject; and coal mining is carried on very successfully at the ports of Lota and Coronel, at which also the smelting of copper is done on a considerable scale. The coal mines at Lota, the property of a Chilean, are worked by English miners.

The foreign trade of the country has expanded greatly within the last twenty years; for, whereas the imports from Great Britain in 1847 are stated to have been only £89,440, and the exports to it £91,640, in 1863 the imports had risen to £1,474,040, and the exports to £2,288,862; the latter, in 1864, advancing further to £3,088,601. In the year 1862 the total value of the exports from Chili was £5,233,830, and of the imports into it £3,695,064. The values of some of the principal articles exported were as follow:—copper, £2,045,173; copper ore, £439,174; silver, £436,172; silver ore, £205,230; wheat, £249,238; and flour, £168,799. Among the chief imports were cotton goods, £630,757; other manufactured goods (silk, linen, wool, &c.), £2,096,161; and sugar, £425,318.

The number of vessels and their tonnage entered and cleared at the ports of Chili, in the same year, 1862, are shown thus:—

Ports.	Entered.		Cleared.	
	No.	Tons.	No.	Tons.
Valparaiso	1005	841,374	1006	337,108
Coquimbo	363	121,968	327	114,169
Huasco	162	62,498	158	60,498
Caldera	399	143,655	402	144,138
Constitucion	193	26,883	185	25,992
Taleahuano (Concep- } cion)	190	74,813	183	73,191
Tomé	257	101,577	258	102,055
Valdivia	73	33,278	74	34,336
Ancud	188	79,457	189	80,078
Total	2830	985,503	2782	971,565

Chili possessed in 1862, 269 merchant vessels, of 59,739 tons. The total revenue in 1860 amounted to £1,498,950, of which £964,960 was derived from customs, and £215,222 from government monopolies; the total expenditure was £1,501,405. The public debt was, in 1861, £3,050,320, £1,041,800 of it being due upon foreign loans, and £1,540,600 for loans for railways in 1858.

The population at the end of 1862 numbered 837,049 males and 839,194 females; total, 1,676,243. And in that

year there were 499 government schools, 80 municipal, 19 monastic, and 335 private; altogether 933 schools, with an aggregate number of 35,975 scholars.

CHILICOTHE [add.], a tn. U. States, Ohio, cap. co. Ross, 85 m. E. Cincinnati, with which it is connected by railway, and upon the Ohio canal, and the Scioto, which winds picturesquely through a valley inclosed by cultivated hills, rising to the height of 500 ft. It is regularly built, with wide streets lighted with gas, and containing many good buildings. The valley is one of the finest farming districts in the States, and its contiguity to the railway, river, and canal, gives it ready access to the coal and iron mines of southern Ohio, and consequently great advantages as a manufacturing place. It was founded in 1796, and in 1800 became the seat of the state government, which was subsequently removed to Lanesville. The old stone state-house is now the court-house. Pop. (1860), 7626.

CHILKEEA, a tn. India, N.W. Provinces, dist. Moradabad, about 140 m. E.N.E. Delhi, at the height of 1076 ft. above the sea; lat. 29° 21' N.; lon. 79° 10' E. It stands in the gorge or pass of Dikkalee, down which the Kosila rushes toward the plain, and consists of a wretched assemblage of cottages half buried in high grass. In summer the air is so pestilential that the inhabitants abandon it, but in spring it becomes a busy mart for the trade between Chinese Tartary and Kumaon on the N. and the low lands on the S.

CHILLAN, a tn. Chili, cap. prov. Nublé, in an angle between the Chillan and Nublé, 180 m. S. by W. Santiago. It consists of an ancient and a modern portion, the former built by the Spanish conquerors, who made it a place of some strength, in which the early settlers often found an asylum when hard pressed by the Araucanians. Pop. 10,282. On the E. limits of the province, whose fertile soil produces much grain and wine, and rears numerous herds of cattle, is the great volcano of Chillan.

CHILLATARA, a tn. India, N.W. Provinces, dist. and 22 m. N.W. Banda, r. bank Jumna, over which there is here a ferry. Though a small place it has a considerable trade, particularly in cotton, which is here shipped in large quantities for the lower provinces.

CHIMARA, a tn. Turkey in Europe, S. Albania, eyalet and 61 m. N.W. Yanina, on the Adriatic. It is the chief place of the Chimariots, and contains about 2000 inhabitants, who live partly by trade, and partly, it is said, by plunder.

CHINANDEGA, a tn. Central America, Nicaragua, dep. Occidental, on a fertile plain terminated by the mountain slopes of El Viejo, 15 m. N.W. Leon. It is a well-built flourishing place, with paved streets, which cross each other at right angles, and a handsome square, in which the principal church stands. The other churches, four in number, are built of adobe plastered and whitewashed. Some of them are surmounted with the peculiar rounded dome of Moorish architecture. There is nothing in their exterior entitled to notice, and their interior, deprived by successive revolutions of all costly decorations, no longer possesses any object of interest. Chinandega is famous for its white pine-apples and oranges. Pop. about 12,000.

CHINCHA, or **GUANO ISLANDS** [add.], a group of three islands off the coast of Peru, about 100 m. S. of Lima; lat. 13° 44' S.; lon. 76° 13' W.; celebrated for deposits of guano, which are so extensive and so much in demand as a manure, that the government of Peru derives a larger revenue from the sale of it than from all other sources. The group consists principally of three rocky islets, which lie about 12 m. from the coast, and are composed of a beautiful bright red granite, of which the components are darkish flesh-red feldspar, white quartz, and a little mica. This granite forms tolerably steep walls, which rise abruptly from the water to the height of 25 to 30 ft., and form a gradual ascent inwards, where they at length assume a rounded form. The surface, totally devoid of vegetation, is covered with the dung of sea-lions (seals) or guano, to a depth which, on the principal island, exceeds 100 ft. In consequence of this valuable deposit, the islands, which would otherwise be unvisited, and totally uninhabited, present a very busy scene, a number of ships loading or waiting to be loaded, by the labourers employed for that purpose, who are composed of convicts from the mainland, Chinese apprentices, and free labourers. In this way a kind of temporary settlement has been formed, and

numerous tents or booths are either occupied as dwelling-houses or furnished as shops. The houses of these people are almost all made of tatora, *i.e.* bulrush matting, stretched on bamboo supports, and in this dry climate afford sufficient covering. The quantity of guano annually exported exceeds 65,000 tons. The deposit of guano is sometimes represented as so great as to be almost inexhaustible, but this estimate must be too sanguine, since it appears that already a good half of what the largest island originally contained has been carried off.

CHINCHIPE, a river, S. America, formed by two streams which rise in the S.W. of Ecuador, the one, the Loyala, from the cordillera of Zamora, and the other, the Savanilla, from the mountain mass of this name, flows S.S.E., and enters the Marañon after a course of about 90 m. Gold is washed from its sands. Owing to the hostility of the Iwaros Indians inhabiting its banks it remains in a great measure unexplored.

CHINDWARA, a tn. India, N.W. Provinces, territory and 167 m. N. Nagpore, on an elevated table-land 2100 ft. above the sea, in the mountainous tract called Deogur above the Ghauts. Its climate is one of the most agreeable and salubrious in India, and it has hence many visitors in search of health or recreation. It was at one time a station for a detachment of the Nagpore auxiliary contingent, which ceased to exist in 1830; there are still a bazaar and some straggling bungalows.

CHINESE EMPIRE [add.] Since the opening of this vast empire to foreign intercourse in 1858, by the Elgin treaty of Tientsin, much valuable information has been obtained by European residents and travellers, regarding the geography of the country, the polity of the government and people, and the nature of their institutions, in addition to what was previously known or erroneously entertained. As regards that province of the empire between Pechelee and the Corea, named Shing-king or Leau tung, formerly a Tartar province, and classed under the head of 'dependencies' in all maps and gazetteers, there is now sufficient reason for concluding that it is geographically and politically an integral portion of China proper. According to the above-named treaty the city of Niu-chwang was opened to foreign commerce, on the same terms as those relating to all the ports in the eighteen provinces privileged to trade with western nations; and reports from the British consul resident at Ying-tze state that the mode of government, class of officials, and the bulk of the inhabitants, are as much Chinese as in the chief province. These facts go far to prove that the Manchoo Tartar element, which invaded China 220 years ago, has not only become absorbed into the multitudinous race they have conquered, but that this extraordinary people, from their natural fecundity, agricultural industry, and commercial enterprise, is slowly but surely obliterating the tribes of Manchooria.

Another, and a more important, change has taken place in the map of this empire among the Tartar dependencies, which has severed a large and fertile region from the sway of the emperor of China, and transferred it to the czar of Russia. This country is now known as the Amoor territory, from inclosing within its bounds the river of that name for a course of 1200 m., but is equally distinguished by having a sea-board in the Gulf of Tartary and Sea of Japan, measuring not less than 700 m. While tributary to China this territory was called Keeking, and bordered on the Russian province Yakutsk, bounded by the Yablonoi-Krebet chain of mountains. The new boundary line extends to the left bank of the Amoor or Sagalien River, along its upper part, and diverges southwards up the Usuri River, a tributary, to Victoria Bay; including a territory with an approximate area of 320,000 sq. m., nearly seven times the extent of Shing-king, and about three times the area of Great Britain. This land was ceded to Russia in 1858, at the same time that the British and French allies negotiated the treaty of Tientsin; but the Russians, while they benefited by that convention, obtained this magnificent concession by a separate treaty.

CHINA, PROPER [add.]

Physical features.—Several expeditions have been undertaken into the interior of China by British officers and merchants, under the auspices of the treaties, which provide that no let or hindrance be given to travellers, the subjects

of treaty powers, peacefully journeying through the country, and much additional information has been thus obtained. Of these expeditions the most extensive and interesting was one formed to cross E. to W. up the Yang-tsze River, passing through Tibet into India. Circumstances prevented the latter project being successful, but the party ascended a distance of 1800 m. by the river; and Captain Blakiston has left an able record of its geographical, geological, and botanical features, as represented on the banks of that great stream. It is evident that its upper waters pass through a rich mineral region, where gold, silver, and other metals, together with coal, and every species of building stone, occur in abundance. Similar data have been afforded by an expedition which crossed from Canton, through the mountain pass that divides the southern from the inner shed of waters, down which they travelled until they came to Hankow, where the Lower Yang-tsze begins, 700 m. above Shanghai. Further north other parties have travelled through the inland parts of Shantung, Pechele, and Shingking, to Mookden, and the coal-measures of Sin-nim. Everywhere these travellers observed that the mineral wealth of the country was quite undeveloped, and that there was sufficient evidence to conclude that China has resources of this kind equal in extent to those of Europe. With the introduction of machinery and scientific appliances, under the superintendence of skilled foreigners, these riches may be developed. Already the importation of foreign coal is being superseded by the native article, and iron is no longer a staple import.

Agriculture.—In like manner the opening of China to foreign intercourse has given a new impetus to the cultivation of its exportable products. Amongst these cotton now appears as a considerable item on the export list, whereas formerly it figured as an import. This, no doubt, has been caused by the high prices obtained in Europe, through the dearth caused by the American war. Nevertheless, the increased production exists; and it is observable that the farmers are beginning to use better seed, so as to grow qualities most suitable to foreign looms, and to adopt a better system of culture. Foreign ploughs and other agricultural implements are in request; and there is every probability that ere long the northern provinces, in which the cotton is chiefly grown, will cease to import common calicoes.

Trade and Commerce.—By the treaty of Nanking (1842), Canton, Amoy, Foochow, Ningpo, and Shanghai were opened to foreign trade, and Hongkong was ceded to Great Britain. The clauses of that treaty were far from satisfactory, and in a great measure gave rise to subsequent misunderstandings with the native authorities, which led to two costly wars against the Chinese government by the English and French allied, in the south and north provinces of the empire; from the capture and occupation of Canton, in December, 1856, to the triumphant entry into Peking, October, 1860. The result of these necessary hostilities was the ratification of a treaty, signed at Tientsin, June 26, 1858, placing the commerce of the United Kingdom with China on a most satisfactory basis, which was equally shared in by France, Russia, Prussia, Portugal, and the United States; and, in addition to the five ports previously open, permission was granted to the subjects of England and France to trade at Niu-chwang (Yingtsze), Tang-chow (Chefoo), Tai-wan (Formosa), Chanchow (Swatow), Kien-chow (Hainan), and the river Yang-tsze was opened to foreign navigation, with power to traffic at the ports of Chin-kiang, Kew-kiang, and Han-kow. A convention was also entered into at Peking on the exchange of ratifications, October 24, 1860, by which the port of Tientsin was opened to trade, and the Cowloon shore on the mainland, opposite the island of Hongkong, ceded to Britain. Further, a supplementary convention adds the port of Tamsui, in Formosa, as an open port. The effect of the treaty upon the increase of foreign trade and shipping is unexampled in the commercial annals of the East. To give the details of that trade with every western nation would occupy more space than is at our disposal. However, the following analysis of the portion of it which belongs to Great Britain will suffice to show its rapid development, especially in the staple product, tea:—The total export of that commodity in each season, which commences in June and ends in May, according to the foreign customs returns, published every six months, was as under—

Season.	Lbs.
1858-59	65,789,792
1859-60	85,560,452
1860-61	90,006,160
1861-62	109,854,000
1862-63	121,273,580
1863-64	119,689,288
1864-65	121,236,870

It must be remarked, however, that the immense increase during the three last-named seasons was caused by the teas for the American market being largely shipped in English vessels, and a part of them also was transhipped to Russia, in consequence of the reduction of the duty on teas at the ports of that country.

The export of raw silk during the same period does not show similar results, as the production of that article was checked by the Taiping occupation of the silk-growing districts, now happily relieved from the desolating presence of the rebels.

Season.	Bales.
1858-59	83,136
1859-60	64,163
1860-61	79,644
1862-63	83,264
1863-64	42,159
1864-65	32,317

A new export has arisen in consequence of the war in America, by the remunerative price of cotton. In the year 1863 the exports to Britain were 30,856,336 lbs.; and in 1864, 85,157,008 lbs.

The import trade in British manufactures is far from being equivalent to the value of the produce exported, the balance of trade being maintained by shipments of specie from England and opium from India. Among the important changes effected by the treaty of Tientsin, is that of legalizing the trade in opium, hitherto carried on as contraband traffic, although winked at by Chinese officials, which rendered it demoralizing alike to native and foreign traders. Not only has this measure augmented considerably the customs revenue, by a duty of £10 on every chest weighing 133 lbs., but its legitimate sale and consumption has lessened the evils produced by its excessive indulgence. All the shops where it is smoked are licensed, and under the supervision of the police. Those who have recently visited these establishments in the chief cities and open ports, have failed to observe the prevalence of the horrible excesses resulting from the use of the drug, which travellers depicted formerly. The value of this commodity imported from India, was as follows:—

1859	£10,660,651
1860	8,336,385
1861	9,428,887

The following figures show the total value of the exports and imports passing between Great Britain and China in the four years stated:—

	Total Exports.	Total Imports.
1861	£9,070,445	£6,212,490
1862	12,137,095	5,835,777
1863	14,186,810	6,514,778
1864	15,673,930	...

Including the import of opium from India and a few other articles, as part of British commerce with China, and also the specie shipments to pay for tea and silk, our trade with that empire, in exports and imports, during 1863 was over £30,000,000 sterling. As the details of the whole external trade are given under each open port, it will suffice to state here that the commerce with other nations, carried on under foreign flags, far exceeds that with Britain and her Indian possessions, so that the total value of the foreign trade in 1863 is estimated at £104,248,804, against £8,303,378 in 1847. The total amount of duty paid on foreign vessels and cargoes, at the treaty-ports in the same year, 1863, reached the handsome sum of £2,802,995.

History.—In 1850 an insurrection broke out in the provinces adjoining Canton, with the object of expelling the Tartar dynasty from the throne. For a long period the insurgents succeeded in maintaining their ground against the imperial forces, and it was not till after the lapse of several years that the latter were enabled in some degree to quell the rebellion. The insolence of the Chinese towards the British and other foreigners had long been the subject of complaint; and, in 1856, a manifestation of this arrogant spirit led to a second war with Great Britain. In October of this year a small vessel, or lorcha carrying British colours, while at

anchor at Canton, was boarded by a Chinese officer and party of soldiers, and twelve of the crew were carried off. All reparation or apology for this outrage being refused, Admiral Sir Michael Seymour, commander of the British fleet for the China station, found himself under the necessity of proceeding to active hostilities, which led to the destruction of the Chinese fleet at Fatsian, in the Canton River, in June, 1857, and the capture of Canton itself after a brief siege, in December of the same year. The Chinese government now made overtures of accommodation, and a treaty was concluded by Lord Elgin, on behalf of the British government, with the Imperial commissioners, at Tientsin, on 26th June, 1858. The terms obtained were sufficiently satisfactory, but were rendered futile by the treacherous attack shortly afterwards on the British and French ambassadors at the Taku forts, while on their way to Peking to obtain a ratification of the treaty. A renewal of hostilities was thus necessitated; an allied army of British and French troops marched upon the capital, which, after a fresh instance of treachery on the part of the Chinese with respect to Messrs. Loch and Parkes, and the barbarous murder of Captain Anderson and others, was entered in triumph by the attacking force. On 24th October, 1860, a fresh treaty was concluded by Lord Elgin, in which the conditions already stipulated in the treaty of Tientsin were repeated with additional clauses; and satisfaction was exacted from the Chinese, in the shape of a large sum of money, to be paid by them towards the expense of the war, and as compensation to the survivors and surviving relatives of those who had been the victims of the act of treachery above referred to. Between the signing of the first treaty of Tientsin and the ratification at Peking, it will be seen that an interval of two years and four months elapsed. During that period this ancient empire suffered so much from foreign and internecine war, that it was apparently in the throes of dismemberment, if not dissolution. In her central, riverine, and maritime provinces the Taiping rebellion was at its height, and the leaders of that movement were for the time *de facto* rulers of a country containing upwards of 65,000,000 inhabitants. In the south Canton was in the military occupation of the British and French forces, while in the north the victorious allied army had captured Peking, and reduced the emperor's palaces at Yuen-ming-yuen to ruins. The financial resources of the empire were at a low ebb, and the government had to comply with the fresh demands of their conquerors, and pay an indemnity of £4,000,000, besides an unsettled demand of £2,000,000 more. To pay this indemnity without time given was quite out of the power of the imperial treasury, and to enforce immediate payment would have been a harsh and suicidal act on the part of the allies. Accordingly it was arranged that the customs at the treaty ports should be placed under the control of foreign collectors, and the first charge upon the revenues be instalments of the indemnity money. No measure could have been better calculated than this to develop the foreign commerce of these ports, and purge the corrupt system of the native customs. Even then, with all these seemingly amicable concessions to foreigners, the party who wielded the reins of government were determined to renew warlike operations against them when another opportunity offered. Meanwhile the emperor Hien-foong, who had fled to his palace of Zehol, in the fastnesses of the Tartarian Alps, died, and the warlike party assumed the regency of his youthful son, who succeeded to the throne, excluding from their counsels Prince Kung and others favourable to foreign policy. The latter party, resolving to gain the ascendancy, secretly conspired together, seized the leaders of the opposite faction and executed them, declaring a new reign of Tung-chee, signifying one of 'law and order.' These events happened about the close of 1861, since which the most satisfactory relations have existed between the ministers of the treaty powers resident at Peking. Not only has the *entente cordiale* been unbroken, but the British and French forces have aided materially in suppressing the Taiping rebellion. Under the instruction of the military upwards of 20,000 Chinese have been drilled and armed after the European manner, and have conducted themselves with prowess in the field. Further efforts were made to form an Anglo-Chinese navy for the suppression of piracy on the coast, and to aid in crushing the rebellion. The project was so matured, that the fleet arrived in China from England, but from some

misunderstanding about the control of this formidable power it was abandoned, and the fleet paid off. Nevertheless, the new era which has dawned upon this exclusive nation, promises to be one of great fulfilment in the cause of universal humanity, religion, politics, and commerce.

Population—Since the official census of 1812, which gave the population of the 18 provinces at 361,693,879, no other, as far as can be ascertained, has been published by the Chinese government. It is known that a census was taken in 1849, but the particulars have not yet been made public. In the absence of statistical returns, various computations have appeared from time to time. Of these, the latest, and in every respect the nearest to an official census, is that furnished by M. Sacharoff, in the works of the Imperial Russian Embassy at Peking. This computation is for the year 1842, giving a total of 414,686,994, including the population of Shing-king, and dividing the provinces as follows:—

Pe che-lee,	36,879,838
Shan-tung,	39,529,877
Shan-see,	17,056,925
Shen-see,	10,309,769
Ho-nan,	29,069,771
Kiang-soo,	39,646,924
Kiang-see,	26,513,889
Ngan-hwi,	36,596,988
Foo-kien,	25,799,556
Che-kiang,	30,437,974
Hoo-pee,	28,584,564
Hoo-nan,	20,048,969
Kan-soo,	19,512,716
Sze-chuen,	22,255,964
Quang tung,	21,152,603
Quang see,	8,121,327
Yun-nan,	5,825,670
Kwi-chow,	5,679,128
Shing-king,	1,665,542
Total,	414,686,994

—(*North China Herald; Customs Returns; MS. Notes.*)

CHING-KIANG [add.], a city, China, the first of importance on ascending the great Yang-tze River, 150½ nautical miles from Shanghai. From its position at the junction of the Imperial canal with that stream, which gave it the designation of "Guard of the River," it was included in the treaty of Tientsin (1858) as one of the open ports. In ancient times it was the chief emporium of trade on the Lower Yang-tze, and continued as such up to 1842, when it was captured by the British. But, although restored the same year, it failed to recover its former prosperity; and circumstances since then have doomed it to misfortune, notwithstanding its eligible site for military as well as commercial purposes. In 1853 the Taipings captured it, and continued in occupation for four years. During that period the industrious population were robbed and ruined by their ruthless conquerors within, and their habitations destroyed by the Imperialists from without, who, after long bombardment, recaptured it in 1857, but found only a mass of ruins. In addition to these desolating effects, the chances of its recovering traffic from the north were stopped by the filling up of the Imperial canal, near Whai-ngan, so that communication with the country south of Tientsin ceased. In 1860, after the ratification of the treaty, several merchants from Shanghai established branches of their houses at this port; but as it was not safe to remain on shore, their agents lived on board hulks and ships laden with merchandise. Here a small precarious trade has been carried on under the surveillance of foreign customs officers, forming one-third of the small community of 25 residents. For three years the British vice-consul of the port fixed his residence on Silver Island, a picturesque rock in the middle of the river, a few miles below the city, where the stream is greatly narrowed, and runs with a velocity dangerous to small vessels and boats. As all British ships bound up the river were obliged to obtain a pass from the consul, many accidents happened from this cause, so that the consulate was removed in 1863 up to the concession adjacent to the ruined city. The Taiping rebels having been completely driven away in 1864, confidence is slowly returning to the few inhabitants who have survived the rebellion; and the foreign residents are gradually moving on shore, where they are building stores for the reception of their goods. In 1863 the imports were of the value of £1,522,603, and the exports £230,276. The Imperialists are slowly restoring

the principal edifices, and there are prospects of a revival of trade, now that the Imperial canal is open for traffic to Soochow; but it must be many years before it can recover the prosperity it enjoyed before 1842, when it had a busy population of 60,000.—(*Chinese Repository*; Williams' *Chinese Commercial Guide*; *MS. Notes*.)

CHINGLEPUT [add.], a tn. India, presid. and 36 m. S.S.W. Madras, cap. dist. of same name. It consists of a town and a fort, was formerly a place of some strength, and is still inclosed by a ditch, and a rampart 2 m. in circuit. Its E. and the greater part of the N. face have the additional defence of an artificial lake, which is 2 m. long by 1 broad, and, besides supplying the ditch, irrigates the adjoining rice-fields, the water being retained for this purpose by an embankment 1000 yards long, upon the top of which the road to Madras is carried. The town consists chiefly of one long street, and of a neighbouring village, called Nullam, which may be considered as its suburb. The inhabitants are mostly engaged in agriculture; but have manufactures to a limited extent of silks, coarse cloth, and pottery. The fort, situated about half a mile N.W., is 400 yards long by 280 broad, and is divided into two distinct parts by a rampart and a ditch; the E. and more elevated forming what is called the Inner Fort. It contains all the public buildings, the principal of which are the court-house, place of arms, hospital, and jail. The troops stationed here, usually two companies of native infantry, live in huts on high ground a quarter of a mile S.

CHINNAPATAM, a tn. India, presid. Madras, dist. Mysore, 34 m. E.N.E. Seringapatam. It consists of a fort and a town; the former faced with stone, and apparently built with some care. Within it are a handsome and remarkable temple dedicated to Vishnu, and a large palace belonging to a relative of the rajah of Mysore. The town is famous for its manufactures of sugar, steel, steel wire, and lacquered toys.

CHIRGONG, or **CHIRGAON**, a tn. and dist. India, Bundelcund, on the road from Calpee to Goonah, 81 m. S.W. Goonah. The district has an area of 25 sq. m., containing 10 villages and 3800 people, and previous to the mutiny in 1857 paid tribute to Jhansi.—The town, defended by a fort of some strength, was stormed by British troops in 1841, in consequence of the depredations of the inhabitants and the rebellious conduct of the rajah.

CHIRIQUI, or **WEST VERAGUA**, a prov. New Granada, lying between lat. 8° 2' and 9° 42' N., and lon. 81° 37' and 83° 5' W.; bounded N. by Caribbean Sea, E. Veragua, S. Pacific Ocean, and W. Costa Rica. The resources of this province are very imperfectly developed; but it is not surpassed by any part of the globe in variety of surface, fertility of soil, and luxuriance of vegetation, and many districts of it are comparatively healthy. It has commodious natural harbours both on the Caribbean Sea and on the Pacific, and contains extensive beds of excellent coal, and abundance of land fit for pasture or tillage. The shortest distance from sea to sea is 46 m.

CHIRKAREE, a tn. India, Bundelcund, cap. of a small native state of same name, picturesquely situated at the foot of a lofty rocky hill crowned by a fort, 42 m. W. Bandah. Below the town is a fine lake swarming with fish. The fort is accessible only by a flight of steps cut in the rock, but is commanded by two heights at no great distance. The state has an area of 880 sq. m., contains 81,000 inhabitants, and has a revenue of £46,083.

CHIRRA POONJEE, a tn. India, Cosya Hills, 28 m. N.N.W. Silhet. Its height of 4200 ft. above the sea led to its adoption by the government as a sanatorium; but the results not proving satisfactory, it was abandoned in 1834. Coal in abundance and of superior quality, and iron ore, are said to exist among the hills; but little has yet been done to turn them to account.

CHISZNE, a tn. Austrian empire, Hungary, co. Arva Thurocz, in a mountainous district near the frontier, on the great road leading into Galicia. It contains 1400 inhabitants, who are chiefly employed in weaving linen, growing flax, and mining.

CHITRAKOTE, or **CHATARKOT**, a tn. India, N.W. Provinces, 50 m. S.E. Banda, on the Paisuni. It is crowded with temples and shrines, and was formerly resorted to by great numbers of pilgrims. The river, which here expands

into a lake, is approached by numerous flights of steps, to enable votaries to perform religious ablution in its waters.

CHITTENANGO, a vil. U. States, New York, co. Madison, on a creek of the same name and the Utica and Syracuse railroad, 14 m. E. Syracuse; it is also connected with the Erie canal. It possesses three or four churches, a bank, and has manufactures of water-lime. Pop. 1200.

CHITTUNG, a river, India, which, branching off from the Sursooly, in Sirhind, flows S.W., is joined by the celebrated canal of Ferozeshah, whose water it conveys W. to Hissar, and then, winding along the sand-hills on the N. boundary of the sandy desert of Bikancer, is lost in the plains of Bhuttiana, after a course of about 120 m. It is totally unfit for navigation; but, taken in connection with the canal of Ferozeshah, is of great agricultural importance.

CHOBE, or **TSCHOBE**, or **ZABESI**, a river, S. Africa, which, formed by several streams, of which the Kubango, from the Bulum Bulu Steppe, near the S. frontiers of the Kimbunda country, assumes its own name about lat. 16° S., and flows circuitously S.E. to Linyanti, the capital of the Makololo. Here, making a sudden turn, it assumes the name of Zabesi, flows E.N.E. in a broad stream, occasionally interrupted by islands, and rendered difficult of access from the land by a wall of reeds about 7 ft. high, and growing together so closely that they are almost impenetrable, and joins the Leambye, or Zambesi, on its r. bank, about lat. 17° 30' S. The exact point of junction is ill defined, because both rivers, before becoming united, separate into a number of branches. The banks of the Chobe are composed of soft calcareous tufa, through which the river has cut out a deep bed with perpendicular sides. The banks, where high, are covered with magnificent trees, infested by the venomous tsetse, and affording a retreat for various antelopes, wild hogs, zebras, buffaloes, and elephants. The depth of the channel between Linyanti and the confluence is from 13 to 15 ft., and wide enough for a steamer to ply upon it. The windings, however, are so numerous and abrupt as to preclude such a mode of navigation. At present it is a work of no small difficulty to paddle it with canoes.

CHOCEMIRZ, a tn. Austrian empire, Galicia, circle and 16 m. N. by E. Kolomea; with a baronial castle with fine gardens. In 1624 the Tartars sustained a signal defeat here from the Poles. There is a sulphur spring in the vicinity. Pop. 2084.

CHOIS, a tn. Mexico, prov. and 70 m. N. Sinaloa, at the foot of the Cordilleras, near r. bank El-Fuerte. It consists chiefly of a tolerably large street of low flat-roofed houses, covered with earth as a protection against the excessive heat; and has a cathedral of no great pretensions in the centre of the public square. The inhabitants used to find employment in the mines; but since these ceased working, have wisely turned their attention to agriculture, and raise good crops of maize and sugar-cane. About two leagues N. of Chois, the El-Fuerte, receiving two important affluents, becomes navigable during the greater part of the year for small boats carrying logwood, provisions, &c. Pop. about 900.

CHO-LEN, a tn. Cochin-China, in the French territory, 8 m. W.S.W. Saigon, on the Ben-luc, which forms part of the great commercial channel communicating between the Saigon and the Vaicos and the Cambodia rivers. The country between the two towns is pleasant, and adapted for the erection of European villas; the suburbs already have a wealthy and superior appearance. Cho-len has something of the style of a Chinese town, with straight streets and long lines of shops; it is also inhabited by large numbers of Chinese, many of whom are very wealthy. But they are said to be a turbulent class, and addicted to opium and gambling. As a commercial town it is of great importance, as all the rice from the western districts is brought hither for sale; and it is also the emporium for three-fourths of all the exports of the country. The inhabitants are made up of many races—Cambodians, Siamese, Parsees, Indian coolies, Malays, and Chinese. They each have their own organization under their respective chief men, subject, of course, to the supremacy of the French rule. The pop. is estimated at 15,000 to 20,000.

CHOLM, or **KOLM**, a tn. Russia, gov. and 110 m. S.E. Pskov, cap. circle of same name, on the Lovat. It contains five churches, a school for the circle, a charitable endow-

ment, various manufactures, an active trade in corn, flax, wood for fuel, and timber, and a very important yearly market. Pop. 3678

CHOLUI, or **KOLUI**, a tn. Russia, gov. Vladimir, circle and not far from Viasniki; contains a church, and has markets, which are held four times a year, and are very numerous attended. Many of the inhabitants live by painting pictures of the saints on the wood of the lime-tree. To such an extent is this carried that Cholui alone is said to produce nearly half a million of pictures annually. Pop. 1888.

CHONOS ARCHIPELAGO, S. America, off the coast of Chili, between lat. 44° and 46° S. It consists of a large number of barren, rugged, and lofty islands, with summits varying from 2000 to 4000 ft. above the sea. The inner sounds behind the islands have not been surveyed, but are supposed to contain numerous harbours. The interior coasts, like the outer, are rugged and barren, and have summits ranging about 3000 ft. A wide inlet, named Darwin Channel, after the celebrated naturalist, leads E. into the inner sounds of the archipelago, and to the W. coast of Chili.

CHOROO, a tn. India, Rajpootana, state and 100 m. E. by N. Bikaner, in a desolate tract on the E. border of a sandy desert. Elphinstone, who visited it in 1808, describes it as nearly a mile and a half in circuit, exclusive of its large but mean suburbs, and of very handsome appearance, and consisting of houses built, like the wall, of a limestone so purely white as to give an air of great neatness to everything composed of it. Boileau, on visiting Chooroo in 1825, found that its fortifications had fallen to ruin, that its commerce was lost, and that its bazaars had become desolate. The explanation is, that hostile armies had been repeatedly contending for the possession of it.

CHOPTANK, a river, U. States, which, rising in Delaware, flows S.W. into Maryland, and falls, by a long and wide estuary, into Chesapeake Bay, after a course of about 100 m., of which 50 m. are navigable for sloops.

CHORAL, a tn. Russia, gov. Poltava, cap. circle and on a river of same name; with six churches, a circle and a parish school, and a benevolent endowment. Tobacco is largely cultivated in the circle. Pop. 4909.

CHOSAN, or **TSAU-LIANG-HAI**, a harbour, Chinese empire, on the S.E. coast of the Peninsula of Corea, in the Sea of Japan; lat. 35° 6' N.; lon. 129° 1' 49" E. It is formed by Capes Young and Vashou, which are about 3 m. apart, and trends N.W. for 4½ m., with a width of 1 to 1½ m. With the exception of some rocks, which lie 3 m. within the entrance, and are always above water, it is free of danger, and has a depth of 12 fathoms, gradually decreasing to 3 fathoms at its head. From being the entrepôt of trade between the peninsula and Japan, it is one of the most important harbours on the Korean coast; the anchorage being safe, and numerous streams falling into the sea affording easy watering-places. The land around its shores is well cultivated, and dotted with villages, the population of which varies according to the season of the year. In the summer, when only the regular inhabitants are met with, from 6000 to 8000 occupy the four villages at the head of the harbour; but in the fishing season thousands from the interior flock to the shore, and impromptu villages, composed of bamboos and mats, spring up in vast numbers along the coast. The natives are very uncouth and filthy, and are withal very dexterous thieves. The Japanese garrison or settlement of 250 or 300 men have but little intercourse with them. The supplies obtainable are cattle, pigs, fish, poultry, vegetables, and wood.

CHOTA NAGPORE, or **LITTLE NAGPORE**, a dist. India, presid. Bengal, between 22° 28' and 23° 40' N.; lon. 83° 54' and 85° 56' E.; is bounded N. by Palamou and Ramgurb, E. Pachete and Singhboom, S. Singhboom and the native states of Bonei, Gangpoor, and Jushpoor, and W. by the native states Odeipoor and Sirgooja; area, 5308 sq. m. It consists for the most part of an undulating plateau about 3000 ft. above the sea, and rising occasionally into ridges of hills which stretch from E. to W. The drainage is received chiefly by numerous tributaries of the Soobun Reeka in the N.E., and by the Coel and other tributaries of the Byturnee in the S. and W. Much of the surface is overrun with jungle, or covered with forests containing teak and other kinds of valuable timber. The soil in the plains consists of

a red loam, and where under cultivation produces excellent crops of wheat, barley, rice, pulse, cotton, and sugar cane. Coal occurs in various localities; but the seams, so far as known, are too thin to be profitably worked. The trade, hampered by imperfect means of conveyance to leading marts, is limited, and is nearly confined to lac, coarse silk, and catechu, for which salt is the principal return. Pop. 482,900.

CHOTIESCHAU, a tn. Austrian empire, Bohemia, circle and 7 m. S.W. Pilsen; with a parish church, a castle, an hospital, a brewery, and a coal-mine. Pop. 1100.

CHOUR, a lofty peak, India. Sirmore; lat. 30° 52' N.; lon. 77° 32' E. It is the most elevated summit S. of the Himalayas, with which it is connected by a ridge running N. and S. for 50 m. It overlooks the plains of Sirhind, and attains the height of 12,149 ft.

CHOWKA, a river, India, which rises in dist. Bareilly, about lat. 28° 6' N.; lon. 80° 4' E.; flows S.E. through this dist. and that of Shajehanpore, enters Oude, and, continuing the same direction, joins the Gogra on its r. bank, in lat. 27° 9' N.; lon. 81° 30' E. It has a total length of about 180 m., and is navigable throughout the year. At 40 m. below its source it has a communication with the Gogra; but thereafter, till its final junction with this river, continues to form an independent stream.

CHRISTCHURCH, a tn. New Zealand, S. Island or New Munster, cap. of prov. Canterbury, about 8 m. N. by W. Lyttleton, with which it is connected by railway, is pleasantly situated on the Avon, in a district dotted with corn-fields, pastures, orchards, and dairy farms; but destitute of trees, there being a few only about the town. One great obstacle to its progress is the want of a proper harbour, the Avon not being navigable except for small steamers, and that only to a point 2 m. below the town. Christchurch is the seat of a bishopric. Pop. 5000.

CHRISTIANSBURG, a tn. W. Africa, Gold Coast; lat. 5° 30' N.; lon. 0° 16' W. It consists partly of a native town, occupying an unhealthy site near a stagnant pool, and by no means attractive in its appearance, and of a castle, which was built by the Portuguese, and, after a repeated change of masters, was confirmed to the Danish crown in 1694. It consists mainly of a square inclosure flanked with bastions, and containing within an imposing but irregular pile of buildings, among which are spacious and airy quarters for the governor and officers, a chapel, hospital, and storehouses. Fort James and Christiansborg, both now British possessions, though still sometimes designated by the respective names of British and Danish Acra, are only 2 m. asunder, and communicate by a handsome road lined on each side with trees.

CHULLUMBRUM, or **CHELLUMBRUM**, a tn. India, presid. and 122 m. S. by W. Madras, dist. S. Arcot, on the lower road between Madras and Trichinopoly, near the mouth of the Coleroon. It possesses a great pagoda, which is held in the highest veneration throughout S. India, and even attracts devotees from Ceylon. In one part of the pagoda there is a roof supported by 930 columns of solid granite, and the lights of the *gopyras* or 'gate pyramids,' 122 ft. high, are seen 10 m. W. at sea. Pop. 11,000 inhabitants, a large proportion of whom are weavers.

CHUMBUL [add.], a river, India, which rises in Malwa, 9 m. S.E. Mhow, among the Vindhya Mountains, near the line of watershed separating the basin of the Nerubudda from that of the Jumna and Ganges, flows circuitously N. through Holkar's and Scindia's Dominions, then changing its direction to N.E., crosses the state of Boondee, and forms the boundary, for a considerable distance, between Scindia's Dominions and Rajpootana. On approaching the Jumna it bends round to the S.E., and continues the same direction in a course nearly parallel to that river, till it finally joins it on its r. bank, about 40 m. above Calpee, after a direct course of 340, and an indirect course of 570 m. Its principal affluents are on the left, the Chambela or Chumbila, and the Banas; and on the right, the Seepra, the Kallee Sind, and the Parbati. On entering the plateau of Mokundara it becomes confined between steep rocky banks, and about 40 m. below, when near the middle of its course, it expands into a lake, on issuing from which, it plunges down a deep bed, which it has excavated in the rock, and forms a series of magnificent falls, descending about 200 ft. in a single mile. It does not

carry a large body of water, at least in the dry season, though it has been known by its junction to raise the level of the Jumna 7 or 8 ft. in 12 hours. The height of its source above the sea is 2019 ft., and the declivity of its bed averages $2\frac{1}{2}$ ft. per mile. It does not seem to be at all used for navigation.

CHUNDLAH, a tn. India, Bundelcund, at the foot of a granitic rock, described as jet black, about 77 m. S. Calpee. It is a thriving place of about 3000 inhabitants, but the heat radiated from the rock is said to be almost intolerable.

CHUNDOWSEE, a tn. India, N.W. Provinces, dist. Moradabad, 45 m. W. Bareilly, on the route from it to Delhi. It is a considerable place, surrounded by a low mud wall, and possesses a well-supplied bazaar. Pop. 20,921.

CHUNGANAUCHERRY, a tn. India, presid. Madras, dist. Travancore, 38 m. N. Quilon. It is built on a rising ground on the E. border of a large delta, known by the name of Kootanaad, and being well situated for trade is both populous and flourishing. The inhabitants are composed of a mixture of Syrian Christians, Brahmins, Nairs, &c., each having their own streets and places of worship. The fair held twice a week is so well attended, that the canal is often blocked up with the canoes and boats of crowds coming from the west.

CHUPAT, a river, S. America, which, rising not far from the frontiers of Chili, flows E. across Patagonia, and falls into the Atlantic near half way between Port San Antonio and the Gulf of St. George. Nothing is known of the upper part of its course, but in the lower part it flows in a very winding course through a fertile country, along banks which are well wooded with sauce-trees, a species of willow. On the bar at ebb there is scarcely a foot of water, but at flow there are from 7 to 12 ft., according to the state of the tide.

CHUPRAH [add.], a tn. India, presid. Bengal, dist. Sarun, on a channel of the Ganges, 25 m. N.W. Dinapore. It occupies a low site, raised only a few feet above the level of the river, along which it extends nearly a mile. Many of the houses belonging to the wealthy tradesmen are large and handsome, but a far larger number are mud huts. It contains also several British factories. There is only one street along which wheeled vehicles can pass; the others are so narrow as to be unfit for the conveyance even of palkees or litters. The civil station, situated outside the town, and N. of it, is said to be salubrious. Pop. 30,000.

CHUTTERPORE, or **CHATTERPOOR** [add.], a tn. India, Bundelcund, cap. territory of same name, 146 m. W.S.W. Allahabad. It occupies a picturesque site among lofty hills to the west of a large and deep jeel or lake, and consists for the most part of narrow streets, and very indifferent houses, though a few of the latter, belonging to the more wealthy inhabitants, are not only spacious, but costly and elaborate in their style of architecture. The principal objects of interest are a large and handsome serai, recently built by the rajah for the accommodation of travellers; and the ruined palace and mausoleum of Chuttur, who founded the short-lived independence of Bundelcund, and gives the place its name. The mausoleum is a large, massive, and elaborate structure, surmounted by five domes. Chutterpore has manufactures of paper and of coarse cutlery. The latter is made from an iron ore obtained from mines in the vicinity. The transit trade, once considerable, is now very limited.

—The **TEREOTRY** has an area of 1240 sq. m., contains 120,000 inhabitants, and yields a revenue of £30,000.

CHYNEPORE, or **CHAYANPOOR**, a tn. India, presid. Bengal, dist. Shahabad, beautifully situated in a fertile and healthy district, 39 m. S.E. Benares. It consists of a town and a fort. It is to the latter only that any interest attaches. It is in the form of a quadrangle 390 ft. long, by 369 broad, inclosed by a ditch and a battlemented stone rampart, with a round bastion at each of the four angles. Within the fort, among other buildings, is a suitable residence of the chief. His family, once Hindoo, embraced Mahomedanism in order to save the property from confiscation.

CICACOLE [add.], a tn. India, presid. Madras, district of, and 110 m. S.S.W. Ganjam, r. bank Naugauloo, near its mouth in the Bay of Bengal. It consists of a town, a fort, and a cantonment. The town is a straggling place, with narrow crooked streets and houses built of mud. The manufactures consist chiefly of ordinary cotton goods, and of muslins which in fineness rival those of Dacca in

Bengal. The fort, which is so completely dismantled that the walls and the ditch cannot easily be traced, is situated to the N., and contains the cutchery, the treasury, the post-office, the commandant's house, the barracks, hospital, and magazine stores. The regimental lines are about 100 yards S.E. of the fort. At a corner of the parade-ground stands a neat little church; and near the river, about $\frac{1}{2}$ m. from the cantonment, the court-house and jail. The civil hospital and dispensary is accommodated in what was formerly one of the best private residences in the place; the military hospital is in the same locality. The London Missionary Society has a school within the town, where English is taught, and there are also several native schools. Pop. 12,800, of whom about 142 are native Christians.

CIEMIERZYNCZE, a tn. Austrian empire, Galicia, circle and 9 m. N.W. Brzezen, was in very remote times the scene of a great battle between the Slaves and the Pezenegs. Pop. 1500.

CINALOA, or **SINALOA** [add.], a tn. Mexico, dep. Cinaloa, r. bank river of same name, about 45 m. above its mouth in the Gulf of California. It stands on hilly ground, and was once a flourishing town of 9500 inhabitants, with a fine cathedral, which possessed among its riches an altar-piece of solid silver. The cathedral and its wealth have entirely disappeared, and another large church which stood in the public square has nothing left but the tower, the nave and choir having been swept away by a tremendous flood from the mountains. The whole place now looks desolate, and can scarcely muster 3000 inhabitants.

CINCINNATI, [add.], a tn. U. States, cap. of Ohio, on the Ohio, and at the focus of nine lines of railway; lat. $39^{\circ} 6' N.$; lon. $84^{\circ} 27' W.$ Its site is a natural plateau, about 12 m. in circuit, divided by the river into two nearly equal parts, and surrounded by hills about 300 ft. high, and grouped so as to form a beautiful amphitheatre. It was first laid out in 1788, and up to 1800 was a small straggling village in the midst of a wilderness. Shortly afterwards it began to expand; schools, churches, banks, and factories arose; business, with its accompanying warehouses, occupied the lower part of the plain; and the inhabitants who had settled there were obliged to retire, and either gradually climb the hill sides, or fill the little valleys on the E. and W. From the manner in which the town has been formed great regularity of plan was impossible, and many changes and transformations will be necessary in order to make Cincinnati the magnificent city which it is doubtless destined to become. Still, however, the work of improvement goes rapidly forward, and every year, while it adds greatly to the population, sees new structures rising in every quarter. Churches to the number of 100, several of them elegant and imposing structures, have already been built, while provision has been made for education by a system both of elementary and superior schools. Among the latter are two male and three female colleges, schools for theology, medicine, and law, several commercial academies, two high-schools, and numerous seminaries, male and female. Libraries also are numerous and extensive, one belonging to the Mercantile Library Association having 20,000 vols., another belonging to the public schools, 12,000, and a third belonging to the Lane Seminary, 10,000. As yet the buildings properly called public have hardly received the attention due to them, and mention can be made only of a city-hall. Manufactures and trade, which is in a great measure founded upon them, are both very important. The most conspicuous among these establishments are iron-works, pork-packing factories, and distilleries. The average annual products of the iron manufacture in all its branches are estimated at £1,200,000. The quantity of work done by the distilleries may be estimated from the fact that 530,000 barrels of whisky were sold in Cincinnati in one year, and that the aggregate sale of all kinds of liquor amounted to £1,800,000. Next in importance to these three great staples are furniture and clothing. The total arrivals of steamers at the port in 1863-4 (ending Sept. 1) were 2936, against 2206 the previous year; and the number of steamers and barges plying between Cincinnati and other ports during the year was 435, against 349 in the year before. The tonnage of the barges was 11,133, and of the steamers 81,609, making together 92,742 tons, against 71,725 tons in the previous year. There were built during the same twelve months 62 steamers and barges

of a burden of 20,117 tons. The river commerce for the period in question was larger than in any former year.

The unusually high price of nearly all commodities, owing to the civil war, and the inflation of the paper currency, gives an enormous increase in the value of the imports and exports, as is seen in these figures:—

	Imports.	Exports.
1860-1.....	£18,791,273.	£13,963,151
1861-2.....	21,519,352.	15,927,054
1862-3.....	30,039,419.	21,352,744
1863-4.....	31,206,361.	49,808,296

Among the principal imports in the year 1863-4 were barley, 379,432 bush.; corn, 1,817,046 bush.; flour, 541,983 barls.; oats, 1,423,813 bush.; wheat, 1,650,759 bush.; lumber, 39,000,000 ft.; coal, 16,000,000 bush.; pork and bacon, 20,169,052 lbs.; coffee, 124,752 sacks; and butter, 59,880 tubs. The number of hogs packed was in 1863, 608,457, and in 1864 (8 months) 370,623. The exports comprised—candles, 217,412 boxes; coffee, 107,733 sacks; cattle, 14,903 head; flour, 393,268 barls.; hides, 188,424; lard, 95,864 barls. and kegs; oil, 83,740 barls.; pork and bacon, 237,856 barls., &c., and 1,810,875 lbs.; oats, 851,392 bushels; wheat, 943,737 bush.; whiskey, 210,410 barls.; and tobacco, 152,584 hhd. &c. Pop. (1860), 161,044.

CIRCISSIA [add.] The protracted resistance maintained by the gallant Circassians against Russian aggression, has at length terminated in the triumph of the more powerful of the two foes, and the Circassians, having surrendered to Russia, have been removed to the Turkish provinces, where they are endeavouring to form a colony, under the protection and with the assistance of Turkey (1864).

CITTADELLA, a tn. Austrian Italy, prov. and 17 m. N. by W. Padua. It is inclosed by a wet ditch and walls flanked with towers; is the seat of a court of justice, and has a fine high church, with an altar-piece by Bassano; an hospital, a theatre, manufactures of cotton and linen cloth, and numerous silk-mills. Pop. 7213.

CITY POINT [add.], a vil. and port, U. States, Virginia, on the James River, at the mouth of the Appomatox, 23 m. S.E. Richmond, and 10 m. E.N.E. Petersburg, with which it is connected by railway. It has good landing, and is accessible by large vessels. It derived great importance during the protracted sieges of Petersburg and Richmond in the civil war, from being made the base of supplies for the Federal armies.

CLARENCE ISLAND [add.], S. America, situated toward a W. outlet of the Strait of Magalhaen, is separated from Chili on the N. by Froward Reach, from Dawson Island on the E. by Magdalen Sound, from Santa Inez Island on the W. by Barbara Channel, and from Terra del Fuego on the S. by Cockburn Channel; lat. 54° S.; lon. 72° W.; length, N.W. to S.W., 55 m.; breadth, about 25 m. Its coast is generally bold, and its surface mountainous. On the E. shore there is a steep mountain called Vernal, or 'Summer-House,' from a remarkable lump of rock on its summit, and at its foot a little port called Hope Harbour, much frequented by the Indians. Southwards Mount Bouqueron rises precipitously to the height of 3000 ft., and terminates at an extremity called Squally Point, from the furious squalls that are continually blowing down its sides. The S. shore is skirted by a numerous group, which bears the name of Prowse Islands, and behind which some good anchorages are found. Throughout its whole coast Clarence Island is penetrated by numerous inlets, the largest of which, San Pedro Sound, extends in a southerly direction for nearly 13 miles.

CLARKE [add.], an island off the N.E. of Tasmania, forming the southernmost of the Furneaux group, and the N. side of Banks' Strait. Its greatest length is 8 m. and its breadth 5½ m. On its S. end, which is rocky, there is a dangerous shoal called the Moriarty Bank, extending nearly 5 m. in an E. direction. All its W. shore is rocky, and fronted by breakers for about a quarter of a mile. On the N. it is separated from Barren Island by Armstrong Channel, which is 10 m. long, between E.N.E. and W.S.W., and from ¾ to 4 m. wide. At Hamilton Road, within this channel, shelter may be found from all winds except those between S. and S.S.E., which do not throw in much sea.

CLARKSBURG, a vil. U. States, Virginia, cap. co. Harrison, on the W. fork of the Monongahela, and the rail-

way to Parkersburg, 210 m. N.W. Richmond. It stands high, and is surrounded by hills. Stove-coal abounds in the vicinity. Pop. 1200.

CLAYTON, two vils. U. States:—1, New York, on the St. Lawrence, where it has a landing-place, and at the terminus of the Utica and Black River railway, 100 m. N.N.W. Utica. It is a port of entry in the collection district of Cape Vincent, and has pop. 4696.—2, Iowa, co. same name, on the Mississippi, 50 m. above Dubuque. Being the most accessible river port, much of the produce of the district is shipped at it in steamers; lead mines also have been opened on the bank of the river. Pop. 723.

CLEVELAND, or **CLEAVELAND** [add.], a tn. U. States, Ohio, cap. co. Cuyahoga, at the mouth of the river of this name, on the S. shore of Lake Erie, and on the Ohio canal, and several lines of railway, which give it almost unlimited means of communication. It occupies a high and commanding bluff immediately above the lake, is laid out in broad well-paved streets and open squares, generally well planted with trees, is well built, and presents a very attractive appearance. Among its public buildings are 35 churches, many of them provided with handsome spires; numerous schools, maintained at the public expense, and under excellent management; a medical college, and a marine hospital. The harbour, furnished with fine piers, is every way complete, and the trade is very extensive, a large portion of it with Canada. The increase of trade has been accompanied with an extraordinary increase of population. The inhabitants of Cleveland amounted in 1830 to 1100, in 1840 to 6071, in 1850 to 17,034, and in 1860 to 43,417.

CLIFTON, a tn. British America, Canada West, co. Welland, about 35 m. (by lake) S.S.E. Toronto. It is the eastern terminus of the Great Western railway, and is situated at the suspension-bridge which crosses the Niagara about a mile above its celebrated falls, and connects the railway system of Canada with that of the state of New York, and all other parts of the States. The Erie and Ontario railway, connecting with the Ontario steamers, also passes through the town. The uncommon facilities for trade which Clifton possesses yet remain to be developed.

CLINTON, four places, U. States:—1, A vil. Massachusetts, on the Nashua, 35 m. W. by N. Boston. It is a thriving place, with some handsome churches, a number of good schools, large gingham factories, in which about 800 operatives are employed, an extensive carpet factory, several machine-shops, and numerous mills. Pop. 3859.—2, A vil. New York, on both sides of Oriskany Creek, and on the Chenango canal, 9 m. S.W. Utica. It contains several churches, and is the seat of Hamilton college. Pop. 1174.—3, A vil. New Jersey, on the S. branch of the Raritan River, and on the New Jersey Central railroad, 10 m. N. Flemington. It possesses several mills and factories, and stands in a fertile and highly cultivated district. Pop. 2949.—4, A vil. Louisiana, on a railway which connects it with Port Hudson on the Mississippi, 32 m. N. Baton Rouge. It is inhabited chiefly by wealthy planters, and contains a fine courthouse and two churches. Pop. 1252.

CLINTON, a tn. British America, Canada West, co. Huron, on the Buffalo and Lake Huron railway, 10 m. E. Lake Huron; with a Wesleyan and a New Connection Methodist Chapel, tanneries, and flour and saw mills. Pop. about 1000.

CLUTHA, or **MATAU**, a river, New Zealand, which has its mouth in Molyneux Bay, in the S.E. of Middle Island or Munster, 4½ m. N. Nugget Point. It is a considerable stream, with deep water, and broad within the entrance. The entrance itself, however, is narrow, and a constant fresh running out of it at the rate of 3 to 5 knots, makes it unfit to be navigated by anything but boats, though small steamers might navigate it with advantage.

COALCOMAN, or **SANTIAGO COALCOMAN**, a tn. Mexico, in a fertile valley in the S.W. of state Michoacan, about 50 m. from the shores of the Pacific. It is of recent origin, and has made rapid progress, chiefly in consequence of the rich mines of iron in its vicinity. Pop. 2000.

COBIJA [add.], or, as the official documents style it, *La Mar*, after the name of the first president of Bolivia, is the only port of Bolivia, and cap. dep. of same name, lies on the shore of the Pacific; lat. 22° 34' S.; lon. 70° 17' 5" W. It stands

upon the beach at the foot of a lofty range of hills; the environs are very uninviting, and but for its position as a port few persons would choose it for a residence. The only good houses are in a long and spacious street, stretching from N. to S. along the shore; the landing-place is bad owing to the heavy surf, but the harbour affords tolerably good anchorage. The prosperity of Cobija depends entirely on the mining districts, but the products of the mines are shipped principally from Caticá, 6 m., and Algodon, 28 m. to the N. They are chiefly owned by English companies, who import almost every necessary. In 1858 the quantity of raw copper shipped at Cobija amounted to about 20,000 tons. Till 1827 it was merely a fishing village occupied by Chingas Indians. In that year it was declared a free port, and in 1839 it became the capital of the department. In consequence of these privileges it began to flourish, and had in 1855 a population of 600 souls. Then was only a commencement of its prosperity, for in 1858, besides a permanent population of 2380, it had a floating population of persons going to and from the mines, estimated at about 2000, and consequently giving an aggregate of more than 4000.

COBURG, a tn. British America, Canada West, cap. co. Northumberland, pleasantly situated on the N. shore of Lake Ontario, and on the Grand Trunk as well as the Coburg and Peterborough railway, 40 m. S.S.E. Toronto. It possesses 8 or 10 churches, an educational establishment which bears the name of Victoria college, a great number of flour and saw mills, with an unlimited supply of water-power, tanneries, and other industrial establishments. The inland communications of Coburg, and its proximity to Rochester and other ports of the American shore, have made it in the course of fifty years a first-rate place of business. From its harbour, which is at once commodious and safe, there were exported in 1857 7000 barrels flour, 200,000 bushels wheat, 500 kegs butter, and 14,000,000 ft. of sawn lumber. Pop. about 7000.

COCA, a river, S. America, Ecuador, formed by the San Francisco, Quijos, and Cozanga, from the E. slopes of the W. Andes, flows between the cordilleras of Guacamagos and Galeras, in a deep channel between lofty and precipitous banks, and joins the Napo, more than doubling its volume. In its course it forms a magnificent cascade of nearly 150 ft.

COCANADA, or KAKEENADA, a tn. India, presid. Madras, dist. and 37 m. E. by S. Rajahmundry, on the shore of the Bay of Bengal. It is a rising place, the residence of several European merchants, and is annually increasing its exports. By means of a commodious canal-boat for passengers and light goods it communicates daily with Rajahmundry, and it is expected that when the Godavery navigation is opened towards Nagpore, it will become the port of shipment for all the cotton which is now conveyed by tedious land journey from Berar to Bombay.

COCHIN [add.], a tn. India, presid. and 355 m. S.W. Madras, cap. dist. of same name, on a low sandy flat of the Malabar coast. The present town stands on the shore, at the S. entrance of a back-water, which, extending S. to N. 40 m., forms a spacious harbour, but is encumbered by a bar, which, even at spring tides, does not admit vessels exceeding 400 tons. Most of the streets are formed with considerable regularity, crossing each other at right angles, and the houses are generally of two stories with pent-tiled roofs, and spacious; though, from the number of courts and walls which surround them, deficient in ventilation, and ill adapted to the climate. Shipbuilding, once among the most important occupations of the place, is still carried on to some extent. The chief exports are cocoa-nuts, coir, cordage, cocoa-nut oil, cassia, fish-maws, and timber. Cochin, besides the town proper, includes the suburbs of Culvaty and Muttuncherry, which form long straggling streets for half a mile to the S.E., along the edge of the back-water. At the latter suburb is an unsightly cotarum or palace belonging to the Cochin rajah, and immediately adjoining it is the synagogue of the Jerusalem or White Jews. The Black Jews, of whom there are many in the interior of the district, have also a synagogue, the floor of which is paved with china very neatly inlaid. In 1503 the Portuguese obtained permission to erect their first Indian fortress here. This became the nucleus of a large town with a fine cathedral. After the expulsion of the Portuguese Cochin became the capital of the Dutch settlements in India, the cathedral was turned into a warehouse, merchants

crowded to it from all quarters, and the traffic by way of the Red Sea became so extensive, that Venetian sequins formed a large part of the common currency. The British came into possession in 1795, and in 1814 demolished the strong fortifications and levelled the ramparts. Pop. 20,000.

COCHIN-CHINA (FRENCH), a French settlement, occupying three of the six provinces of the Anamite country of Lower Cochin-China, namely, Dong-naï or Bien-hoa, Saïgon or Gia-dinh, and Mi-tho or Dinh-tuong. The settlement is bounded N. by the kingdom of Cambodia and the territory of Vinh-xuong, S. by Vinh-luong and the China Sea, E. by Binh-thuan, in Middle Cochin-China, and W. by the prov. of Chau-doc. Bien-hoa, the easternmost prov., is the most healthy and pleasant, especially in its higher part; its chief town, of the same name, is fortified, and stands on the l. bank of the Dong-naï. It is divided into two departments, and has a soil admirably adapted to the growth of sugar-cane, and of tobacco and indigo. Vast forests of useful trees, and the lofty mountains of Baria and Cape Tiawan, add to its picturesque. Iron is found at Bengo. Gia-dinh, the central prov., forms three arrondissements, and its soil in the N. is similar to that of Bien-hoa; in the S. rice is extensively grown. Saïgon is the cap., and stands on the r. bank of the wide and deep river of the same name; it is divided into a military and commercial port, the latter being S. of the former, and separated from it by the Chinese canal. The third prov., Dinh-tuong, or Mi-tho, is the richest and most extensively cultivated, but the least healthy, of all the French possessions, cholera and marsh-fever being permanent scourges.

The lowlands, where the waters stagnate, are covered with a rank vegetation from 3 to 10 ft. high; contiguous to the flowing streams are extensive rice-grounds. Where the soil is somewhat raised above the water-level it is very fertile, and in some places ranges of low hills follow the line of the rivers. In the more elevated districts are grown tobacco, sugar-cane, maize, indigo, and betel. Among the other products, are tea, gums, cocoa-nut oil, silk, spices, and various farinaceous and aromatic articles. The Anamites raise also great numbers of buffaloes, cattle, hogs, and birds; the first being employed in agriculture, and, as well as oxen, for draught purposes; but since the French conquest oxen are reserved more strictly for food. The elephant, rhinoceros, and crocodile are not indigenous; but tigers, deer, apes, and serpents, and many kinds of birds, are common. Fishing, in a country so abounding with streams, is naturally a great source of livelihood to the inhabitants, who prepare considerable quantities of the fish they catch for exportation, and for the Saïgon market, where they can command a good price. The mineral productions are few. Only one kind of stone, yellowish, and apparently an agglomerate of chalk or shells, is found fit for building purposes. Alum and salt are obtained on the coast of Bien-hoa; and iron exists, but not in quantities sufficient for profitable working. Copper and iron are imported from China, and manufactured by the people, but to no great extent. Industrial arts are as yet limited among the natives. They are skilful in all kinds of basket-work, in which they use the reeds and other similar materials which abound in the low lands; silk and cotton are also wrought. But they excel in the use of wood, of which their temples, pagodas, and tombs are built, and ornamented with elaborate carving. They live in villages—numbering nearly 1000 altogether—adjacent to the rivers, which, in the unsuitableness of the country for land traffic, form almost the only means of communication. Their houses are either tiled or thatched with straw, the roofs being supported with wooden pillars; the better class are in two sections, the inner apartments, and the outer verandah, which serves for use in the daytime; they are often well furnished, and not devoid of comfort. The only roads at present existing are those connecting Saïgon, the capital, with the principal towns. Telegraphic communication between many of the principal places has been already opened, and is being extended. The people are more warlike than the Chinese, and have learned from their long conflict with Europeans the use of strategy and fortification. Slavery has been abolished since the French occupation; polygamy is permitted, but not generally practised. The climate of Cochin-China, lying between lat. 10° and 12° N., is not liable to great variation. In the dry season, from October to April, the N.E. monsoon brings a

refreshing mitigation of the heat, which is greatest in February and March; the season of the rains and the S.W. monsoon is humid and exhausting; but upon the whole the climate is said to be much less oppressive and unhealthy than that of Senegal or Guiana. Cholera, dysentery, ague, and cutaneous affections are the prevalent diseases.

A persecution of the French R. Catholic missionaries in Anam furnished the imperial government with an occasion for regaining a long-desired footing in the East. An expedition against Cochinchina was decided on in 1857, and Saigon was occupied. The Austro-Italian war deferred further operations till 1861, when the conquest of Mi-tho gave the French possession of the most fertile district of lower Cochinchina, and enabled them to extend their frontier to the borders of Cambodia. At the end of the same year Bien-hoa, and in the early part of 1862, Vinh-xuong, fell into their hands, and a treaty of submission was exacted from the king of Anam. But insurrectionary movements delayed the final and peaceful settlement of affairs until April, 1863, when, by a new treaty, the king of Anam ceded the three provinces which now form the French territory, together with the free navigation of the several arms of the Cambodia River, and the opening of the ports of Balat, Tourane, and Quang-an; besides assuring protection to the French missionaries in Anam, and stipulating to pay an indemnity of £820,000. The province is now organized in prefectures, sub-prefectures, and cantons. The population is estimated at 900,000.—(*De Grammont, Binetau, &c.*)

COCOS, an isl. of the N. Pacific, about 400 m. W. of the coast of New Granada, in S. America, in lat. (Chatham Bay) 5° 32' 57" N.; lon. 86° 58' 22" W. It is about 30 m. in circuit, has an elevated surface, becoming visible at sea at the distance of 60 m., and is abundantly supplied with excellent water. At one time it was almost covered with cocoa-nut trees, but most of them have been barbarously cut down for fuel. Wild pigs are numerous, and the sea around the shores teems with fish. In Chatham Bay, on the N.E. side of the island, there is good anchorage in 14 fathoms. Cocos was a favourite rendezvous of the buccaneers, and is still visited by whalers.

COD, CAPE [add.], a sandy peninsula, U. States, forming the S.E. extremity of Massachusetts, and stretching first E. for 35 m., with an average breadth of about 8 m., and then nearly due N. for 30 m. more, with an average breadth of less than 4 m. Where it faces the S. and E. its coast line is convex, but its N. and W. faces are concave, and inclose between it and the mainland a considerable expanse of water called Cape Cod Bay. As the navigation is dangerous several lights have been erected upon it. One of these, at Race Point, its N. extremity, is a revolving light 155 ft. above the sea. The lower portion of the cape is a waste of barren sand-hills, with occasional patches of beach grass and a long stretch of salt-marshes. Where the ground rises pitch-pine, with a sprinkling of several varieties of oak, forms considerable forests, in which wild deer are still found. Numerous boulders lie scattered on the surface, but no rock *in situ* is seen, nor in the sinking of wells has any been discovered. But, notwithstanding the prevalence of sand, the peninsula is by no means destitute of inhabitants. In many of its sheltered nooks are thriving villages, occupied mostly by industrious and enterprising fishermen, and furnishing excellent marine nurseries, from which the masters of many of the best ships in the American merchant service have been obtained. Cape Cod was first discovered in 1602, by an English sailor of the name of Gosnold, who had sailed from Dartmouth in the bark *Concord* on a voyage of discovery, fitted out mainly by the Earl of Southampton. The number of cod fish caught in its vicinity induced him to give it the name which it still bears. The most memorable occasion on which it was subsequently visited, was on the 9th of November, 1620, when the *Mayflower* arrived with the Pilgrim Fathers, and anchored next day in the fine land-locked harbour of Provincetown.

COEL, or **KOYLE**, a river, India, which rises in a mountainous tract on the S. frontier of Chota Nagpore, flows N., and joins the Sone on its right bank, in lat. 24° 31' N.; lon. 83° 54' E. Its whole length is about 140 m. Seams of coal have been discovered on its banks.

COHAUILA, or **COAHUILA** [add.], a state, Mexico, bounded N. by Texas, from which it is separated by the

Rio Grande, E. Texas and Nuevo Leon, S. Zacatecas, and W. Chihuahua and Durango; area, 93,600 sq. m. It is traversed from N.W. to S.E. by two nearly parallel mountain ranges, and so intersected by detached ranges in other quarters that its only plain of considerable extent occurs in the N., and from the manner in which it is inclosed, having an entrance without any proper outlet, has received the name of the Bolson or 'Sack' of Mapimi. This Bolson is almost entirely in the possession of the Comanche and Lipan Indians, who have thus not only appropriated the best part of the territory, but are so determined and barbarous plunderers, that neither agriculture nor any other branch of industry can be carried on within reach of them; large farms, and even whole villages, have already been abandoned, as the only effectual means of escaping from their depredations. The quantity of tillable land is very limited, but, where quietly possessed, is well cultivated, partly in fields of wheat, maize, and barley, and partly in vineyards, from the produce of which wine and brandy of high repute are made. Sallillo, or Leone Vicario, situated in the S.E. corner of the state, near the frontiers of Nuevo Leon, is the capital. Pop. 66,228.

COHASSET, a vil. U. States, Massachusetts, co. Norfolk, on the coast, at the terminus of the South Shore railway, 12 m. S.E. Boston. The inhabitants are extensively engaged in the mackerel fishery, which here employs about 44 vessels and 560 persons. Pop. 1775.

COIMBRA, or **FORT COIMBRA**, a tn. Brazil, prov. Matto Grosso, r. bank Paraguay; lat. 19° 55' 43" S.; lon. 57° 52' 32" W. It is the most southerly Brazilian settlement on the Paraguay, and stands on a height 40 ft. above it. The fort, a solid stone structure mounted with six guns, completely commands the channel of the river, which is only one-third of a mile wide.

COLBOURNE, a tn. British America, Canada W., on the Grand Trunk railway, and about 2 m. from the harbour of its name, called also Port Cramahé, on Lake Ontario. It possesses an Episcopal Methodist and a Wesleyan church, a superior grammar school, several foundries, a tannery, a pottery, and saw and flour mills. The harbour of Colbourne is a port of entry, from which a considerable amount of lumber is annually exported. The fishery in the lake, which abounds with white fish and salmon trout, and the curing of them for inland or foreign markets, has recently sprung into notice, and promises to become important. Pop., including that of town and harbour, about 1400.

COLD SPRING, a vil. U. States, New York, co. Putnam, 45 m. N. New York, on the Hudson River railroad. It is situated in the Highlands, contains five churches, and has an iron and brass foundry and machine shops. Pop. 1200.

COLD WATER, a vil. U. States, Michigan, on E. branch of Cold Water River, and the Michigan Southern railroad, 115 m. W. by S. Detroit. It stands alone in a prairie of its own name, surrounded by a fertile country, and being furnished with water-power from the river, possesses several mills, &c.; and has a large retail trade. Pop. 1800.

COLD WATER RIVER, British America, peninsula Labrador, an affluent of the Moisie, rises in Trout Lake, in the table-land of Labrador, at the height of 1548 ft. above the sea, in lat. 51° 35' N.; lon. 66° 5' W. It forces its way through gorges, flanked by noble mountains rising 2000 ft., bare, rugged, and wild. In the course of 20 m. it falls 1430 ft., in one place it falls 506 ft. in about 2½ m., over a series of cascades broken by masses of rock and boulders, and lower down, between two of the lakes through which it flows, there is a descent of 270 ft. in a distance not exceeding 1200 yards. In its lower part it is in some places 60 ft. broad, but at its mouth, on the l. bank of the Moisie, about 35 m. above the debouchure of the latter in the Gulf of St. Lawrence, it is not more than 30 ft. in breadth. Its course has a length of about 80 m., and its general character is that of a torrent, navigable only occasionally by canoes for short distances between the rapids.

COLGONG [add.], a tn. India, Bengal, dist. Bhagulpore, r. bank Ganges, and a station on the East Indian railway, 245 m. N.W. Calcutta. The fort, which stands close to the river, is now a heap of ruins; in the river near it are three masses of rock 60 ft. high, with their fissures filled with stunted trees. Steam-packets ply from it to places up and down the river.

COLLALTO, a tn. Austrian Italy, prov. and about 12 m. N. Treviso; with an old castle of the middle ages, the cradle of the counts, now princes, of Collalto, descendants of the house of Hohenzollern.

COLLEGE, two places, U. States:—1, *College Hill*, a vil. Ohio, 6 m. N. Cincinnati, containing two prosperous educational institutes, Farmer's college, attended by about 200, and Ohio female college, by about 150 students. Pop. 500.—2, *College of St. James*, a post vil. Maryland, co. Washington, containing a Protestant Episcopal college and preparatory school.

COLLINGWOOD, a tn. British America, Canada W., co. Simcoe, on the Georgian Bay, an eastern branch of Lake Huron, and at the terminus of the Ontario, Simcoe, and Huron railway, 75 m. N.N.W. Toronto. Though a few years ago it was little better than a wilderness, it now possesses two churches, a weekly newspaper, steam saw-mills, and building-yards, from which ships of 150, 350, and 450 tons each have been launched. Pop. about 2000.

COLOGNA, a tn. Austrian Italy, prov. and 22 m. S.E. Verona, on a picturesque site on the Gua. It is surrounded by ancient walls, is the seat of a court of justice and several public offices, and has a new cathedral with a Corinthian portico, several other churches, with good paintings, a fine courthouse, an hospital; and trade in wine and hemp, which are here grown to a large extent. Pop. 6496.

COLOGNOLA, a tn. Austrian Italy, prov. and 10 m. E. Verona, at the entrance of the Illasi valley. It has many fine villas, and a parish church, with paintings by Farinati and Il Gobino. Pop. 3074.

COLORADO, a territory, U. States, formed in 1861 out of portions of Kansas, Nebraska, New Mexico, and Utah, is bounded by the parallels of 37° and 41° N., and the meridians of 102° and 109° W.; and has an area of about 106,000 sq. m. It is traversed from N. to S. by the Rocky Mountains, which divide it into two parts, and send down numerous streams, those of the W. slopes carrying their water to the Colorado, from which the territory takes its name, and those of the E. slopes carrying it to the basin of the Mississippi, through the Arkansas and the S. arm of the Platte. The territory is rich in mineral wealth, containing gold, silver, copper, iron, coal, salt, alabaster, limestone, and gypsum. None but gold mines have as yet been worked to any extent, but these are productive both in the quartz rock, for crushing which many hundred mills are in operation, and in the beds of the streams. On the W. slope of the Snowy Mountains silver mines have likewise been discovered. Ironstone is found in all parts of the territory, and a smelting furnace has been erected at Boulder for the manufacture of pig-iron. Deposits of lead and quicksilver also exist, and coal has been found at the base of the mountains near Denver City. The territory is scantily timbered, but there are large tracts of good agricultural land, and farms are being cultivated in all parts, producing grain of all kinds and vegetables in abundance. In many districts, however, irrigation is requisite, so that agriculture is at present confined principally to the valleys of streams and a few other favoured localities. The extension of the Pacific railroad westward, passing probably a little above Denver, will be felt advantageously by every branch of industry, and with the facilities it will afford the population and products of the territory will be largely and rapidly increased. The mines yielded about £2,400,000 in 1863. Golden City is the capital. Estimated pop. (1863), 70,000, of whom 15,000 are Indians.

COLOTLAN (SAN ANTONIO DE), a tn. Mexico, state Jalisco, about 85 m. N.W. Guadaluara, l. bank Xeres, in a fruitful valley at the height of 5000 ft. above the sea. It carries on an important transport trade by means of mules, and contains about 2500 inhabitants.

COLUMBIA, two places, U. States:—1, A tn. Tennessee, cap. co. Maury, on the l. bank of Duck River, and on the Tennessee and Alabama railway, 45 m. S.S.W. Nashville. It contains two churches, a college, a female academy, in a handsome edifice, with beautiful and extensive grounds, and several other excellent schools; and carries on an active trade.—2, A vil. Missouri, cap. co. Boone, 16 m. N.N.W. Jefferson City. It derives its chief claim to notice from being the seat of the state university, the buildings of which, including the ground, cost £25,000.

COLUMBIA (BRITISH), a colony formed on the Pacific side of British North America in 1858, of territory resumed from the Hudson's Bay Company, comprising the districts formerly known by the names of New Caledonia, New Georgia, New Norfolk, and New Cornwall. It is bounded N. by the Simpson and Finlay Rivers, E. by the Rocky Mountains, S. by the parallel of 49°, which here defines the boundary between British America and the U. States, and on the W. by the Gulf of Georgia, Charlotte Sound, and the Pacific Ocean, the former separating it from Vancouver Island, with which however it is combined for governmental purposes. Its extremities lie between lat. 49° and 57° 25' N., and lon. 114° and 131° W.; its length N. to S. being about 420 m., and its mean breadth about 300 m.; area, 200,000 sq. m. The coast line is deeply indented with sounds and bays, which furnish a number of excellent harbours, but the pre-existence of the port of Victoria, in Vancouver Island, and its proximity to the entrance of the Frazer, has hitherto precluded any necessity for occupying them. The interior of the country is much diversified in character and surface, the eastern side being entirely mountainous, from the line of the Rocky Mountains with its snowy peaks rising to the height of 15,000 or 18,000 ft., and the subordinate ranges which spread westwards almost to the centre of the land. The surface of the western parts—after passing a range of hills fringing the coast, and shooting up in irregular peaks, varying from 1000 to 10,000 ft. in height, and intersected at intervals by the long inlets which indent the coast—is irregular, with occasional high land, as far as the Frazer River, between which and its tributary, the Thompson, is a large tract of level forest. The rivers are numerous and large, and form an important feature of the country; but their value as means of transit and of access to the interior is destroyed by the many rapids and falls which occur along them, owing to the precipitous and mountainous nature of the country through which they flow for the most part. The most navigable, and on this account important, is the Columbia, which rises in the vicinity of the Rocky Mountains, between the Briscoe and Selkirk ranges, in about lat. 50° 30' N., lon. 116° W., and flowing N.W. to lat. 52° 10', makes a sudden bend to the S.W. and S., pursuing this course till it passes the U. States boundary into Anjou state, through which it turns westward to the Pacific. This river is navigable, with but a few breaks, by steamers as far as, or even perhaps beyond, the head of Upper Arrow Lake in British Columbia, but it has the disadvantage of passing in the first instance through a foreign territory, and as yet that part of Columbia in which it lies has but few settlers, though probably the recent discovery in it of gold diggings of the richest kind will soon attract a large accession. The Frazer, which is wholly within the Columbian limits, is the best known, and practically most important. It takes its rise in the western slope of the Rocky Mountains, about lat. 53° N.; lon. 119° W., and after flowing N.W. to about 54° 30', like the Columbia, makes a bend to the S., in which direction it flows, with a slight inclination to the E., receiving during its course, and on its left bank, in about 50° 13', the waters of its principal tributary, the Thompson; soon after which it makes a sharp turn westward, flowing in a broad and navigable stream into the Gulf of Georgia, a few miles below New Westminster, the newly founded capital of the colony, upon its right bank. Steamers are able to ascend it as far as Yale, about 90 m., though the current is often extremely rapid; but beyond that point it rushes through mountain gorges in a narrow torrent, with a velocity of 15 to 20 m. an hour. This is also the characteristic of its affluent the Thompson, which rising in the ranges to the S.W. of the source of the Frazer, flows, with the name of North Thompson, through lofty and precipitous hills, densely covered with almost impervious forest, in a southerly direction to Kamloops Lake, through which it turns W., and then S.W., into the l. bank of the Frazer. The Pease River, rising on the northern side of the hill range which deflects the Frazer from its northerly to its southerly course, and flowing N. into the Finlay, also has importance from being likely to prove prolific in gold. The characteristics of vast torrents dashing through mountain gorges usually enveloped with a dense growth of timber, sufficiently describe the principal rivers of British Columbia, which are unavailable for purposes of navigation, with rare exceptions

of occasional short distances. The expanse of primeval forest, for the most part as yet pathless and unexplored, is a remarkable feature of the eastern mountain districts. Some idea of it may be gathered from the graphic description by the intrepid travellers, Lord Milton and Dr. Cheadle, of what they witnessed upon the Thompson: 'The steepness of the path was not the greatest difficulty; it was the collection of timber, and the impenetrable character of such a region. There were pines and thujas of every size, the patriarch of 300 ft. in height standing alone, or thickly clustering groups of young ones struggling for the vacant place of some prostrate giant. The fallen trees lay piled around, forming barriers often 6 or 8 ft. high on every side; trunks of huge cedars, moss-grown and decayed, lay half-buried in the ground, on which others as mighty had recently fallen; trees still green and living, recently blown down, blocking the view with the walls of earth held in their matted roots; living trunks, dead trunks, rotten trunks; dry, barkless trunks, and trunks moist and green with moss; bare trunks, and trunks with branches, prostrate, reclining, horizontal, propped up at different angles; timber of every size, in every stage of growth and decay, in every possible position, entangled in every possible combination.'

The difficulty of transit in such a country would be considered insuperable, were it not for the absolute necessity of overcoming it in order to reach the sites of its incalculable wealth, the gold-fields. These have been discovered to exist in all directions upon and eastward of the Frazer River. The most extensive, at least those hitherto most extensively worked, are the fields in the Cariboo district, which lies in the N. bend of the Frazer, about lat. 53° 20'. Cariboo is 'a sea of mountains and pine-clad hills, the former rising to a height of 7000 or 8000 ft., and surrounded by a confused congeries of the latter, the surface everywhere having been disturbed, the strata tilted on end, and beds of streams heaved up to the top of hills.' Gold is also found in the Thompson, and many of the small streams tributary to it, and upon the Nicholas, Similkameen, and Okanagan, lying between it and the Columbia Lakes and River, as well as in the Kootanie district, already mentioned; indeed the whole of the eastern division of the territory abounds more or less richly in auriferous deposits, both in the beds of the streams, and in the quartz of the hills. The first discovery of gold in this region was made in 1858, by an Indian, it is said, who, stooping to drink of the Nicaomen, a small affluent of the Thompson, near its junction with the Frazer, saw a nugget glittering in the water. The news soon spread, and a rush of gold-seekers took place. The Cariboo district became the centre of attraction from its exceeding richness in the precious metal, which is there not confined to the rivers, but is found in the gulches and table-land 300 or 400 yards from them, and much beyond their highest levels; in some spots about a foot of gravel overlies the bed rock of light-coloured shale, which is very soft, and in the rents of which the gold is deposited; in others it is worked at the depth of many feet. The richness of the deposits may be gathered from the fact that parties of three or four miners have collected quantities varying from 3 or 4 to 70 or 80 oz. of gold per diem. The quartz rock is also considered to be of unusual richness. Coal also has been found on the W. coast.

The quality of the land for agricultural purposes is a subject of differing opinion. The country on either side of the Lower Thompson is exceedingly beautiful and picturesque, being a succession of green rolling hills and valleys, lakes and rivers, and apparently of great value as a grazing district; but hitherto very few settlers have attempted farming operations, though between the Thompson and Frazer they have begun, with a good chance of success, with the aid of artificial irrigation. Similar expectations were entertained of the Lilloet flats, W. of the Frazer, which were at first celebrated as excellent feeding grounds, but are described by Milton and Cheadle as having become in 1863 merely bare, dusty plains, the 'bunch grass' which formerly covered them, and which constitutes the principal herbage throughout, having been destroyed by continued grazing; it grows in distinct tufts, and requires, after being eaten down, three years to recover itself. Upon the lower part of the Frazer, in its straight W. course from Hope to its mouth, are fertile lands, but they are covered almost entirely with dense forest,

and exposed to summer floods. It seems likely then, that until the country becomes more thickly and permanently populated—and then only after a lapse of time, until the vast expanse of forest can be partially cleared, and its place occupied by cultivators of the soil—the population must be dependent upon foreign sources for most of the commonest necessaries of life. But the nature of the country makes the importation of them a work of extreme difficulty and expense, and imposes a high cost upon all articles of consumption. Hence the devising of methods of transit is a matter of primary importance, and is engaging the attention of the government and all others interested in it. The only available approaches to the interior at present existing are those proceeding from New Westminster, the capital, up the Frazer, until one diverges up the Harrison River and Lake, and then the Lilloet and other lakes, by what is known as the Harrison-Lilloet route, rejoining the Frazer at Lilloet, and thence proceeding by 'trail' to the Cariboo or other districts in that direction; the other route continues up the Frazer as far as Yale, after which it lies along the 'trail,' passing over the mountains which tower above the l. bank of the river, presenting difficulties and dangers which, though they have been lessened by ingenious engineering efforts, are still not a little formidable. Other routes have been proposed, leading more directly from the coast to the Upper Frazer, some of which have been traversed more than once. One of these lies through Burke Channel, the entrance of which is about 80 m. N. of Vancouver Island, and which runs inland for 50 m., and is then continued by three arms for 25 m. further; the central one of these arms, called Bellhoola Bay, Mr. Colin M'Kenzie reached from Alexandria on the Frazer, a distance of 160 m., in 13 days, the rise in the watershed of the coast range being so gradual, that he only knew he had passed the summit by finding that the streams flowed W. instead of E. Another, and perhaps even more eligible route, is suggested from Dean's Canal, the uppermost of the three arms, to the Nachuten, an affluent of the Stuart, and along the latter to Fort George, upon the Frazer, immediately adjacent to the Cariboo gold-fields. All these routes have their entry from the Pacific side; but the great desideratum is that the country should be accessible from the eastward, overland, and through British territory. The Rocky Mountains form the great barrier; several passes through them have been traversed with more or less difficulty, the chief of them, from the S. northwards, being the boundary, Kootanie, Kananaski, Vermilion, Kicking Horse, Athabasca, and the Tête Jaune, or Yellow Head, or Leather. All, except the latter, presenting various degrees of difficulty upon the E. side, are met on the W. by a country completely blocked by mountain and forest. The last named, the Tête Jaune or Yellow Head Pass, is said to be the most feasible, as it traverses a wide break in the range, only 3760 ft. above the sea, offering a natural roadway, of very gradual ascent, and obstructed by timber only. The head of the pass is within 90 m. of Cariboo, but the interval is mountainous and densely wooded, though said not to present any insuperable obstacles. If this route were opened it would have the additional advantage of effecting a communication with the fertile country of the Saskatchewan, on the E. of the Rocky Mountains, which is admirably suited for agricultural settlement, and only needs such a market as Columbia would furnish as an outlet for its produce. Mutual benefit would thus be conferred on two most valuable districts of our colonial territory. It is by this pass that the Hudson's Bay Company propose to carry the line of telegraph which they are about to lay across the continent. Railway communication with this region through British territory is yet distant, the connection between the Atlantic and Pacific being likely to be first made through the U. States to California. The Pacific railway now in progress will, on the western side, this year (1866) be extended to the summit of the Sierra Nevada Mountains, 104 m. from the city of Sacramento, which is itself 2700 ft. above tide-water. Four thousand men, chiefly Chinese, are now engaged on that railway, and the state of California has voted \$2,100,000 for its prosecution. To meet this railroad the railway on the eastern side of America now extends from New York to 200 m. beyond St. Louis, the border city between Illinois and Missouri.

Government, &c.—The colony, as yet in its youth, has not been organized with a representative system of government,

the administrative and legislative power being invested in the governor of Vancouver Island, who is also governor of British Columbia. This supreme authority has been so judiciously exercised, that even upon the first rush of gold-seeking immigrants law and order were rigidly preserved and enforced, and life and property are protected in almost perfect security. For judicial purposes a supreme court exists, which 'goes on circuit,' and there are local magistracies, &c., for the settlement of matters within their cognizance. The establishment of a bishopric and a staff of clergy was early effected, and missions have been placed not only among the European population, but also among the aboriginal Indians and the Chinese immigrants.

Commerce and Population, &c.—As yet no formal statistics have been published of the foreign and internal trade of the colony. The state revenue and expenditure of the colony in 1862 are set down at about £90,000 respectively. It was estimated in 1864 that the united population of Vancouver Island and British Columbia was about 100,000, Vancouver Island having about 25,000 of that number.

COLUMBUS [add.], three places, U. States:—1, A tn. Georgia, cap. co. Muscogee, l. bank Chattahoochee, which is navigable for eight months in the year, and at the junction of three railways, on the E. frontier of Alabama. It ranks as the third town of the state in population, commerce, and importance, is regularly laid out in streets, from 99 to 165 ft. wide, and contains many handsome private dwellings finely shaded by trees, which give the whole place an attractive appearance. The principal public buildings are a very handsome courthouse, five churches, a female college, an academy, a seminary, an orphan asylum, a market house, and jail. The industrial establishments consist of a paper mill, five flour and five large cotton mills, foundries, machine shops, cotton presses, a woollen and an agricultural implement factory. Before the civil war nearly 80,000 bales of cotton were annually shipped here. The village of Gerard, opposite to Columbus, is connected with it by a handsome bridge. Pop. (1860), 9621, of whom 3317 were slaves.—2, A tn. the cap. of Ohio, in the Ohio valley, near the centre of the state, on the E. bank of the Scioto, on the Ohio canal, and at the junction of five railways; lat. 39° 57' N.; lon. 83° 3' W. Standing on an alluvial flat it presents nothing attractive in its site. Its most striking feature is the number and extent of its public buildings and institutions. The capitol is second in size only to that of Washington, and though not very striking, from being built of grey limestone in the simple Doric style, is truly a handsome structure. Its interior is elegantly finished. The other principal buildings and institutions are seventeen churches, a German Lutheran theological seminary, a medical college, lunatic, blind, and deaf and dumb asylums, and a penitentiary, containing 350 cells for prisoners. The ample means of communication, both by water and rail, give Columbus a very extensive trade, and make it the central entrepôt for the produce of the surrounding country. Pop. (1860), 18,554.—3, A tn. Mississippi, cap. co. Lowndes, l. bank Tombigbee, which is here navigable at all seasons, in a fertile district occupied chiefly by plantations, 145 m. N.E. Jackson. It contains six churches, a female seminary, an academy, a courthouse, and jail; carries on an active trade, and is a shipping place for cotton. P. 3308.

COMBARBALLA, a tn. Chili, prov. Coquimbo, cap. dep. of same name, 100 m. S.E. Coquimbo, on a rugged site surrounded by barren mountains; with a parish church, a post office, and 1200 inhabitants.

COMISA, a tn. Austrian empire, Dalmatia, circle Spalato, on a large bay on the W. side of the island of Lissa. It has a harbour defended by a tower, and a valuable sardine fishery. Pop. 2400.

COMITAN, or COMITLAN [add.], a tn. Mexico, state Chiapas, on the Grijalva, 40 m. S.E. San Christoval. Its inhabitants are mostly in prosperous circumstances, occupying good houses in the town, and living on the incomes of their *haciendas* or farms, which they cultivate by the labour of Indians, and only occasionally visit. Pop. 10,000.

CONCEPCION [add.], a tn. and port, Chili. [See CHILLI (Talcahuano) in *Supp.*]

CONCEPCION, a tn. La Plata, r. bank Uruguay, prov. Entre Rios, 150 m. N. Buenos Ayres. It is a pretty place, and boasts of a college, where youths are educated, without

partiality or distinction of rich and poor, at the expense of the province. This institution, the buildings of which are handsome and commodious, has in a great measure supplanted that of Cordova, which was long celebrated, but has now dwindled to a provincial school. Pop. 4000.

CONCEPCION, a tn. S. America, Ecuador, in the interior of the country to the E. of the cordillera of Galeras, on the banks of the river Guataraco. It is inhabited by about 150 families of Indians, who cultivate a little tobacco and some other crops, and are sometimes employed as porters in carrying burdens across the country to San José.

CONCEPCION, or VILLA REAL DE CONCEPCION [add.], a tn. Paraguay, r. bank river of this name; lat. 23° 23' 56" S.; lon. 57° 30' 39" W. It stands on a plain about 20 ft. above the ordinary level of the river; was once a flourishing place, and should now be a principal port for the export of *yerba*, or Paraguay tea, and caoutchouc, but the policy of the government in monopolizing all trade and centralizing it at Asuncion, has destroyed its prosperity, and left it with a pop. of not more than 2000.

CONCEPCION (VILLA DE LA), a tn. Mexico, state and 65 m. W. Chihuahua, on a beautiful mountain stream of same name, an affluent of the Yagui. It stands in an elevated valley forming the most fertile district in the state, and famous particularly for its apples, which are raised chiefly by the Indians. The famous mines of Jesus Maria, situated on the E. frontiers of Sonora, have been the main sources of its prosperity.

CONCORD [add.], two tns. U. States:—1, Massachusetts, cap. co. Middlesex, on the river of its name, and at the junction of several lines of railway, 22 m. N.W. Boston. It possesses two churches, an academy, and various other schools; and a courthouse and a townhouse, both handsome structures. Its manufactures and trade are unimportant. Concord figures both in the early wars with France and Spain and in the war of independence. Pop. 2244.—2, cap. of New Hampshire, on the Merrimac, and at the junction of five railways, 63 m. N.N.W. Boston. It consists of two distinct portions, formed by the Merrimac, which traverses it from N. to S. The main village, situated on the W. or right bank of the river, contains a number of handsome buildings. Among these are conspicuous the state-house, which is built of granite, and stands in a finely wooded park; the city-hall, several elegant churches, the Methodist biblical institute, and the state lunatic asylum. One of the staple manufactures is carriages, for which Concord has long been famous. The other principal articles are woollens, cottons, cabinet-work, tin-ware, iron castings, and musical instruments. In the vicinity are extensive quarries of a beautiful white fine-grained granite, which is largely exported. Pop. 10,896.

CONCORDIA, a tn. La Plata, cap. dep. of same name, r. bank Uruguay, about 60 m. above Concepcion. Its inhabitants carry on a considerable transit and foreign trade. The principal exports are hides, tallow, and *yerba* or tea. Concordia boasts of a flourishing free-school. About 20 m. higher up the river the navigation is obstructed by the Salto Grande, where for about a third of a mile the channel is covered with verdant islets and innumerable rocks of a reddish sandstone, over and through which the foaming waters dash with the greatest fury. Owing to this obstruction Concordia is the last town in Entre Rios from which there is an uninterrupted communication with the towns of the Parana and La Plata. Pop. 2500.

CONDAPILLY [add.], a tn. India, presid. Madras, dist. and 52 m. N.W. Masulipatam. It stands at the foot of a range of hills, one of which is crowned by a picturesque fort, and was once the capital of a circar of same name. Since it fell into decay the walls, which still surround it, inclose an area far larger than the inhabitants require for dwellings, and a considerable portion of it is therefore under cultivation. The houses actually occupied cover only a small space at the foot of the hill. The only object of interest is the fort already mentioned, which has an elevation of 1700 ft. above the sea, and exhibits in its remains a degree of architectural magnificence.

CONDAVEED, a ruined fort, India, presid. Madras, dist. and about 12 m. W. Guntoor. It stands on a granite range of same name, at the height of 1000 ft. above the sea, and shows by the remains of fortifications, granaries, and

dwelling-houses, that it was of large extent, of great strength, and of sufficient importance to justify its selection as the capital of a circar. During the hot season it recommends itself to the notice of European residents at Guntoor, by the grateful relief which it affords from the burning heat of the plains. When the hot winds blow the difference of temperature above and below is from 10° to 12°, at other times the difference is 5° or 6°.

CONNEAUT, a tn. U. States, Ohio, on a creek 2 m. from Lake Erie, at the junction of the railways from Cleveland and Pittsburg to Buffalo. It contains a number of churches and schools, possesses a good harbour, with a lighthouse at the mouth of the creek; and carries on an active trade, being the entrepôt for the produce not only of the adjacent parts of Ohio, but also of a considerable portion of Pennsylvania. Pop. about 1500.

CONNECTICUT [add.], one of the U. States. The state contained on Jan. 1, 1864, 770 m. of railway, of which 616 were completed, the total cost of construction and equipment being £4,616,380. The value of the property in the state was estimated in the census of 1860 at £92,557,107. The revenue for the year ending April 1, 1863 (including temporary loans), was £540,130, and the expenditure £518,011; and the state debt amounted to £635,416. With regard to agriculture, there were in 1860, 1,830,808 acres of improved land in farms, and 673,457 acres of land unimproved. The number of horses was 33,276; sheep, 117,107; milch cows, 98,877; working oxen, 47,939; other cattle, 95,173; swine, 75,120. Of agricultural produce the state furnished, according to the returns of 1860:—

	Bushels.	Bushels.	Lbs.
Wheat.....	52,401	Potatoes.....	1,833,148
Rye.....	618,702	Pease and Beans	25,864
Indian Corn	2,059,835	Buckwheat.....	309,107
Oats.....	1,522,218	Clover Seed.....	13,671
Barley.....	20,813	Other Seeds.....	13,024
		Tobacco.....	6,000,133
		Wool.....	335,986
		Butter.....	7,620,912
		Cheese.....	3,898,411
		Hay (tons)	562,425

The population of Connecticut by counties in 1860, is stated as follows:—

Counties.	Whites.			Coloured.	Total.
	Males.	Females.	Total.		
Fairfield . .	36,614	39,186	75,800	1676	77,476
Hartford . .	43,766	44,877	88,643	1319	89,962
Litchfield . .	23,001	23,206	46,207	1111	47,318
Middlesex . .	14,771	15,751	30,522	337	30,859
New Haven . .	46,881	48,351	95,232	2113	97,345
New London . .	29,989	30,398	60,387	1344	61,731
Tolland . . .	10,105	10,348	20,453	256	20,709
Windham . . .	16,731	17,545	34,276	471	34,747
Total	221,858	229,662	451,520	8627	460,147

CONNERSVILLE, a vil. U. States, Indiana, cap. co. Fayette, on W. bank Whitewater River and the Hamilton and Rushville railway, 56 m. E.S.E. Indianopolis. Among its public buildings is the courthouse, one of the finest in the state, several churches, and two banks. The Whitewater Valley canal furnishes water-power and facilitates trade. Pop. 2119.

CONSTANTINE [add.], a prov. N. Africa, the most easterly of the three into which Algeria is divided, is bounded N. by the Mediterranean, E. Tunis, and W. the prov. of Algiers; its S. limits are scarcely defined; area, 68,360 sq. m., of which, however, considerably more than a half belongs to the Sahara. The province is naturally divided by its physical features into three distinct parts, the N. slope, which sends its waters to the Mediterranean, the plateaux forming the connecting link between the mountain chains, and the slope southwards towards the desert. The principal streams, each watering and fertilizing a valley of greater or less dimensions, are the Bedjaia, which falls into the Gulf of Bougiah, the Seybousa, which is lost in the Lake of Bona, the Rounel, and the Medjerda, which flows E. into Tunis. The soil, in which, from the general prevalence of limestone, calcareous matter forms a principal ingredient, is fertile, and well adapted for the cultivation of grain, the vine, the olive, and the date, and numerous other fruits. Cotton also grows well. The most valuable minerals are iron, lead, copper, antimony, and many beautiful varieties of marble. The only mines in working order, however, are the iron mine of Karezas, from which

£7400 worth of ore was raised in 1862, and the lead mine of Kefum Tebul, from which £11,000 worth of metal was extracted. Mineral springs, some of them thermal and of considerable celebrity, occur in different localities. On the coast the coral fishery is carried on with some success, yielding an annual return of about £70,000. Railways are contemplated, connecting Setif, Bougiah, Philippeville, Constantine, and Bona, but the portion between Philippeville and Constantine is likely to be the first constructed. The proposed lines are portions of a system designed to run parallel with the coast, 30 or 40 m. inland, from the frontier of Morocco to that of Tunis, with branches to the principal places on the sea-board. The administrative division, like that of the other provinces of Algeria, is into military and civil, the former consisting of four subdivisions, and the latter forming three arrondissements, of which Constantine, Bona, and Philippeville are the respective capitals. European pop., exclusive of the army, 27,382; native pop. about 1,101,421.

CONSTANTINOVSKAIA, a tn. Russia, gov. Don Cosacks, r. bank Don. It is the seat of the civil authorities of the first district of the gov., and has three yearly markets. The vine is extensively cultivated in the vicinity. P. 4232.

CONSTITUCION [add.], a seaport tn. Chili, cap. prov. and at the mouth of the river Maule, 160 m. S. by W. Valparaiso. It stands on the l. bank of the river, at the bottom of an amphitheatrical basin, and owing to its advantageous site has more than doubled its population within twenty years. It has at length assumed the appearance of a compact and well-ordered town, and contains a number of handsome residences, though the majority of the houses continue as before of one story, and have a rather mean appearance. The streets, however, though not paved, are spacious, and either parallel or at right angles to one another. On the plaza, situated very centrally, are the church, barracks, and prison, all of them of too humble a character to deserve special notice. Abundance of timber along the banks of the Maule, a good harbour at its mouth, and a sloping beach for launching-ways offer inducements to shipbuilding. Of these advantages has been taken, and shipbuilding is carried on to a considerable extent; but the chief trade is sawing and preparing the timber, which is floated or otherwise brought down from the interior. The coasting trade is considerable, but the foreign trade is very insignificant. The principal articles sent coastwise, or to other ports, are flour, beans, timber, barley, wine, tallow, and charqui. Pop. upwards of 4000.

CONTRECŒUR, a tn. British America, Canada E., co. Verchères, r. bank St. Lawrence, 16 m. N.E. Varennes. It possesses a R. Catholic chapel and several schools, but cannot boast either of its manufactures or its trade. Pop. about 2000.

COOK'S ISLANDS [add.], a group, S. Pacific Ocean, between the Friendly and Society Archipelagos, consisting of nine or ten islands; includes Rarotonga, one of the principal stations of the London Missionary Society, pop. 3500; Mangaia, pop. 5000; Aitulaki, 1400; Atue, 1000; Mitiero, 250; Mauki, 350. The islands are much frequented by whale ships for fresh provisions. They receive their name from their great discoverer.

COOK'S LAND [add.] This dist. is now included in the colony of Queensland (which see in this Supp.)

COOMBLA, or COOMBLA, a tn. India, Madras, dist. S. Canara, 19 m. S. Mangalore. It stands on an elevated peninsula, which runs into a salt-water lake, formed by a sand-spit dividing it from the sea. Two rivers discharge themselves into the lake, and in the rainy season their waters make the lake fresh. Formerly a bridge over the narrow inlet which connects the lake with the sea united Coombla with the opposite town of Kanyapoor. The fort, occupying a lofty spot, has a fine situation; but the town is now much decayed.

COOMPTAH, a tn. India, presid. Madras, dist. N. Canara, 100 m. N.N.W. Mangalore. It stands about a mile E. of a creek on the coast which forms its harbour, and was a place of consequence till it was pillaged and burned by the troops of Hyder Ali. After a long period of decline it has begun to revive, chiefly in consequence of the rapid extension of cotton cultivation in the district. Handsome dwellings and warehouses have been built in it by native merchants from Bombay; and its port, which was formerly dull,

is now in the shipping season the scene of great-commercial activity. The export of cotton, which is brought down from Bellary and the Mahratta country for shipment, has become a large and important trade. Pop. 6885.

COONDAPOOR, a tn. India, Madras, dist. N. Canara, 205 m. N.W. Bangalore. It stands on the S. side of the estuary of five rivers which flow down from the Ghats; the estuary, however, is very shallow, and navigable only by small vessels and canoes, which ascend the Cheekra River 10 m. to Wundsly. The country around is very beautiful, and an old fort with outworks stands in a fine position a little inland. Salt is manufactured by evaporation of sea-water.

COOPER, or **VICTORIA** [native, *Tewhaka*], a port, New Zealand, Middle Island or Munster, on the N.W. side of Banks' Peninsula. It is formed by Godley or Cachalot Head on the N., and Toloa Head on the S., and has at its entrance a width of 1 m., which it maintains as far up as the town of Lyttelton, situated on the N. shore of a small bay 4 m. within the Heads. At the anchorage off Lyttelton the depth is only 3½ fathoms. Port Cooper is easy of access in most weathers, except S.W. gales, which blow down it with great violence. There is also a considerable swell in N. winds.

COOSSY, a river, India, presid. Bengal, which rises in dist. Ramghur, about lat. 23° 35' N.; lon. 85° 58' E.; flows circuitously S.E. to Midnapore, then nearly due E., then again S.E., and joins the Hooghly on its r. bank, where it begins to widen out into a broad estuary. Its whole course is 240 m. During the dry season it is generally fordable.

COOSY, a river, India, which rises among the snowy peaks of Mount Gonsainthan, which reaches the height of 24,700 ft., near the N. frontiers of Nepal, flows circuitously S.S.E. to the British frontier, and, crossing it, continues nearly due S. across the alluvial district of Purnea to its junction with the Ganges. Its principal affluents are the Arun and the Tambar, both of which it receives on its left in Nepal, and the Gogaree, which joins it on its right only 10 m. above its mouth. In descending from the mountains, it forms three cataracts, or rather violent rapids. In Bengal it throws off numerous branches, but still continues a large stream, with a channel from 1½ to 2½ m. wide.

COPACAVANA, a tn. La Plata, on the W. frontiers of prov. Catamarca and the eastern slopes of the Cordillera; lat. 28° S.; lon. 68° 30' W. It occupies a long stretch of ground, and is a well-built flourishing place, of cheerful appearance, with numerous fine gardens and vineyards, and an extensive trade in cattle, chiefly with Chili, being the chief and natural entrepôt for the traffic across this part of the Cordillera.

COPIAPO, or **SAN FRANCISCO DE LA SELVA** [add.], a tn. Chili, prov. Coquimbo, about half-way between the W. Andes and the Pacific; lat. 27° 20' S.; lon. 72° W. It consists of the town proper and two suburbs, one at the E. and the other at the W. extremity. The E. suburb is a wretched place, consisting of mean huts occupied by the poorest classes: the W. suburb is composed of elegant houses and villas, with fine gardens attached to them. The town proper is in the form of a rectangle, extending a considerable distance from E. to W., with a comparatively narrow breadth, and consists of a spacious plaza and four long streets, crossed at right angles by about twenty avenues or lanes. Owing to the frequency of earthquakes, the houses are of slight construction, being composed of wood fastened with cane and covered over with two successive coatings, one of mud and another of lime. Slight as the construction is, it answers well in a climate where little rain falls, and has therefore been employed in several public buildings; among others, the principal church, which, in consequence, has all the appearance of a mere temporary erection. In the plaza near to the church is a bronze statue, erected in 1851 in honour of Juan Godoy, for his discovery of the silver mines of Chañarcillo in 1832. The only solid structure of any importance is an old church, whose low and massive walls have hitherto enabled it to withstand the most violent shocks of earthquakes. Copiapo counts among its industrial establishments iron-foundries, and factories for crushing-mills and other machinery employed in working the mines, and is enabled to carry on a considerable trade by means of its port of Caldera, situated about 30 m. W. on the Pacific, and now connected with it by railway. Pop. about 15,000.

COQUIMBO [add.], a prov. and seaport tn. Chili.—The PROVINCE contains, besides Coquimbo, the ports of Guayacon, Tongay, and Totoralillo; but vessels bound to them must first touch at Coquimbo or some other chief port of the republic. The copper ores of it are very abundant, but not sufficient for the requirements of the smelters, and consequently large quantities are imported from the north of Chili and from Bolivia, and coal is likewise brought from Coronel and Lota. The chief branch of industry in the province is the mining and smelting of copper; in several smelting establishments wood is used for the fires, but coal is burned in all the large works. The productions of the mines and smelting-works is shown in the following returns for the year 1864:—

Name of Mine.	No. of Men employed.	Quantity of Ore raised.	
		Tons.	Value of Ore.
Pique	600	9,090	130,000
San José	500	11,400	135,000
Brillador	250	7,400	31,000
Panulcillo	650	30,900	120,000
Total	2000	58,790	416,000

Name of Works.	No. of Furnaces	Ores smelted.	Copper produced.	
			Tons.	Value of Copper.
Guayacon	34	44,000	10,000	800,000
Coquimbo	12	23,528	3,000	244,000
Compañia	7	16,840	1,575	106,000
Panulcillo	9	26,550	5,000	130,000
			<i>Regulus of 35 p. c.</i>	
Total	62	110,918	19,575	1,280,000

A railway was opened in 1862 40 m. in length, connecting Coquimbo and Serena with Las Cardas and the mines in the interior, the plant, employés, &c., being all English. An extension of the line from Las Cardas to Panulcillo, 13 m., is being made, and cart-roads are under construction from Serena to Higuera and from Tamaya to Panulcillo, which altogether will give considerable impulse to the mineral trade. Pop. (1854), 110,589.—The town is to be supplied with water by the railway company, who have contracted to build a reservoir with filtering appliances, and furnish water gratuitously to the inhabitants. An English contractor is also engaged in the erection of gasworks for Serena. The nature of the country and climate is unfavourable to agriculture; but some fine farms and gardens in the neighbourhood of Coquimbo are made productive by irrigation, by means of a canal communicating with the Coquimbo River.

The subjoined table gives the statistics of British and foreign shipping in the port of Coquimbo, in the years 1863 and 1864, showing a large increase in the latter:—

	British.		French, Ham- burgh, and American.		Chilian.		Total.	
	Vsls.	Tons.	Vsls.	Tons.	Vsls.	Tons.	Vsls.	Tons.
1863	42	16,856	11	5,322	410	62,862	463	85,040
1864	60	27,456	14	7,077	511	77,404	585	111,937

The Pacific Steam Navigation Company's vessels touch at the port eight times a month, but are not reckoned in the foregoing statement.

The cargoes entered at the port consist chiefly of coal and materials for mining and smelting purposes; the cargoes outward comprise copper in ingots, bars, regulus, and ores, small quantities of silver and cobalt ores, hides, &c. The following table exhibits the value of the imports and exports in the years 1863 and 1864:—

	Imports.		Exports.	
	1863.	1864.	1863.	1864.
	£	£	£	£
England	51,060	87,154	460,610	815,718
France	1,534	239	106,487	123,040
Hamburgh	—	—	54,029	33,804
United States	7,125	10,877	17,999	160
Bolivia	3,028	36,514	155	943
Peru	923	827	1,272	6,108
Total	63,670	135,611	640,552	979,773

CORDOVA [add.], a tn. La Plata, cap. prov. of same name, on the S. side and about $\frac{1}{4}$ m. from the banks of the Primero, which here bends round from N.W. to S.E., and half encircles the town; lat. $31^{\circ} 20' 15''$ S.; lon. $68^{\circ} 46' 21''$ W. Cordova is the largest and most important place in the interior of La Plata, and is built, according to the old Spanish fashion, in regular streets crossing each other at right angles, and usually terminating in a large central square. The principal buildings are the cathedral, an ancient and venerable structure situated on the W. side of the plaza, built by an Italian in the Renaissance style, with a richly decorated front, two towers, and a dome, and generally regarded as the finest church which La Plata possesses; the church of Santa Catalina, attached to a large and wealthy nunnery of same name, which is occupied by about 40 nuns, belonging for the most part to wealthy families; the nunnery of Santa Theresa, with 25 nuns; the three monasteries of St. Francis, La Merced, and St. Dominick; the first with a fine new church attached; the second old and in a somewhat dilapidated state, but remarkable for the solidity of its structure; and the third conspicuous by its two towers; the university, occupying the extensive buildings of the old Jesuit college, and provided with a rector and six ordinary professors; the Cabildo, the orphan hospital, and the infirmary. Cordova, which long figured as the ecclesiastical metropolis of S. America, still retains much of its original character. All the buildings of note, and all the endowments, are more or less clerical, and the clergy or their connections and dependants form by far the most influential, and by no means a small numerical portion of the whole community. The trade, though only transit, is very important, as all the traffic of the W. and N.W. provinces must pass here on the way to Santa Fe and Rosario. At present the only mode of conveyance is by ox-waggons or mules; but it has been proposed to connect Cordova with Rosario by a railway. Could this be done, there cannot be a doubt that a vast increase of traffic would ensue. The province, which exported in 1856 about 304,000 lbs. of wool, in 1863 exported 912,600 lbs. The pop. of Cordova is so uncertain that it is estimated variously from 15,000 to 40,000.

CORMANTYN [add.], a tn. and ruined fort, W. Africa, on the Gold Coast, in the Gulf of Guinea, about 12 m. E.N.E. Cape Coast Castle. The fort is in the form of a square, about 100 ft. on the side, with bastions at the angles, and an out-work which seems to have been a parade-ground, or the place where, during the slave-trade, the slaves were given air and exercise. On the S.W. side there is a tower 146 ft. high, and a series of apartments in a state of ruin. The inside of the fort is filled with weeds and shrubs. The fort, though said to have been the first built by the British on the Gold Coast, fell into the hands of the Dutch, who gave it the name of New Amsterdam, and continued in possession of it till 1807, when it was plundered by the Ashantees. The native town, which stands at the corner of a range of high ground, is a large and populous place, with nothing remarkable except the great size of some of its trees.

CORNING, a tn. U. States, New York, on the Chemung River, and on the New York and Erie, the Corning and Blossburg, and the Buffalo, Corning, and New York railways, 200 m. N.W. New York. It is pleasantly situated at the foot of a hill, contains six churches, a distillery, a tannery, two furnaces, and several mills, and carries on an active trade in coal and lumber. Pop. 3626.

CORNWALL, a vil. U. States, Connecticut, about 2 m. E. of the Hausatonic railway, 40 m. W. by N. Hartford. It owes its chief claim to notice to its foreign mission-school, which was founded in 1818, for the purpose of training native converts from paganism, and making them fit to become missionaries to their countrymen. In one year 19 of the students were American Indians, and 10 natives of the islands in the Pacific. Pop. 2041.

CORNWALL, a tn. British America, Canada West, cap. of the united counties of Stormont, Dundas, and Glenagarry, 1. bank St. Lawrence, contiguous to a station of the Grand Trunk railway, 70 m. S.W. Montreal. It possesses six churches—Church of England, Church of Scotland, Free, Wesleyan, Congregationalist, and R. Catholic—a grammar-school, a weekly newspaper, tanneries, foundries, and flour, fulling, and saw mills, and, being a port of entry, commands

a considerable trade, particularly in flour, the boats of the through and American lines between Montreal and Hamilton, and those of the Montreal and Kingston line calling daily. The Longue Sault Rapids, immediately above the port, are avoided by a canal, 12 m. in length. Pop. about 2500.

COROMANDEL [add.], a settlement, New Zealand, New Ulster or North Island, on the E. shore of the Firth of Thames, 30 m. E. by N. Auckland. It possesses a tolerable harbour for small vessels, and is the centre of a large and flourishing timber trade, the kauri pine, and other valuable trees, being here fine and abundant. Gold has been discovered in the neighbourhood.

CORSICA [add.], an isl. and dep. France. The natural products of Corsica are beautiful and various; the summits and sides of the mountains are covered with extensive forests of Corsican pines, evergreen oaks, cork trees, beeches, and chestnuts. In other parts the hillsides are overgrown with dense thickets of cistus, myrtles, arbutus, and other shrubs. The state holds about 103,000 acres of forest; the communes, 129,200 acres; and private proprietors, 40,500; altogether about 272,700 acres. About two-thirds of these forests consist of resin-yielding trees, many of the laricio pines measuring 13, 16, and 19 ft. in circumference, and from 140 to 160 ft. in height. The felling of timber commenced only about 1853; but has already become a valuable business, as has also the extraction of resin.

Agriculture by no means keeps pace with modern improvements, and the island scarcely produces corn and grain sufficient for six months' supply of its population. The construction of roads, the draining of marsh lands and stagnant waters, especially on the east coast, the greater facilities of communication with other countries, and the steady though slow increase of the population, are tending to a better state of things. As yet, however, large tracts of fertile land remain uncultivated, and implements are of the rudest form. The land is greatly subdivided, almost every peasant possessing a small holding; a tract is farmed out for a certain period; the peasant provides the labour, the proprietor the seed, and the produce is divided between them.

The chief towns in the island are now connected by good roads. 568 m. of good road were open to traffic at the beginning of 1863, and 134 m. more were under construction; the total expenditure upon them having been £636,280.

The formation of the new port of Bastia was authorized in 1863. It will extend before the new quarter of the town to the north of the old port, having an area of $41\frac{1}{2}$ acres, and a protecting mole 763 yards in length. Improvements are also being made at other ports.

The number of vessels entering the ports of Corsica from foreign places more than doubled during the ten years from 1851 to 1861. In the former year, 719 vessels, of 68,500 tons, entered; and in 1861, 2006 vessels, of 146,796 tons. The few British vessels that frequent the Corsican ports generally bring coal to them for steam purposes.

The value of the imports and exports has gradually increased, as appears thus:—

	Imports.		Exports.	
	From France.	Other countries.	To France.	Other countries.
1858 . .	£555,541	£93,727	£267,678	£65,435
1859 . .	531,193	90,018	237,296	83,441
1860 . .	635,633	150,108	236,891	59,808
1861 . .	709,579	169,621	331,551	118,360
1862 . .	722,410	187,039	316,151	143,819

The total value of the imports in 1863 was £1,082,154, and of the exports £435,400. The trade at the port of Bastia alone in 1863 amounted to £644,400 in imports, and to £166,696 in exports.

The climate of Ajaccio, the capital of the island, and containing about 14,000 inhabitants, is exceedingly equable and salubrious, and is highly recommended for sufferers from pulmonary disease; but the total want of proper accommodation unfits it at present for a residence for strangers.

The population of the island at the last census (1861) was 252,889.

COSALA [add.], a tn. Mexico, state Cinaloa, at the foot of the Sierra Madre, 80 m. N. by W. Mazatlan. It depends partly on its mines, which are still extensively worked, and partly on trade. Pop. 4000. A little to the S. is another mining town called Copala, with a pop. of 1200.

COTAGAITÉ, or SANTIAGO DE COTAGAITÉ. a tn. Bolivia, prov. and 75 m. S.S.E. Potosi, picturesquely situated in a beautiful champaign district. It contains several broad streets lined with superior houses, an imposing cathedral adjoining a capacious square, and one of the largest and best post-houses in Bolivia. It is subject, however, to sudden inundations. In the vicinity is a large extent of well-cultivated ground.

COTAYAM, or KORIUM, a tn. India, presid. Madras, dist. Travancore, 30 m. S.S.E. Cochin. It is built along the banks of the Meenachel, which falls into the lake or back-water of Vembaraad a few miles below, is defended by a small fort situated at its N. extremity, and has in the same locality a small square of bazaars, where a weekly market is held and some trade carried on. The Syrian Christians (composing the main body of the inhabitants) consider Cotayam as the principal seat of their religion, and have several large churches in the neighbourhood. The Church Missionary Society has long had a station here; and with the view of aiding in the instruction of the Syrian population generally, a college was erected and liberally endowed by the late rane. Her successor is unfortunately of a different spirit, and discountenances every species of improvement or reform. The scenery of the surrounding country is very picturesque.

COTEAU, the name of three places, British America, Canada East:—1, *Coteau du Lac*, a vil. co. Soulanges, 1. bank St. Lawrence, within a short distance of a station on the Grand Trunk railway, 33 m. S.W. Montreal, with a Protestant and a R. Catholic church. Pop. about 600.—2, *Coteau Landing*, also co. Soulanges, about 3 m. from the former, and with nearly the same pop., 600.—3, *Coteau St. Louis*, situated near the E. end of Mount Royal, on the island and 3 m. from the city of Montreal. Many of the inhabitants find employment in the extensive quarries of building stone in the vicinity. Pop. about 2000

COTTIAR, KOTTIAR, or KOETJAR, a tn. Ceylon, a little E. of the mouth of the Mahawallé Ganga, on the S. side of the bay and 13 m. S. of the town of Trincomalee. It was a place of importance in the 16th and 17th centuries, when it carried on an active trade with India. In 1612 the Dutch, by permission of the emperor of Kandy, erected a fort here; and in 1675 they had from 80 to 100 ships employed in bringing cloths and other wares from the Coromandel coast, to exchange them for areca nuts, palmyra sugar, and timber. The surrounding district was full of villages, and rich in arable and pasture land, and carried on a large trade both export and import. Within less than a century all this prosperity ceased. Cottiar declined as Trincomalee rose, and its population so much decreased that it was seriously proposed to colonize it from Java or China. At present its chief inhabitants are fishermen. One thing for which it is still remarkable is the size of its oysters. One of these, measured by Sir J. E. Tennent, was 11 inches long by half as many broad.

COUDRES [add.], an isl. British America, Canada East, in the St. Lawrence, and (with the exception of Orleans) the largest in that river below Quebec, from which it is distant 54 m. N.N.E. It is 6 m. long by $2\frac{1}{2}$ wide, is lined on its S. side by rocky shoals, which stretch out fully a mile from the shore; but on the N. side presents a bold coast for 2 m. to the eastward of Prairie Bay, though the elevation neither there nor in any part of the interior exceeds 250 ft. above the sea. The rocks are composed of grauwacke and slate, the soil is tolerably fertile and well cultivated; and the whole island, forming a distinct parish, contains as many inhabitants as it is able to support. Prairie Bay on its N. shore is completely sheltered from easterly winds, and has deep and spacious anchorage.

COUNTRY HARBOUR, British America, is the finest which Nova Scotia possesses to the E. of Halifax. On the E. side of the channel leading to it is a bold and precipitous headland of clay-slate in nearly vertical strata 160 ft. high. Its entrance is 600 yards wide and 11 fathoms deep. Beyond, it varies in width from a third to a half of a mile, and in depth from 10 to $5\frac{1}{2}$ fathoms. Its whole length is about 5 m. The shores on either side are steep, and increase in altitude towards the interior, till they attain the height of 470 ft. near the harbour head. The population, thinly scattered along the shores, have employed themselves in lumbering and the fisheries, to the neglect of agriculture.

COURTALLUM, a tn. India, presid. Madras, dist. and 31 m. N.W. Tinnevely, a few miles S. of the Aringow and Alehorovil Passes, in the mountains which separate Tinnevely from Travancore. Its site at the height of 700 ft. above the sea, and in the direction of the current of air which, flowing through the mountain passes, maintains a delightful coolness, points out this as a locality admirably adapted for invalids. Its scenery also is of the most picturesque description, presenting, along with the most luxuriant vegetation, a series of magnificent cascades, the lowest of which descends 175 ft. by two successive leaps of nearly equal height. In the vicinity there is a beautiful pagoda, much visited by Hindoos, who ascribe a peculiar sacredness to the whole place, and have hence given it the name of Ten-casi, or Southern Benares.

COURTNEY, a tn. India, presid. Madras, dist. and 10 m. W. by N. Bellary. It is a place of considerable antiquity, surrounded by a wall of mud and stone, with stone gateways. A large part of the space inclosed is covered with ruins; the present inhabitants occupying not more than 200 houses, and employing themselves chiefly in agriculture, but partly also in the manufacture of saltpetre. The Ringing Stones, for which the vicinity of Courtney is famous, are angular and globular masses of a large greenstone dyke, which from their peculiar positions and the nature of the rock give a sharp ringing sound when struck.

COVINGTON [add.], two places, U. States.—1, A tn. Kentucky, co. Kenton, on the Ohio River, opposite to Cincinnati, of which it may be considered a suburb, and upon railways connecting it with Lexington and Louisville. It stands in an extensive plain, and is regularly laid out after the plan of Cincinnati. It contains 10 churches, two banks, a city-hall, and well-endowed Baptist college; and has manufactories of cotton, hemp, silk, and tobacco, an iron-rolling mill, and an establishment for packing beef and pork. It is also the residence of many persons whose business is in Cincinnati. Pop. (1860), 16,471.—2, A vil. Indiana, cap. co. Fountain, 1. bank Wabash River, and on the Wabash and Erie canal, 73 m. W.N.W. Indianapolis. A bridge is built across the river. Large quantities of grain are shipped here by the canal, and in the vicinity coal and iron ore abound. Pop. 1366.

COWITCHEN, a harb. val. and river in the S.E. of Vancouver Isl., 4 m. W. of the S. port of Admiral Isl. The harbour, which lies about 25 m. northwards from the capital, Victoria, is not of great importance, except as giving access to the fertile valley of the same name, which runs back from it in a W. direction. This valley is very extensive, and calculated to contain 40,000 or 45,000 acres of excellent agricultural land, the soil being a rich loam 2 or 3 ft. deep. The climate also is equable and temperate, and many varieties of fruits and plants grow wild. Through the valley runs the Cowitchen River, issuing from a lake of the same name, 24 m. inland, and emptying itself into the head of the harbour; for some miles it is navigable by canoes. The valley is peopled by a tribe of Indians bearing the same appellation, who, however, are indisposed to the settlement of strangers in it, and are a somewhat unmanageable community.

COWLOON, or Kowloon, a dist. China, forming a peninsula at the mouth of the Canton River, province of Quangtung, directly opposite to the island of Hongkong, of the harbour of which it also forms the northern shore. It was ceded to Great Britain by the convention of Peking, concluded on 24th October, 1860, between Lord Elgin and Prince Hung, and was formally taken possession of, on behalf of Her Majesty, on 18th January following. Its acquisition had been rendered a desirable object in consequence of its being the favourite resort of pirates and other desperadoes, who it is to be hoped may now be rooted out and suppressed by the vigilance and energy of the British authorities.

CRAB, BIEQUE, or VIEQUE ISLAND [add.], West Indies, one of the Passage group of the Virgin Islands; is 18 m. long from E. to W., and from 2 to 4 m. broad. A ridge of small hills runs nearly its whole length along the middle of the island, rising to a moderate height at its S.W. end. The E. end is low. The S. side has several small bays, of which Danes and Sound or Settlement Bays afford tolerable anchorage with sandy bottom. On the N., Port Mula is formed by an abrupt bend of the shore from E. to N.; it is a small bay,

and at the mouth of a small stream on its S. side is the village of Isabella II. The island is a Spanish possession attached to Porto Rico, and has several estates upon it producing sugar, of which about 5000 tons are said to be shipped annually.

CRACOW [add.], a tn. Austrian empire, Galicia, cap. gov. and circle of same name, on a plain surrounded by gently rising hills, 1. bank Vistula, here crossed by a newly erected bridge, and on the railway to Breslau, 200 m. N.E. Vienna. It consists of the town proper and of seven suburbs, is the seat of important government offices and courts of justice, of a general Protestant consistory, and of a R. Catholic bishopric. Among its 40 churches notice is particularly due to the cathedral, which was founded in 1359 by Casimir the Great, and occupies a beautiful site on Mount Wawel. It has 26 beautiful marble altars, the silver tomb of Stanislaus, bishop of Cracow, who suffered martyrdom in 1076; and fine monuments of the Polish kings who reigned between 1163 and 1733, of several bishops, and of the three greatest Polish generals—Sobieski, Poniatowski, and Kosciusko. The most remarkable of the other churches are—St. Mary's, built in 1226, and adorned with fine glass paintings and wood carving of the 15th century; the church of St. Anna, with the tomb of St. John of Kenty, and a monument to Copernicus; St. Peter's and St. Paul's church, with the tombs of the Braniccki family; and the Franciscan church, which was built in 1237, and possesses fine paintings. The other principal buildings and establishments are the royal palace, immediately adjoining the cathedral on the large Ringplatz, built by Casimir in the 14th century, and converted in 1848 into a strong castle, with barracks and military hospital; the university, with a library of 42,000 vols. and 2200 MSS.; the government house and offices, the observatory and botanic gardens, the technical institute, the painting and music schools, the upper gymnasium, the ecclesiastical seminary, the industrial, commercial, Jewish, and infant schools, 9 monasteries and 9 nunneries, a house of correction, and 4 hospitals. The manufactures consist chiefly of agricultural implements, woollen and linen cloth, leather, &c.; and an active trade is carried on in wood, corn, wine, salt, linen, and fat cattle. On an artificial hill near the town, which has a height of 300 ft., and used to bear the name of Kosciusko, a strong fort has been erected. Cracow has repeatedly been laid in ashes, both by casual conflagrations and by enemies—by the latter particularly in 1202, when attacked by the Bohemians, in 1241 by the Mongols, in 1655 and 1657 by the Swedes under Gustavus, in 1657 by the Stekenburger under Rakoczy, and in 1702 by the Swedes again under Charles XII. A congress of princes held here produced the abdication of Casimir the Great in 1363. Pop. 41,086, exclusive of military.

CRAIGLEITH, a vil. British America, Canada West, near the S. extremity of the Georgian Bay, an eastern branch of Lake Huron. It stands about 6 m. from Collingwood, at the foot of Blue Mountain, the highest ground in Canada West, rising 1500 ft. above the sea, and commanding a magnificent view. The inhabitants are employed either in fishing, or in the excellent stone-quarries for which the Craigeith of Canada, like the Craigeith of Edinburgh, is celebrated.

CRANE, an isl. British America, Canada East, lying in the St. Lawrence, between the Middle and the South Traverse, 34 m. below Quebec. Being joined by low meadow land to Goose Island, about 2½ m. below, it is properly only one island with it; and thus the two, with the connecting meadows, form a long and narrow belt of land 10 m. long, and parallel to the right or S.E. bank of the river. Taken by itself Crane Island is 3½ m. long, is densely wooded on its S.W. side; and on the N. side, where there is a village and a church, it is in a good state of cultivation, and rises into a ridge of granuwacke and slate. The meadows connecting it with Goose Island feed great numbers of cattle. (See Goose Island.)

CRESPADORO, a tn. Austrian Italy, prov. and 17 m. W.N.W. Vicenza, on the Chiampo; with a parish church and large stone-quarries, and 2248 inhabitants.

CRÈTE [add.], an isl. Mediterranean. The staple produce of the island is olive-oil. Cotton, from American, but chiefly from indigenous seed, has been grown of late years, the quantity produced in 1863 being about 1170 cwt.,

and in 1864 2000 cwt. A number of coffee-trees was imported by the pasha from Mocha in 1864 as an experiment; and an attempt is also being made to introduce oysters, which did not previously exist on the coasts, by laying down some beds of them in Suda Bay, and elsewhere.

The foreign trade of the island amounted in 1863 to £399,391 in imports, and £401,417 in exports; and in 1864 to £344,407 imports, and £446,760 exports. The principal articles imported and exported in 1864 were as follows:—

Imports.		Exports.	
Butter,	£17,221	Olive-oil,	£113,000
Manufactured Goods,	290,560	Soap,	170,986
Natron,	10,780	Silk,	19,965
Tobacco,	20,784	Carobs,	13,724
Wheat, &c.,	30,000	Cotton,	4,527

Of the shipping frequenting the various ports of the island in 1864, there entered the port of Canea 614 vessels, of 30,931 tons; Candia, 474 vessels, of 31,323 tons; and Retimo, 213 vessels, of 17,472 tons. These figures are likely to be increased in the course of 1865 by a renewed line of steamers between the island and Greece, and a project to open steam communication with Egypt. The port of Rétimo has been deepened and improved by dredging, and the same operation is being performed at Candia.

CROSS LAKE, British America, between Cedar Lake on the W., and Lake Winnipeg on the E., is, like the former, merely an expansion of the Saskatchewan, the waters of which become, as it were, filtered in it before their final discharge. It is an oblong sheet of water, about 8 m. long from N. to S., by 3 broad, and lies with its greatest length nearly at right angles to the course of the river, which, just before entering it, is obstructed by a band of limestone lying across its bed, and forms what is called the Cross Lake Rapid. This obstruction, the first, of any magnitude, which interferes with the placid flow of the river, produces a descent of 5½ ft. in a short distance. The Hudson's Bay Company's boats, carrying about five tons, are only enabled to ascend it by dividing the load, and taking it up at two successive times. Loaded boats descending run the rapid without difficulty. The case is different with another rapid of a more formidable character, called the Grand Rapid, which occurs after the river issues from Cross Lake, and is about to pour its waters into Lake Winnipeg (which see).

CSABA, a tn. Austrian empire, Hungary, co. and 9 m. E. Pesth, on the wooded outlines of the Pilis Mountains; it has an archducal palace with gardens. There appears to have been a Roman station here. Pop. 1200.

CSAPRING, a tn. Austrian empire, Hungary, co. Oedenburg, cap. dist. of same name, on the Repce; with a court of justice, two churches, a castellated mansion, and a trade in wine and wood. Pop. 2419.

CSENGER, a tn. Austrian empire, Hungary, co. Szathmar, on the Samos, 2 m. N.W. Szathmar Nemethi; with a castle and a distillery, and 2637 inhabitants, mostly belonging to the Reformed church.

CSEREPFALU, a tn. Austrian empire, Hungary, co. Borsod, about 10 m. S.E. Miskolcz. The inhabitants belong mostly to the Reformed church, and have quarries of marble and limestone. In a romantic valley in the vicinity are the ruins of the old castle of Odor. Pop. 2450.

CSESZNEK, a tn. Austrian empire, Hungary, co. Veszprim, on the road to Raab. It has a trade in excellent fruit and tobacco. In the vicinity are the ruins of a castle built in 1314 by Sigismund Gara. Pop. 1120.

CSÖKÖLY, a tn. Austrian empire, Hungary, co. Somogy, not far from Atad; with a trade in flax, and well-attended markets, and 2020 inhabitants.

CSONOPLJA, a tn. Austrian empire, Banat, circle and 19 m. S. by E. Zombor; with a trade in corn and cattle, and 5115 inhabitants.

CUCULLI, a tn. South America, La Plata, prov. of Salta. Approached across a flat and uninteresting country, it stands out in bold relief against the blue horizon, having from a distance, in consequence of the regularity of its shape and the uniformity of its buildings, some resemblance to a fort. The streets crossing at right angles form regular blocks of the houses, which are for the most part solidly built of brick, while the grand plaza is occupied by an imposing cathedral, and several other large buildings of some architectural pretension. In other parts of the town are

churches with pointed spires, the Tambo, a large hôtel not unlike a monastery, and shops well supplied with almost every species of goods. The market held in the plaza is, on market-days, crowded with huge waggons from the country, some of them filled with butcher's meat, and others with pumpkins, water melons, and various other kinds of fruit and vegetables.

CUDDAPAH, or **KURPA** [add.], a dist. and its capital, India, presid. Madras. The DISTRICT lies between lat. 13° 5' and 16° 20' N.; lon. 77° 48' and 79° 50' E.; is bounded N. by Kurmool and Guntoor, E. Nellore and N. Arcot, S. North Arcot and Mysore, and W. Bellary and Kurmool; area, 12,970 sq. m. The mountains form an uninterrupted chain of great extent, rising abruptly from the plains, and traversing the district throughout its whole length in continuous and parallel ridges. About 30 m. E. of Cuddapah these mountains become linked with the Eastern Ghauts. The E. and W. ranges consist chiefly of gneiss, overlaid with sandstone and sienite, and contorted and intersected by veins of greenstone. They form long ridges, some of them hog-backed, and ribbed with sides deeply excavated by mountain torrents, and bases presenting an unbroken abutment of perpendicular precipices from 50 to 60 ft. high, and having all the appearance of gigantic artificial walls. The S. ranges consist of granite, with gneiss and mica slate, all more or less in a state of decomposition. They are usually of a conical form, are often isolated, and are either abruptly truncated or terminate in precipitous peaks, some of them 3500 ft. high. In other quarters sandstone prevails, with a structure varying from quartz rock to conglomerate and loose grit, and sometimes finely variegated. It usually rests on limestone of a deep blue colour, which cuts easily, and is often employed as a coarse marble. The sandstone conglomerate is the matrix of the diamonds which are found about 7 m. N.E. of the town of Cuddapah. The mines are still worked, but have latterly proved by no means profitable. On the surface of the limestone in the plain around Cuddapah large accumulations of hematite and fusiform iron ore are found. Soda, saltpetre, and common salt are found in great abundance in a soft red ferruginous clay. The district is drained almost entirely by the Pennaar and its tributaries, of which the most important are the Sugglear, the Cheyair, and the Papugny. The soil of the plains in the W. and N. is the rich black loam celebrated for the production of cotton. On the same soil wheat and indigo are largely cultivated. The other principal crops are rice and dry grains, such as cholam, raggi, &c. In gardens, particularly those around the town of Cuddapah, sugar-cane, tobacco, turmeric, and betel are grown. As there are few forests, wild animals are not numerous. The characteristics of the climate are intense heat by day and a stifling stagnation of air at night. Against these European constitutions are ill fitted to contend. Pop. 1,451,921.—The town, also called Kurpa, lies 140 m. N.W. Madras, on the Boga. Though a place of great consequence in the time of the Hindoo rajals of Beejanuggur, most of its public buildings are in ruins or appropriated to new purposes, and the houses still occupied as a native town are in the majority of cases merely mud huts of a wretched description. The fort, inclosed by a dilapidated mud wall, with round brick and stone towers, contains the palace and out-buildings of the Patan rulers of Cuddapah. Its mosque is in good repair, but the other parts, or rather the site on which they stood, is now occupied by the civil cutcherry, treasury, jail, and post-office. The palace of the nabob, situated close to the pettah, now exists only as a mud fort. The importance attaching to Cuddapah at present is almost entirely derived from the cantonment, which is about 3 m. to the E., and separated from it by the river. Its barracks and hospital are substantially built of brick and chunam, and covered with tiles. The principal products are cotton, wheat, and indigo; besides sugar-cane, tobacco, turmeric, and betel, which are grown in the gardens.

CULIACAN [add.], a tn. Mexico, cap. state Cinaloa, l. bank river of same name, which falls into the Pacific at Altata, about 26 m. below. It occupies the site of the old city of Hueicollhuacan, which is famous in Mexican history, consists of regular streets, which run in parallel lines or transversely from the public square, which is surrounded by a fine colonnade, and contains among its edifices a cathedral

of large dimensions, decorated within with fine paintings, but wearing an old and dilapidated appearance; a mint, a modern erection, which cost about £70,000, and a magnificent clubhouse, where billiard gambling forms a favourite pastime. Most of the inhabitants are interested in the working of the gold and silver mines in the vicinity, which still continue to be worked to some extent, and with considerable success. Lima or Nicaragua wood, which grows all along the ranges of the Sierra Madre, and is exported at the little seaport of Altata, is the principal article of trade. Pop. 9600.

CULLOMA, or **COLUMA**, a tn. U. States, California, on the S. fork of American River, and on the road from Sacramento to Nevada, 35 m. E.N.E. Sacramento. In the vicinity is a number of saw-mills, one of which, called Sutter's mill, is remarkable as the spot where gold was first discovered in California.

CUMBERLAND, a tn. U. States, Maryland, cap. co. Alleghany, l. bank Potomac, and on the Baltimore and Ohio railway, 120 m. W.N.W. Baltimore. It contains several churches, a courthouse, and other county buildings; and carries on an active trade, particularly in coal and iron, which are extensively worked in the vicinity. Next to Baltimore Cumberland is the largest town in Maryland. Pop. 6073.

CUMBERLAND, a territory, British America, on the northern shores of Lake Winnipeg, extending between lat. 52° and 55° N., and lon. 100° and 105° W.; and watered by the Saskatchewan and Red Deer Rivers. Its appearance is partly that of a rich prairie country, interspersed with forests of oak and elm trees, and partly of a succession of hill and dale beautifully adorned with lakes, grass, and woodland. It presents many obvious advantages to settlers.

CUMBUM, a tn. India, presid. Madras, dist. and 80 m. N.N.E. Cuddapah. It consists of a fort, which is strongly placed, but in a very dilapidated condition; and a town, which, though decayed, is of some size and importance. An artificial lake, about 5 m. long by 4 broad, surrounded by picturesque hills, and forming one of the most beautiful sheets of water in this part of India, irrigates and fertilizes the grounds around the town.

CUM-SING-MUN, a harbour, China, on the E. side of the island, and about 20 m. N. of the town of Macao. It is said to be more safe and commodious, as well as more healthy, than any of the other harbours or anchorages near the mouth of the Canton River, and would be a desirable haven for vessels of large draught to run for from the anchorage off Lintin on the approach of a typhoon, were it not for an extensive shoal, with a depth of only two to three fathoms at 2 m. outside the entrance, which is about $\frac{1}{2}$ m. wide. Cum-sing-mun used to be the great rendezvous of the vessels engaged in smuggling opium into Canton.

CUNENE, **KUNENE**, or **NOURSE** [add.], a river, S.W. Africa, which rises in the marshy plateau of Sambos, in the Kimbunda country, about lat. 12° 40' S.; lon. 17° 30' E.; descends rapidly southwards, augmented by numerous affluent so as soon to become navigable, traverses the lands of Molondo, Kamba, Humbe, and Hinga, belonging to the kingdom of Kanyama, united with the Oval, and at some distance below with the Kakulabale coming from the W., changes its direction to S.W., skirts the Mucimba lands (Ambeba), and then turning W. falls into the Atlantic, in lat. 17° 15' S. It was at one time supposed to lose itself in the sands without reaching the ocean, but an expedition, fitted out by the Portuguese government in 1854, having landed on the 14th November on the Tiger Peninsula, proceeded southwards till it struck the river, and then travelled along the bank to its mouth; thereafter it proceeded up the stream for about 25 m. Owing to the bar at its mouth and a succession of cataracts it is not navigable. It is said to swarm with crocodiles and hippopotami. The banks are clothed with a rich vegetation, and in the adjoining forests elephants are so numerous that the Cunene was known and marked on maps as Elephant River.

CURIA-MURIA, or **KOORIA-MOORIA** [add.], a group of is. situated in a bay of the Indian Ocean, off the S.E. coast of Arabia. They are five in number, and lie between lat. 17° and 18° N.; lon. 56° and 57° E., occupying an elliptical patch of sea, 20 m. long by 8 m. broad. Though almost barren, it was rumoured that they were rich in guano, and under this impression the British government obtained a cession of the group from the Imam of Muscat, vessels

hastened to possess themselves of the fancied treasure in such numbers that, in the beginning of 1858, 50 vessels, with an aggregate burden of 45,000 tons, were seen at anchor off the islands; and it was sanguinely calculated that, though the manure was found on only two of the smallest of the group, the quantity was not less than 200,000 tons. 45,000 tons are stated to have been loaded up to the end of 1858, and the export was briskly continued up to 1860. The error was as to the quality. Large quantities of earthy gypsum, formed by the dashing of the salt spray on the limestone rocks of which the islands are partly composed, and the dung of fowls, with its most valuable ingredients washed out of it by the heavy rains of the S.W. monsoon, are the only guano of the Curia-Muria group. The essential difference between Curia-Muria and Peruvian guano becoming well understood, the demand for the former has in great measure, if not entirely, ceased.

CURICO [add.], a tn. Chili, prov. Colchagua, cap. dep. of same name, 110 m. S.S.E. Valparaiso. It is by far the neatest and apparently the most thriving town in the province, is regularly and compactly built on the fork between the Lontue and the Teno; has several well-paved streets, a plaza, a very pretty alameda, three churches, one of them particularly handsome and conspicuous from its white tower, and two schools, in one of which French and Latin are taught. It is said that there are rich copper mines in the vicinity of Curico, which might still be worked to advantage. Pop. about 7000.

CURITIBA [add.], a tn. Brazil, cap. prov. Parana, near the source of the river of same name, 230 m. S.W. Sao Paulo. Previous to its erection into a capital it was a comparatively insignificant place, and some time must elapse before it can assume an appearance suitable to its altered position. Much of the old town remains, with its narrow, angular, unpaved streets and squares, and its old houses, many of them verging on ruin; but the work of regeneration has begun, and the necessary public buildings, though certainly not on a scale of much magnificence, are in course of erection. The president has now a modest structure which serves for his palace. A state-house also has been erected, together with a treasury, a general guard-house, a prison, a lyceum, &c. Pop. about 5000.—(*Lallemant*.)

CURRENT RIVER, U. States, rises in Missouri, co. Texas, enters Arkansas, and after a S.W. course of about 250 m., joins the Black River. It is navigable by flat boats, and abounds in excellent fish. Its chief affluent is Jack's Fork.

CURTIS, an isl. Australia, Queensland, off the E. coast, from which it is separated by Keppel Bay, which forms the estuary of five considerable creeks or arms of the sea. It is 25 m. long, and 13 m. broad near its N.W. end. The surface, generally low, and in some parts swampy, rises towards the S.E., and becomes well diversified by hill and valley. On

the N.W. the channel which separates it from the mainland is not only narrow, but so shallow, that it dries at low water about 6 m. from the entrance.

CUYOS [add.], a group of isls., about 36 in number, lying between the islands of Panay and Palawan in the Philippine Archipelago, and forming part of prov. Calamianes. *Gran Cuyo*, the largest, between lat. 10° 46' and 10° 53' N.; lon. 121° 1' and 121° 7' E., has a medium length and a medium breadth of about 3 m. The soil is of indifferent fertility, and the cultivation is chiefly confined to mountain rice. The population is however considerable, the men finding full employment in the fisheries, chiefly of trepang, and in gathering edible nests, and the women in weaving fabrics of abaca and cotton. The cocoa-palm is abundant, and its sap forms the chief article of export. On the W. side of Gran Cuyo there is a town of same name, containing 7540 inhabitants. It consists almost entirely of native huts, but is defended by a fine stone fort with four bastions, mounting heavy cannon. It is said to have been built as a protection against the pirates of Sooloo and Mindanao.

CZAKATHURN, a tn. Austrian empire, kingdom of Croatia and Slavonia, circle and 9 m. N.E. Warasdin, on the railway to Ofen. It has an hospital, and an old castle, once the residence of the heroic Niklas Zrinyi. Pop. 2618.

CZANIEC, a tn. Austrian empire, Galicia, circle Wadowice, 34 m. S.W. Cracow, in the midst of extensive forests; with a fine baronial castle, and 1900 inhabitants, who are chiefly employed in weaving drills.

CZARNY-DUNAJEC, a tn. Austrian empire, Galicia, circle New Sandec, cap. dist. of same name, l. bank Black Dunajec, 48 m. S. by W. Cracow. It has rich seams of iron ore. The marsh of Bory in the vicinity is remarkable from standing so close upon the watershed between the Mediterranean and the Baltic, that of the two streams which issue from it, one carries its waters N. to the Vistula, and the other S. to the Danube. Pop. 1750.

CZCHOW, a tn. Austrian empire, Galicia, circle Bochnia, about 30 m. S.E. Cracow, on the Dunajec. It is pleasantly situated in a valley, and was once fortified and the seat of a Polish starost. In the vicinity is an old massive tower, once used as a state prison. Pop. 1300.

CZELADNA, a tn. Austrian empire, Moravia, circle Neutitschein, contains 1800 inhabitants, who are chiefly employed in working the iron mines of the neighbouring mountainous district.

CZERNELICA, a tn. Austrian empire, Galicia, circle and about 20 m. N.E. Kolomea; with an ancient castle, in which for a long time the Polish king John Sobieski resided. Pop. 2824.

CZNERNIEJOU, a tn. Austrian empire, Galicia, circle and 8 m. S. Stanislaw, was in the fourteenth century a place of strength, and the residence of a Russian prince. Pop. 1500.

D.

DABLING, a vil. India, l. bank of the Sutlej, 4 m. from the confluence of the Hopehoo, 9400 ft. above the sea. It stands in a fertile spot, amid groves of poplars and orchards, the chief fruit of which is the apricot. The opposite bank of the Sutlej presents a perpendicular section of 6000 or 7000 ft. of pure rock. About 1 m. E. is another village named Dooling, with which it is usually associated. The inhabitants are of the Chinese-Tartar type.

DAGBO, a tn. W. Africa, territory Doma, r. bank Benuwe, 90 m. above its confluence with the Kwara; lat. 8° 2' N.; lon. 7° 53' E. Between Dagbo and Eruko, situated a few miles below, the river is studded with large wooded islands, some of them inhabited. They add to the beauty of the scenery, but greatly increase the difficulty of navigation. A little to the E. the Doma Hills, prettily rounded and well wooded, with a central peak about 700 ft. high, form conspicuous objects.

SUPP. IMP. GAZ.—Vol. 1.

DAGGS SOUND, New Zealand, on the S.W. coast of Middle Island or Munster; lat. 45° 23' 7" S.; lon. 166° 52' 30" E. The width of the entrance is 1 m., but soon narrows within to 800 yards. After a general trend E. by S. for 5 m. the sound branches off into two arms, a N. by W. and a S.E., each running for 2 m. Within the heads for 1½ m. the depth is from 20 to 80 fathoms, but after the narrowing of the channel it increases to 70 and 90 fathoms. The best anchorage is at the head of the N. arm, in 12 to 18 fathoms, within 800 yards of a stony beach, with several streams of fresh water running through it. A remarkable scene which occurred while H.M.S. *Acheron* was anchored here in 1851 is thus described in the Remark-book of Commander G. H. Richards: 'Our anchorage was at the head of the northern arm, a cable's length from the shore, in 12 fathoms; the change of the moon brought a N.W. gale, with heavy rain, and in the course of a few hours no fewer than fourteen magnificent cascades were

pouring down the steep sides of the mountains (upwards of 3000 ft. high) by which we were surrounded, bringing with them trees of considerable size, and all other obstructions met with in their passage. There was as if a heavy surf were breaking round the vessel; the mist, floating as low as our mast-heads, occasionally obscured everything but the summit of the mountains and the foam below, and produced altogether a scene as grand as it is possible to conceive, which lasted, without abating in any degree, for two days, when the water alongside, which had been as salt as the ocean, was for a considerable depth below the surface perfectly fresh.'

DAGO-N-DAJI, a tn. Western Africa, Hausa States, prov. Kebbi, 50 m. S. by W. Sokoto. It has a dilapidated clay wall, but notwithstanding the symptoms of decay has a pleasing appearance, in consequence of the number of gonda and date trees inclosed within its area. Its market is important, and has for its staples, cattle, sheep, salt, and beads.

DAHIRAH, a prov. Arabia, Oman, on the E. side, bounded N. by the prov. of Sharjah, and touching the Persian Gulf with its N. W. corner; E. by Datinah; S. Djebel Akh-dah; and W. the Great Sandy Desert; between lat. 23° 20' and 24° 25' N.; and lon. 54° 20' and 56° E. It is a tract abounding in pasture more than in arable land, and bears a kind of sheep rivaling the Nejdian breed; the dromedaries of the district too are fleet and enduring. The inhabitants are Sonnees and Bedouins. Bereymah is the principal town, and stands in a strong position amid the passes of Djebel Okdah, surrounded by several villages. The Djebel Okdah is a lofty mountain range, the soil about which is light, and the vegetation not luxuriant.

DAHOMEY [add.], kingdom, W. Africa. The present extent of the kingdom is estimated by Captain Burton to be much less than was formerly supposed. He states that the northern frontier is the river Tevi, about 100 m. from the coast; on the N.E. are the tribes of Yoriba or Yoruba, on the N.W. the Aja and other tribes, all of which, though liable to the assaults and ravages of the Dahomans, are practically independent. The extreme breadth of Dahomey thus does not exceed 50 m., and it narrows towards the S., where it is not more than 25 or 30 m.; the area being about 4000 sq. m., instead of 36,000, according to earlier computations. The population is likewise set down at the smaller total of 150,000, of whom Captain Burton estimates that four-fifths are women and children; and adds, 'The annual withdrawal of both sexes from industry to slave-hunting and the customs at the capital, the waste of reproduction in Amazons (the female soldiers, who are compelled to celibacy), and the losses by disease and defeat, have made the country in parts a desert,' 'the population not being a third of what the land could support.' The soil is red and exceedingly fertile, but agriculture is despised, slaves being employed in it; the women, however, are the chief labourers, and cultivate their land with some degree of skill. The oil-palm might be a much greater source of wealth than it is, and the roads to the coast are generally good enough for wheeled carriages.

The cap. is Abomey, or Agbomey, at which the king principally resides, having a second palace at the village or town of Cannah, about 7 m. S. of it; the situation is higher, drier, and less unhealthy than Whydah, which is the seaport.

The people are of a warlike and aggressive character, engendered no doubt by their implication in the slave-trade. Incursions are frequently made by them upon neighbouring tribes, and the captives seized in these marauding expeditions are either sold to the traders, or are reserved, with condemned criminals, for the king's annual 'customs,' or human sacrifices, which are held by the present king, Gelele, in the last days of December and first ones of January, and are alleged by Captain Burton to have a quasi pious object, namely the furnishing the spirits of his deceased father and other ancestors with the requisite attendants in the shades below. The numbers of human beings alleged to have been slain on these occasions by the present king have no doubt been exaggerated; but when to the lowest reckoning is added the fact that whenever any event occurs, important or trifling, which the king wishes his father to be made acquainted with, a 'messenger' is decapitated to convey the news, and that this involves the death of one or more almost every day, the annual destruction of life is evidently very great. See АНОМЕЯ.—(Burton's *Mission to Dahomey*.)

In December, 1863, a special mission was despatched by the British government to Agbomey, to make representations to the king with a view of inducing him to repress the traffic in slaves, and to modify, if not discontinue, the barbarities of the customs, and also to represent to him the advantages he would derive from establishing a legitimate trade with foreigners at Whydah. It is feared that little good was practically effected by the mission. The king was contemplating at the time an attack upon the neighbouring Egbas in their city, Abbeokuta, and at the end of February he marched thither at the head of an army of 10,000 or 12,000 men and Amazons, with three small brass guns. After a three weeks' march they assaulted the town, the inhabitants of which had received warning of the intended attack, and had prepared themselves for it; after a few hours' fighting the Dahomans were forced to a retreat, and then completely routed by the pursuing Egbas; their loss being reckoned at nearly 7000, while that of the Egbas was about 40 killed and 100 wounded. The result is considered a heavy blow upon the stability, and perhaps the existence, of the throne and kingdom of Dahomey, many signs of its decadence having previously been noted.

DAILLEBOUT, a vil. British America, Canada East, co. Joliette, 48 m. N.E. Montreal; with a R. Catholic church, boys and girls' schools, and a considerable trade in lumber. Pop. about 1800.

DAKOTA, a territory, U. States, between lat. 42° 30' and 49° N.; lon. 96° 30' and 103° W.; bounded N. by British America, E. Minnesota and Iowa, S. and W. Nebraska; length, from N. to S., 450 m.; average breadth about 200 m.; area, 152,000 sq. m. The surface though not mountainous is elevated, one plateau, called the *Coteau des Prairies*, about 1450 ft. above the sea, stretching for 200 m. near its E. frontier, while another of less altitude occupies a considerable portion of its N. and centre. In the N.E. and S.W. are open grassy plains and high rolling prairies. More than half of the boundary lines are formed by large rivers—the Missouri separating it from Nebraska, and its affluent the Big Sioux from Iowa, while the Bois des Sioux and the Red River of the north separate it from part of Minnesota. Lakes are very numerous, and for the most part fresh, but one in the N., called Minni Wakan or Devil Lake, about 40 m. long by 12 broad, and with no known outlet, is salt. The climate in the S. is mild and temperate, and in the N. very severe, the cold there being sometimes so intense as to freeze quicksilver, and sink the thermometer 48° below zero. The soil in the S. and S.E. is excellent, and several of the valleys, particularly those of the Missouri and Red River, produce good crops of Indian corn, oats, wheat, and tobacco. In the unsettled and unexplored districts, occupied chiefly by the Indians as hunting-grounds, are vast herds of buffaloes, deers, and antelopes; the black bear and wolf are also common, and the fur-bearing animals are so abundant that the American fur trade derives its chief supplies from this quarter. Dakota, formerly included in Minnesota, having been separated from it in May, 1858, the inhabitants elected a legislative assembly, which met in October following at Sioux Falls, adopted a code of laws, divided the country into counties, and applied to congress for a formal organization, which was completed in 1861. Pop. (1860), whites 2576, Indians 2261; total, 4837.

DALAMOW, a tn. India, Oude, dist. Banskara, l. bank Ganges, 58 m. S. Lucknow. It possesses a brick-built fort, and two large ancient Hindoo temples, which, seated on the banks of the river, with flights of steps down to the water, present a striking appearance when approached by it. Pop. about 10,000.

DALHOUSIE, a tn. British America, New Brunswick, beautifully situated on the side of a hill S.W. of the island of same name, at the E. extremity of the Ristigouche estuary in Chaleur Bay. It contains a church, and possesses an excellent harbour, which is secure in all winds, and much visited by timber ships, which here load with lumber. The place, at present small, is rapidly increasing.

DALJA, a tn. Austrian empire, kingdom of Croatia and Slavonia, co. and 12 m. E.S.E. Eszeg, on the Danube, here crossed by a ferry. It contains 4450 inhabitants, chiefly employed in agriculture, the rearing of cattle, and fishing.

DALKISSORE, a river, India, presid. Bengal, which rising in dist. Pachete, about lat. 23° 30' N., lon. 86° 34' E.,

pursues a S.E. course of about 170 m., nearly parallel to that of the Coosy, and joins the Hooghly on its r. bank at Diamond Harbour.

DALLA, a tn. Western Africa, cap. prov. of same name, 170 m. S. by E. Timbuctoo. It is a place of considerable size, situated to the W. of the mountains of Iombori, and is inhabited mostly by Tombo, only a small part of the population being Songhay. Its governor being in subjection to the fanatical chief of Masina, who would never allow a Christian to visit his territory, Dr. Barth on arriving here felt obliged to assume the character of an Arab.

DAMAGHAN, a tn. Persia, Taberistan, 190 m. E.N.E. Teheran. It was once a flourishing place under the ancient name of Ihecatompylos, but is now without importance, though surrounded by a wall flanked with towers; and has only 1200 to 1500 inhabitants.

DAMAUN, a tn. India, presid. Bombay, dist. N. Concan, at the mouth of the river of same name, and near the Bombay and Baroda railway, 104 m. N. Bombay. The town is fortified with a rampart having ten bastions and two gateways, and contains nine Christian churches, and a castle named St. Hieronymus. The surrounding district is low, but fertile and pleasant, and well stocked with timber suitable for shipbuilding. The river has a bar at its entrance, outside of which there is a good roadstead where vessels may anchor; and within the bar, which has about 3 fathoms at high-water, there is a depth of 18 to 20 ft. Ships of 500 to 600 tons have been built in the river. The town formerly belonged to the Portuguese.

DAMBROWA, a tn. Austrian empire, Galicia, circle and 10 m. N. Tarnow, cap. dist. of same name, has a large castle with beautiful gardens, and famous horse-markets. It was ravaged in 1653 by the plague, and two years later by the Swedes. Pop. 1900.

DAMERGHU, a dist. Western Africa, between the S. frontiers of the Imoshagh or Tawarek country, immediately N. of Zinder and Tasawa, and the S. frontiers of Air or Asben, to which it belongs; lat. 14° 30' N.; lon. 8° 50' E.; length about 60, breadth about 40 m. It has an undulating surface, and a soil so fertile as to be capable of maintaining a very dense population. Though devastated by the bloody wars carried on between the king of Bornou on the one side, and the sultan of Agades and the Tawarek on the other, it is still proverbially spoken of as the granary of the kingdom. One proof of its great productiveness is seen in the little stacks of corn (millet) scattered among the huts, and really consisting only of enormous reed-baskets, placed on a wooden scaffold about 2 ft. high, as a protection against the mouse and the ant, and thatched over like the huts. The district appears to have been originally peopled by the Kanari race, who are still its chief occupants, though many of them have been reduced to the condition of serfs or prædial slaves. The surface of Damerghu, though usually undulating, sometimes assumes a mountainous character, and rises into peaks, of which one of the most conspicuous is the cone of Zosawa.

DAMMOODA, a river, India, presid. Bengal, which rises in dist. Ramghur, about lat. 23° 55' N.; lon. 84° 53' E., and flows first E. to Pachete, and then S. past Raneegunj, and nearly parallel to the railway between this town and Burdwan. Here it turns almost due S., and continues this direction to its junction with the Hooghly, on its r. bank near Diamond Harbour, and a little above the junction of the Dalkissore. Its total length is 350 m. Coal and iron abound in its valley.

DANE, or **DANES**, an isl. China, in the Canton River, close to Whampoa. It is not above 5 m. in circuit, but has a very picturesque appearance, being broken into hill and dale and fertile glens, occupied by a peaceable rural population. On its N. shore there is a stone dock, 550 ft. long, with a gate 80 ft. wide. Vessels drawing not more than 17 ft. can be taken into it at very high tides. On other parts of the island are numerous mud docks for vessels of smaller draught.

DANGER ISLANDS, in the American Polynesia of the S. Pacific Ocean; lat. 10° 54' S.; lon. 165° 54' W. They are three in number, surrounded by rocks and breakers, and have a dangerous reef 27 m. E. S. E.

DAN SABUA, a tn. Western Africa, on the road from Katsena to Kano, and near the boundary line of these two provinces. It is a considerable place, defended only by a

stockade, and exhibiting so few signs of industry among the inhabitants that it has a deserted look.

DANUBE [add.] In consequence of the rectification of the frontier of Bessarabia, as provided in the treaty of Paris in 1856, the whole of the lower course of the Danube, from Orsova to the Black Sea, lies within the Turkish territory. The portion of Bessarabia which formed the north bank of the river is now included within the principality of Moldavia.

DANVILLE [add.], two places, U. States:—1. A tn. Pennsylvania, cap. co. Montour, on the N. branch of the Susquehanna, 48 m. N.N.E. Harrisburg, and on the railway from Philadelphia to Elmira. It contains five churches and an academy, and, being situated in the heart of a coal and iron district, is actively engaged in the iron manufacture. Among its industrial establishments are two foundries, five blast-furnaces, and one of the largest establishments in the States for making iron rails and chairs. Pop. 6385.—2. A tn. Kentucky, cap. co. Boyle, on a branch of Dick's River, and on a railway connecting it with Lexington, 40 m. S. Frankfort. It is the seat of a Presbyterian theological seminary, with 4 professors and 36 students; of a college, with 5 professors, 180 students, and a library of 5600 vols.; and of the state asylum for the deaf and dumb. Pop. 4962.

DAOODNUGUR, or **DAOUDNAGUR** [add.], a tn. India, presid. Bengal, dist. Behar, 89 m. E. Benares, r. bank Sone, which is here navigable. It consists of about 2000 houses ranged in streets, of which some are straight and wide, but the most part are wretched lanes. It contains two large *serae*, or public lodging-houses, both of them surrounded by walls, and one loopholed, so as to be capable of defence; and has manufactures of blankets, coarse cotton carpets, and other cotton fabrics; and a considerable trade.

DAPOOREE, a tn. India, presid. Bombay, dist. and 4 m. N. Poonah, on the Mootah, a feeder of the Beema. It contains a residence for the use of the governor of Bombay, and in its vicinity are the botanical gardens maintained by government.

DARAGUNJ, a tn. India, N.W. Provinces, dist. and opposite to Allahabad, with which it communicates by a ferry, l. bank Ganges. It is a place of some importance, with a pop. of 9103.

DARIEN, a vil. U. States, Georgia, cap. co. M'Intosh, l. bank Altamaha, 60 m. S.S.W. Savannah. It contains five churches and an academy, is a port of entry, and exports pine lumber. Its former trade and importance have been diverted from it by the Central railroad. Pop. 600.

DARIEN HARBOUR, S. America, New Granada, within the Gulf of San Miguel, an E. arm of the Bay of Panama, is a magnificent sheet of water, which is formed by the junction of the Tayra and Savannah Rivers, and stretches S.E. for 11 or 12 m. as far as the village of Chupigana. It affords excellent anchorage in 7 to 10 fathoms, and in the hands of an energetic people would soon become valuable. Several rivers discharge their waters into it, its shores are almost without exception one continuous line of mangrove, with densely wooded hills, 100 to 300 ft. high, at a short distance inland; the mahogany, palm, and india-rubber trees can be had in abundance; and maize, rice, sugar, coffee, cocoa, yams, and plantains grow almost wild. The climate has a bad name, but with common care health may be preserved during the worst season, and during the other six months the weather is fine.

DARNLEY, or **ERROO**, an isl. Australia, which forms the principal guiding mark for the great north-east channel into Torres Strait from the eastward; lat. (peak) 9° 35' 15" N.; lon. 143° 45' E. It is about 5 m. in circuit, of volcanic formation, and attains, in a peak rising from its W. portion, the height of 610 ft. It is skirted on the E. and S. by a coral reef, but on the N. and W. is bold, and free from dangers. On the N. shore there is good anchorage in 14 or 15 fathoms in Treacherous Bay, so named in consequence of the barbarous murder of a Captain Hill and four seamen by the natives. The surface is well diversified by hills and plains, and the richness of the soil is proved by the luxuriance of vegetation. The natives, though far more intelligent and industrious than those of Australia, have given many proofs of cunning and ferocity. In their fields, which are numerous, and inclosed by neat fences of bamboo, they raise yams, sweet potatoes,

plantains, and sugar-canes. Cocoa-nut trees are also very abundant, particularly in the neighbourhood of their dwellings, which consist of huts resembling laycocks, 12 ft. high, and are arranged in groups of ten or twelve, each group with its bamboo fence. Pop. about 1000.

DARRORO, a tn. Western Africa, Hausa States, prov. Zegzeg, 140 m. S. Kano. It stands in a mountainous district, and occupies a position so strong by nature, that a wall on the N. side only is all the defence which it requires for its security. At some distance N.E. there is a cascade on the Gurara.

DASCHGESAN, a vil. Persia, prov. Azerbaijan, within a mile of the E. shore of Lake Urumiya. It is a miserable place, with houses composed of a kind of patchwork of tuff-stone and bits of marble stuck together with mud; but deserves notice from having in its immediate vicinity the celebrated marble quarries out of which some of the most splendid buildings of Persia and W. Asia were constructed. The marble is of various colours, among which the most highly valued are the milk white, the lemon-coloured, and the pink. It is also more or less transparent, the greater degree of transparency enhancing the price.

DAULE, a tn. S. America, Ecuador, prov. and 30 m. N.W. Guayaquil, cap. cant. and near l. bank river of same name. It was a handsome place in 1839, when it was nearly destroyed by fire. Before it had been completely rebuilt the calamity was repeated in 1854, and the greater part of it is still in ruins. Its annual festival attracts multitudes from all parts of the country.

DAUPHIN, a lake, British America, situated between Riding Mountain on the S. and Winnipigoos on the N. It is 700 ft. above sea-level, or 72 ft. above that of Lake Winnipeg, and has a length from W. to E. of 21 m., a greatest breadth of 12 m., and an area of 170 sq. m. It is very shallow. Its feeders are numerous, but unimportant; its outlet is the Moss River, by which it discharges itself into Winnipigoos. It abounds with large pike, and at its S. extremity the hop grows in great luxuriance and abundance.

DAUKA, a tn. Western Africa, Hausa States, cap. dist. of same name, 75 m. N. by E. Kano. It is a large place, surrounded with a strong clay wall in good repair, but is only thinly inhabited. Its weekly market is unimportant. Daura state is one of the oldest of the original seven Hausa states, and boasts of having had an apostle of its own, Mohammed Ali el Baghdadi, who took the lead in introducing Islamism into the country.

DAVENPORT [add.], a tn. U. States, Iowa, cap. co. Scott, r. bank Mississippi, on the Mississippi and Missouri, and opposite to Rock Island, the terminus of the Chicago and Rock Island railways, 47 m. E. Iowa. It stands at the foot of a bluff which rises gradually from the river, and is inclosed on the land side by an amphitheatre of hills. The streets are regularly laid out, and many of the houses are large, commodious, and handsome. The principal public edifices, are 17 churches, a college attended by 100 students, of whom about a fifth are of the female sex, another college exclusively for females, a commercial college, and other schools, a courthouse, and other municipal offices. A magnificent bridge across the Mississippi connects Davenport and Rock Island. The industrial establishments include foundries and other ironworks, brick-yards, marble works, breweries, and planing, saw, and flour mills. There are also manufactures of soap and candles, agricultural implements, waggons, carriages, and pianofortes. The trade of 1857 amounted to the aggregate value of nearly three millions sterling, consisting of 53,099 tons of imports and 34,157 tons of exports, the latter composed principally of wheat, barley, flour, and lumber. Pop. (1860), 11,267.

DAWSON ISLAND, S. America, situated in the Strait of Magalhaens, off the W. coast of Terra del Fuego, opposite to the deep inlet of Admiralty Sound and to Useless Bay, is 46 m. long, and about 20 m. broad. It terminates in the N. in Cape Valentine, which is low, though Mount Graves in its vicinity rises to the height of 1498 ft. On the W. side, the only places where vessels can anchor, are Lomas Bay and Port San Antonio. The E. coast is intersected by several deep inlets, one of which, Brenton Sound, penetrates so far across as to be only 4 m. from Lomas Bay. The S. coast is separated from Terra del Fuego by Gabriel Channel, which is

25 m. long, and from $\frac{1}{2}$ m. to $1\frac{1}{2}$ m. wide, extending in the direction of the strata in a remarkably straight line, with almost parallel shores. This channel appears to be merely a ravine of slate formation, into which the water has found its way, and thereby isolated Dawson Island from the mainland. The N. shore of Gabriel Channel is a ridge of slate rising abruptly to a sharp edge, and then as abruptly descending on the opposite side, where it forms a valley. The S. shore is of a different character, being formed by a mass of mountains. Among these the most conspicuous are Mounts Buckland and Sarmiento. The former of these, which has an estimated height of 4000 ft., is a pyramidal block of slate terminating in a sharp-pointed peak. The latter, rising from a broad base to the height of 6800 ft., and terminating in two peaked summits, is the most remarkable mountain in the Strait of Magalhaens. From the humidity of the climate, and its being clothed with perpetual snow, it is usually enveloped in thick vapour. Sometimes, however, during a low temperature, with a N.E. or S.E. wind, when the sky is often cloudless, it becomes exposed to view, and presents a magnificent spectacle. The summit of the range between these two mountains is occupied by a large glacier, which, as it melts, feeds innumerable cascades. These, leaping down from height to height, on their way to Gabriel Channel, add a singular and beautiful feature to the surrounding scenery.

DAYTON [add.], two places, U. States:—1. A tn. Ohio, cap. co. Montgomery, on the Mad and Great Miami Rivers, and at the terminus or junction of several railways, connecting it with all parts of the country, 66 m. W.S.W. Columbus. It is built with great regularity, in spacious streets 100 ft. wide, and crossing each other at right angles, and exhibits in many of its private mansions an elegance, and in public buildings a magnificence, not often witnessed in a provincial town. The most conspicuous edifices are seventeen churches, many of them with spires, a high-school, a large female academy, two other similar academies conducted by nuns, a county courthouse, planned after the model of the Parthenon, and built of a coarse but compact white marble, an orphan asylum, a lyceum, and two large market-houses, one of which contains on its second story a city-hall and council-chamber. The principal industrial establishments are two paper, two flour, four saw, and five oil mills, driven by water, which is conveyed from the Mad River by a hydraulic canal, two woollen and three cotton factories, five machine shops, three iron foundries, six large breweries, and various manufactories of agricultural implements, railroad cars, gun barrels, pegs and lasts, hollow ware, &c. The quantity of superfine flour manufactured annually is about 125,000 barrels, and the value of the assessed property exceeds a million sterling. Pop. (1860), 20,081.—2. A vil. Alabama, pleasantly situated, 76 m. S.W. Tuscaloosa, in a healthy district covered with cotton plantations. It is inhabited chiefly by wealthy planters, and has neither manufactures nor trade of any consequence.

DEANS CANAL, an inlet, British Columbia, at the head of Burke Channel, on the W. coast. The entrance to Burke Channel is about 80 m. from the N. end of Vancouver Island; it runs inland about 50 m., and then divides into three arms, Deans Canal being one of them, and running nearly N. for 25 m.; the other two are North and South Bentinck arms, pursuing respectively N.E. and S.E. directions. From these inlets an available route can be opened to the inland districts of the Fraser.

DEBJUCHIN, a tn. Russia, gov. Perm, circle Solikamsk, in a mountainous district, is celebrated for its salt mines.

DEBR-ESKI, a tn. Abyssinia, Tigré, prov. Simen; lat. 12° 50' N.; lon. 33° 40' E. It occupies the summit of a mountain of same name, which is at least 3000 ft. above the adjoining valley. Till recently it contained only a few huts and one or two churches, but having become the favourite residence of Prince Ubi, and an asylum for political refugees, it has rapidly increased in size and importance. Its isolated position almost excludes it from trade, for which, indeed, its inhabitants have no inclination, most of them being Ubi's soldiers and dependants.

DEBRO (FEL), a tn. Austrian empire, Hungary, co. Heves, about 11 m. S.S.W. Erlau, on the Tarna; with a trade in excellent tobacco. Pop. 1500.

DECHTITZ, a tn. Austrian empire, Hungary, co. Upper Neutra, on the Blava, which divides it into two parts. It has

extensive potteries, and a paper and other mills; the environs are covered with vineyards. Pop. 1300.

DECSE, a tn. Austrian empire, Transylvania, circle and about 22 m. N.N.E. Karlsburg; with an active trade in fruit and mustard. At Miriszlo, in the vicinity, a great battle was fought in 1600, when the Walachian woiwod Michael was defeated by the Imperialist general Basta.

DEDEROO-OYA, a river, Ceylon, which rises among the mountains to the N. W. of Kandy, near the S.E. frontiers of the N. W. Provinces, flows first N.N.W., then W.S.W., and falls into the sea near the town of Chilaw. Its length is 70 m., and the area of its basin 738 sq. m.

DEDHAM, a tn. U. States, Massachusetts, cap. co. Norfolk, on the Charles River and a branch of the Boston and Providence railway, 14 m. S.W. Boston. Its principal buildings and institutions are a handsome courthouse, built of granite, with a Doric portico on each front; ten churches, a library, a high-school, and several grammar-schools. The manufactures consist chiefly of ironware, machines, leather, refined sugar, cards, soap, and candles; and there are several cotton and woollen mills. Pop. 6330.

DEEG, or DIG, a tn. India, Rajpootana, territory Bhurtpoor, 57 m. N.W. Agra, amid numerous jheels and marshes, and during a great part of the year surrounded by water. It is a place of great antiquity, and was regarded by the natives as almost impregnable, till Lord Lake stormed it on the 23d December, 1804. It was held at this time by a usurper, and was shortly afterwards restored to the legitimate Jat ruler, but not till its fortifications had been dismantled. In consequence of this proceeding Deeg ceased to be a place of strength, but still possesses some interesting public buildings. Among them is the rajah's palace, forming the four sides of a fine garden, 475 ft. long and 350 ft. wide. The buildings, constructed of a fine grained sandstone, are said to yield only to the Taj Mahal in respect of elegance of design and beauty of workmanship.

DEEP RIVER, U. States, N. Carolina, rises in co. Guildford, flows first S.E., then nearly due E., and after a course of about 100 m. unites with the Haw in forming the Cape Fear River. Mines of anthracite and bituminous coal are worked on its banks in co. Chatham, up to which it has been made navigable.

DEESAKNA, a tn. Austrian empire, Transylvania, circle and S.W. Dees, with mines of rock-salt and 2020 inhabitants.

DEESAUN, a river, India, which rises near Seermow, in the N.E. of Bhopal, at the height of 2000 ft. above the sea, flows N. across the territory of Saugor and Nerbudda into Bundelcund, and joins the Betwa on its r. bank, after a course of 150 m. It abounds in fish, but is not navigable.

DEHRA DOON, a beautiful and fertile valley, India, N.W. Provinces, at the S.W. base of the lowest and outermost ridge of the Himalaya, between lat. 30° and 30° 32' N.; lon. 77° 43' and 78° 24' E. It is bounded on the N. by the Jumna, N.E. by the mountains of Gurwhal, from 7000 to 8000 ft. high, S.E. by the Ganges, S.W. by the Sewalik range, 3000 to 3500 ft. high. Its length from S.E. to N.W. is about 45 m.; breadth from 15 to 20 m. A transverse range divides it into two basins—that on the N.W. belonging to the Jumna, which drains it by the Axun; and that on the S.E. to the Ganges, which drains it by the Sooswa. The valley contains 234 towns, the chief of which is Dehra, standing on the dividing ridge overlooking the two basins at the height of 2369 feet. The valley is remarkable for the beauty of its scenery. In its general appearance it is sloping and picturesque, with finely cultivated fields separated with hedges, and intersected with streams and tracts of woodland, and thus closely resembles the scenery of England. It has much soil of a deep rich mould, well adapted for the growth of rice, maize, gram, cotton, sugar, opium, hemp, and indigo. It abounds with dense forests, in which are found elephants, tigers, leopards, and other wild animals. The climate is temperate and healthy for Europeans, except from July to September, when the monsoon prevails and fever is rife. A great number of persons were induced to settle in it in 1837, and saw their labours about to be rewarded by abundant crops of the finest quality, when at the setting in of the rains the jungle fever began to rage like a pestilence. Many fell victims, and many who survived fled terrified, and

have never returned. The new settlement has in consequence made little progress, though the population—mostly Hindoo—is still considerable, amounting to 32,083.

DEHRAH, a tn. India, N.W. Provinces, chief place in the above valley, 72 m. S.E. Simla. It stands at the height of 2369 ft. on the crest of a ridge which crosses the valley; contains a large number of houses, partly belonging to Europeans; and possesses a small but handsome temple, built of stone, with stucco embellishments. Its position at the intersection of two great thoroughfares is advantageous for trade.

DELATYN, a tn. Austrian empire, Galicia, circle and 25 m. S. by W. Stanislaw, in a mountain basin, at the confluence of the Budisna with the Pruth; has salt springs, salt refineries, and baths, with a milk-cure establishment, and contains 3259 inhabitants.

DELAWARE, or DELAWARE COURTHOUSE, a tn. U. States, Ohio, cap. co. Delaware, pleasantly situated near the Columbus and Cleveland railway, l. bank Olentangy, here crossed by a bridge, 30 m. N. Columbus. It is a handsome well-built place, containing six churches, and the Ohio Wesleyan university. A sulphur spring in the vicinity is much resorted to. Pop. 3889.

DELHI [add.] On the breaking out of the Indian mutiny, in May, 1857, Delhi became the centre of the operations of the rebels, who flocked to it from all quarters. The nominal representative of the Great Mogul, who held the sovereignty of the place under British protection, joined cause with the rebels; and in addition to assuming the character of an independent potentate, gave his sanction to the massacres and atrocities perpetrated on the European residents. By the middle of June a British army under generals Wilson and Nicholson was assembled in front of the city, and a siege commenced, which, from the smallness of the besieging force, was necessarily slow and protracted. It was brought to a successful termination on 20th September, when Delhi was entered by the British troops, and the nominal sovereignty heretofore possessed by the king was declared extinguished; and he himself, after being tried for the murders committed under his authority, was found guilty, and sentenced as a convict to transportation for life. A great part of the place was reduced to ruins in the mutiny and siege, but it has since recovered much of its former appearance, and has also been much improved in its sanitary condition.

DELLYS, a tn. N. Africa, Algeria, prov. and 43 m. E. by N. Algiers, on a small bay of the Mediterranean, and on the site of the ancient Roman town of *Iusuccurum*. It stands in a beautiful and healthy district, and consists of a native and a European town. Among its buildings is a handsome mosque. Its markets (held twice a week) are important; and though its harbour is indifferent, large quantities of produce (chiefly oil and grain) are shipped at it. Pop. 2750.

DEMAVEND [add.], a mountain, Persia, belonging to the Elbruz chain, and situated 45 m. S. of the Caspian Sea, and very nearly the same distance N.E. of Teheran. It is the culminating point of a lofty mountain chain, but there has been great diversity in the estimates of its height. According to an early calculation, founded on a partial ascent, it was no more than 14,695 ft. Humboldt, founding on similar data, made the height 19,609 ft. In 1858 Mr. R. F. Thomson and Lord Schomberg Kerr reached the summit, and with a hypsometrical apparatus made the height 21,520 ft. A previous trigonometrical measurement by Lieut.-colonel Lemm had made it 20,120 ft. In 1860 Capt. Ivatschinzov, at the head of the Russian-Caspian expedition, by trigonometrical measurements found it to be 18,549 ft. The difference between the trigonometrical calculation of the Russians and that of Colonel Lemm is so great that the question cannot be considered to be yet set at rest. In the lower half of the mountain the rocks and precipices consist principally of limestone. Long high ridges, commencing at the foot of the cone, run out for some distance, and end abruptly, leaving between them deep valleys and ravines, covered for the most part with loose stones, gravel, and earth. Here and there huge volcanic rocks pierce through the outer covering. In ascending the upper part of the mountain the first thing necessary is to climb a narrow and very steep ravine covered with loose stones, which, yielding under the foot, make walking difficult and painful. Beyond this, and

nearly at right angles to it, is another steep ravine filled with snow. After it is crossed the ground, though still very steep, becomes more practicable; consisting of a firm reddish soil, on which grow numerous and various plants, including among others the forget-me not, wild thyme, lavender, ferns, and a beautiful variety of the everlasting flower of the most delicate form and colour. Near the foot of the cone, at a height of nearly 13,000 ft., vegetation ceases. At a distance the cone appears to be nearly smooth, and to slope evenly from top to bottom at an angle of 45°; but is found, when approached, to consist of a number of ridges which run from the summit to the base, and are separated by deep ravines full of snow and ice and large accumulations of débris. The ascent is now made over rocks of lava and basalt, broken up into a thousand shapeless masses piled in confusion. At length a long ridge is reached, evidently formed by a stream of lava, which has run over the surface and left it so smooth and steep that it is difficult to maintain a footing. The best part of the ascent is up a steep slope, among rocks of a light yellow colour formed of limestone and sulphur. The cone terminates in a crater about 85 yards in diameter, and nearly surrounded by jagged rocks composed partly of basalt and partly of sulphur and limestone. The basin within is almost entirely filled with snow. From two caves near the summit and many small holes in the rock a stream strongly impregnated with sulphur issues.

DEMBA, a tn. S.W. Africa, cap. dist. Lower Kissama, Kimbunda Country, about 20 m. E. of the Atlantic, and 100 m. S. Loanda, stands on a bleak height. The inhabitants, whose chief employment is the manufacture of salt, suffer much from drought; and, as some protection against it, have converted the baobab trees into water-cisterns, by hollowing them out with considerable skill from top to bottom. The trees still left standing in this condition continue to grow vigorously. Pop. about 2000.

DEMBICA, a tn. Austrian empire, Galicia, circle and 22 m. E. Tarnow, on the Wysloka, and on the railway from Cracow, in a fertile district, with a baronial castle in the Gothic style. It was devastated by the Hungarians in 1474. Pop. 2528.

DEMBOWIEC, a tn. Austrian empire, Galicia, circle and 4 m. S. Jaslo; with 1900 inhabitants, chiefly employed in weaving linen and bleaching yarn.

DEMIANSK, a tn. Russia, gov. and 80 m. S.S.E. Novgorod, cap. circle of same name, on the Yarona; with two churches and 1209 inhabitants. Within the circle lies Skaraia Russia, the capital of the N. military colonies. It is situated on two small streams, has 17 churches, an imperial palace, a monastery, three schools, and salt springs, and contains 8168 inhabitants.

DEMITROVSK, a tn. Russia, gov. and 40 m. S.W. Orel, cap. circle of same name, on the Obstshiritz; with four churches, a school for the circle, a charitable institute, and several industrial establishments. Pop. 4014.

DEMNIÄ, a tn. Austrian empire, Galicia, circle and 26 m. N.W. Stry; with large iron-works, at which both cast and malleable iron is made. Pop. 1380.

DEMREE, a river, which rises in Thibet in lat. 28° 45' N.; lon. 92° 11' E., flows S. for 60 m. to a gorge of the Himalaya, after passing which it turns S.W., and joins the Monas, an affluent of the Brahmapootra, after a course of about 180 m.

DEMSUS, a tn. Austrian empire, Transylvania, circle and about 25 m. S.W. Broos; with a Greek non-united church, built out of the ruins of an ancient heathen temple. There are iron-works in the vicinity. Pop. 1260.

DENDI, a tn. Western Africa, about 15 m. S.S.W. Sokoto. It is a large and comfortable-looking place, with a profusion of trees, among which the dirowa or *parkia*, the doum-palm, and the delet-palm are conspicuous. On its east side is a depression full of fresh herbage.

DENEK-MADEN, or GUMISCHAN, a tn. Turkey in Asia, Anatolia, 45 m. S.E. Angora. It is a mining village, with 150 Greek and 15 Turkish dwellings, and presents a very indifferent appearance. The mines, which consist of argentiferous lead, are worked to some extent, and tolerably productive. The silver only is sent to Constantinople, and the lead (probably the more valuable of the two) belongs as a requisite to the superintendent.

DENHAM WATERS, a large bay on the W. coast of Africa, in the kingdom of Dahomey, running in from the Bight of Benin a distance of more than 65 m., and expanding to a breadth of 45 m.; lat. 7° N.; lon. 2° 20' E. The native name is Ahuanga Si.

DENMARK [add.] The character of the geological structure and geographical situation of Denmark show that the country is designed by nature to derive wealth from agriculture and commerce rather than from manufactures. The soil is well irrigated, and unbroken by great elevations which hinder tillage; it is under the influences of a climate equally free from continuous drought and excessive moisture; and it is capable of a greater variety of culture than would seem compatible with so high a latitude. On the other hand, it is almost entirely destitute of mineral wealth, and affords but a very small extent of water power; two important obstacles to manufactures on an extensive scale. At the end of 1863 the kingdom possessed five factories of cloth, of a coarse kind, one of which was in the hands of the government, and supplied the army and navy. There were also eighteen paper-mills, only six of which were of any importance; twenty-one oil-mills, producing oil of the annual value of about £240,000; six sugar-refineries, yielding about £700,000 worth of sugar annually; distilleries of brandy from corn and potatoes, the annual production of which was estimated at 8,000,000 to 9,000,000 gallons; six large iron-works, and various small foundries; twenty-nine yards for ship-building, and manufactures of soda from the new mineral cryoleth. A new tariff, reducing some of the high protective duties, was inducing a slight increase in some branches.

At the commencement of 1864 the Danish territory was politically distributed into four parts, viz.: Denmark Proper (consisting of the Danish islands and North Jutland), with an area of 14,730 sq. m., and a population (in 1860) of 1,600,551, purely Danish; the duchy of Schleswig or South Jutland, area 3530 sq. m., pop. 409,907, more than one-half Danish, the remainder Frisian and German; the duchy of Holstein, area 3280 sq. m., pop. 544,419, purely German; and the duchy of Lauenburg, area 402 sq. m., pop. 50,147, also German. Thus the total area was 21,942 sq. m., and the population 2,605,024. The policy of the Danish government in respect to the German part of the inhabitants of the Duchies, chiefly in the alleged coercing them into a forced assimilation to the Danes, and especially in compelling the use of the Danish language in the state schools, had long given umbrage to the German powers. Certain measures of the Danish government, and the strong remonstrances offered to them by the German Confederation—even menacing the validity of the treaty of London of 1852, by which the principal European powers recognized the sovereignty of the king of Denmark over the Duchies—brought matters to a crisis in 1863. On the last day of that year, in consequence of the Confederation resolving on federal interference in the Duchies, the Danish troops evacuated Rendsburg on the Eider, which separates Holstein from Schleswig, and 5000 Saxon troops immediately entered the town, and were enthusiastically welcomed by the inhabitants. In January, 1864, a misunderstanding arose between the federal diet and Austria and Prussia, whereupon the two latter powers determined upon independent action, and Holstein was occupied by them with detachments of troops. The popular feeling in the duchy was almost unanimously in favour of Germany, and an address was presented to the federal diet by a deputation from it, offering homage to the Duke of Augustenburg, the heir of the Schleswig-Holstein crown, as their lawful sovereign. On Feb. 1, the Prussian forces marched from Kiel under Marshal Wrangel across the Schleswig frontier, and occupied Gottorp, the Danes retiring at their approach. The first conflict occurred near Missunde on the Schlei; after which the Prussian troops crossed the Schlei by night in boats, to turn the left flank of the Danish army, and another body crossed by a pontoon-bridge, in order to unite with the former, and take the Dannewerke in the rear, while the Austrians pressed it in front; but during the night the Danes evacuated their position, abandoned all their artillery in the forts, and retired northwards, concentrating their forces about Fredericia, Duppel, and on the island of Alsen. The Prussians addressed themselves to the siege of Duppel, the *tête-du-pont* of the island of Alsen, till the 18th of April, when

they became finally masters of the place; and then they entered Jutland, where their conduct became very arbitrary and oppressive. The British government endeavoured to put a stop to the further progress of the war by proposing a conference of the great powers upon the basis of maintaining the integrity of the Danish monarchy, under the provisions of the treaty of 1852; but Prussia, for her part, now declined to be longer bound by that treaty. The conference, however, assembled at London on April 25, and an armistice was agreed upon till June 12, and afterwards prolonged to June 26. On June 22 the labours of the conference, directed to the arrangement of some compromise which should secure proper consideration for Denmark, came to an abortive result, and at the end of the month active hostilities were resumed. Alsen, which had remained in the occupation of the Danes, was captured by the Prussians, who crossed in considerable force at midnight of the 29th. The loss of Alsen, and necessary abandonment of Fredericia, decided the struggle, and Denmark was compelled to yield and accept terms of peace. Negotiations took place at Vienna, and on Aug. 1 preliminaries were signed by the respective powers, to the effect that 'the king of Denmark renounced his rights to the duchies of Schleswig, Holstein, and Lauenburg; and moreover ceded those parts of Jutland situated to the south of the district of Ribe laid down upon the maps, and sundry small islands adjacent, an equivalent portion of Schleswig, comprising, exclusive of the island of Arroe, the territories connecting the district of Ribe with the rest of Jutland, being transferred to Denmark, for the purpose of rectifying the frontier line; the debts of the kingdom of Denmark being apportioned between the Duchies and the kingdom proper.' A treaty of peace, in accordance with these preliminary terms, was subsequently signed at Vienna, on Oct. 1, 1864. The ultimate destiny of the Duchies remains as yet (1866) undecided; but it is probable they will be appended to the dominions of Prussia.

DENNIS, a vil. U. States, Massachusetts, on the peninsula of Cape Cod, 60 m. S.E. Boston. It possesses six churches and some building-yards. The inhabitants are chiefly engaged in coasting and in the mackerel fisheries. Pop. 3662.

DEOBUND, a tn. India, N.W. Provinces, dist. Saharunpore, 75 m. N.E. Delhi, in an open and cultivated country, between the Hindun and Kalli Nuddlee Rivers, over the former of which there is a bridge. Pop. 11,634.

DEPALPOOR, or **DEYPULPOOR**, a tn. India, Holkar's Dominions, 25 m. N.W. Indore. It stands on the W. side of a large tank or lake, on the road from Mhow to Neemuch, and contains about 4000 inhabitants.

DERA ISMAEL KHAN [add.], a tn. India, Derajat, at a short distance from the W. or r. bank of the Indus; lat. 31° 50' N.; lon. 70° 58' E. Having been built to replace a former town which stood nearer the river, and was entirely swept away by it, it has been laid out with considerable regularity. The houses, however, composed of unburned brick, are mean and unsubstantial, and the whole place has an air of desolation at all times except in spring, when it becomes crowded by Afghans, who purchase great quantities of goods for transport by their caravans to Central Asia. The most important article of this commerce is white cotton cloth, of which there are manufactures in the place; but the greatest part is imported. There is also a considerable trade southward by the Indus in grain and salt. A native regiment mutinied here in 1858, but were speedily disarmed.

DERBEND, or **DERBENT** [add.], an anc. and decayed city, Russia, Daghestan, W. shore of the Caspian Sea. It is situated on the side of an acclivity which rises boldly from the sea-shore, and is surrounded by a massive crenellated wall, built of large square stones, with gates flanked by enormous towers. A hut, inhabited by Peter the Great in 1722, stands on the shore, and is carefully preserved. In 1848 it was encircled and adorned with pilasters and chains, and defended by a couple of cannon. Upon the gate is an inscription signifying 'The first resting-place of the great Peter.' Derbent has quite an oriental aspect, and the Persian costume is the one most commonly seen in its streets. Its bazaar is large and well attended, and, though fallen from its ancient importance, it is still a place of considerable trade. The Russians regard it as the key of the Caucasus, and a strong fort occu-

pies the summit of the hill on which the town is built. In the neighbourhood lies the village of Dach-Kessine, at the foot of the precipitous mountain of Kogre-Kafe. Here is the remarkable cavern of the Dives, traditionally famous as the

DERBEND.—From a view by M. Moynet.

supposed dwelling-place of the giants of Scripture, and also known as the Vizier's Tomb, from a vizier who perished in one of the Persian invasions having been interred in this gloomy and pestiferous recess. It is paved with the bones of wild beasts and brigands who have sought shelter in it.

DERITA, a tn. Abyssinia, Amhara, 10 m. E. Lake Tsana or Dembea. It stands on a mountain-side, and consists of houses which are better built and more spacious than is usual in Abyssinia. The chief manufactures are prepared skins and cotton tissues. The inhabitants, a mixed race of Arabs and Gallus slaves, are all Mahometans.

DERREYEH [add.], a ruined tn. Arabia, Nejd. The ruins of this large town, which was formerly the cap. of Nejd, as Riadh now is, occupy the whole breadth of the valley in which it stood. The palace walls, of unbaked bricks, rise close under the N. ridge, unroofed and tenantless; a little lower down are the fragments of an immense mosque, and near this the market-place. A tower on an isolated height appears to mark the original dwelling-place of the Saoud family. The outer fortifications remain uninjured for much of their extent, with their turrets and bastions; in other parts they lie as they were levelled by the Egyptian artillery in 1819. Many of the houses are still standing within the town, and the lines of the streets from gate to gate are quite distinct. From its extent, nearly half a mile square, and the close packing of the houses, it is calculated that it formerly contained 40,000 people; it is now entirely uninhabited. The gardens outside form a green ring, in full beauty and luxuriance, around the gray ruins; the rich plantations and well watered fields belonging to this, the old capital, being cultivated by a small colony of gardeners, who live in scattered huts and village dwellings close under the walls.

DESCHAMBAULT, a vil. Canada E., co. Portneuf, l. bank St. Lawrence, 24 m. W. by S. Quebec; with a R. Catholic church, building-yards, and an extensive trade in flour and lumber. Pop. about 1800.

DESCHNA, a tn. Austrian empire, Bohemia, circle and 16 m. S.E. Tabor; with a parish church, a townhouse, a brewery, and mineral springs. Pop. 1900.

DESTERRO [add.], a tn. Brazil, cap. prov. and on the W. shore of the island of Santa Catharina. It contains

many well-built houses, but seems a dull spiritless place, without any sign of commercial activity. None of the streets can properly be called a thoroughfare, while most of them are laid out as if the object had been to obtain, not business, but seclusion. Almost every public building has an antiquated appearance. The president's palace, the churches—mostly ungainly structures—the post-house, and the house of correction, are all of this description. The only edifice which may be considered as an exception to the general rule is the Misericordia, or house of the Sisters of Charity, which is so far new that it still remains unfinished. The harbour, formed between the island and the mainland, is, next to that of Rio de Janeiro, the best on the Brazilian coast, combining all the requisites of sufficient depth, capacity, and shelter. In one respect, however, the position of Desterro is unfortunate. Being situated on an island, it can only communicate with the mainland by a ferry. The consequence is, that it cannot be made the common entrepôt for the foreign and inland trade without rendering a double shipment necessary. Pop. 6000 to 7000.—(Lallemant, *Reise*.)

DETROIT [add.], a tn. U. States, the cap. of Michigan, on the strait or river of same name, which here forms the boundary between the U. States and British America, at the outlet of Lake St. Clair, and 20 m. N. of Lake Erie. The town is built principally on a slope, which rises gradually from the strait; and, though laid out on the whole in streets which cross at right angles, presents numerous irregularities. Some of the streets and avenues have a width of 200 ft, but a greater number do not measure above 60, and some are barely 50 ft. Some of the dwelling-houses are large and elegant, and several of the hotels are on a very extensive scale. The public buildings include a court-house, custom-house, and post-office; about 30 churches, of which several are large and splendid structures; and the public schools. The Freemen's hall and the Oddfellows' hall are also fine buildings. The means of communication by both water and rail being very ample, trade and manufactures have been largely developed, Detroit being the central entrepôt for the produce and general traffic of the whole state, and nearly all the merchants in the upper lake region, as well as in the interior, making most of their purchases here. To meet the requirements of this commerce, numerous large warehouses have been erected along the banks of the river; and the whole place is full of stores of various descriptions. Among the industrial establishments are nine large steam saw-mills, which annually prepare about 40,000,000 ft. of pine lumber for export; five flour-mills, large building-yards for ships and boats, and numerous foundries, tanneries, and breweries. Extensive establishments also manufacture locomotive and other engines, machinery, agricultural implements, &c. Considerable trade is carried on with the Canadians, and the aggregate value of exports and imports is said now (1865) to amount to several millions of dollars annually. The harbour is one of the finest in the U. States, and has a depth of water sufficient for the largest vessels. Its shipping amounts to upwards of 100,000 tons, chiefly in large schooners, brigs, and steamers. In September, 1864, a large vessel, named the *Etowah*, made the voyage from Liverpool to Detroit, traversing the whole route by the lakes and canals, and returning with a cargo of copper from the Michigan mines.

The following is a list of the principal imports and exports in the year 1860:—

	Imports.	Exports.
Flour barrels	825,175	808,513
Wheat bushels	1,694,951	1,607,757
Corn "	565,343	592,044
Rye "	19,128	10,699
Barley "	110,199	2,726
Oats "	179,598	309,205
Wool lbs.	4,545,505	4,468,711
Live Hogs No.	61,289	48,259
Cattle "	61,810	3,372
Pork barrels	51,421	49,400
Beef "	18,993	22,931
Whisky tierces	3,272	3,361
Staves barrels	22,315	13,536
Lumber No.	3,674,928	4,182,100
	13,256,752	44,584,000

The value of property assessed for taxation in 1858 was

about £3,500,000 sterling. The progress of the pop. has been very rapid. In 1850 it was 21,019; in 1860, 45,619.

DEUTSCH-HANSE, a tn. Austrian empire, Moravia, circle and 13 m. N. Olmütz; with four markets yearly. The inhabitants, who are chiefly employed in growing flax and weaving linen, number 1900.

DEUTSCHNOFEN, a tn. Austrian empire, Tyrol, circle Brixen, 8 m. S.E. Botzen; with an important trade in corn, cattle, and wood. In the vicinity is the famous pilgrim resort of Weissenstein, with a Servite monastery. Pop. 1400.

DEVIL'S BRIDGE, a celebrated bridge over the Reuss, in the canton of Uri, Switzerland, on the road to Italy by the St. Gothard Pass. It crosses a fearful abyss, with vertical walls of rocks on each side, and is situated in the very midst of the spray of the cataract, down which the Reuss dashes with a tremendous uproar. It consists of an old and a new bridge—the former an aerial structure of one arch, barely allowing two persons to pass, and originally thrown across the gorge by Abbot Gerald, of Einsiedeln, in 1118. The new bridge stands immediately above the old, and forms a safe and massive erection of two arches. The Devil's Bridge was obstinately contested on two occasions, in 1799, between the French and Imperial armies, the victory remaining ultimately with the latter, who compelled their opponents to retreat down the valley of the Reuss to Aldorf. The grand and terrific character of the surrounding scenery renders this locality one of the most remarkable in Switzerland.

DEVIPATNAM ['nine stones'], a tn. India, presid. Madras, dist. and 60 m. S.E. Madura, on the W. shore of Palk's Strait. It takes its name from a natural bath formed by nine rocks in its vicinity, and owes its existence to one of the many legends interwoven with the history of Rama, who is said to have here planted nine stones on the sea-shore, and worshipped them as representatives of the nine planets. The belief founded on this legend is that every one who bathes in the sea in this locality washes away all his sins, and is sure of succeeding in all his enterprises. Accordingly, crowds of pilgrims annually resort hither to perform the necessary ablutions, and Devipatnam has become a place of no small importance, not only possessing a temple which draws crowds to its annual festival, but carrying on a considerable trade, particularly in rice, which is here stored up in large granaries, and reserved for sale in times of scarcity.

DHALAC, or DAHALAC [add.], an archipelago of the Red Sea, off the coast of Abyssinia, between lat. 15° 25' and 16° 36' N.; lon. 39° 25' and 41° E.; and forming a mid-station between Massowa on the one side and Loheia and Jeddah on the other. It consists of nearly 100 rocks and islets, mostly uninhabited, clustering round the island of Dhalac el Kebir, which is about 35 m. long by 30 broad, and has a very irregular shape, being deeply cut into numerous bays and creeks. All the islands are little raised above the level of the sea, and consist, at least in their upper portion, of very porous and crumbling coralline rocks, which are covered with a very thin coating of soil. The two large islands, Dhalac and Nora, possess a scanty vegetation of thorn-bushes and a few doum-palms. The inhabitants, whose language indicates an Abyssinian origin, are rich in goats, camels, and asses, all of which roam at large in a half-wild state; on Döhel Island cows also are reared. In winter savoury cheese is made from goats' milk. Upon the large island, hereditary chiefs, dependent on the Paacha of Massowa, to whom they pay a yearly tribute of 1000 dollars in boats and slaves, exercise authority in certain localities; but in other respects the government is native. The principal villages were formerly very rich, but have been impoverished by the rapacity of the Turks. For this reason, and in fear of further exciting the cupidity of their masters, the inhabitants never cultivate their land, though the soil is favourable, but devote themselves to fishing as their principal occupation, the women and children attending to their cattle and households. The pearl is the chief fishery, for which the sea of Dhalac is specially suitable; but the quality of the pearls is considered to be inferior. The market for them is Dömöllo, on the large island. Tortoise-shell also, and mother-of-pearl, are collected on a large scale, and form an important part of the native trade; the former finds a market at Jeddah, and the latter is sent to India, as well as to Europe and Syria. Excessive fishing, however, has much injured the pearl-oyster

beds. Sponges also are collected. Agriculture would be profitable, in consequence of the winter rains; water is plentiful, the climate pleasant, and not too hot in summer. The people are plentifully supplied with butter, durra, rice, dates, and other fruits, by the numerous vessels frequenting the islands from the ports on the mainland.

DHAMORA, a river, India, which rises in one of the lower ranges of the Himalaya, flows S.E. for about 50 m. through the Terai of Nepaul, enters the British territory, and, proceeding S. through dists. Tirhoot and Bhagulpore, joins the Gogaree in lat. 25° 31' N.; lon. 86° 48' E., after a course of about 120 m.

DHAP, a tn. India, presid. Bengal, dist. and 6 m. N.W. Rungpoor. It consists of about 300 houses, and has a pleasing aspect when approached, from a number of European villas situated in its vicinity, and embosomed among trees.

DHAR [add], a small native state and tn. India, Malwa. The STATE, situated to the W. of Holkar's Dominions, about lat. 22° N.; lon. 75° E., has an area of about 1070 sq. m., and a revenue of £47,500. Much of its soil is fertile, and yields good crops of rice, wheat, maize, millet, pulse, oil plants, opium, tobacco, sugar-cane, hemp, and turmeric. The rajah is a Puar or Pramar Rajpoot of ancient descent; but his sovereignty is of comparatively modern date, the territory having been conferred upon his family by the peishwa about a century ago. For a long time it suffered greatly from the devastations of the Mahrattas and Pindarees, and must have lost its independence had it not been saved by British interference. Pop. 104,860.—The TOWN, cap. of the above state, 35 m. W.S.W. Indore, is surrounded by a mud wall inclosing an area 3½ m. long and ½ m. broad, and contains, among other striking buildings, two large mosques, built of red brick, but falling to decay. It is said to have once contained from 12,000 to 20,000 houses; but the number of inhabited houses is now comparatively small. Outside the town, on an eminence 43 ft. above the plain, is a large fort, built of red stone, with a rampart from 30 to 35 ft. high, surmounted by two square and twenty-four round towers, besides octagonal towers which defend the gateway situated on the W. face. The rajah's palace is within the fort. During the sepoy mutiny a body of mutineers who made Dhar their head-quarters were openly countenanced by the native authorities; but as the rajah was a minor, and was not properly responsible for the misdeeds of his guardians, his territory, after a nominal confiscation, has been restored. Pop. 5000.

DHARWAR, a dist. and tn. India, presid. Bombay. The DISTRICT, between 14° 16' and 15° 20' N.; lon. 74° 50' and 76° E., is bounded N. by Belgaum, E. the Nizam's Dominions and Bellary, S. Mysore, and W. the Madras dists. Canara and Belgaum; greatest length, N. to S., 105 m.; greatest breadth, 77 m.; area, 3837 sq. m. The surface is composed in a great measure of extensive plains. One small portion has an inclination to the S.W., and sends its drainage through a gorge in the Ghauts to the W. coast; but the general declivity, as indicated by the course of the Toombudra, its principal stream, is towards the N.E. The soil is in many parts fertile, and, from its dry gravelly nature and breezy undulating surface, is particularly adapted to the cotton plant; the climate also being congenial to its growth, a large quantity of ground is annually sown with it. There are some cotton fields near the town, but the greater part of the district lies some miles to the E., the intervening land being chiefly sown with grain. About 270,000 acres are planted with cotton, being nearly or quite the whole available extent. The cotton, yielding about 250 lbs. (uncleaned) to the acre, is not pressed in bales, but packed in loose bags, and sent to port on the backs of bullocks; but a better system is being introduced. The cultivation is carried on chiefly by the ryots, who occupy holdings averaging about 24 acres. A good deal has been done lately in the construction of new and repair of old roads, and in providing and renovating tanks. Pop. 754,385.—The TOWN, cap. of the above dist., presid. and 275 m. S.S.E. Bombay, consists of a pettah, or native town, inclosed by a ditch and a low mud wall of no strength, and of a fort which, situated in a plain N. of the town, is surrounded both by a wall and an outer and an inner ditch, from 25 to 30 ft. wide, and nearly as deep. The works, though constructed principally of mud, and somewhat dilapidated, present at least a formidable appearance. Three government

schools—English, Mahratta, and Canarese—have been established here.

DHOLKA, a tn. India, presid. Bombay, dist. and 28 m. S.S.W. Ahmedabad. It is surrounded by a mud wall 4 m. in circuit; and, though still a considerable place, shows that it was once of much more importance, by standing in the midst of ruined palaces, mosques, mausoleums, and fine tanks embanked and lined with masonry. Pop. 2500.

DHOLPORE, a small native state and tn. India, Rajpootana. The STATE, between lat. 26° 30' and 26° 57' N.; lon. 77° 32' and 78° 20' E., is bounded N. and N.E. by Agra, S.E. the Chumbul, separating it from Scindia's Dominions; and S.W. and W. Kerowly; length, N.E. to S.W., about 54 m.; breadth, 23 m.; area, 1626 sq. m.; revenue, £70,000. The surface is in the E. level and sandy, and in the S.W. hilly, being traversed by low ranges of sandstone. The soil, as may be supposed under such circumstances, possesses little natural fertility; but, being greatly improved by careful culture and liberal irrigation, yields fine crops. The chief, who is styled *rana*, and the majority of the inhabitants, are Jats. Estimated pop. 550,000.—The TOWN, cap. of the above state, stands 1 m. from l. bank Chumbul, and 35 m. S. by W. Agra. It is an ancient place, and indicates its antiquity by numerous old mosques and mausoleums. Almost all the structures are composed of the fine freestone of the district, and exhibit, among other specimens of skilful and elaborate workmanship, some stone screens, the trellis-work of which is as beautiful as when first made. The fort, situated on the high and steep bank overhanging the river, has a striking appearance. The only modern building in Dholpore deserving notice is a large public bungalow for travellers. It was held by the Indore rebels for a time during the mutiny.

DHOLIA, a tn. India, presid. Bombay, dist. Candeish, 181 m. N.E. Bombay. It is a place of considerable size and importance, upon the great road from Bombay to Agra, and at the intersection of several others; but its situation in a hollow surrounded by hills is a very unhealthy one. S. of the town extensive tanks have been constructed.—There is another place of the same name upon the Bombay, Baroda, and Central India railway, about 52 m. S. of Ahmedabad, near which is the Mbye viaduct, the loftiest on the line, being 83 ft. above the river, and constructed of 27 spans of 60 ft. each, upon the iron screw principle.

DHUBBOOHEE, or DUBHOEE, a tn. India, Gujerat, 15 m. S.E. Baroda. It is a very ancient but decayed place, of nearly quadrangular shape, inclosed by a rampart 2 m. in circuit, built externally of large hewn stones, and furnished within with a beautiful colonnade. At each angle of the rampart is a large tower, and at intervals along it are 52 other towers of minor dimensions. On each face is a double gate, and in the interval a spacious area surrounded by a corridor and guard-rooms. The E. gate, in particular, and a temple adjoining it, are noble specimens of Hindoo architecture. Within the rampart there is a large tank of strong masonry, giving access to the water by a magnificent ghaut, and bordered by numerous pagodas. These and all the other buildings are covered with elaborate sculptures of warriors on foot and on horseback, elephants, lions, camels, birds, snakes, and various other animals. Seen from a distance, nothing can be more imposing than the appearance of the town; but within, the ravages of time and of war are everywhere visible. Though the number of inhabitants is still considerable, they attract less notice than the swarms of monkeys, which have made the ruins of Dhubboohie their favourite residence, and are allowed by general consent to play their pranks without molestation.

DHUNSEEREE, a river, India, which rises in lat. 25° 20' N.; lon. 93° 33' E.; and on the S. frontier of the Toola Ram Senaputtee country; flows N.N.E. into Assam, then N.W., and joins the Brahmapootra on its l. bank, after a course of about 140 m.

DIADIN, a vil. Asiatic Turkey, in Armenia, 125 m. E.S.E. Erzerum, is said by Wagner to be 'one of the dreariest Khoordish nests' he visited, but is a place of much importance to the caravans in winter, as it furnishes them with provisions, and an escort if required. It is said to occupy the site of an ancient and important Armenian city called Zahrawan, and has a castle, which some have attributed to the Genoese. Within view of it, to the S.W., rise the green

slopes of Mount Ala-Dagh, in which the Murad-tehai, or Eastern Euphrates, takes its rise.

DIAMANTE, or **PUNTA GORDA**, a tn. South America, La Plata, prov. Entre-Rios, l. bank Parana, 30 m. below Santa Fé, prettily situated on a height. Though comparatively insignificant as a town, it would be important for steamers ascending the river, as here, for the first time, they would obtain suitable fuel, that of the lowlands and islands being too soft for the purpose, whereas on the firm lands of Entre-Rios, commencing with Diamante, both the algaroba and espanella attain great size, and from their remarkable solidity afford the best fuel for steamers, one cord being fully equal to a ton of coal. Pop. 1000.

DIEGO (SAN), [add.], a tn. U. States, California, near its S. frontier, on a bay of same name; lat. 32° 45' N.; lon. 117° 10' W. It stands in a district remarkable for its sterility, but said to be rich in minerals, including gold, copper, quicksilver, and coal; and consists of the usual square plaza, and some streets containing low and wretched-looking houses built of sun-dried bricks. The county buildings, which are small and in bad taste, and a few churches, are the only public edifices. The harbour, though not protected from the E. wind, is considered the best on the W. coast of America between Acapulco and the Strait of Juan de Fuca. The inhabitants live chiefly by fishing and making salt. Pop. 731.—(*Peter. Myth.* 133, 1861.)

DIGNUGUR, a tn. India, presid. Bengal, dist. and 18 m. N.W. Burdwan, about 5 m. from the railway from Burdwan to Raneegunje. It is a large place, inhabited by a considerable number of wealthy natives, and has a considerable trade in sugar, the produce of the surrounding district.

DIKOWA, a large tn. W. Africa, Bornou, in the Gamerghu, 60 m. S. by E. Kutawa. It is surrounded by walls, which, overtopped by the regularly shaped crowns of magnificent fig-trees, give it a very imposing appearance, and at the same time afford a most effective defence, being about 30 ft. high, terraced on the inside, and in good repair. The huts, lofty and of a round shape, want the characteristic top, and are each provided with a courtyard, but towards the interior the streets are formed not of huts, but of clay-built houses. The favourable impression produced by the general appearance of the place is much aided by the number of large, beautiful, wide-spreading fig-trees, elastic gum-trees, and an occasional isolated papaw-tree. The inhabitants cultivate cotton to a large extent, but their fields, overgrown with rank grass, and even bushes, prove them very slovenly cultivators. At some distance, S. of the town, flows a stream called the Yalowe, which sends its waters to Lake Chad. Pop. roughly estimated at 25,000.

DILOLO, a lake, S. Africa, country of the Balonda, on a plateau or elevated prairie 4740 ft. above sea-level; lat. 11° 32' 1" S.; lon. about 22° 25' E. It is a fine sheet of water, somewhat of a triangular shape, 6 or 7 m. long by 1 or 2 broad. The most interesting circumstance connected with it is, that it probably forms part of the watershed between the Atlantic and the Indian Ocean, furnishing, notwithstanding its limited dimensions, the sources of two rivers, the N. and the S. Lotembwa, the one of which sends its waters through the Kasai to the former ocean, and the other through the Zambesi to the latter.

DINDIGUL [add.], a tn. India, presid. Madras, dist. and 30 m. N.N.W. Madura, in the middle of a wide plain, surrounded by hills, and 720 ft. above sea-level. The town, which stands on a gentle slope, has wide streets, well-built houses, and plentifully supplied bazaars. The fort, which is on the W. side of the town, and made some figure in the wars of the Carnatic, is merely a fortified rock, which rises abruptly from the plain to the height of 280 ft., and consists of a singular wedge-shaped mass of gneiss, veined with felspar, and, with the exception of a few patches, perfectly bare of vegetation. The military lines, situated at the N.W. corner of the town, on the highest part of the slope, are well drained, and always dry and clean. The manufactures consist of excellent black and white fabrics of Carumba wool, some silks, muslins, and cotton goods, paper, implements of husbandry, and domestic utensils. Pop. about 6500, exclusive of the detachment of troops.

DINKA, a negro tribe, Central Africa, inhabiting a territory which lies between Sennaar and the Sobat on the N.

and S., and between the White Nile and the Blue Nile on the W. and E. Part of this territory is well adapted for grain, but the far greater part of it is covered with a coarse herbage, on which the Dinka rear immense herds of cattle. These, however, tempt the cupidity of their neighbours, particularly the Shillooks, living on the opposite bank of the river, who are ever on the alert to cross over in their canoes and commit depredations. The Dinka, who are a harmless peaceful race, are thus deterred from availing themselves of the rich pastures close to the r. bank, and usually reside in the interior, beyond the reach of their persecutors.

DIRAWUL, or **DILAWUR**, a fortress, India, Bhawalpoor, in the desert, 40 m. E. of the Punjnad. It is strongly fortified, but probably its greatest security lies in its position, which is approachable only through a parched desert entirely devoid of water. The nabab Bhawal Khan used it as a treasury, as well as for quietude or for safety. Gunpowder for artillery purposes, but of inferior quality, is manufactured in it.

DISANG, a river, India, which rises in the country of the Naga tribes, flows first N., then N.W. through the British dist. Seebpoor in Assam, and after a course of about 90 m. joins the Brahmapootra on its left bank, lat. 27° 4' N.; lon. 94° 30' E.

DISNA, a tn. Russia, gov. and 120 m. N.E. Wilna, cap. circle and on a stream of same name, at its confluence with the Duna. It has four churches and a parish-school, and contains 5208 inhabitants.

DITRO, a tn. Austrian empire, Transylvania, circle and 48 m. N. by E. Udvarhelyi; with a mineral spring, and 4404 inhabitants.

DJEBEL SHOMER. See **SHOMER (DJEBEL)** in *Supp.*

DJEBEL TOWEYK. See **TOWEYK (DJEBEL)** in *Supp.*

DJELAJIL, a tn. Central Arabia, kingdom of Nejd, 133 m. N.N.W. Riadh. It is remarkable for its remote antiquity, being mentioned by Arab writers before the Mahometan era. It is a considerable town, with an unusual extent of palm groves and plantations, irrigated by a rivulet which springs from a fountain 12 or 15 m. from the town, and flowing between grassy banks in a considerable stream, loses itself in the plantations of the suburbs. Running water of this kind is a very rare phenomenon in Central Arabia. The buildings of the town and its castle are noticeable for their pretty situation among the trees in the locality. It is named from the "bells" attached to the necks of mules and sheep.

DJIBBA, a tribe, Central Africa, dwelling on the N. bank of the Sobat, an affluent of the White Nile, about lat. 7° N. and lon. 37° E. They are a fine tall race, of a dark brown colour, and a warlike temper. To their ordinary weapons of spears and clubs—the former from the scarcity of iron often pointed with antelopes' horns, straightened and finely sharpened—they add a peculiar kind of iron-bracelet, which tapers out to a sharp edge, and is used in close contest with an antagonist. Another singular practice of these warriors is to interweave the hair of fallen enemies with their own at the back of the head, and thus form a tail of about 4 inches wide, which is decorated with cowries, and so long that it reaches nearly to the ground. Elephants and lions are numerous in the Djibba country.

DJIMBINDI. See **KIMBANDI** in *Supp.*

DJOUR, a tribe, Central Africa, situated some distance to the S. of a large lake, which seems to be an expansion of the White Nile, near lat. 5° N. and lon. 27° E. Though not allied to the Dinka, they are like them pastoral in their habits, possessing large herds of cattle and numerous flocks of sheep and goats. Agriculture is practised, but being looked upon as an inferior species of employment, is left entirely to the females. The chief articles of food are milk and grain, the latter not of native growth, but obtained by barter with neighbouring tribes. Dress is confined to the married females only, and consists of an apron of scanty dimensions, all others, like their congeners the Shillooks, who live considerably to the N., going naked. Notwithstanding the low state of civilization thus indicated, the Djour have made some progress in one of the most important branches of industry, not only smelting iron-ore, but rendering the metal malleable, and manufacturing it into hoes, hatchets, lances, &c., with a skill which, considering the rudeness of their implements, is astonishing.

DJOWF, THE ['the belly'], a valley and province of the kingdom of Djebel Shomer, forming an oasis in the N. W. of Arabia, lat. (of centre) 29° 30' N.; lon. 40° E. It is a large oval depression, lying generally E. and W., 60 or 70 m. long and 10 or 12 m. broad, between the desert which separates it N. from Syria, and the sandy waste intervening S. between it and the mountains of the Djebel Shomer, the nearest of the central Arabian plateau. Approached from the W. it has the appearance of a deep broad valley descending ledge after ledge till its innermost depths are hidden by far-reaching shelves of reddish rock, below everywhere studded with palm-groves and clusters of fruit-trees in dark green patches, down to the farthest end of its windings. It contains, besides its capital of the same name, and the populous town of Sekakali, about 12 m. N.E. of it, several villages and hamlets, clustering round water-springs, and containing from 20 to 50 or 60 houses in each. Attached to them, as in the principal towns, are extensive gardens, which are much celebrated for their productiveness. The date-palm, apricot, peach, fig-tree, and vine are largely cultivated, and their fruit is very superior in both flavour and abundance. Corn, leguminous plants, gourds, melons, and many other vegetables, are grown extensively; the land being carefully and copiously irrigated by running streams of pure water. The inhabitants are tall, well proportioned, of rather fair complexion, with long curling black hair, and features for the most part regular and intelligent; they are thus good specimens of the pure northern or Ismaelitish Arab type. Their longevity too is noteworthy; it being no uncommon thing to see a man of seventy set out fully armed with a band of youths. The climate is good and dry; during the months of June, July, and August, the temperature is said to average about 90° or 95° Fahr. in the shade at noon; at night the air is comparatively cool. The inhabitants are stated to have once been Christians before their forcible conversion to Islamism, and to be descended from the ancient Arab clan of Tai. Towards the end of the last century the Djowf was subjected to the Wahabee monarchy, but after the overthrow of the Nejdian empire in 1817-8, recovered partial independence; but it became long distracted and exhausted with intestine civil contentions, till the surrounding Bedouins were able to force the inhabitants into a tributary position. Upon the rise of the new kingdom of Djebel Shomer, a little to the S., the Djowf was soon marked out for subjugation, which, though incomplete for a time, was effected in 1855 by Telal the reigning prince, who stormed the capital and destroyed the dwellings, and exiled the chiefs of the faction opposed to his rule. A governor of the town and province was appointed, and under a wise system of government the district has recovered much of its former strength and prosperity, while the inhabitants, once degraded by licence and social quarrels almost to the level of Bedouins, have advanced rapidly in civilization as well as in wealth, numbers, and commercial activity. The population of the valley or province is estimated at 42,000.—(*Palgrave's Central and Eastern Arabia.*)

DJOWF, a tn. Arabia, chief place of the above district, 350 m. N. Medinah. It is composed of eight villages, which, though now merged into one town, still retain the distinction of 'quarters.' The principal is that of Haboob, which contains a castle and about 400 houses. The other quarters of various sizes stretch up and down the valley, but are connected by their extensive gardens. The entire length of the town thus formed is about 4 m., but its breadth nowhere exceeds half a mile. Every family has a separate dwelling. The better kind of houses have an outer court for unloading camels, &c., an inner court, a large reception-room, and several smaller private apartments occupied by the family. Very many of the houses have a round tower 30 or 40 ft. high, and 12 ft. or more in diameter, with a narrow entrance, and loop-holed above, sometimes contiguous to the building, and sometimes placed in the adjacent garden; the use of the towers appears to be as places of refuge and defence in the marauding feuds of rival chiefs. They are built of unbaked brick, of great thickness and solidity. At the present time they are generally in a dismantled and half-ruined state. While the houses of the upper class are thus usually detached, those of the lower orders are clustered together, with no regard for order. The Djowf being in this way a mixed collection of houses and gardens is naturally unwall'd. The

gardens are inclosed with high walls of unbaked brick, and are intersected by a labyrinth of little water-courses, passing from tree to tree, and from furrow to furrow. The population is estimated at about 17,000.

DOBZYCE, a tn. Austrian empire, Galicia, circle and 16 m. S.W. Bochnia, cap. dist. of same name; with the ruins of a strong castle, seated on a height overhanging the Raba. Pop. 2200.

DOBRICZA, a tn. Austrian empire, Serbian Banat, Military Frontier, 52 m. E.S.E. Peterwardein; with a parish church and a school, and 2430 inhabitants.

DOBRUDSIA (THE), a territory in the north-east of Bulgaria, European Turkey, is included between the Danube, which forms its boundary on the W. and N., the Black Sea on the E., and Trajan's Wall on the S., which extends from Kustendji on the Black Sea to Chernavoda on the Danube. In its centre it is traversed from N. to S. by a range of upland downs, which forms a sort of watershed between the Danube and the sea; in the E. it is marshy and contains several lakes. There is a great scarcity of good water for drinking. It contains, however, many fertile spots, but in the summer, like the countries adjoining it, resembles a desert, while in the spring, from the melting of the snows, the soil takes the appearance of a vast muddy slough. The inhabitants support themselves by rearing sheep and buffaloes. The fauna is large and diversified, comprising eagles, bustards, cranes, wild geese, partridges, kites, ducks, wild swans, and wild dogs. The principal town is Babadagh, situated in the N.E., about 4 m. to the W. of Lake Rassein. The Dobrudsha is noted in the history of the Russian war, by the entrance into it, in 1854, of the Russian army, compelling the Turks to fall back to the fortress of Silistria.

DOBRZITSCH, a tn. Austrian empire, Bohemia, circle and 23 m. S.S.W. Prague, cap. dist. of same name. It has a parish church, a castle with large gardens, chemical works, a potash refinery, a brewery, a distillery, a steam and two other saw-mills. Pop. 2000.

DOLMATOW, or DOLMATOV [add.], a tn. Russia, gov. and 300 m. E.S.E. Perm, l. bank Isset. The town, once of considerable importance, has fallen into decay, and is now only a village. It contains a large and splendid monastery, dedicated to St. Dolomete, standing on an eminence on the l. bank of the Isset, near its junction with the river Tetcha. The walls surrounding it give it the effect of a kremlin, which indeed it much resembles in its architectural features. The surrounding country is well wooded; the soil fertile, producing good crops of rye and wheat. There are no fences to the fields here; every village has a ring-fence of posts and rails, inclosing a considerable area, with gates on the road, and a watchman to shut and open them, and within this inclosure all the cattle and poultry of the village are turned out to feed.—(*Atkinson's Siberia*, 161-3.)

DOMBE-AN-KISANDA, a dist. S.W. Africa, prov. and about 40 m. S. Benguela. It is inclosed by bare volcanic mountains, and, contrasted with the parched and sterile tract by which it is approached, looks like a green oasis. Its fertile soil, irrigated by the Kuparol, makes it the granary not only of Benguela, but of several districts situated farther to the S. Its inhabitants, belonging to the Mundombe tribe, are excellent cultivators, and, in addition to their agricultural crops, prepare large quantities of manioc, which is disposed of to the European factories along the coast. They also possess numerous herds of cattle, for which the grassy banks of the Kuparol afford a rich pasture. In the mountains surrounding the district copper, sulphur, and saltpetre are said to be found, but no attempt has been made to work them. The Portuguese have here only a nominal authority, of which the principal sign is a small fort with a garrison of 20 men. Pop. 10,000.

DOMOKOS (SZENT), a tn. Austrian empire, Transylvania, circle and 30 m. N.E. Udvarhely. The inhabitants are chiefly employed in mining and smelting copper. Pop. 2430.

DONARI, a tn. Western Africa, Bornou, country of the Manga, about 90 m. W. by N. Birni. It was formerly a considerable place, and is still surrounded by an earthen rampart, inclosing a large area, of which, however, only a small portion is actually occupied. The majestic monkey-bread trees are the chief ornament of the place. Cattle seem to form the wealth of the inhabitants.

DONDE, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on the Kulatu, near its source, and on the W. edge of the Bulum-Bulu desert. It stands on a lofty plain under the shade of Incendera trees. The inhabitants, taking advantage of the Bihé caravans which pass through it, devote themselves chiefly to trade. Pop. 2000.

DONGURPOOR, or **DOONGURPOOR**, a native state and tn. India, Rajpootana. The state, between lat. 23° 35' and 24° 3' N.; lon. 73° 40' and 74° 18' E., is bounded N. and E. by Mewar or Oodeypoor, S.E. Banswarra, and S. and S.W. the Myhee Caunta, dist. of Gujerat; length, E. to W., 40 m.; breadth, 35 m.; area, about 1000 sq. m. Revenue, £10,900, from which the British government is entitled to draw not more than three-eighths as tribute. Pop. 100,000.—The town, cap. of the above state, situated 110 m. N.N.E. Baroda, is of considerable size and fortified, and contains the palace of the rawal, who resides in it.

DOODHOO, a tn. India, Rajpootana, state Jeypoor, 186 m. E. Agra. It is of considerable size, containing 700 houses and more than 100 shops, is inclosed by a ditch and ramparts nearly a mile in circuit, and is, moreover, defended by a small fort, built of masonry and faced with earth.

DOODNA, a river, India, which, rising in the N.W. of the Nizam's Dominions, lat. 20° 2' N.; lon. 77° 5' E., flows S.E., and joins the Poorna, an affluent of the Godavery, after a course of about 120 m.

DOR, a tribe, Central Africa, inhabiting a territory whose S. frontier is said to be in lat. 3° N. and in lon. 27° E., and to extend above 300 m. from S. to N. The surface generally is well adapted for agriculture, and is carefully cultivated by the inhabitants, who display much skill and industry, both in raising the crops and in harvesting them. Their dwellings are constructed of a beautiful basket-work of cane, with perpendicular walls 6 ft. high, crowned with a pretty cupola-shaped roof. Their food consists principally of a thick porridge of maize flour, flavoured with a sauce of herbs and red pepper; but animal food, whenever it can be obtained, is so much relished, that even rats, mice, and snakes are greedily consumed. In regard to dress the Dor display feelings of decency and propriety unknown to the neighbouring tribe of Djour.

DORE, or **LITAKO**, a tn. Western Africa, cap. prov. Libtako, 320 m. W. Sokoto; lat. 14° 11' N.; lon. 0°. Though once of importance, it is now in a state of miserable neglect and decay, the wall which surrounded it having been allowed to become a mere heap of rubbish. It has, however, an important market, being a great place of resort for the Arabs of Azawad, a district to the north of Timbuctoo, who bring to it great quantities of the salt of Tasdenni, for the Wangarawa or Eastern Mandingoes, who bring white kola-nuts, and also shells, evidently imported from Sierra Leone or the river Nunez; and for the people of Mosi, who bring cheap cottons and fine donkeys, the latter in great demand. Dore is said to abound in thieves.

DORÉH, **DORÉI**, or **DORX**, a harbour, Indian Archipelago, on the N.E. shore of the N. peninsula of Papua or New Guinea, near the N. entrance of Great Geelvink Bay; lat. 0° 51' S.; lon. 134° E. The inhabitants occupy four villages on the borders of the sea, two on the N. side of the harbour, and the two others on the islands Mana-Souari and Masmapi. Many of the houses are within water-mark, raised on posts, and reached by a rough and tottering causeway. They are very low and long, with roofs shaped like the convex bottom of a boat, and are rudely put together with any materials that chanced to be most easily obtained, such as old mats, cocoa-nut leaves, bits of board, broken boats, &c., being in fact most wretched abodes. The people recognize the sovereignty of the sultan of Tidore. The harbour is formed by a long low promontory curving round towards the Arfak range, which rises abruptly from the opposite shore to the height of 9500 ft. This promontory is a raised coral reef, apparently of recent formation. A narrow channel about 3 m. long leads into the harbour, which is of very limited extent, but well sheltered, and with sufficient depth, over a bottom of sand and shells, for vessels of any size. A fine river discharges its water into the harbour at its N. extremity. On its S. side is a fort built by the Dutch in 1828, for the protection of a colony which they had just established. The locality is very unhealthy.

DÖRFEL, a tn. Austrian empire, Bohemia, circle Bunzlau, about 5 m. from Böhmish-Aicha; with 2175 inhabitants, who are chiefly employed in weaving and spinning yarn.

DORNA WATRA, a tn. Austrian empire, duchy Bukovina, 42 m. S.W. Suczawa, on the highroad to Siebenburg, and not far from the Bistrizza and the frontier of Moldavia; with a sulphur spring and a bathing establishment attached to it. Pop. 2418.

DOROHOI, a tn. Turkey in Europe, Moldavia, circle of same name, on the Shiska, an affluent of the Pruth, 80 m. N.W. Jassy, is an entrepôt for the manufactures sent into Moldavia from Austria, France, Prussia, and Saxony, and has important annual fairs.

DOUERA, or **DUERA**, a tn. N. Africa, Algeria, prov. and 17 m. S.W. Algiers, on a bare and rugged site, about 560 ft. above the sea. It is an important military post, and consists of clean and regular streets. Serving as an entrepôt for the produce of the surrounding districts, it carries on a considerable trade in corn and cattle. The whole neighbourhood is covered with vineyards, and mulberry, cotton, and tobacco plantations. Pop. 1500.

DOUGLAS, a tn. Canada East, co. and on the S.W. shore of the Bay of Gaspé, at the point where the latter receives the St. John. As yet it is little more than a village of fishermen and farmers, but its excellent and extensive roadstead, in any part of which vessels may anchor in 11 to 6 fathoms over sand and clay bottom, promise to give it maritime importance. The shore leading to it from Peter Point, a distance of 12 m., presents a succession of precipitous headlands, the cliffs of bituminous shale and sandstone rising to the height of 200 ft. above the sea.

DOVER, a vil. U. States, Ohio, r. bank Tuscarawas, near the mouth of Sugar Creek, and on the Ohio canal, about 60 m. S. Cleveland. It is regularly built, possesses six churches, a woollen factory, several tanneries and mills, and is the shipping point for large quantities of wheat and flour, the former to the annual amount of about 500,000 bushels, and the latter of about 40,000 barrels. Pop. 1423.

DOWSA, or **DEOSUR**, a tn. India, Rajpootana, state Jeypoor, 110 m. W. Agra. It consists of a town and a fort. The town, which is of considerable size, is surrounded by a stone wall in a very dilapidated state, and contains some large and richly-carved houses, several Hindoo temples, one of them a fine old structure, a mosque, and many handsome tombs, all of these, however, verging to decay.—The fort is built on one side of a rocky hill, with a flat summit nearly 4 m. in circuit, and, besides being naturally difficult of access, is inclosed by a looped wall flanked at the bottom by two large bastions. It is used by the rajah of Jeypoor as a state prison.

DRACUT, a vil. U. States, Massachusetts, on the Merrimac, opposite to Lowell, with which it is connected by two bridges, 25 m. N.W. Boston. It contains four churches, and possesses a woollen, a cotton, and two paper mills. Pop. 1881.

DRAHA, or **WADY-DARAH**, a river, N.W. Africa, Marocco, which rises in the S. slope of the Great Atlas, about lat. 32° 10' N.; lon. 5° 20' W., and proceeding southwards in a course remarkable for the number and extent of its windings, is lost in the sands. Its length is supposed to exceed 300 m.

DREW POINT, a low flat promontory on the N. coast of Russian America, Arctic Ocean; lat. 70° 54' N.; lon. 153° 40' W.

DRISSA, a tn. Russia, gov. and 100 m. N.W. Vitepsk, cap. circle and on a river of same name; at its confluence with the Duna. It has two churches, a parish school, and a charitable endowment. At the village of Kliaslitzu, in the circle, a battle was fought between the French and the Russians in 1812. Pop. 2832.

DROORAJAPATAM, or **DOORGARAUZPUTNUM**, a tn. India, presid. Madras, on the Coromandel coast, W. side of the entrance into Pulicat Lake, 60 m. N. Madras. The town is connected with Madras by means of the lake and a cutting, called Cochrane's canal, about 14 m. long, and starting from the back-water near the town of Pulicat. A little S.E. of Droorajapatam is the only place on the Coromandel coast which offers the least protection to shipping during an easterly gale.

DRUSES [add.] The region of Lebanon is shared between the Druses and the Maronites, a sect of Christians,

who, up to 1840, lived with them in peace and harmony. The change of dynasty, however, which subsequently took place, by the substitution of the Turkish sway for that of Mehemet Ali, seems to have engendered a feeling of bitter animosity and deadly strife between the two peoples, in which the Druses were greatly excited and supported by the Turks, and more especially by the fanatical rabble of Damascus; considerable provocation also was given by the Maronites. The hostile spirit continued to increase in intensity till it broke out with fearful violence in the summer and autumn of 1860. The most atrocious massacres and barbarities were perpetrated by the Druses upon the unhappy Maronites, which the Turkish government appeared unable to arrest, till an expedition from France, under the sanction of the principal European powers, sailed to the Syrian coast. Through its agency, and the diplomatic intervention of the European states with the Sublime Porte, a species of tranquillity was restored, and a guarantee given for the prevention in future of such scenes of horror, and also for the punishment of those who had committed or encouraged the barbarities. Large subscriptions were collected in Britain and other countries for the relief of the unfortunate Christians of Syria, multitudes of whom, though they had escaped the massacres in which thousands of their nation perished, were reduced to beggary and exile.

DRZEWOHOSTITZ, a tn. Austrian empire, Moravia, circle and about 14 m. S.W. Neutitschin, on the Bistrizza; with a parish church, a castle, an ancient townhouse; and wool, cattle, and other yearly markets. Pop. 1500.

DSCHAKOWA, or **DYAKOVA**, a tn. Turkey in Europe, in the N.E. of Albania eyalet Rum-ili, on the Grenik, 63 m. E.N.E. Scutari. It contains six mosques, a R. Catholic and a Greek church, and above 8000 inhabitants.

DUBKA, a river, India, which rises in Mount Gagur or Gutgarh, in the dist. of Kumaon, lat. $29^{\circ}27'N.$; lon. $79^{\circ}26'E.$; flows first S.W. to the village of Burooa, where it descends from the mountains into the plains, then nearly due S., and joins the West Rangunga, about lat. $28^{\circ}24'N.$; lon. $79^{\circ}17'E.$ Below Burooa it often bears the name of Googha, and still lower down that of Nahul. Its whole course is about 90 m.

DUBUQUE, a tn. U. States, Iowa, r. bank Mississippi, about 50 m. below the confluence of the Wisconsin, upon the Illinois Central railway, and at the point where the three states of Iowa, Wisconsin, and Illinois touch each other. It stands on a broad plateau, at the foot of hills, with terraced vineyards, not unlike those of the Rhine, extending several miles along the river, here nearly a mile wide, is regularly laid out, and contains several handsome buildings. It is the central depôt for the mining region of Iowa, the lead from the mines in the vicinity being conveyed down the river in steamboats. Steam coal and limestone are abundant, and a quarry of variegated brown marble is said to have been found on the opposite side of the river. Its prosperity is owing partly to the extent of immigration to the far west, and partly to the rich lead mines. The town contains a R. Catholic cathedral, several Protestant churches, and two banks. Pop. 13,000.

DUCHI, a tn. W. Africa, Haasa States, prov. Zanfara, 140 m. N.W. Kano. Its name, meaning 'rocks,' indicates the peculiar nature of the place, a labyrinth of rocky eminences intersected by a ravine giving it a very wild and romantic appearance. The houses, scattered about in several groups among the rocks, are scarcely visible. The surrounding district having only a slight covering of fertile soil is well adapted for millet. In some parts cotton of good quality seems to be grown.

DUK-EL-ARBA, a tn. Abyssinia, cap. prov. Dagossa, about 12 m. W. Lake Tana or Dembea. It is a large place, with a church on a lofty height, but possesses no other object

of interest, as it is only recovering from the disasters brought upon it by civil war.

DUMARAN, an isl. Indian Archipelago, belonging to the Calamiane prov. of the Philippine Isles, and situated about 10 m. N.E. Palawan, about lat. $10^{\circ}31'N.$; lon. $119^{\circ}22'E.$ It has a computed area of 151 geo. sq. m., and on its E. coast a small town of 1750 inhabitants, with a R. Catholic mission. The coast is steep, with no anchorage for large ships, and little shelter even for boats; the interior is covered with forest, containing the wild buffalo, the wild hog, and deer. The people are employed chiefly in fishing trepan, shell tortoise, and pearls, and in gathering esculent swallows' nests.

DUNAJOW, a tn. Austrian empire, Galicia, circle and N.W. Brzezan; with a copper mill, and 1600 inhabitants.

DUNEDIN, a tn. New Zealand, S. Island or New Munster, cap. prov. Otago, is situated on the E. coast, at the head of a fine bay or creek, which may be said to form an outer and an inner harbour, the former extending to Port Chalmers, beyond which large vessels do not go, and the latter to Dunedin itself, which is accessible only to light craft and

small steamers. The town, which was founded in 1848 by a body of Scotch settlers in connection with the Free church, possesses a church, manse, and school. Agricultural operations, which were for some time confined to the vicinity of the town, are gradually extending to other quarters, and it is confidently expected that the colonists will become large exporters both of corn and wool. The area occupied by the town and fenced around it is 629 acres, of which 329 were under cultivation in 1861. The number of vessels entering the port in the same year was 256, of 84,394 tons, being nearly quadruple that of the previous year; the number leaving the port was 213, of 89,724 tons, showing a similar increase. Pop. (1861) 5956.

DUNKIRK [add.], a tn. and port, France. In consequence of the increase of the population, and the limited area within the ramparts, much difficulty has been experienced in procuring sufficient accommodation for the inhabitants. The 'Basse Ville' in particular is very unhealthy, owing to its crowded state and the ditches inclosing it on all sides. The local authorities, however, have prevailed upon the government to level a part of the ramparts and fill up the ditches, hitherto productive of fever and ague, so that building may be freely carried on to the W. of the town. A new and handsome building, the palais de justice, was finished in 1864, the erection of which cost £20,000, besides the fitting up of the interior. A church is also to be built for the French Reformed congregation.

Agriculture is making rapid progress in the district of the town, both in cultivation and draining, the latter being essential to the land, about 13,000 acres of which have been subjected to it.

The Iceland-cod fishery, though less productive than in 1861, produced in 1862 a gross amount in weight of 117,079 cwt., of the value of £107,681. About 122 vessels, of 12,262 tons, belonging to the port, were employed in the fishery in 1863. Five oyster-beds, *parcs d'huîtres*, have been established, and well organized, and provided with the means necessary to render them prolific and profitable.

The principal imports in the year 1863 were tallow, grain, cod-liver oil, rape-seed, hemp, timber, iron, and machinery; the exports were chiefly raw sugar, wine, oilcake, flour, wheat, fruit, and vegetables. A brisk trade in pig iron is carried on with Scotland, and large quantities of machinery are imported; and iron rails, tyres, cast steel, &c., from Sheffield, *via* Hull. British vessels, to the number of 771, and of a tonnage of 96,479, entered the port in 1863, bringing, amongst others, 259 cargoes of pig and manufactured iron. A considerable trade is also carried on with Spain, railway materials to the value of £62,131 having been exported thither in the same year. Timber from Norway also passes through Dunkirk to the interior in large quantities. P. 32,000.

DUNNVILLE, a tn. Canada West, co. Haldemund, 50 m S. by W. Toronto, on the Grand River, and on the Buffalo and Lake Huron railway. It possesses five churches, several flour and saw mills, amply supplied with water-power, a tannery, and a foundry. The chief exports are wheat and sawn pine timber. Pop. about 1500.

DURANGO [add.], a tn. Mexico, cap. state of same name, on the elevated plateau of Anahuac, at the height of 6500 ft. above the sea, in lat. 24° 25' N.; lon. 104° 30' W. Originally established as a military post in 1559, to check the incursions of the Chichimeks, it long remained without any importance, and dates its prosperity from the discovery of the rich mines of Guarisamey, situated at some distance to the W. Its leading streets, its principal square, and most of its public buildings owe their existence to the proprietors of these mines. It has a cathedral, and several other churches and chapels, four monasteries, an old Jesuit college, a mint, an hospital, a large tobacco factory, and various other industrial establishments. In its environs are two celebrated places of pilgrimage, and out of the plateau in its vicinity rises a hill called the Cerro del Mercado, which is entirely composed of magnetic iron. A still more remarkable object to be seen in the same locality is a meteoric stone of the extraordinary weight of 41,800 lbs. Pop. 14,000.

D'URBAN, a tn. S.E. Africa, about 1 m. east of the anchorage in the large and finely-sheltered circular basin which forms Port Natal. It is well laid out in wide streets, lined with beautiful trees, which give it a healthy and pleasing appearance, and consists of about 400 houses, chiefly of wood, but gradually giving place to stone houses. The inhabitants, mostly English, have an Episcopal church and a Wesleyan Methodist chapel. A railway, connecting D'Urban with the pier, about 2 m. distant, is meant to be extended along the fertile valleys, producing indigo, coffee, and sugar, to the timber districts of Natal. Pop. 1200.

DURGUTLI [anc. *Egara*], a tn. Turkey in Asia, Anatolia, 30 m. E. Smyrna. It stands among mountains in the vicinity of a large marsh, and contains a pop. estimated at nearly 30,000, who are largely engaged both in manufactures and trade.

DURRAUNGDRRA [add.], a tn. India, Gujerat, peninsula Kattywar, near the Runn or Salt March, 75 m. W. Ahmedabad. Though greatly decayed it is still a place of importance, surrounded by a comparatively modern wall, and containing about 2000 substantial houses. Its manufactures are chiefly coarse cloth and carpets.

D'URVILLE, an isl. New Zealand, off the N. coast of Middle Island or Munster. It forms a prominent feature in Cook Strait, projecting into it as a bold and salient point from the E. shores of Blind Bay, is 17 m. long from N. to S., by about 6 m. wide, and is only separated from the mainland by a very narrow channel. Its harbours are on the N. Port Hardy, and on the W. Greville or Brooke Harbour. It has also on the E. a roadstead, called Rangetoto, formed by three islands of the same name. The surface of D'Urville is

wooded and mountainous, attaining in its highest point an elevation of 2180 ft. Stephen's Island, 2 m. N.E. of D'Urville, though only 1 m. in extent, is a scarcely less prominent object, as it rises abruptly from the sea to the height of nearly 1000 ft. Coasters sometimes pass between these islands, but never without risk.

DUSKY, a sound or bay, New Zealand, in the S.W. extremity of Munster or Middle Island; lat. (Five Fingers' Point) 45° 44' 15" S.; lon. 166° 27' 45" E. It is formed between Five Fingers' Point, the S.W. extremity of Resolution Island, on the N., and South Point on the S., having between them a width of 4 m., stretches in an E.N.E. direction for 22 m., and is studded with numerous islands and rock. The principal anchorages are Pickersgill Harbour and Cascade Cove on the S., and Facile Harbour and Duck Cove on the N.; temporary anchorages may be found in other places, but the depth of water is in general too great. Among the islands of the sound, are Anchor Island, which lies immediately within its entrance, is 3½ m. long, and rises to the height of 1360 ft., and the three islands, Indian, Long, and Cooper, respectively 1½, 7, and 3½ m. long, forming a chain which extends nearly to the head of the sound, and leaves a navigable channel both N. and S. of it. Dusky Sound was so named by Captain Cook, who discovered it on his first, and explored it in his second voyage.

DUTHUMI, a settlement, S.E. Africa, territory Khutu, belonging to the basin of the Kingani, about lat. 7° 20' S.; lon. 37° 30' E. It is one of the largest and most fertile localities in the territory, consisting chiefly of a plain of black earth and sand choked with vegetation where not corrected by the axe. It is watered by a perennial stream of same name, which, joining the Mgezi, an affluent of the Mgeta, belongs to the basin of the Kingani. The means of irrigation thus furnished are carefully employed. To the N. of the plain rise the craggy hills of Duthumi, stretching N.N.W., and ultimately, it is said, becoming linked with the Usugara chain considerably to the N.W. It is also not improbable that they become linked in a similar way with the Ngura Mountains in the E. Their estimated absolute height is from 3000 to 4000 ft. They appear to rise abruptly, but throw out branches, which slope gradually toward, and seem finally to merge into it; their jagged crests and peaks indicate a primitive formation. The Kingani is said to issue from a cave or fissure in the E. slope of these hills, and to receive so many feeders as to swell immediately into a large perennial stream; its affluent, the Mgeta, rises in the W. slope, and flows along the S. base. Owing to the prevalence of rain and the great humidity of the atmosphere, the Duthumi Hills are generally cloud-capped, and never expose their outlines except in the clearest weather. Notwithstanding the allegation that water freezes upon the heights, the ordinary crops of the lowland districts, holeris and sesamum, manioc and sweet potatoes, are grown, and cucumbers, beans, plantains, and sugarcane abound. The jungle at the base of the hills gives shelter to the elephant, the rhinoceros, the gnu, &c. The great curse of Duthumi is the slave-trade. Arab traders often reside there for months, for the purpose of purchasing slaves cheaply. Perpetual feuds among the chiefs are the natural result, and scarcely a month passes without fields being laid waste, villages burned down, and the unhappy cultivators carried off for sale.

DUTTEEAH, a state and tn. India, Bundelcund. The STATE, between lat. 25° 32' and 26° 18' N.; lon. 78° 15' and 78° 54' E., has an estimated area of 850 sq. m., contains 380 villages, and produces a revenue of about £100,000. The rajah pays no tribute, but maintains a military force of 1000 cavalry, 5000 infantry, and 80 artillerymen. He faithfully supported the British in the mutiny of 1857, besieging the rance of Jhansi, who had revolted. Pop. 120,000.—THE TOWN, cap. of the above state, lies on the route from Agra to Saugor, between parallel low and rocky hills, 110 m. S. by E. Agra, and is surrounded by a stone wall about 30 ft. high, but without ditch or glacis. It consists of narrow winding streets, in which, however, many of the houses are large and substantial. The rajah's palace, situated within a well laid out pleasure-ground of about 10 acres, inclosed by a lofty wall, with embattled towers at each of its four corners. Within the inclosure is a reservoir, with a fine fountain in the form of an octagon, surrounded by columned cloisters, with a

sculptured elephant at each corner spouting water from its uplifted proboscis. There are two other palaces, one within the town, and the other outside, but both untenanted. Pop. about 40,000.

DWALAGIRI [add.], a peak of the Himalayas, in Nepal. This mountain, which was formerly believed to be 28,000 ft. in height, is now ascertained to be only 26,826. The highest point of the Himalayan range is Mount Everest. (See EVEREST.)

DYALOUNG, a river, India, which rises in lat. 26° 4' N.; lon. 93° 42' E.; on the boundary between the Tooloo Ram Senaputtee country and the British dist. Nowgong,

Lower Assam, flows W. for 95 m., and joins the Kullung, an affluent of the Brahmapootra.

DYIKUMA, a tn. S.W. Africa, Kimbunda country, territory Selles, between the Kikombo and the Balomba, 75 m. N.E. Benguela, is the residence of an independent native chief. The inhabitants employ themselves in agriculture, the making of Dongo laces, and trade. The Tapach, flowing from E. to W. through the district, adds greatly to its fertility. Pop. about 1500.

DZWINOGROD, a tn. Austrian empire, Galicia, circle and about 32 m. N.W. Brzezan. It was once fortified, and stood several sieges. Pop. 1400.

E.

EASTON [add.], a tn. U. States, Pennsylvania, cap. co. Northampton, r. bank Delaware, and on railways connecting it with the Lehigh coalfield, Philadelphia, and New York, 54 m. N. Philadelphia. Though the site is rather uneven, the streets are regularly formed at right angles and spacious, and there is also a public square. The principal public buildings and institutions are eleven churches and two Jewish synagogues, Lafayette college, with 6 professors, 100 students, and a library of 4500 volumes; a superior high-school, an academy, and a farmers' and mechanics' institute. In the vicinity a cemetery of about 40 acres has been formed on picturesque ground overhanging Bushkill Creek. The industrial establishments include tanneries, foundries, blast furnaces, cotton factories, rifle factories, and numerous distilleries, and oil, saw, and flour mills. The trade is in the above articles, and more especially in flour and whisky. Of the last 14,000 barrels were exported in a single year. The surrounding country is said to contain inexhaustible seams of excellent iron ore. Zinc also has been discovered, and is worked to some extent. Pop. 8914.

EASTPORT [add.], a vil. U. States, Maine, near the boundary between the U. States and British America. It stands on the S.E. shore of Moose Island, communicating with the mainland by a covered bridge 1200 ft. long; is compactly built, and contains seven churches, six schools, and a public library. In its spacious harbour, which is never blocked by ice, the tides rise 25 ft. Shipbuilding employs many of the inhabitants, and an active trade is carried on, partly with the British provinces and partly in the export of lumber. There is also an extensive fishery, and at times 200 to 300 boats engaged in it may be counted within sight of the town. At the termination of the war in 1815 Great Britain claimed Moose Island, on which Eastport is built, and other islands in Passamaquoddy Bay; but, in 1818, a commission appointed to decide the question adjudged them to the U. States. Pop. 3850.

EAST RIVER, U. States, is the name given to a strait situated between New York and Brooklyn, and connecting New York Bay with Long Island Sound. It is about 18 m. long by $\frac{1}{2}$ m. wide, and has a rapid current caused by the tide of the Atlantic, which, rushing through it, reaches New York three quarters of an hour earlier than the tide from the bay, and thereafter runs up the Hudson many miles in advance of the latter tide. East River is navigable by the largest vessels, but has a pass, called Hellgate, which is dangerous, though several of the more formidable obstructions have been removed by blasting.

EATON, a vil. U. States, Ohio, cap. co. Preble, on the Seven Mile Creek and the Eaton and Hamilton railway, 50 m. N. by W. Cincinnati. It stands in the centre of a rich agricultural country, and has some trade in its produce. Pop. 1600.

EBED, a tn. Austrian empire, Hungary, co. and 20 m. E. Komorn, on the Danube. The inhabitants are partly employed in the culture of the vine, but more especially in the sturgeon fishery, which is here important. Pop. 1120.

EBOULEMCUS, a vil. Canada East, co. Charlevoix, l. bank St. Lawrence, 65 m. N.E. Quebec. It has a R.

Catholic church; but as most of the inhabitants appear to prefer official employment to private enterprise, neither trade nor manufactures exhibit any signs of activity. Pop. estimated at 2500.

E-CHING, a city and dist. in China, department of Yang-chow, on the l. bank of the Yangtze River, 20 m. above Chin-kiang, and 204 m. from Shanghai. It is situated at the junction of two small creeks, one of which communicates with the Imperial canal, forming a trading port of importance to native traffic. The town is pleasantly situated on rising ground about 2 m. N. of the river bank, and presents a thriving aspect compared with some larger cities. In the eastern suburb there is a fine temple surrounded by lofty trees, and a seven-storied pagoda in excellent preservation marks the centre of the town. At all times along the creek leading to the great river a forest of masts may be seen, with ensigns of every shape and colour, giving it a lively aspect. The port is not open to foreign commerce; but as there is no prohibitory clause in the treaty of Tientsin to prevent foreign steamers towing native junks on the river from port to port, there is a considerable traffic of this kind carried on from E-ching to Ta-tung, a small *entrepôt* near the city of Tungliu, 252 m. higher up the Yangtze, on the r. bank of the river. These junks are chiefly laden with salt from the Yellow Sea, conveyed up the small streams on the coast leading into the Great canal. There is a high duty on this commodity, as it reaches the central provinces of China, where it is not found in a natural state. Formerly the junks had to pay the duty at the intermediate custom-houses on the river, which led to much smuggling and exaction. Since the foreign steamers have commenced to tow them, an arrangement has been made between the mandarins of E-ching and Ta-tung, who collect the duty for all the customs, and allow the junks to pass under foreign flags from port to port without further levy. It is in this way that several ports on the Yangtze, ostensibly closed to foreign trade, are open to merchants who have no hesitation in stretching the terms of treaties; and while they carry on the towing traffic between the ports at the rate of one tael (6s. 8d.) per ton, they make a handsome profit on opium and merchandise, for which there is a large demand at these towns for the interior markets. These innovations, it is expected, may lead to E-ching and other riverine ports being ere long added to the number of treaty ports.—(MS. Notes.)

ECUADOR [add.], a state, S. America. In consequence of hostilities with Peru and New Granada, the prosperity of the state has been obstructed of late years. Commerce and industrial pursuits have been paralyzed; labourers and artisans have been thinned and demoralized by being drafted into the army, agriculture necessarily neglected, and trade generally reduced to stagnation. The cultivation of cotton, which is produced with great facility, has been suddenly and greatly extended; the quantity grown in 1863 having been about 600,000 lbs., and in 1864, 2,000,000. Unfortunately the thinness of population, but above all the unsettled state of the country, hinders the success of ardent commercial enterprise, which otherwise exists. The following figures

show the state of foreign trade during the years succeeding that of its most flourishing condition, 1858:—

	Imports.	Exports.
1858	£506,456	£474,524
1859	286,918	462,403
1860	428,877	913,428
1861	1,003,123	552,303
1862	361,791	458,332
1863	328,016	680,151

The number of vessels entering in 1861 was 273, of 64,360 tons; and of those outward bound, 265, of 57,616 tons. Pop. (1858) 1,040,371, of whom about 600,000 were whites.

EDGARTOWN, a vil. U. States, Massachusetts, cap. co. Dukes, on the N.E. side of the island of Martha's Vineyard, 75 m. S.S.E. Boston. It contains three churches, and has manufactures of oil, candles, and salt, boat-building yards, and a well-sheltered harbour, with a pier 1000 ft. long, a lighthouse, and from four to five fathoms' depth of water. Pop. 2118.

EDMONTON (FORT), a station of the Hudson Bay Company, British America, l. bank of the N. Saskatchewan, 40 m. above its junction with Sturgeon River; lat. 53° 33' N.; lon. 113° 18' W. It is the most important establishment in the Saskatchewan district, and is inhabited by about thirty families living in the fort, who find employment in the making and repairs of the carts, boats, sleighs, &c., required for the Company's traffic. It has a wind-mill, forge, and carpenter's shop. Wheat grows luxuriantly, and potatoes and other roots flourish as wonderfully here as everywhere else on the Saskatchewan. At Lake St. Albans, 9 m. N., is a colony of half-breeds, who have left the service of the Company, and formed a small settlement presided over by a R. Catholic priest. The older colony of Lake St. Ann's, of similar character, but with more numerous inhabitants, lies 40 m. beyond to the W.

EDROBOL, or **ETROPOL**, a tn. Turkey in Europe, Turkish Servia, on the frontiers of Bulgaria, eyalet and 95 m. E.S.E. Nissa. It is beautifully situated on the banks of the Little Isker. There is a walk-mill, and iron was at one time smelted and cast in the vicinity. Pop. about 2000, partly Bulgarians.

EDUR, **EDER**, or **EDUR**, a state and tn. India, Gujerat, Mhyee Caunta. The state, which is tributary to the Guicowar, but under the political superintendence of the Bombay government, is ruled by a descendant of the celebrated Ajil Sing, rajah of Joodpoor, and yields a revenue of £23,434, under the deduction of £3295 as the Guicowar's tribute.—The town, cap. of the above state, 103 m. N. by W. Baroda, is encircled by hills on three sides, and on the fourth defended by a wall. On a hill completely commanding it are the remains of a ruined fort, in which the rajahs used to find an asylum in times of danger. The ascent to it is by a steep zigzag path protected by four gateways. An adjoining hill contains several Jain temples and the remains of a palace. Pop. about 6000.

EKKAIREE, or **AKHERI**, a ruined tn. India, presid. Madras, ter. Mysore, 20 m. N. Bednore, and 162 m. N.W. Seringapatam. It is now in a decayed condition, but was once the capital of a powerful state. Inclosed by three concentric walls of great extent, it contains a citadel, a large temple of Siva, and an ancient palace of the Sedasiva dynasty, famous in Hindoo story. All the buildings, except the temple, are desolate, and the town is without inhabitants; the government having been removed to Bednore and the place deserted in the middle of the seventeenth century.

EESA, a country, E. Africa, inhabited by the tribe which gives it its name, and is probably the most powerful branch of the Somali nation. It extends N. to the Wayna family of the Dankali, S. to the Gudabusi, and midway between Zaylah and Berberah, E. to the Indian Ocean, and W. to the Gallus around Harar. The tribe, said to number 100,000 shields, is divided into numerous clans, which again are subdivided into minor septa. An *ugaz*, or chief, who resides in the Hadagali Hills, and is generally called Roblay, is nominally recognized as the head of the whole tribe; but every kraal or temporary village has its own *oddai* (sheikh or headman), from whom the settlement takes its name. His direct authority is very limited, and depends in a great measure on his individual power and influence. The Eesa are docile, good-humoured, and warm-hearted, but at the

same time fickle and irascible, and (worse than all) proverbially cruel and treacherous. 'These Bedouins,' say the people at Zaylah, 'offer a bowl of milk with the left hand, and stab with the right.' They are blacker and uglier than the other Somali. Their wealth consists in flocks and herds.

EGBAS, a name applied to the inhabitants of the walled town of Abbeokuta, W. Africa, and the outlying districts. The Egbas are well made and muscular, and evince a greater facility in receiving the influences of European civilization than almost any other negro tribe. (See *ABBEOKUTA in Supp.*)

EGE, a valley, Western Africa, Kanem, 175 m. N.E. Lake Chad. It is a very celebrated locality with the nomadic inhabitants of the adjacent regions, and is temporarily frequented by a variety of tribes, who visit it to water their camels at its famous wells, which have the reputed virtue of promoting the camel's growth; and to collect the fruit of the siwah (*Capparis*), which grows here in great abundance. Ege, thus largely resorted to, is also a marked point for predatory expeditions.

EGGENBURG, a tn. Austrian empire, Lower Austria, circle Upper Marchartsberg, at the W. foot of the mountain of this name, 49 m. N.W. Vienna. It is surrounded by walls, is the seat of several public offices, and has an old parish church, a mission-house belonging to the Redemptorist congregation, a madder mill, and numerous looms. Pop. 1350.

EGMONT [add.], a mountain, New Zealand, occupying the outer portion of a peninsula on the S.W. coast of North Island or Ulster; lat. (summit) 39° 18' S.; lon. 174° 4' 45" E. Though not the highest, it is the most strikingly remarkable mountain in New Zealand, and in clear weather may be distinctly seen from a ship's deck at sea at the distance of more than 100 m. It rises in a perfect cone from a base of 30 m. in diameter to the height of 8270 ft. Its summit, an extinct crater, is flattened and covered with perpetual snow for nearly a fourth of its height. A saddle-shaped eminence, forming a kind of offset on the N.W., has an altitude of 4600 ft. Numerous torrents descend from the mountain. The coast line of the peninsula on which the mountain stands is so nearly circular, 'that supposing a pair of compasses were planted on the summit of Mount Egmont, with a radius of 15 m., and a semicircle were then described, it would be an almost accurate delineation of the coast for a distance of 45 m., or from the Karpokouui streams to New Plymouth.'—(*New Zealand Pilot*.)

EGRI PALANKA, a tn. Turkey in Europe, in the N. of Macedonia, eyalet and 43 m. N.E. Uskub. It has several squares, adorned with fountains, and lined with houses, along which vines are planted. The shops are full of arms manufactured within the town, and of iron, the produce of iron-works in the vicinity. Pop. about 3000.

EGYDI (ST.) **AM NEWALDE**, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, near the source of an affluent of the Danube, 43 m. S.W. Vienna; with manufactures of files and various articles in steel and iron, and saw-mills. Pop. 1630.

EGYHAZA (NYIR), a tn. Austrian empire, Hungary, co. Szaboles, 29 m. N.N.W. Debreczin, cap. dist. of same name; with a Lutheran college, an hospital, an asylum for children, baths, manufactures of soda and matches, a distillery, three oil-mills, and important yearly markets. Pop. 14,787, mostly Lutherans.

EHDEN, a vil. Syria, prov. and 15 m. S.E. Tripoli, in a beautiful and well-cultivated tract on the W. slopes of Lebanon. About 10 m. S.E. is the famous group of cedars of Lebanon, not less remarkable for their position than for their size and beauty. 'They are situated,' says Dr. Robinson, 'at the head of a vast amphitheatre looking W., surrounded by the loftiest ridges of Lebanon, which rise from 2000 to 3000 ft. above them, partly covered with snow. In the midst of this vast temple of nature the cedars stand as the lonely tenants, with not a tree, and scarcely a green thing, besides.'

EHRENBERG (OLD and NEW) [add.], two contiguous places, Austrian empire, Bohemia, circle and 35 m. N.E. Leitmeritz; with a parish church, two mills, and large manufactures of Manchester goods. Pop. of Old Ehrenberg, 4603; of New Ehrenberg, 1300.

EIESKOWICE, a tn. Austrian empire, Galicia, circle and 4 m. N.E. New Sandec, cap. dist. of the same name,

near the Biala; with an important trade in linen, and 1950 inhabitants.

EIKHAMS, formerly a missionary station, but now the residence of an independent chief, S. Africa, Damara-land, is prettily situated on the slope of a hill, which, though bare on its summit, has its base finely clothed with large groups of mimosas, and watered by a tributary of the Swakop. The springs in the vicinity, one of them with a temperature of 190°, are sufficiently copious and elevated to afford ample means of irrigation, and the soil thus treated is very fertile. 'Taking it as a whole,' exclaims Mr. Anderson, 'Eikhams is the prettiest place I ever saw, either in Damara-land or in Namaqua-land.' Unfortunately all this beauty could not secure permanency to the missionary station, and hence both the excellent dwelling-house and most substantial church which had been erected are falling rapidly to decay.

EINSIEDL, a tn. Austrian empire, Hungary, co. Zips, on the Göllnitz, about 18 m. N.W. Leutschau; with mines of silver and copper. Pop. 2400, mostly Lutherans.

EIPEL, a tn. Austrian empire, Bohemia, circle and 27 m. E.N.E. Gitschin; with a town-house, a parish church, a brewery, flax-spinning and other mills. Pop. 1300.

EISENBACH, a tn. Austrian empire, Hungary, co. Bars, about 6 m. N. Schemnitz; with picturesquely situated and much-frequented thermal baths, and mines of gold and silver. Pop. 900.

EISENBROD, a tn. Austrian empire, Bohemia, circle Bunzlau, on the Pardubitz and Reichenberg railway; with several public offices, a parish church, a town-house, yarn-spinning factories, and three mills. Pop. 2084.

EISIEC, a tn. Austrian empire, Galicia, circle Wadowice, about 34 m. S.W. Cracow. In the vicinity are the extensive blast-furnaces and other iron-works of Wegierka-Gorda. Pop. 1300.

EL-AKSABI, a tn. N.W. Africa, near the W. borders of the Sahara, on the caravan route from Shinghot to Nun. It consists of a number of huts inclosed within a mud fort, and some houses of a better description situated outside. Altogether it is a poor place, and dirty in the extreme, as the horses, camels, and other domestic animals, are regularly shut up within the courts at night to prevent their being carried off by a robber tribe which prowls in the vicinity.

ELAMBAZAR, a tn. India, presid. Bengal, dist. Beerbhoom, 90 m. N.W. Calcutta, l. bank Hadjee, which is here navigable. It is a great mart for rice, which is extensively grown in the vicinity. Pop. 2950.

EL-BASSAN, a tn. Turkey in Europe, Albania, eyalet Rum-ili, on the Skumbi, 62 m. S.S.E. Scutari. It is the see of a Greek bishop, contains a Greek church and three mosques, and has a much-frequented market. In the vicinity is a monastery, founded about the beginning of the 11th century, and about 10 m. S.W. are ten hot sulphur-springs. Though consisting of about 2000 houses, it does not contain above 4000 inhabitants.

ELBEKOSTELETZ, a tn. Austrian empire, Bohemia, circle and about 16 m. N.N.E. Prague, on the l. bank, and on an island of the Elbe; with a parish church, town-house, hospital, and cavalry barracks. Pop. 1500.

ELBETEINIZ, a tn. Austrian empire, Bohemia, circle and 12 m. N.W. Czaslau, on the Elbe, a little above Kolin, and on the Vienna and Prague railway; with a parish church, a town-house, a brewery, and two mills. Pop. 2469.

EL-BIOD-SHERGUI, a tn. N. Africa, Algerian Sahara, in a plain on the S.E. side of the Sidi Sheikh range, 180 m. S.S.E. Oran. It is surrounded by a crenellated wall, 10 ft. high, and flanked by four small towers, is defended by a castle, and contains a mosque with a minaret. The inhabitants, occupying about 180 houses, are chiefly employed in agriculture and the weaving of woollen stuffs. El-Biod-Shergui is only one of a cluster of six villages which bear the common name of El Abiod Sidi Sheikh, and are under the rule of the chief Marabut of the Uled Sidi Sheikh tribe. As might be expected under such circumstances, the villages contain no fewer than seven Marabut establishments. All of them are well endowed by gifts and the offerings of pilgrims, and one in particular, occupying a central position in the group, is a handsome structure, rendered conspicuous by its white dome, and richly decorated within, the pavement being covered with carpets, and the walls hung with ostrich feathers,

ostrich eggs, flags, and mirrors. The villages are surrounded by productive and well-watered gardens, stocked with date-palms and other fruit-trees.

EL-FUERTE, a river, Mexico, which, rising among the mountains of Chihuahua, near the watershed between the Pacific and the Atlantic, flows first S.W. past the town of Urique, whose name it often bears in the upper part of its course, and then, on receiving the Rio Verde on its l. bank, changes its course to E., flows past the town of its name, forming the boundary between Sonora and Sinaloa, and after a course of 400 m. falls into the Gulf of California, in lat. 27° N.; lon. 110° W. Though broad and deep, particularly during the rainy season, for a considerable part of its course, it is so shallow at its mouth that it cannot be considered navigable except for the smallest craft.

EL-FUERTE, a tn. Mexico, dep. and 70 m. N. by W. Sinaloa, l. bank river of same name; lat. 26° 56' N.; lon. 108° 59' W. Before the Spanish yoke was thrown off it was a paltry village, composed chiefly of Indian huts, but Sonora having, after the declaration of independence, made it the seat of government, it soon became a flourishing town of 5000 inhabitants. This prosperity was not destined to last. Another political change made Alamos the seat of government, and El-Fuerte sunk as rapidly as it had risen. It has now scarcely 3000 inhabitants, and possesses nothing worthy of notice except its fine cathedral. Mining and agriculture constitute the chief employments.

ELGIN, a tn. United States, Illinois, on both sides of the Fox River, and at the junction of the Fox River Valley and the Galena and Chicago Union railway, 34 m. N.W. from Chicago. It is a prosperous trading place, with several academies and schools, manufactures of agricultural implements and carriages, a distillery, and a flour-mill. Pop. (1860) 2797.

EL-GOLEA, **EL-GUELEA**, or **EL-MENIA**, a tn. N. Africa, Algerian Sahara; lat. 31° 58' N.; lon. 0° 12' W. It consists of a high town, crowning the summit of a rock, and surrounded by lofty walls, and a low town, occupying a hollow between the high town and the spur on which are still seen the ruins of the ancient Quasba. Around both towns, but without any attempt at regular arrangement, are a number of date plantations. The houses, composed of four earthen walls, with a roof of palm-branches, are divided into two or three apartments, each with a court attached, but they have no terrace, and are invariably of a single story. El-Golea is of Berber origin, but the Arabs, who gained possession of it, have so completely extinguished the former nationality that the Berbers, still forming the bulk of its population, have forgotten their own idiom and speak Arabic.

EL-HAMRA, a vil. W. Arabia, Hejaz, 70 m. S.S.W. Medina. It is built upon a narrow shelf between a high steep hill and a sandy watercourse about $\frac{1}{2}$ m. broad, and consists of a collection of huts of unbaked brick and mud, roofed over with date-leaves. It possesses a fort, and contains a bazaar consisting of a few shops disposed in a long lane. Dates, grown in its palm-orchards, grain, ready-made bread, horse-plantains, rice, butter, and similar edibles, are plentiful and cheap. Like all settlements in El Hejaz it is half in ruins, but thickly peopled wherever the walls are standing.

EL-HODH ['the basin'], an extensive district, W. Africa, lat. 17° 20' N.; lon. 8° W., to which its Arab inhabitants have given its name from its being surrounded by a range of rocky hills called El-Khodha. At the one extremity of the range stands Walata, and at the other Tishit, both belonging to El-Hodh, and so far fixing its limits. The N.E. part of this district, called Arik, from its being inclosed on the W. and E. by light sand-hills, is rich in wells, and some centuries ago was densely covered with small towns and villages. Several other districts of El-Hodh, from the want of water, are not habitable. Baghena, though sometimes viewed as distinct, naturally belongs to the district of El-Hodh, and is one of the most favoured portions of it, being no less fit for fixed settlements than for nomadic wandering.

EL-HUSN, or **KALAT-EL-HUSN**, a vil. Syria, prov. and 38 m. N.E. Tripoli. It is the site of an ancient fortress, occupying a height, from which there is a view of the waters flowing E. to Lake Hums and W. to the Mediterranean, and commands a pass which must always have been of much importance.

ELIZABETH, or **ELIZABETH CITY**, two places, United States:—1, A tn. New Jersey, cap. co. Union, on Elizabethtown Creek, 2½ m. from its entrance into Staten Island Sound, and on the New Jersey Central and the New York and Philadelphia railways, 8 m. S.S.W. Jersey city. It is built on an eminence in regular and straight streets, shaded with trees, contains twelve churches and a number of excellent schools, and has several large manufactories. Its port, situated in the sound, is accessible by vessels of 300 tons, and the town itself by vessels of 50 tons. Pop. 11,567.—2, *Elizabeth City*, N. Carolina, cap. co. Pasquotank, on the river of that name, 20 m. above its mouth, 110 m. N.E. Goldsborough. It is one of the principal towns in the N.E. part of the state, and communicating with Norfolk, Virginia, by the Pasquotank and the Dismal Swamp canal, exports lumber, and the various products of the pitch-pine. Pop. 1798.

ELIZABETH, a cape, Russian empire, forming the N. extremity of the island of Saghalin; lat. 54° 24' 30" N.; lon. 142° 46' 30" E. It is a mass of rock, terminating an uninterrupted mountain chain, and presents a number of pointed summits, on which no vegetation of any kind appears.

ELIZABETHGRAD, a tn. Russia, gov. and 126 m. N. Kherson, cap. circle of same name, on a beautiful plain watered by the Ingul; lat. 48° 30' N.; lon. 32° 30' E. It is a thriving place, defended by a citadel, and has a church, an arsenal, a large hospital, and secular and religious schools for the circle and parish. Pop. 13,300.

ELIZABETHSTADT, a tn. Austrian empire, Transylvania, circle and 36 m. N.N.E. Hermanstadt, cap. dist. of same name, on the Great Kokel. It is a royal free town, and has two fine R. Catholic churches, a Mechitarist monastery, with a valuable library; extensive culture of silk, and an active trade. Pop. 2241, many of whom are Armenians.

EL-KANTARA, a vil. N. Africa, Algeria, on a rivulet of same name, at the outlet of a pass in the Jebel Anres, 82 m. S. W. Constantine. Though called by a single name, it is more properly a group of three nearly-adjacent villages, each of which is inhabited by a distinct sub-tribe of Arabs. It possesses seven mosques and two Marabut endowments. The inhabitants weave woollens only to supply their own wants, and devote their chief attention to the cultivation of their gardens, orchards, and vineyards, and the rearing of bees. The environs are rich in Roman remains. Taken as a whole El-Kantara has a pop. of about 2000.

EL-KASR, or **MEDINET-EL-KESR**, two places, Egypt, Libyan Desert:—1, A tn. Wah El-Dahkel (Western Oasis), 235 m. W. Thebes; lat. 25° 42' N.; lon. 29° E. It is tolerably well built, consists of streets with gates, which are kept shut at night, and contains a number of houses of two stories. Near its centre is a sulphurous thermal spring, and in its environs is a number of ancient remains, including an Egyptian temple, a small pyramid, and a Roman castle. Pop. 2000.—2, A vil. Oasis of Wah-el-Baharih (Lesser Oasis), 175 m. S.W. Cairo; lat. 28° 27' N.; lon. 29° 5' E. It is inclosed in part by walls about 6 ft. high, and constructed of materials obtained from ancient ruins. In its vicinity there is a Roman triumphal arch. Pop. about 800.—At a short distance eastward are two other villages—the one El-Baoueyt, with 600 inhabitants; and the other, Zabou, surrounded by a wall, and possessed of a copious spring.

ELKHART, a vil. U. States, Indiana, at the confluence of the Elkhart and St. Joseph, 150 m. N. Indianapolis, and on the S. Michigan and N. Indiana railway. It carries on an active trade, being the principal entrepôt for the exports of the county. Pop. 1035.

ELKHORN, a tn. U. States, Wisconsin, cap. co. Wellworth, 45 m. S.E. Madison, at the junction of the Racine and Mississippi and Wisconsin Central railways. It possesses four churches, a large and well-finished courthouse, county offices, and numerous stores. Pop. 1031.

ELLA, a mountain pass, Ceylon, Central Province, on the road leading from Badulla southward to the lowlands. In approaching it the view is obstructed by densely wooded hills, and at one time nothing is seen but an apparently impassable glen. But a sudden turn discloses a ravine, through which a torrent has forced its way, and over which for more than 60 m. the prospect extends unbroken by a single eminence, and terminates at last in the waters of the Indian Ocean. 'Perhaps,' says Sir J. E. Tennent, 'there is not a scene in

the world which combines sublimity and beauty in a more extraordinary degree than that which is presented at the Pass of Ella.'

ELLICHPOOR [add.], a tn. India, Nizam's Dominions, cap. jaghire of same name, on the Putna, an affluent of the Taptee, 112 m. W. by N. Nagpore. It is slenderly fortified, being only in part surrounded by a battlemented stone wall, 60 ft. high, but not more than 4 ft. thick. A gateway, which forms the only entrance, is highly ornamented. Some of the houses and bazaars, built of brick, are handsome; but the whole place, though large, is very indifferently built. Even the palace of the nabob, the most conspicuous of its edifices, possesses little merit. Ellichpoor made some figure in the Mahratta war, in which the Duke of Wellington gained his first laurels. It is included in what are called the Nizam's sequestered or ceded districts.

ELLICOTT'S MILLS, a vil. U. States, Maryland, on the Patapsco River, and on the Baltimore and Ohio railway, 10 m. N.N.W. Baltimore. It possesses a college, and a large amount of water-power, which is turned to account in cotton and other factories. Pop. 1444.

ELLORA, a vil. Canada West, co. Wellington, 50 m. W. Toronto, on the Grand River; with four churches, a grammar-school, saw and flour mills, a brewery and distillery, several foundries, and a large local trade. Pop. about 1200.

ELLORE [add.], a tn. India, presid. Madras, dist. and 35 m. N. Masulipatam, in a flat and open country. It is a large and populous place, intersected by the Tammelaïr, which divides it into two distinct portions, but is dry the greater part of the year, and at all times fordable. The houses of the town are tolerably well built, in streets which are, for the most part, finely shaded by trees. On the right bank of the stream are the remains of an old fort, and also the bazaar, which is constructed with considerable regularity, the shops having wooden fronts, like those in the W. of India. The barracks and hospital, belonging to the detachment of native troops stationed here, are also on this side. The officers' houses are on the left bank. A little to the E. of the town is the Lake of Colair, which, during the rains, covers upwards of 100 sq. m.

ELLSWORTH, a tn. and port of entry, U. States, Maine, cap. co. Hancock, 67 m. E. by N. Augusta, on both sides of the Union, which is here navigable and crossed by four bridges. It is one of the most flourishing places in the state, and possesses two churches, a high-school, county buildings, a tannery, a machine shop, a pottery, building-yards, two grist and nine saw mills. The trade is chiefly in lumber, of which about fifty millions of feet are annually exported. The registered tonnage of the district is 6733, the enrolled and licensed tonnage 27,632 tons. Pop. 4658.

ELMIRA, a tn. U. States, New York, cap. co. Chemung, on the Chemung, near the mouth of Newton Creek, and on the New York and Erie, the Williamsburg and Elmira, and the Elmira, Canandaigua, and Niagara Falls railways, 170 m. W.S.W. Albany. It is a well laid out and rapidly-increasing place, containing nine churches, a female college, capable of accommodating 300 pupils, numerous other academies and schools, county buildings, breweries, tanneries, furnaces, machine shops, woollen, soap and candle, edge-tool, and carriage factories, planing, flour, and saw mills. Pop. 8682.

EL-PARRAL, a tn. Mexico, prov. and 120 m. S. by E. Chihuahua, on a tributary of the Río Conchos, was the centre of an important mining district. The country around is fertile. Pop. about 7000.

ELSINEUR [add.] The payment of Sound dues was abolished in virtue of a treaty concluded in 1857 between Denmark, Great Britain, France, Russia, Sweden, and other powers, and a subsequent treaty with the United States, by which, in consideration of the sum of 35,000,000 rixdollars (£3,935,000), paid as compensation, and apportioned among the contracting powers, Denmark agreed to renounce all claim to any dues on vessels passing the Sound, or the Great and Little Belts, the navigation of which for the future was declared to be free and unrestricted.

EL-SUWAYRKIYA, a tn. Arabia, on the S. frontiers of the pachalic and 90 m. S. by E. from the town of Medina. It is a small place, consisting only of about 100 houses, built upon the side and at the base of a mass of basalt. The lower part is protected by a mud wall, with the usual semicircular

towers, and the summit has been converted into a *fortalice* by a rough bulwark of stone piled up so as to make a parapet. The narrow streets and mud houses are essentially Arabian, but the bazaar is well supplied with meat, dates, wheat, and barley. The inhabitants, Beni Husayn Sayyids, claim allegiance from all the Bedouin tribes around, and yield it only in name to the governor of Mecca.

EMAMGHUR, a fort, India, Scinde, in the Thur or Great Desert, lying between it and Jesslmeer, 100 m. N.N.E. Hyderabad. The expedition of Sir Charles Napier against this place at the head of a camel corps of 250 European infantry, with two 24 lb. howitzers, and 50 cavalry, is one of the most remarkable of his exploits. The Ameers, who had deemed it impregnable, on account both of the difficulty and the great strength of its works, were so intimidated when they saw it about to be attacked, that no defence was made. The British commander left it a heap of ruins. It was in the form of a square, inclosed by an outer and an inner wall, the former only 15 ft. high, the latter 40 ft. high, and surmounted by eight round towers. Some of the chambers were bomb-proof.

EMBOMMA, a tn. S. Africa, r. bank Zaire or Congo, about 100 m. above its mouth. It stands on a height, possesses a large weekly market, and, being well adapted for trade, contains several Portuguese factories. It was long, and it is to be feared, still continues to be, a central *dépôt* for slaves. While the French were intent on their emigration scheme, they established large factories here, with the view of employing a small steamer to ply between Embomma and Tend Point, for the purpose of bringing down the so-called emigrants. The country around Embomma, producing corn, beans, and almost every European vegetable in abundance, is the granary for the slave factories in the interior and along the coast to the N. of the river.

EMILIAN PROVINCES, a name sometimes given to those territories of Central Italy, situated on the Emilian Way, or Via Emilia, a celebrated highway of ancient times, constructed by the consul Emilius Lepidus, between Placentia (Piacenza) on the Po, and Ariminum (Rimini) on the Adriatic. It includes the duchies of Parma and Modena, and the former Papal delegations of Bologna, Ravenna, and Forli, all now part of the kingdom of Italy.

EMMITSBURG, a vil. U. States, Maryland, in the midst of a fertile and populous district, 45 m. N.W. Baltimore. It contains several churches, a R. Catholic college and theological seminary, an academy, a female orphan asylum, and an institute for girls, under the care of the sisters of charity. Pop. 812.

EMOD, a tn. Austrian empire, Hungary, co. Bersod, 12 m. S. Miskolez; with a fine castle and gardens, and 2139 inhabitants.

ENDERBURY ISLAND, a coral isl. of the American Polynesia, Pacific Ocean; lat. 3° 8' S.; lon. 171° 14' W. It is 3 m. long and 2½ m. broad, with a dry lagoon, and encircled by a coral reef of from 30 to 150 ft. in breadth, and 18 at its greatest altitude.

ENDERBY, an isl. S. Pacific, the N.E. isl. of the Auckland group, S. of New Zealand, in lat. 50° 32' S.; lon. 166° 12' E. It is 2 or 3 m. long, covered with a peaty mould, and capable of sustaining a large number of cattle; it also grows potatoes and most European vegetables, and is everywhere covered with trees, from 15 to 70 ft. high. It was occupied by a colony of about 70 New Zealanders from Clatham Island, who settled in the group, and was granted by the English government to the Messrs. Enderby, as a station for the Southern Whale fishery Company, in 1850, which, however, was a failure. The group was discovered in 1806.

ENDERBY LAND, the name given to a considerable extent of coast in the Antarctic Ocean, S. of Madagascar; lat. 67° 25' S.; lon. 50° E. Discovered by Captain Biscoe in 1831.

ENDERES, a tn. Turkey in Asia, prov. Sivas, beautifully situated in a romantic but well-cultivated district, 100 m. S.W. Trebizond. It consists of about 120 houses, all built of stone, and flat-roofed, and is divided into two quarters, occupied respectively by Turks and Armenians. The latter have two churches, one of them ancient, the other quite modern. Considerable care and skill are shown in

irrigating the fields, which, in consequence, raise good crops of wheat, barley, and flax. Almost all the persons employed in Constantinople in cutting and manipulating tobacco are natives of Enderes.

ENGANO [add.], an isl. Indian Archipelago, about 60 m. off the S.W. coast of Sumatra; lat. (W. point) 5° 21' S.; lon. (E. point) 102° 7' 15" E. Its area, including some islets near it, is computed at 400 geo. sq. m. It is girdled by a coral reef, on which the surf breaks heavily. The surface, though sufficiently elevated to be visible at the distance of about 20 m., seems not to be mountainous. The soil is a red clay, occupied for the most part by dense forest. The inhabitants, of genuine Malay extraction, are in a very rude state. Their only clothing is a shred of prepared bark or dried banana leaf at the waist. Having no knowledge of iron, their weapon is a spear tipped with fish-bone.

ENNS [add.], a tn. Austrian empire, Upper Austria, circle Traun, on the river Enns and the W. railway, 85 m. W. Vienna. It is a very old but well-built place, consisting of a town proper and five suburbs. The town, surrounded by turreted walls, which were built with the ransom shamefully exacted from Richard Cœur de Lion, contains 390 houses, arranged partly in streets, and partly in a large public square, and in many cases of handsome appearance. The principal building within the walls is the castle of Ensegg, belonging to Prince Auersperg, and containing a collection of Roman antiquities. Among the benevolent institutions are an asylum for children, a town-hospital, a lazaretto, and a poorhouse. The trade of the place is tolerably active, particularly in iron and steel ware. *Lorch*, a vil. in the vicinity, is partly on the site of the Roman Laureacum, and deserves notice both for a fine old church and several Roman antiquities. It was also the scene of the martyrdom of St. Florian, in the reign of Diocletian. Pop. 4000.

ENTRECASTEAUX, or NORTH PORT, a port, Tasmania, near the S.W. entrance of the channel of same name, on the S.E. shore of the island. It is about 600 yds. wide at its entrance, but immediately within increases in width to 1200 yds., and extends northward for nearly 1½ m., with depth of 5, 4, and 3 fathoms at a short distance from the shore. The ground, rising with a gentle acclivity, is covered with thick wood, and the water is so sheltered that it is scarcely agitated by the most violent winds.

EPIPHANIE, a vil. Canada East, co. L'Assomption, 27 m. N.E. Montreal, near the Achagan. It has a considerable trade in flour and lumber, and a pop. of about 1500.

EPPAN (ST. MICHAEL), a tn. Austrian empire, Tyrol, circle Brixen, not far from Botzen. It is a large straggling place, and has a Capuchin monastery, founded in 1638, and an educational institute. Much wine of good quality is grown in the vicinity. Pop. 1600.

ERAOOR, a vil. Ceylon, East Province, near the N. shore of the lagoon, and 8 m. N.W. of the town of Batticaloa. It is a large place, inhabited by Moors, who are chiefly engaged in agriculture, though some of them weave cotton cloth; some are also drivers of *talavams*, or bullock caravans, into the interior, carrying cocoa-nuts, salt, and brassware from the coast, and bringing back in return areca-nuts, deer's horns, and wax. The Moors of Eraoor were celebrated for their courage and address in the capture of wild elephants, while they were in demand for the courts of Indian princes; but of late years this demand has almost ceased. The road from the coast to this village passes through a rich country, lined the whole way on the right by cocoa-nut plantations, and on the left by carefully cultivated and plentifully irrigated rice-fields.

ERAR, a small river, E. Africa, which, rising among the hills to the N.E. of Harar, flows past that city in a S. direction, towards the Webbe of Ogadyn, sometimes called the Webbe Shebayli, or Haines River. Where Burton crossed it it had a bed about 100 yds. wide, and filled the greater part of it with a thin sheet of clear, cool, and sweet water. What gives interest to the Erar is the fact that it is the only perennial stream which exists between Harar and the coast.

ERD, or HAMSABEG, a tn. Austrian empire, Hungary, co. and about 23 m. N.E. Stuhlweissenburg, near the Danube; with a castle, the ruins of a Turkish tower, a Roman road, distilleries, tileworks, and a trade in corn and wine. Charles of Lorraine defeated the Turks here on 23d July, 1684; and,

according to Hungarian chronicles, a great slaughter of the Huns took place in the same locality. Pop. 3552.

ERDBERG, a tn. Austrian empire, Moravia, circle and 9 m. E. Znaim; with a deanery church and 2252 inhabitants.

ERDEK [anc. *Artace*], a tn. Turkey in Asia, Anatolia, on the W. side of the peninsula of Cyzicus, which projects N. into the Sea of Marmora. It was entirely burned down in 1854, but has risen from its ashes, and now contains about 1000 Greek and 200 Turkish houses. A tongue of land, which terminates in a hill presenting three steep faces towards the sea, is defended on the land side by a wall which was once thought to be Pelasgian, but is now understood to be not older than the middle ages.

ERDO-BENYE, a tn. Austrian empire, Hungary, co. Zemplin, 30 m. S. by E. Kaschau; with a trade in excellent wine and fruit, and numerous mineral springs, with a bathing establishment. Pop. 2050—half of them belonging to the Reformed church, and many of them Jews.

ERDOSZABA, a tn. Austrian empire, Hungary, co. and 25 m. S.E. Szathmar, on the N. frontiers of Transylvania. It has a castle belonging to Count Hunyady, and contains 1100 inhabitants.

ERIE [add.], a tn. U. States, Pennsylvania, cap. co. of same name, beautifully situated on Presque Isle Bay, on the S. shore of Lake Erie. Its site is an elevated bluff, commanding a fine view; its streets are broad, and regularly laid out at right angles, and it has a central park of great extent and beauty. The principal public buildings and institutions are the custom-house and post-office, occupying a handsome marble structure, twelve churches, a public library, an academy, and a number of public schools. Among the industrial establishments are two extensive foundries, machine shops, several large flour-mills, and a variety of factories. Possessing one of the best harbours on the lakes, and also ample means of communication with the interior, by the Sunbury and Erie railway, and the Erie extension of the Pennsylvania canal, Erie possesses an extensive and rapidly increasing trade. It has also a valuable fishery a few miles N. of the harbour, where large numbers of white fish and trout are caught. Pop. 9419.

ERKELET, a tn. Asia Minor, prov. Karamania, S. of the river Kizil Irmak (the ancient Halys), in lat. 38° 50' N.; lon. 35° 13' E. The name is a corruption of the ancient Heraclea. It is a thriving and healthy town, with neatly built houses and beautiful gardens. The surrounding country is eminently fertile. Pop. about 6000 souls, of whom the majority are Mohammedans.

ERUKO, a tn. Western Africa, prov. Bassa, r. bank Benue, 80 m. above its confluence with the Kwara. It is surrounded by a double palisade of tall trees, and stands near the ruins of a town of same name, which appears to have been much more important. In the modern Eruko there are no buildings of any pretensions; but in the earlier town, which was pillaged and burned down by the Fellatah many years ago, not only were the walls more substantial, and the plans more regular, but some attempts at architectural ornament had been made. The huts had been coloured both within and without, not in rude daubs, but with red, white, and a bluish-black, laid on evenly, and equally tinted all over. The inhabitants are industrious, and are much employed in the manufacture of palm-oil, Eruko being the farthest place up the Benue where it is made, though the oil-palms grow abundantly for many miles higher.

ERZERROOM [add.], a tn. Turkish Armenia, cap. pach. of same name, 166 m. N.N.E. Diarbekir; lat. 40° 9' N.; lon. 41° 6' E. It was totally destroyed by an earthquake on the 2d of June, 1859, compelling its inhabitants to migrate to the neighbouring towns.

ESACHTILZ, a tn. Austrian empire, Hungary, co. Upper Neutra, 23 m. N.N.E. Tyrnau, on the Dudvagh; with the ruins of a castle, once occupied by the notorious Elizabeth Bathory; and a trade in corn and wine. Pop. 2050.

ESKI-DSHUMNA, or ESKI-JUMA, a tn. Turkey in Europe, Bulgaria, eyalet and 64 m. S.S.E. Silistria, on the N. slope of a lofty ridge. It has an important annual fair; and by means of extensive mulberry plantations raises a large quantity of silk.

ESKI-SHEHR [add.], [anc. *Dorylaeum*], a tn. Turkey in Asia, Anatolia, 35 m. S.E. Constantinople. It consists of

two parts—the town proper and the bazaar, connected with each other by a stone dike of considerable length. The mosques, with their eight minarets, give the place an imposing appearance, but the interior is still and lifeless. The celebrated baths are in the bazaar quarter; and there are some interesting Roman sculptures and inscriptions in the vicinity. Eski-Shehr figures in the wars of the Crusaders.

ESMERALDAS [add.], a river and tn. S. America, Ecuador. The river is understood to be formed by several streams from the W. Andes, not far from Cotopaxi, flows N.N.W., receiving several affluents, of which the Guailamba is the most important, and falls into the Pacific, about 12 m. below the town of same name. In the upper part of its course its channel is obstructed by rapids, and in the lower there is a bar with a bottom so uneven that 7 fathoms are found alongside 84. Such, too, is the velocity of the current, that the water continues fresh for 2 m. from the river's mouth.

—The town, on the l. bank, 6 m. above the mouth of the river, and capital of the prov. of same name, 100 m. N.W. Quito, is of recent origin, having been substituted for an older town, which stood on the banks of the river at some distance, and is a very paltry place, consisting of wooden houses, with a pop. of not more than 600, of whom the majority are muleteers. There are mines of emeralds in the vicinity, formerly worked by the Jesuits; but since the expulsion of the order, this branch of industry has been neglected.

ESQUIMALT, a tn. and port. Vancouver Island, at the S. extremity, 3 m. S. Victoria, the capital of the island. The town is well situated, and the harbour offers safe and convenient anchorage; it is also well adapted for an almost impregnable fortified position, as well as for a naval station and docks. The harbour of Victoria being unsuitable for shipping, Esquimalt has become the port for the island, and is likewise the entrepôt for much of the commercial traffic with British Columbia. In 1858 Victoria contained only a fort of the Hudson Bay Company, and one or two houses attached to it; and at the same period Esquimalt was entirely unoccupied. The discovery of gold in British Columbia produced a sudden influx of settlers: the town of Victoria sprang up with great rapidity, and the necessities of trade have produced the equally rapid rise of the port of Esquimalt. The town is already of considerable extent, and among its earliest buildings were a naval hospital, and the residence of the chief-justice of the island; it is connected with Victoria by an excellent road. The following figures will show the commercial position the port has already attained, for though they represent the trade and traffic of the whole of Vancouver Island, they are yet almost entirely applicable to Esquimalt alone, which engrosses nearly all the exports and imports, and the great majority of the shipping in the latter years.

	1859.	1860.	1861.	1862.	1863.
Tonnage of Vessels } Entered & Cleared }	135,395*	254,123	172,265	282,895	341,984
Value of Imports . . .	£ —	£ —	£ 416,611	£ 744,377	£ 797,296
„ Exports . . .	—	—	—	—	39,579

* From June 14 to Dec. 31.

The small amount of exports is accounted for by the fact that the gold, which is the only exported produce of British Columbia, is usually taken to California by the producers, and there disposed of: the want of an adequate coined currency preventing its being exchanged within the colony or in Vancouver Island. Thus, though for the most part it passes through Victoria and Esquimalt, yet, being in private hands, it does not appear under the head of exports.

ESQUIMAUX, a group of islands, British America, on the E. coast of Labrador, near the S.W. entrance of the Strait of Belle Isle. They form part of a chain which commences at Salmon Bay, and stretches W. along the coast for 14 m. under the different names of Esquimaux, Old Fort, and Dog Islands. They are of all shapes, sizes, and heights, never however rising higher than 200 ft., and are, with the exception of some near the mainland, bare of trees. Whale Island, the southernmost of the chain, is only $\frac{3}{4}$ m. long, and $\frac{1}{4}$ m. broad. Near it lie the steep, bare, granitic islands which

form the harbour of Bonne Espérance. The island Esquimaux, which gives name to the group, is of larger dimensions, being from 8 to 9 m. in circuit. It lies in the mouth of Esquimaux Bay, so near the mainland that only small schooners can pass through the narrow channel.

ESQUIMAUX (POINT), British America, Labrador, on the shore of the St. Lawrence, N. of Anticosti Island, and 500 m. N.E. Quebec. A village has been founded on it by Canadian settlers, who have built some good two-storied houses, and cleared and fenced a considerable extent of land, which they cultivate. The situation of the new settlement is pleasant, and the lowlands of the back country, at the foot of the hills, which rise in rugged masses a few miles from the shore, are well adapted for the rearing of cattle. About 50 families had arrived here in 1862. Similar colonies are springing up at other spots along the coast, Natashquan, a short distance eastward, being one of them.

ESTERO-REAL, a river, Central America, rises in the W. cordillera of the Andes, flows circuitously W., forming the boundary between Nicaragua and Honduras, and falls into the head of the Gulf of Fonseca, near its S.E. extremity. It has a good depth of water, and was navigated by Sir E. Belcher, in the *Starling*, for 30 m. from its mouth. But for the prevailing strong winds, which made the passage toilsome, he might easily have gone farther. According to native accounts there is 10 ft. of water in the channel for 30 m. more.

ESURDA, or **ESUNDA**, a tn. India, Rajpootana, state and 60 m. S. Jeypoor, near l. bank Bumra. It is a well-built town, of pleasing appearance, inclosed by a ditch and a strong wall, and defended by a citadel near its centre.

ETAWAH [add.], a dist. and tn. India, N.W. Provinces. The **DISTRICT**, between lat. 26° 21' and 27° 9' N.; lon. 73° 46' and 79° 49' E., is bounded N. by Mynpoorie and Furruckabad, E. Cawnpore, S. Bundelcund, S.W. Scindia's Dominions, and W. Agra; area, 1674 sq. m. The whole dist. lies within the Doab, except a small strip which lies along the r. bank of the Jumna. The soil in the E. and N.E. is generally fertile, but becomes indifferent towards the Jumna, and still more so beyond it, where the surface is rugged, wild, and in some parts almost barren. The principal spring crops are wheat, barley, gram, and other kinds of pulse; the autumnal crops, opium, sugar-cane, cotton, indigo, rice, jowar, and bajra. The fruits include apples, mangoes, plantains, guavas, oranges, citrons, limes, lemons, and remarkably fine melons. Among the wild quadrupeds are jackals, hyænas, wolves, wild hogs, antelopes, and porcupines. Birds, including falcons, peacocks, and the small species in almost endless variety, are said literally to crowd the trees; guinea-fowl and the common gallinaceous poultry run wild in the jungle. The climate is very trying to European constitutions; in no other part of India are the hot winds more frequent and scorching. Pop. 481,224.—The **TOWN**, cap. of the above dist., situated about 1 m. E. of the Jumna, on the E. Indian railway, 206 m. (by rail) N.W. Allahabad, and 63 m. S.E. Agra. has a striking appearance, many of the houses occupying small isolated summits, separated by deep, narrow, precipitous ravines. The interior, however, is very indifferent, and exhibits many symptoms of decay, and much appearance of poverty and wretchedness. The fort, situated on a high sandhill overlooking the Jumna, is of limited dimensions; the jail is one of the largest in the N.W. Provinces. The British cantonment, which lies on a wide sandy plain, 1 m. N.W. of the town, has never been a favourite station, and for some time before the late mutiny was occupied only by a wing of native infantry. The sepoys then belonging to it mutinied in the latter end of May, 1857. Pop. 17,783.

ETIMADPOOR, or **ATAMADPOOR**, a tn. India, N.W. Provinces, dist. and about 20 m. E.N.E. Agra. It is an inconsiderable place, situated in a district much cut up by deep precipitous ravines; is surrounded by a mud wall of no great strength, and possesses a well-supplied bazaar. Within the town is a large tank, embanked by strong walls of masonry, and having in its centre a polygonal building of two stories, crowned by a dome.

ETZATLAN, a tn. Mexico, state Jalisco, 42 m. W. Guadalaxara; with 2834 inhabitants, employed in agriculture and mining.

EUFALA, a tn. U. States, Alabama, 70 m. S.E. Montgomery, beautifully situated r. bank Chattahoochee, which is here navigable from November to June. It occupies a height about 200 ft. above the water, contains several churches, and, in addition to some general trade, used to export annually about 20,000 bales of cotton, the produce of the surrounding plantations. Pop. 3000.

EUGÉNIE, an archipelago, nearly in the centre of Victoria Bay, on the S.W. coast of Manchooria, in the Sea of Japan. The islands, about twenty in number, vary much in size, the largest having an area of about 20 sq. m., and are hilly and covered with verdure. The trees, mostly oaks, of superior quality, and hazel, are thinly scattered. Some of the islands afford good anchorages for ships of the largest burden. They are inhabited apparently by Chinese and Koreans.

EUPATORIA [add.], a tn. Russia, the Crimea, 50 m. N. Sebastopol. It is noted as the place of debarkation of the allied armies of England and France, in September, 1854, when they effected their first landing in the Crimea, and a few days afterwards encountered the Russians in the battle of the Alma.

EVANSVILLE, a tn. U. States, Indiana, cap. co. Vanderburg, on a height above the Ohio, at the terminus of the Erie and Wabash canal, and on the Evansville and Crawfordsville railway, 140 m. S.W. Indianapolis. Owing to a remarkable bend which the Ohio makes here Evansville has sometimes been designated the 'crescent city.' It contains twenty-two churches, including almost all denominations, various public schools, three public libraries, and a national marine hospital erected by the general government. Coal and iron abounding in the neighbourhood give great facilities to manufactures, and accordingly numerous factories, machine shops, and mills have been erected. Pop. (1860), about 11,484.

EVEREST, a mountain, Asia, in the N. of Nepal; lat. 27° 59' 17" N.; lon. 85° 58' 6" E. It is the loftiest summit of the Himalaya, having a height of 29,002 ft., while Kinchinjunga, which used to claim that honour, and is situated to the E. of it, in lat. 27° 42' 9" N.; lon. 88° 11' 26" E., is only 28,156 ft., and Dwalagiri, to the W. of it, in lat. 28° 41' 48" N.; lon. 83° 32' 9" E., is only 26,826. Colonel Waugh, who first measured it in conducting the trigonometrical survey of India, has given it the name of Mount Everest, in honour of Colonel Everest, his distinguished predecessor.

EXMOUTH, an isl. British America, Arctic regions, in the W. entrance of Belcher Channel; lat. 77° 15' N.; lon. 95° 50' W. When seen from a distance it attracts attention by the redness of its colour, produced by the strata of red

EXMOUTH ISLAND.—From Belcher's Last of the Arctic Voyages.

sandstone, of which the greater part of it is composed. On the summit, which has a height of 567 ft., this sandstone is capped by a fossiliferous limestone. Vegetation is more luxuriant than usual in the same region, and game also appears to be abundant, not only geese, ducks, ptarmigan, and hares frequenting it in great numbers, but deer also. Notwithstanding this abundance it is not inhabited, and does not seem even to be visited by natives.

EXUMA [add.], two islands, W. Indies, Bahamas, partly intersected by the tropic of Cancer:—1, *Great Exuma*, about 25 m. long, between N.W. by W. and S.E. by E., with a varying breadth of 1 to 5 m., is low and swampy, and skirted by sandbanks and small cays on the S., but becoming more firm and elevated on the N., attains the height of 50 to 100 ft. Its inhabitants are chiefly employed in raising stock and provisions, which they dispose of to small coasters, who carry them to Nassau in New Providence. Along the N. shore are several secure harbours, for vessels drawing 14 or 15 ft. Pop. about 2000.—2, *Little Exuma*, separated from the former by a small shallow channel almost fordable at low water, is about 8 m. long from E.S.E. to W.N.W., but is narrow and low, and contains only about 160 inhabitants, who find their chief employment in a valuable salt-pond.

EYN-NEJM [‘fountain of the star’], a vil. E. Arabia, kingdom Nejd, 200 m. E. Riad, at one time famous for a hot sulphureous spring, covered with an open cupola, and largely frequented for the cure of cutaneous diseases and paralysis. But the government a few years ago destroyed both well and cupola, ‘lest the people should put their trust in the waters rather than in God.’

EYRE, LAKE, a large sheet of water, almost worthy of being denominated a sea, in S. Australia, lying between lat. 28° 20' and 29° 30' S., and lon. 135° and 140° E. The rivers Frome and Clayton empty themselves into this lake, whose northern boundaries are not as yet defined with any degree of accuracy. The country on the W. side is sandy and barren, but occasionally relieved by hills that attain a considerable elevation. To the S. there are numerous creeks, which promote a rank but prolific vegetation. The districts bordering on Lake Eyre and Lake Torrens were thoroughly explored by M'Donnell Stuart in 1859-60, who, again examining a part of its shore in 1861, found it edged with a layer of salt, 3 inches thick, upon clay.

EYTAH, or **ETA**, a tn. India, N.W. Provinces, dist. Mynpoorie, 50 m. N.E. Agra, occupies a low site almost completely flooded in the rainy season, is surrounded by a mud wall, and has a well-supplied bazaar.

EYWANOWITZ, a tn. Austrian empire, Moravia, circle and 20 m. N.E. Brinn, on the Hanna. It has an ancient castle, surrounded by a ditch and flanked with bastions; a Jewish infirmary, and three annual fairs; and contains 2000 inhabitants.

F.

FACING ISLAND, Australia, on the coast of Queensland, off Port Curtis, and just below the tropic of Capricorn; lat. 23° 45' S.; lon. 151° 25' E.; is 8½ m. long, and 2½ m. at its greatest width; and is generally low, the most elevated part, Signal Hill, situated at its S. end, reaching only to an altitude of 275 ft. Its shores are muddy and covered with mangroves, which fringe the creeks or cluster upon extensive swamps, while the interior presents no richer vegetation than coarse sedgy grass and small bushes, with the usual monotonous gum-trees. A series of low sand-hills extends along the coast. A kind of rock-oyster is found here, and the island also furnishes quails, the blue mountain-parrots, curlews, godwits, and bustards.

FAIRFIELD, two places, U. States:—1, A tn. Connecticut, on Long Island Sound, and on the New York and New-haven railway, 60 m. S.W. Hartford. It consists principally of one broad street, with spacious hotels in its vicinity for the accommodation of summer visitors. The business of the town is carried on chiefly at the harbour of Southport, situated about 2 m. to the W., at the mouth of Mile River; but owing to the rivalry of Bridgeport, at the terminus of the Naugatuck and Housatonic railways, seems not to be increasing. Pop. 4379.—2, A vil. Iowa, cap. co. Jefferson, on Big Cedar Creek, 52 m. S.S.W. Iowa city. It possesses a branch of the state university and a female seminary, and carries on a considerable trade. Pop. 1692.

FAIRHAVEN, or **FAIR HAVEN**, two places, U. States:—1, A vil. Connecticut, on both sides of the Quinepiack, which here expands into a bay, extending to Newhaven harbor, and is crossed by two wooden bridges—one for the railway and the other for ordinary traffic. It is a cheerful, well-built place, with many fine villas, possesses five churches, four building-yards, and a number of vessels, engaged partly in the Mediterranean and partly in the W. India trade; and is famous for its oysters, of which about 750,000 bushels are annually taken. Pop. about 4000.—2, A vil. Massachusetts, on the Acushnet, at its mouth in Buzzard's Bay, and on a branch of the Cape Cod, and on the Bedford branch of the Boston and Providence railways, 50 m. S.E. Boston. It contains eleven churches, a high-school, and a savings-bank; paper and cotton mills, a brass foundry, and soap, candle, and oil factories. An expansion of the river forms a fine harbour, and a good deal of shipping belonging to the place is engaged in the whale fishery. Pop. 3118.

FALKENAU, a tn. Austrian empire, circle and about 24 m. N.N.E. Leitmeritz; with manufactures of cotton goods, dyeworks, bleacheries, glass refineries, two mills, and 1800 inhabitants.

FALTSHI, a tn. Turkey in Europe, Moldavia, circle of same name, r. bank Pruth, 53 m. S.S.E. Jassy. The camp in which Peter the Great allowed himself to be completely surrounded, in 1714, and was in consequence compelled to sign the treaty of Hush, was in the vicinity.

FAMAKA, or **FAMOKA**, a vil. Africa, Sennar, r. bank Blue Nile, opposite Fazoklo.

FANNING, an isl. N. Pacific, belonging to what has been called American Polynesia, in lat. 3° 59' N.; lon. 159° 20' W. It is about 5 m. in diameter, nearly circular, and almost covered with cocoa palms. It possesses a good harbour, is abundantly supplied with excellent fresh water, and promises to become of some importance, having been formally taken possession of by the British crown, on the 8th of February, 1861.

FAOU (LE), a small maritime tn. France, dep. Finistère, 17 m. E.S.E. Brest, in a smiling valley on the Faou, where it joins the Brest Roads. It has some saw-mills, and trade in cattle, wine, brandy, and grain; and its harbour, though small, is well frequented. Pop. 1115.

FARAH, a tn. India, N.W. Provinces, dist. and 22 m. N.W. Agra, about a mile from r. bank Jumna, in an open and well-cultivated country. It is built chiefly within an inclosure of what appears to have been at one time a very large serai, is defended by a square mud fort, with a bastion on each flank, and has a small but well-supplied bazaar.

FARALLON INGLES, a small but lofty isl. S. America, in the Bay of Panama, at the edge of the shoal off the river Buenaventura, 5 m. N.W. Brava Point, in lat. 8° 20' 36" N.; lon. 78° 24' 30" W. It is memorable as the spot where Dampier and his party, in 1681, on being prevented by the Spaniards from going by the Santa Maria or Clepo Rivers, sank their ship, and commenced their journey to the Atlantic. They travelled 110 m., occasionally crossing high mountains, but generally proceeding along valleys among deep and dangerous rivers, and in twenty-three days reached the Atlantic, near the Concepcion Cays, 60 m. W. of Golden Island in Caledonia Bay, in the Caribbean Sea, near the W. entrance of the Gulf of Darien.

FARMINGTON, a tn. U. States, Maine, cap. co. Franklin, on the Sandy River, and the terminus of a branch railway, 31 m. N.W. Augusta. It contains six churches, an academy, and numerous other schools; and being well supplied with water-power, possesses a large number of manufactories. Not a few of the inhabitants are employed in grazing, for which the district is well adapted. Pop. 3106.

FARO, a river, Western Africa, the source of which, not exactly known, is supposed to be near Mount Labul, about

lat. $6^{\circ} 20' N.$; lon. $10^{\circ} 40' E.$ It flows N.N.E. through Adamawa, and joins l. bank Benuwe, 35 m. E. Yola. Near the point of junction, when Dr. Barth crossed it, it had a breadth of about 600 yards, and was running with a rapid current, though its average depth was not more than 2 ft. In the rainy season this depth is much increased, and a sandy headland at the junction is laid almost entirely under water.

FARSHA, a vil. N. Africa, near the E. frontier of Kordofan, cap. Dar Hamar, or the Red Country; lat. about $13^{\circ} N.$; lon. $28^{\circ} 30' E.$ It consists of several hundred huts erected on the side of a gentle slope, and is the residence of the chief of the Hamar tribe, who, though nominally subject to Turkey since the conquest of Kordofan, is virtually independent. The district of Dar Hamar, over which his authority extends, consists of extensive plains, such as the Arabs delight to roam over, in many parts so destitute of water as to be completely parched and sterile during the hot season, but springing into comparative luxuriance during the rains; and in other parts possessed of such a depth of soil, and so far favoured by springs, that the characteristics of the desert disappear, and gigantic baobab-trees are seen. The Hamar, who have their capital in Farsha, are said to be able to muster 2000 men, most of them in mail shirts and helmets.—(*Petherick.*)

FATAWEL, a tn. Western Africa, Adamawa, to the E. of the Wandala range, 140 m. N.E. Yola, is particularly deserving of notice as the principal mart for ivory in this part of Africa.

FATSAN, or FAT-SHAN, a tn. China, prov. and 7 m. S.W. Quangtung or Canton, on an arm of the Canton River. It is said that towards the end of the 17th century it did not yield to Canton in wealth or population. Its decline is probably owing in part to a change in the river, which has left it with a channel only 4 ft. deep. It has still considerable manufactures of silks, cottons, mats, paper, and articles which are sent to Canton for export.

FAVOURITE'S ISLAND, a coral isl. of American Polynesia, in the N. Pacific; lat. $2^{\circ} 50' N.$; lon. $176^{\circ} 40' W.$

FAYETTEVILLE [add.], a tn. U. States, N. Carolina, at the head of navigation of Cape Fear River, 53 m. S. Raleigh. It is one of the largest and most stirring places in the state, contains several turpentine distilleries, cotton factories, and flour-mills; and carries on an active trade, particularly in lumber, tar, and turpentine, the materials of which are furnished by the pine forests covering a large part of the adjoining country. Pop. 4790.

FAZOKLO, or FAZOGLO, a vil. Africa, the most S. of Sennar, l. bank Blue Nile, at the foot of the mountain of same name; lat. $11^{\circ} 45' N.$; lon. $34^{\circ} 40' E.$ The huts which form the village are shaded by baobabs. It is remarkable as being the most S. point of the possessions of the viceroys of Egypt upon the Blue Nile, though his sovereignty here is merely nominal. Mehemet Ali built here two edifices, which he dignified with the name of palaces, and to which he said he would retreat in case of need. They are both in a ruinous condition. The mountain Fazoklo is the first of any importance met with when ascending the Blue Nile, and gives its name to the province around it. It stretches to the S., and then to the S.S.W., its S. boundary not admitting any precise definition.

FAZOKLO, or FAZOGLO, a prov. Africa, E. Soodan, to the S. of Sennar, l. bank Blue Nile, between lat. 11° and $12^{\circ} N.$, named from the mountain chain which forms its N. boundary; is very undulating, bristling with abrupt heights, and intersected by deep gorges. Its principal stream is the Tomate, which comes from the S., and after winding through the

province, falls into the Blue Nile below the village of Fazoklo. A great number of torrents, dry part of the year, furrow the province in all directions. Gneiss, granite, eurite, mica schist, and sieuite are the prevailing rocks, accompanied with feldspath, on which reposes auriferous alluvium. Gold is

MOUNT FAZOKLO, with Pasha's Palace and Village of Fannaka.—From Tremaux, Voyage au Soudan Oriental.

found in the sands everywhere, and has a purity of about 95. Vegetation is very vigorous; extensive and almost impenetrable forests cover the country; in dry places the mimosas prevail, and in moist places may be seen the great *Adansonia digitata*, the tamarind, ebony, *Cassia fistula*, three species of palms, euphorbias, and the bamboo, which forms thickets. The soil likewise produces many liliaceous, cucurbitaceous, and gramineous plants, but no wheat, and legumes, more especially haricots. The negroes cultivate only a little tobacco and maize. The fauna includes the elephant, rhinoceros, hippopotamos, lion, panther, and a kind of very ferocious hyæna, but few horned animals. The sheep have a short kind of wool, resembling hair, disposed over the body in patches of various shades of colour. Birds are numerous, and include the stork, the tailless eagle, the sacred ibis, the black ibis, and many grain-eating birds with rich plumage. The chief insect is the white ant, which destroys whatever is left within its reach.

There are three seasons in Fazoklo. Summer begins in February, when the heat attains to about 112° Fah. May comes in with violent storms, and during it there is rain twice or thrice each week, and during the three following months the rains are incessant; they diminish in September. Winter commences in October, and ends in January, during which time the morning is cold, and the afternoon warm. In the twenty-four hours the thermometer varies from 50° to 104° Fah.

The inhabitants are negroes and pagans, and go completely naked. They are called Berta, and their country is sometimes named Dar-Berta. The tribes are divided by the mountains or groups of mountains they inhabit; and they construct their dwellings—round bamboo-huts, covered with straw—in the most inaccessible localities, as a protection against their enemies the Gallas on the south, and the soldiers of the viceroys of Egypt on the north. The chief centres of population are those of the mountains of Cassan, Benchangourou, Singé, Fakaro, and Kamamille. The *mek* or king dwells in Cassan. The Bertas are quiet, abstemious, and live chiefly on fruits. They make a kind of beer of meal, which is both nutritive and intoxicating. They are occupied chiefly in gold-washing, but have also some tanneries for the preparation of hides. The merchants who come to purchase their gold, bring them in exchange salt, millet, cloth, and glass-beads. The Bertas are courageous. They are armed with skin-shields, large daggers, and lances, which they throw with great address; and on the appearance of an enemy they give the alarm by lighting fires on the tops of the hills.

Fazoklo was once an independent state, governed by an elected king, whose conduct was judged each year by a council of notables. During this examination the king remained seated on an ottoman, surrounded by armed men, ready to kill him should he be condemned. This custom was preserved till the reign of Yassin, who was massacred in 1838 by order of his judges. Fazoklo now pays tribute to the viceroy of Egypt, who has the right of appointing and deposing the chiefs of the country.

FEGYVERNEK, a tn. Austrian empire, Hungary, co. Szolnok. It was once a place of some importance, but lost it in consequence of the inroads of the Turks. Tobacco is largely grown in the vicinity. Pop. 3618.

FELD, a vil. N. Arabia, on the S.E. side of the Selma chain, at the junction of the Syrian and a Persian pilgrim route to Mecca. It is the oldest village in the province, and is inhabited by about 150 families, who subsist by gathering fodder, and laying it up in store against the arrival of the pilgrims, to whom they then sell or exchange it.

FESTRITZ, a tn. Austrian empire, duchy Carniola, on a stream of same name in the Wochein Valley, 30 m. N.W. Laybach. Its inhabitants are engaged partly in agriculture and partly in mining coal and iron, and both smelting and manufacturing the latter. Pop. 5000.

FELVINCZ, a tn. Austrian empire, Transylvania, circle and 25 m. S.S.E. Klausenburg, on the Maros. The inhabitants are chiefly employed in agriculture and the rearing of cattle. Pop. 1150.

FERGUS, a vil. British America, Canada West, co. Wellington, on the Grand River, 48 m. W. by N. Toronto; with a Free and a Wesleyan church, two weekly newspapers, and a large trade in flour and lumber. Pop. about 1000.

FERNANDO (SAN), a tn. Chili, prov. Colchagua, cap. dep. of same name, nearly equidistant from the W. base of the Cordilleras and the banks of the Tinguirien, 110 m. S.E. Valparaiso. It occupies a site so injudiciously chosen, as to be exposed to the winter floods; and consists of houses which, though compactly built, have, as well as the streets, a very poor appearance; the former being low and incommodious, and the latter ill paved and tortuous. The two churches are equally wretched, and the three schools are poorly attended. Though exposed to inundation San Fernando is 1410 ft. above sea-level. Pop., including the suburbs, about 12,000.

FERNANDO (SAN), a tn. Mexico, state Coahuila, in a fertile district, near the Rio Grande, 206 m. N. Saltillo. It stands on the Upper Salado, and was once an important military post, but suffered much during the war between Mexico and the U. States, and has never recovered its former prosperity. It still contains about 3000 inhabitants, whose chief employment is agriculture.

FERNEZELY (ALSO, KIS-BANYA, and FELSO), three nearly contiguous places, Austrian empire, Hungary, co. Szathmar, 42 m. E.S.E. Szathmar-Nemethi, near the N. frontiers of Transylvania. They have mineral springs, and mines of silver, copper, and lead, with smelting furnaces and other mining establishments; and an aggregate pop. of 3000.

FEROZABAD [add.], a tn. India, N.W. Provinces, dist. and 24 m. E. Agra. It is of considerable size, surrounded by a wall, and indicates, both from the beautiful remains of splendour within it, and the numerous mounds and shapeless ruins outside, that it must once have been a place of great importance. The present inhabitants live chiefly in cottages thatched with straw. The bazaar is well supplied. Pop. 11,792.

FEROZEPORÉ, a tn. India, N.W. Provinces, dist. Goorgaon, cap. pergunnah of same name, 74 m. S. Delhi. It is surrounded by a tolerably strong wall flanked with towers, and defended by a mud fort, which is mounted with cannon. Within the fort is the nabob's palace, which, though not large, is handsomely built and furnished in the English style. Pop. 7989.

FEROZPOOR [add.], a dist. and tn. India. The DIST., situated in Sirhind, is of very irregular shape, of somewhat indefinite limits, in consequence of several changes which took place after the termination of the Sikh war. Its centre seems to be nearly intersected by the parallel of 31° and the meridian of 75°. Neither its area nor its population can be stated. A great part of the surface is barren or covered with jungle, and not more than one-thirtieth is alleged to be

under cultivation. Evidences of its having once been in a more prosperous state are furnished by several ruined villages and towns, and fine wells now choked with rubbish. The great thing wanted is irrigation, and this might be furnished at comparatively little expense, by cutting a canal of only a mile long, which would convey water from the Sutlej to the Sukri, a dry watercourse or mullah which winds through the district.—The TOWN, cap. of the above dist., situated about 3 m. from l. bank Sutlej, and 50 m. S. by E. Lahore, consists of the town proper and a fort. The town, surrounded by a ditch and a mud wall, had fallen into a state of great decay and general wretchedness, when its occupation by the British completely changed its appearance. For its narrow lanes, in the filthiest state imaginable, and its mean houses huddled together in the most disorderly manner, have been substituted wide and handsome streets, with colonnaded rows of shops and long lines of warehouses. The fort, an irregular structure filled with earth to half the height of the walls, and crowded with mean brick and mud hovels, has also been remodelled and converted into an important British arsenal. On the breaking out of the mutiny some companies of the 45th N.I. nearly succeeded in seizing it, and when frustrated did not decamp till they were permitted, by some mismanagement, to commit much havoc in the town. Pop. about 6000.

FERTILE BELT, THE, a strip of country, British North America, on the N. boundary of the U. States, or between lat. 49° and 51° N. and lon. 95° and 98° W. The country on either side of this singular district is bleak, barren, and unsuitable for the settler; but the Fertile Belt itself is described as a partially wooded region, abounding in lakes and rich pastures. The soil is a rich, deep, vegetable mould, occasionally spreading out into open blooming prairies. But, as the winter endures for upwards of seven months, during which period the rivers and lakes are ice-bound, and the whole country clothed with snow, and as the heat of the summer is equally intense, it may be doubted whether the Fertile Belt will ever attract a steady immigration of European settlers. An attempt was made, however, as early as 1811, by the Earl of Selkirk to colonize a portion of it, and with many vicissitudes the Red River settlement has struggled on, until now its population, including Indian "half breeds," numbers about 6000 souls.

FIERSO, a tn. Austrian Italy, prov. and 12 m. S.W. Rovigo; with several churches, and 3238 inhabitants.

FIFENESS, the extreme E. point of Fifeshire, Scotland, about 2 m. E. by N. Crail. Its elevation above the sea is very slight, and it presents no features of grandeur or sublimity like other headlands. A reef, called the Carr Rocks, projects from it into the German Ocean, and has been the occasion of numerous shipwrecks.

FILLYO, a tn. Western Africa, Songhay country, 240 m. S.E. Timbuctoo, in a beautiful and fertile district. It consists of several detached groups of houses, built of clay, with elevated tower-like entrances, which give the whole place a castellated appearance. The vicinity has a rich embellishment of trees, and the surrounding fields bear heavy crops of corn. The inhabitants, almost all Songhay, are nominally subject to the Pullo chief of Jilgodi, but have an independent demeanour, and evidently detest the Fellatah yoke.

FILLMORE, a tn. U. States, Utah, of which it is the capital, about 150 m. almost due S. from the Great Slave Lake. It is inhabited by Mormons, and consists of houses made either of adobe or of fire-burned bricks. The only building of any pretension is the capitol, which is built of rough-hewn red sandstone in the form of a Greek cross, with a cupola of 60 ft. in diameter in its centre. The beautiful and commanding site of Fillmore, at the height of 5000 ft. above the sea, and at the foot of the main Wahsatch range, not seeming to compensate for its distance from the north and more populous district of the territory, the Mormon legislature in 1856 passed an act, removing the seat of government from it to Salt Lake City. In this they exceeded their powers, and Fillmore is still the recognized capital, though as yet it is a very paltry one, its pop. in 1860 being only 715.

FIORIO, a tn. Italy, on the W. shore of the island of Ischia, at the N.W. entrance of the Bay of Naples. It is the largest town on the island, and, though consisting of narrow streets, is clean and well built, with many handsome houses of two stories. On a rocky promontory jutting into the

sea a church and monastery occupy the site of an old castle, of which the crenellated walls still remain. The inhabitants of Ischia are bold and skilful sailors, often venturing in their small boats to Genoa and the coast of Africa. Pop. 6000.

FISHKILL, two places, U. States.—1, A vil. and township, New York, opposite Newburg, on the Hudson River and the Hudson railway. The vil., situated on Fishkill Creek, contains four or five churches and an academy. Pop. of township, 9546.—2, *Fishkill Landing*, a vil. at the mouth of the above-named creek, with several churches, an iron foundry, a machine-shop, some factories, and a number of stores. There is a ferry between it and Newburg. P. 2544.

FITZROY [add.], an isl. near the N.E. coast of Australia, 5 m. N.E. Cape Grafton, is about 5 m. in circuit; its surface is generally high and well wooded, with two peaks, one of which is 861 ft. in height. The rock when exposed is granitic. The prickly calamus palm, pomegranate, and a kind of yam abound upon it.

FLATTERY, a cape, U. States, territory Washington, on the Pacific, the N.W. extremity of the land at the entrance of Juan de Fuca Strait; lat. 48° 24' N.; lon. 124° 43' W. About 12 m. S. of it are the Flattery rocks, which extend some distance outwards, and have a considerable elevation. Upon Tatoosh, off the cape, is a lighthouse.

FLEISSEN, a tn. Austrian empire, Bohemia, circle and 12 m. N.N.W. Eger, on the frontiers of Saxony; with a Protestant church, manufactures of hosiery and calico, paper, cotton, and other mills; and 1500 inhabitants.

FLINDERS, the name of two isls.—1, An isl., the largest of the Furneaux group, situated in the E. entrance of Bass Strait, between the N.E. of Tasmania and the S.E. of Australia. It is about 36 m. long by 21 m. broad, and is traversed by several ridges, one of which, high, barren, and mountainous, presents a bold and abrupt front to the W., but slopes gradually on the E. down to a low sandy beach. The Strzelecki Peaks, forming the culminating points of this ridge, are 2550 ft. above the sea. On the W. the island is fronted by several small islands, under the lee of which shelter from westerly winds may be obtained. On the E. the shore forms nearly a straight line of sandy beach for about 19 m., and then becomes diversified by three remarkable peaks, called the Patriarchs, which rise from the low sandy shore, and are detached by a similar sandy plain from the high barren mountains on the W. Off the E. extremity of the island, and in the vicinity of the loftiest of these peaks, lie the Babel Isles, so named by Captain Flinders, from the discordant and various notes of the innumerable birds frequenting them.—2, An isl. off the coast of S. Australia, about lat. 34° S.; lon. 134° E. It is the largest and most central of the Investigator group, and is nearly in the form of a square, each side measuring from 3 to 5 m., with rocks projecting from the intermediate points. When Flinders visited it it was frequented by hairy seals, sooty petrels, and small kangaroos. The only good anchorage is on the N.

FLINT, a tn. U. States, Michigan, cap. co. Genesee, 48 m. N.W. Detroit, on the line of railway from Port Huron to Grand Haven. It stands in a fertile district, is the seat of the Michigan asylum for the deaf, dumb, and blind; possesses abundance of water-power, and carries on an active trade. Pop. 2950.

FLINT, a river, U. States, rises in the W. part of Georgia, near Fayetteville, flows S., and at the S.W. extremity of the state unites with the Challohoochee in forming the Appalachicola. Its whole course is about 300 m., of which a large portion is navigable.

FLINT, an island in the Pacific Ocean, S.W. of the Marquesas Islands; lat. 11° 26' S.; lon. 151° 48' W.; is a narrow strip of coral about 1½ m. long, surrounded with breakers, which render it almost impossible for a boat to land. It was discovered in 1801.

FLORES, ENDEH, or MANGERAI [add.], an isl. Indian Archipelago, forming one of the volcanic group stretching eastward from Java; bounded N. by the Java Sea, S. the Indian Ocean, E. the Strait of Flores, which separates it from the islands of Adenara and Solor, and W. by the Strait of Mangerai or Mangerye, which separates it from the island of Komodo; lat. 8° 3' to 9° 59' S.; lon. 119° 40' to 123° 1' E.; 240 m. long, by 20 m. to 40 m. broad; area about 4035 geo. sq. m. The N.E. point is named Cape Flores. On the E.

SUPP. IMP. GAZ.—VOL. I.

and W. coast there are good harbours for large vessels. On the S. coast are volcanoes; and on the E. side of the island is the peak of Lobetabi, 7117 ft. high, in the vicinity of which dwells a tribe very inimical to Europeans. There are likewise other lofty mountains, as Romba or Goonong Keo, also a volcano, 9159 ft. high; Goonong Rokka, 6555 ft.; and the peak of Larantooka, 5091 ft. high; and others. The interior of the island is not well known. It is mountainous, well wooded, and not unfruitful, and has warm springs. Among the products are buffaloes, oxen, goats, swine, dogs, fowls, tortoises, and birds'-nests; sapan and sandal wood, maize, rice, wild cinnamon, and a small quantity of the best cotton in the archipelago; sulphur, pumice-stone, copper, some gold and iron, and on the coast amber. The inhabitants, estimated to number 250,000, are of Malay extraction, but, unlike other Malays, build their houses on the ground, in place of elevating them upon posts. From Celebes vessels arrive annually in February and March, laden with gold, ivory, common earthenware, native cloths, &c., and take back in August and September birds'-nests, cordage, and oil. In former times slaves were exported from Mangerai, and were much sought after. The principal places of trade are Mangerai in the N., and Endeh in the S. coast. Since August 6, 1851, in consequence of a treaty then concluded, the whole island belongs to the Dutch, though the Portuguese claim some portions of it, and possess a fort on the E. coast at Larantooka, where some of the natives are Christians.

FLUSHING, a vil. U. States, New York, at the head of a bay opening into Long Island Sound. It contains ten churches, and several schools and seminaries, and is surrounded by extensive nurseries and gardens, which attract numerous visitors from New York, the distance being only 8 m., and the communication constant by steamer or rail.

FOGHA, a valley, Western Africa, prov. Kebbi, about 125 m. S.W. Sokoto. It is bordered on the E. by a hilly chain, separating it from another valley in Mauri, is partly occupied by a backwater of the Niger, so devoid of current that it seems almost stagnant, and where widest has a breadth of about 1000 yards. The sloping banks of the valley are adorned with a profusion of doum-palm, and the flat below is clothed with rank grass. The ground is so strongly impregnated with saline particles, that a good deal of salt is manufactured by the simple process of putting the earth into funnels made of straw and reeds, pouring water over it, boiling the liquid thus obtained, and forming the sediment into the shape of a small loaf. The inhabitants, who are of the Fulbe or Fellatah race, suffer much from the incessant warfare waged against them by the Dendi.

FOKSHANI, or FOKSICIANI [add.], a tn. Turkey in Europe, 45 m. W.N.W. Galatz, on the Milkov, an affluent of the Sereth, which divides it into two parts, one of which is in Moldavia and the other in Walachia. The part in Moldavia is the seat of a civil and a criminal court, possesses a normal school, carries on an active trade with Galatz, particularly in corn, and has a pop. of 20,000, while that of the Walachian portion does not exceed 3000.

FOKTU, a tn. Austrian empire, Hungary, co. Pesth-Solt, 9 m. W. Kalocsa; with a beautiful archiepiscopal summer residence, and 3064 inhabitants, who are nearly equally divided between Protestants and R. Catholics.

FOLTITCHENI, a tn. Turkey in Europe, Moldavia, cap. circle Sucezawa, on the Samosch, near the frontiers of Bukowina, 68 m. W.N.W. Jassy. It is the seat of a civil and criminal court, possesses a normal school, has an important annual fair, and carries on an active trade, particularly in cattle. Pop. 3000.

FOND DU LAC, a tn. U. States, Wisconsin, cap. co. of same name, at the S. end of Lake Winnebago, and on the Chicago, St. Paul, and Fond du Lac, and on the Milwaukee and Fond du Lac railways, 60 m. N.E. Madison. It is pleasantly situated on a wooded slope descending towards the lake, and possesses eight churches, a steam woollen factory, several large stores, and a great number of flour and saw-mills. Pop. 5450.

FONTANA FREDDA, a tn. Austrian Italy, prov. Udine, on the railway, 4 m. W. Pordenone. It is memorable for the victory gained in its neighbourhood, on 16th April, 1809, by the Archduke John over the viceroy Eugene Beauharnois. Pop. 3026.

FOO-CHOW [add]. For ten years after this port was open to foreign commerce in 1843, the trade was insignificant compared with what it has become after the second decade of years. At first the native merchants were exceedingly jealous of foreigners, and placed every obstacle in their way to the inland trade. On the occupation of Shanghai by the Taiping rebels in 1853, the tea-men stopped the supply of tea from the Bohea country to that port, where it was shipped, and directed their stocks to be carried down the river Min to Foo-chow, where the foreign ships followed and took in their cargoes. Not only did this traffic continue during the time Shanghai was held by the rebels, a period of eighteen months, but the route was found to be shorter, and hence the trade more profitable, so that it never returned to Shanghai; consequently Foo-chow has become the great outpost for the black tea district. Before that period scarcely a chest of tea appeared on the export list, and now it is the second largest port for the shipment of tea in China. In 1853 the exports did not exceed £43,000, and the imports £46,000. As compared with 1863 there was a very perceptible falling off in

1864 in the tonnage of British vessels in the port, as is thus shown:—

	Arrived.		Departed.	
	vessels.	tonn.	vessels.	tonn.
1863	332	149,726	327	147,663
1864	325	131,123	325	131,541

The decrease is accounted for by a falling off in the paper and tea trade to Tien-tsin, and by the disturbed state of the neighbouring provinces. But both the imports and exports have increased in value.

	Imports.	Exports.
1863	£2,071,107	£3,503,751
1864	2,207,774	3,890,889

The rebel disturbances, however, have so much interfered with trade, and induced the levying of so exorbitant taxes, that commerce is thrown into confusion, and the provisions of the treaty of Tien-tsin have become almost a dead letter in the port. The returns of opium show a decrease, the value of it in 1863 being £1,221,373, and in 1864 £1,086,834. And less tea was exported to Great Britain and Europe in 1864 than previously, but there were increasing demands for it for Australia, which is supplied almost entirely from

Foo chow. The total export of tea in 1864 was valued at £3,711,003, and amounted to 64,967,800 lbs.; in 1863 the totals were £3,230,485, and 61,000,180 lbs.

At this port the weights used are the same as the English pound weight, the picul being 100 lbs. The teas bought chiefly with Mexican dollars, or orders from native bankers upon correspondents in the tea districts; and paper currency is used in the city, representing metallic value equivalent to two, three, four, and five shillings. From the animosity shown, at the opening of the port, by the inhabitants of Foo-chow to the foreigners admitted to trade with them under the sanction of their own government, and the danger of exasperating them by their presence, which in several cases led to outrages, none of the foreign traders have taken up their abode within the walls of the city. The only foreigner resident there is the British consul, who deemed it a matter of policy to maintain the prestige of his country at all hazards. All the other foreign residents live in the suburbs. The total foreign population in 1864 was 129, of whom 89 were British. There were 30 mercantile houses, 13 sundries, 3 missionary establishments, 8 consulates and consular agents, 7 pilots, 27 insurance agencies, and a branch of the imperial maritime customs, with 16 British, 3 French, and 2 German officials. The Taoutai, or head mandarin of the city, is the superintendent of trade.—(Williams' *Chinese Commercial Guide; China Directory, 1864; Chinese Customs Returns.*)

FOO-CHOO, or **FU-CHU**, a bay and tn. China, in the Gulf of Leao-tong, on the W. coast of the peninsula of the Regent's Sword; lat. (of town), 39° 40' N.; lon. 121° 50' E. The BAY, which is the next inlet N. of Hulu Shan, is formed on the S. W.

by a promontory, which terminates in a projecting reef. This avoided, excellent anchorage is found to the N.E. in 5 fathoms water, with an isl. in front, which, from its appearance, has received the name of Flat Top. The land on the N. side of the bay is of singular formation, bearing so strong a resemblance to extensive fortifications, that it is difficult at first sight to believe it to be natural.—The town, situated on a river a little above its mouth in the bay, is said to command no trade except in coal, which is worked in its vicinity, and exported both in its natural state and in the form of manufactured fuel.

FOO-KEE-HIEN, a tn. China, l. bank Yang-tze-kiang, near the N.E. frontiers of prov. Sechen. It is a town of the third rank, and possesses considerable literary fame, containing immense numbers of students and lettered men of every grade. Among the most remarkable of its buildings is the Wen-tchang-koun, or temple of literary composition, where the assemblies of the literary corporation are held, and the examinations for degrees take place. Adjoining it is a magnificent garden, in the middle of which rises an octagonal tower of four stories, affording from its summit a fine view of the various quarters of the town, with its embattled walls, the windings of the Yang-tze-kiang, and the surrounding country dotted with villages and farm-houses, and covered with rich and varied vegetation. On one side of the garden a pretty Confucian pagoda stands among large and lofty trees; and on the other side is a range of little cells, in which, during the examinations, the students are shut up with nothing but pens, ink, and paper, to answer the questions put to them.

FORDHAM, a vil. U. States, New York, on the New York and Haerlem railway, 12 m. N.N.E. New York city. It is the seat of St. John's college and St. Joseph's theological seminary, two prominent R. Catholic institutions. The buildings of the college consist mainly of an old country mansion and outhouses, to which from time to time additions have been made. In 1859 it had eighteen professors and tutors, all Jesuits, except three, and was attended by 125 students. The seminary, which has a church attached to it with a tall spire, is an imposing edifice of gray stone. The village contains two or three other churches, and is a favourite summer residence.

FORNO DI ZOLDO, a tn. Austrian Italy, prov. and 14 m. N. Belluno. In the vicinity a seam of coal and a mine of argenteriferous lead are wrought. Pop. 3252.

FORT DES MOINES, a tn. U. States, Iowa, cap. co. Polk, 100 m. W. Iowa city, at the junction of the Des Moines and Racoon, the former of which is being made navigable for steamboats up to the town. It is a flourishing place, having ample water-power, which drives several saw and flour mills, abundance of timber, and a valuable coal-field. Pop. 3965.

FORTEAU, a bay, British America, in the Strait of Belle Isle, on the E. coast of Labrador. It is 4 m. wide at its entrance, between Points Amour and Forteau, and runs N. for 2½ m. between high and green table-lands of sandstone. At its head is a considerable and rapid river of the same name, abounding with salmon, and on the W. side a fine cascade. There is a church, parsonage, and resident clergyman of the Church of England at the settlement. The bay is the best roadstead in the strait, and vessels may anchor anywhere towards its head in 10 to 13 fathoms over sandy bottom. The Jersey merchants have large fishing establishments on its shores. On Amour Point there is a lighthouse in the form of a circular stone tower, faced with brick. It is 109 ft. high, and 155 ft. above the sea, and is visible in clear weather at the distance of 18 m. During fogs signals are made with a fog-whistle.

FORT ELLICE, British America, one of the stations of the Hudson's Bay Company, beautifully situated r. bank Assiniboine, 280 m. above its junction with the Red River of the North; lat. 50° 24' 32" N.; lon. 101° 48' W. It was once a post of considerable importance, being the dépôt of supplies to the Swan River district. In this respect, however, Fort Pelly has been substituted for it, and it has in consequence become only a secondary station. The buildings are constructed of wood, and surrounded by a high picket inclosure. The trade, carried on with the Plain Crees and the Ojibways, consists chiefly in pemmican and dried meat, obtained from them in exchange for European articles.

FORT GARRY, Brit. N. Amer. See **GARRY** in *Supp.*
FORT LEAVENWORTH, a military post, U. States, Kansas, r. bank Missouri, 30 m. above the junction of the Kansas River. It was established in 1827 as a general rendezvous for troops proceeding westward, and as a dépôt for all the forts on the Santa Fé and Oregon routes. For these purposes it is well adapted, as nearly all the great military roads of the territories intersect it. It contains barracks and an hospital for the troops, warehouses, and stabling for 8000 horses and 15,000 mules. Several large farms are cultivated in connection with the fort. The town of Leavenworth is only about 2 m. distant.

FORT MADISON, a tn. U. States, Iowa, cap. co. Lee, on the Mississippi, 12 m. above the lower rapids. It occupies the site of a frontier fort, which was erected in 1808 for defence against the Indians, and was burned down in 1813 when the garrison was obliged to evacuate it. The present town is well built, with a good proportion of brick houses, and possesses a substantial courthouse, half a dozen churches, and a state penitentiary. Its manufactures are rapidly increasing in importance, and its favourable position as a shipping point for the lumber, grain, and pork of the surrounding districts, has already given it an extensive trade. Pop. 2886.

FORT RILEY, a military post, U. States, Kansas, at the junction of the Republican and Smoky Hill forks of Kansas River. It is situated on the great emigrant route to New Mexico and California, about 140 m. from Fort Leavenworth, with which it is connected by an excellent military road. Its stone barracks are sufficient for eight companies of

infantry, and large accommodation has also been provided for cavalry.

FORT WAYNE, a tn. U. States, Indiana, cap. co. Allen, at the confluence of the St. Mary and St. Joseph, which here form the Maumee, on the Wabash and Erie canal, 105 m. N.N.E. Indianapolis. It stands in a beautiful and well-cultivated district, possesses fifteen churches, one of them a R. Catholic cathedral, and a German female school under the charge of nuns; and carries on an active trade. It occupies the site of Twightwel, an old village of the Miami Indians, who were removed W. of the Mississippi in 1841, and, though thus of comparatively recent origin, it contained in 1860 10,388 inhabitants.

FORT WILLIAM, British America, a station or settlement of the Hudson's Bay Company, on the N. or left bank of the Kaministiquia, at its mouth, on the W. shore of Lake Superior. It consists of a small fort sufficiently strong to resist any Indian attack, and a garden, formed of soil brought from some distance, and having an area of about an acre and three-quarters. Opposite to the fort is a large island formed by the middle channel of the Kaministiquia. This island, once almost covered with wood, chiefly tamarack, was gradually cleared to a great extent for fuel; and, where not again covered by a second growth, is partly occupied as the site of an Ojibway village, and partly as pasture ground, grazed by a herd of cows belonging to the company, which swim across the river, a distance of 400 ft., twice every day, when passing to and fro between the island and the farmyard in the vicinity of the fort.—(*Hind.*)

FOTH, a tn. Austrian empire, Hungary, co. and 12 m. N.N.E. Pesth, not far from the railway; with a handsome R. Catholic church, and a beautiful castle with a fine park; and 2000 inhabitants, mostly Protestants.

FOTSHA, a tn. Turkey in Europe, Herzegovina, at the confluence of the Shiotna with the Drin, 22 m. S.E. Bosna Serai. It is beautifully situated, contains twelve mosques, and is celebrated for its knives and sword cutlery, which in excellence vie with those of Constantinople. Pop. from 10,000 to 12,000.

FOVEAUX, a strait, New Zealand, separating the Middle or Munster Island from the South or Stewart Island. It extends for 30 m. in a W.N.W. and E.S.E. direction, from the N.W. end of Stewart Island to the island of Ruapuki, which lies in its E. entrance, is generally about 15 m. wide, and has a depth of 15 to 28 fathoms over a sandy bottom. The approach from the eastward is rendered somewhat formidable, both by the position of Ruapuki, and the islets, reefs, and tide rippings which surround it in almost every direction. The danger, however, from the island is less than it seems, as there is a clear channel on each side of it with not less than 12 fathoms water. After the island is passed the N. shore presents new dangers, as it is studded with islets and reefs, some of them extending 8 m. from the coast, and not always visible. Even here, too, the dangers are more apparent than real, as there always remains a clear navigating width of not less than 10 m. The greatest difficulty in navigating Foveaux Strait is the boisterous weather which is almost invariably met with. S.W. but more frequently N.W. gales blow with more or less violence, and without regard to seasons, throughout the whole year, frequently continuing without intermission for many days, and then lulling for a few hours only to return with renewed violence. Hence vessels passing westward through the strait are sometimes weeks in getting round the S.W. extremity of the Middle Island. Even when there it may only be to encounter a new difficulty arising from a strong current, which, should the wind fall or prove unfavourable, may have the effect of driving them back again within the strait. For these reasons the passage of the strait from the E. is not to be recommended to any but steam vessels; it is otherwise with the passage from the W., as a slant wind, S.W. or N.W., may always be calculated upon.

FRAMPTON, a vil. British America, Canada East, co. Dorchester, 33 m. S. by E. Quebec; with a Protestant and a R. Catholic church, several schools, and an extensive trade in pork, butter, and cattle. Pop. 1000.

FRANCE [add.] The material prosperity and progress of the empire have been greatly augmented by wise legislation and by the commercial enterprise which has been aroused within the last few years. Among the domestic economical

reforms in practice or contemplation, the facilitating the formation of companies upon the 'limited liability' system, and of co-operative societies among the working-classes, will give a great impulse to trading enterprise. Measures of various kinds, affording liberty and encouragement to local as well as general effort, are also promoting the same movement. The good results of the policy of the emperor and the government are shown in the great extent to which commerce has already been increased and developed. For example, the imports rose to £99,200,000 in 1864, exhibiting an increase of £2,160,000 over 1863, of £11,280,000 over 1862; and, allowing for the extraordinary quantity of corn introduced in 1861, in consequence of the bad harvest, an increase of £15,960,000 over 1861. The principal article imported in 1864 was cotton, which amounted to £12,600,000—the value of that imported in 1863 being £10,480,000, and in 1862 £5,040,000; the greatest part of this cotton is purchased direct from Egypt and India. The exports, in like manner, have risen greatly in amount, and prove the influence of the new commercial system. French produce exported in 1861

was of the value of £77,050,400; in 1862, £89,707,240; in 1863, £105,702,360; and in 1864, £116,017,560; showing an increase in the four years of nearly 50 per cent. The augmentation has been chiefly in tissues of various kinds, the following figures contrasting them in the two years 1861 and 1864—

Tissues.	1861.	1864.
	£	£
Silk	13,315,610	15,880,840
Wool	7,519,960	14,197,960
Cotton	2,253,880	3,262,520
Flax or Hemp	594,880	907,680

The commercial relations between France and Britain show a decrease in the imports into France from Britain, in 1864, of £2,200,000, while the exports to Great Britain rose £3,240,000 above the previous year. The 'special commerce' between the two countries in the years 1863 and 1864 is shown in these tables—

IMPORTS INTO FRANCE FROM GREAT BRITAIN.			EXPORTS FROM FRANCE TO GREAT BRITAIN.

1860	2,393,000,000	2,949,000,000	5,342,000,000

Augmentation—Second period over first . . . 37 per cent.
 „ Third period over first . . . 94 „
 „ Third period over second . . . 42 „

The mercantile marine of France, which is still under heavy restrictions, has not advanced equally with its commerce; in the shipping at the ports the French flag has a far less share than foreign flags. This is proved by the follow-

ing return of the entrances to, and the clearances from, French ports, and the proportion of French vessels therein, during the three years 1862, 1863, and 1864:—

VESSELS ENTERED FRENCH PORTS.

Year.	No. of Vessels.	Tonnage.	French Vessels.	Tonnage.
1862	28,822	4,566,673	12,374	1,907,897
1863	28,821	4,560,795	12,038	1,919,301
1864	28,400	4,662,791	11,880	1,952,093

VESSELS CLEARED FROM FRENCH PORTS.

Year.	No. of Vessels.	Tonnage.	French Vessels.	Tonnage.
1862	19,205	3,005,969	8,201	1,445,872
1863	20,407	3,171,678	8,771	1,327,205
1864	20,261	3,230,088	8,717	1,506,435

Revenue and Expenditure, &c.—In 1860 the total revenue of the empire amounted to £78,487,944, and the expenditure to £83,363,654. The estimated revenue for 1865 was £85,521,763, and the expenditure, £85,336,353; and for 1866, £83,391,684, and £83,245,504 respectively. The budgets now distinguish the income under three heads—ordinary, extraordinary, and special, and similarly with the expenditure; and as they are rated at different times, it is difficult to arrive at the actual condition of French finance. The cost of recent wars and warlike operations has been semi-officially set down thus:—Crimean war, £53,920,000; Italian,

£13,800,000; Chinese, £6,640,000; occupation of Rome, £2,000,000; occupation of Syria, £1,120,000; Mexican expedition, £10,800,000; supplementary expenses, £3,560,000; making a total of £91,840,000. The nominal amount of the public debt of France was, in 1851, £213,825,494; in 1861, £421,154,658; in 1862, £450,963,134; in 1863, £524,109,378; and in 1866, £608,343,196. The annual interest payable on the debt was £26,134,407 in 1865.

Population, &c.—The following figures show the number of the population of France, according to the census of 1861, and the five which preceded it:—

Year of Census.	Population.	Increase in Five Years.	Annual Increase per cent.
1836 . . .	33,540,910
1841 . . .	34,230,178	689,269	0.41
1846 . . .	35,400,486	1,170,308	0.68
1851 . . .	35,783,170	382,684	0.22
1856 . . .	36,139,364	356,194	0.20
1861 . . .	36,717,254	577,890	0.32

But to arrive at the exact amount of the population in 1861, must be added that of the three departments annexed to the empire after the Italian war. These three new departments contained, according to the census of 1861—Alpes Maritimes, 194,578; Savoie, 275,039; and Haute Savoie, 267,496; total, 737,113; from which must be deducted 68,054 for the district of Grasse, detached from the department of Var, and incorporated with Nice, to form the new department of Alpes Maritimes. With this net addition, the total population of France was 37,386,313 in the eighty-nine departments. In twenty-one departments the population was numerically less in 1861 than twenty-five years previously; in twenty-three it had gradually increased; and in the remaining forty-two it had fluctuated, sometimes rising and sometimes falling; but finally, in 1861, being higher than in 1836. The continuous increase took place in those departments which contain the largest or principal manufacturing cities—the rural population being progressively absorbed by the towns; the urban population of places of above 2000 inhabitants having increased 23 per cent., while the rural has diminished 0.60 per cent. between the years 1846–1861. The 37,510 communes into which the departments are subdivided, contained, in 1861, 7,632,938 houses, classed as follows:—

Houses having only a Ground Floor	4,573,424
„ a Ground Floor and One Story	2,209,267
„ „ Two Stories	560,682
„ „ Three Stories	138,436
„ „ Four Stories	34,981
„ „ more than Four Stories	26,198

Of these houses, 19.45 per cent. were roofed with thatch or shingles; but there was some improvement in this respect, the proportion of thatched dwellings in 1856 having been above 20 per cent. In 1861, 497,061 foreigners were domiciled in France, viz.:—

Belgians	204,139	Swiss	37,749
Germans	84,958	English	25,711
Italians	70,539	Poles	7,357
Spaniards	35,023	Americans	5,020

the remainder being made up of a number of other nationalities. Of the whole French population there were only 3,883,579 persons not living in the departments in which they were born; and the total number of French subjects settled abroad amounted to no more than 316,582. These figures exclude Algeria and other French colonies.

The classification of the people according to their professions and social position is shown in the following table, which embraces the heads of families, with their wives, children, and dependants:—

Class or Employment.	Males.	Females.	Total.
Agriculture	9,918,838	9,954,655	19,873,493
Manufactures	5,524,880	5,475,147	11,000,027
Commerce	745,219	792,657	1,537,876
Professions in connection with the above three	78,433	69,733	148,166
Other Employments	77,957	95,404	173,361
Liberal Professions	960,601	589,398	1,549,999
Clergy	79,554	124,893	204,477
Professions not specified	1,259,764	1,639,150	2,898,914
Total	18,645,276	18,741,037	37,386,313

As nothing contributes more effectually to a true appreciation of the condition of a country than a knowledge of the elements of which its population is composed, particulars are subjoined of the various classes supported by agriculture and manufactures. From them it will be seen that France is an eminently agricultural country, more than one-half of its inhabitants deriving subsistence from agricultural pursuits, while in England the proportion does not exceed one-fourth, and on the Continent fluctuates between 30 and 40 per cent. Of those living by agriculture, it will be remarked that more than one-half are proprietors, cultivating their own estates; and about 900,000 of those given above as of 'profession not specified' should be added to this class, as they live upon the produce of their own lands, which are farmed out.

	Males.	Females.	Total.
<i>Agricultural Population.</i>			
Proprietors living upon and cultivating their own Estates	4,530,478	4,557,534	9,088,012
Proprietors whose Estates are managed by Agents	118,373	104,027	222,400
Farmers paying Yearly Rent	1,568,260	1,495,520	3,063,780
Tenants paying part of Produce Day and other Labourers	747,550	732,343	1,479,893

Total	5,524,880	5,475,147	11,000,027

FRANCISCO (SAN), [add.], a tn. U. States, California, cap. co. of same name, on the N.E. corner of a peninsula, which lies between the bay of same name and the Pacific Ocean, in lat. 37° 46' N.; lon. 122° 23' W. It stands on the E. slope of some high hills facing the bay, on a bleak tract, with no trees, and little fertile ground within a distance of 20 m., and is built chiefly in an amphitheatre, formed by Telegraph Hill (294 ft. high) on the N.E., Roncon Hill (120 ft.) on the S.E., and Russian Hill (360 ft.) on the W. The streets are straight, and, intersecting each other at right angles, divide the town into a number of nearly equal square blocks. In addition to the streets are twelve squares reserved for public use, but only one of them, called the Plaza, or Portsmouth Square, can yet be considered ornamental. The busiest streets have a pavement of what are called cobblestones, but the others, both in the carriage way and on the side paths, are only flanked with fir deals, from 2 to 3 inches thick. The town is lighted with gas made from imported coal; water is brought by two aqueducts, one from the distance of five, and the other from the distance of twenty miles. Of the houses, which in 1860 numbered 10,123, 8603 were of wood, 1461 of brick, 47 of iron, 6 of adobe, and 6 of stone. One of the last was built of granite, quarried and cut in China. The principal public buildings are the custom-house, erected at an expense of £160,000; the city-hall, originally built as a theatre, and purchased by the municipality for £50,000; the mint, the marine hospital, three theatres, one of them among the largest and handsomest edifices of the kind in the U. States; 23 churches, of which the R. Catholic are the

most numerous, and apparently the most flourishing, as the total number of Protestant communicants is only about 1000; 2 Jewish synagogues, about 26 schools, a convent, 2 orphan asylums, and several hospitals. There is a remarkable preponderance in the number of grog shops, which amount to 800, while the groceries are only 373. Horse railroads have been constructed through most of the streets, which have extensive traffic. The city contains (1865) 13 foundries and machine shops, employing more than 2000 hands; glass-works, 2 sugar refineries, 9 flour and 4 saw mills, 2 woollen-mills, 2 mills for cleaning rice, chemical works for the production of nitric and sulphuric acid, a rope-walk, 4 savings-banks, 7 fire insurance offices, besides agencies for foreign companies, and agencies for foreign life offices. Real property has improved greatly, and rents have risen in proportion, dwellings of six to ten rooms letting for £200 to £400 per annum. The U. States branch mint coined in 1864, \$15,917,640 in gold, and \$365,300 in silver. The export of treasure in 1864 was as follows:—

To New York,	£2,463,225
„ England,	6,887,300
„ China,	1,577,775
„ Panama,	75,750
„ Other Countries,	187,400
Total,	£11,141,450

The exports, other than treasure, amounted in the same year to £2,644,265. The value of the imports, which consist of a great variety of articles of consumption—butter, candles, soap, boots and shoes, coal, nails, timber, &c.—cannot be stated. The number of vessels that arrived in the port in 1864 was 2096, of 739,124 tons; and of those that departed, 2166 of 810,859 tons. Of those arrived 81 were British ships, of 49,702 tons. Six ocean steamers, most of them measuring 2000 tons or more, sail regularly between San Francisco and Panama, leaving each port thrice a month. Other steamers maintain communication with Portland, Victoria, Olympia, Mazatlan, and São Pedro. San Francisco, previously known as Yerba Buena, assumed its present name on 30th Jan. 1847. A month later, when a census was taken, the population was only 459. In the spring of 1848 gold was discovered, and a rush took place, which had raised the pop. in 1852 to 34,870. The fires which have occurred in the town have been so frequent and so destructive that between Dec. 24, 1849, and June 22, 1851, five are counted, which occasioned an aggregate loss of £3,200,000. The preponderance of wooden houses in the town accounts in part for these conflagrations, but it would seem that they are also attributable in part to mismanagement on the part of the municipal authorities; unfortunately not confined to police regulations, but extending to all the branches of administration, and productive of so much insecurity to life and property, that in 1851 and 1856 the citizens took the law into their own hands, and appointed vigilance committees, which proceeded to exercise all the powers of government, apprehending alleged criminals, bringing them to trial, and in some cases not only passing sentence of death, but carrying it into execution. The census of 1860 gave a pop. of 56,805, but the actual number is estimated at 70,000, of whom about 40,000 are Americans, 12,000 Irish, 5000 Germans, 4000 British, 3000 French, and 2000 Chinese. Many of the last are professedly R. Catholics, and have a native priest of their own, who was educated at Rome. One remarkable feature in the population is the preponderance of males, there being about three adult men to one adult woman.

FRANKENFELS, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, 50 m. S.W. Vienna. It is an ancient place, supposed to have been founded by Charlemagne; and has ironworks and four saw-mills.

FRANKLIN, two places, U. States.—1, A tn. and port of entry, Louisiana, on the r. bank of the Bayou Teche, 95 m. W. by S. New Orleans. Being accessible by large steamboats, it has been the shipping point for large quantities of cotton, sugar, and maize. Pop. 1400.—2, A vil. Indiana. cap. co. Johnson, on Young's Creek, 20 m. S.S.E. Indianapolis, and on the Madison and Indianapolis, and the Martinsville railways. It contains county buildings, five or six churches, a Baptist college under the name of the Baptist Manual Labour Institute, and a large seminary. Pop. 2367.

FRASER, or **TACOUTCHE-TESSÉ** [add.], a river, British North America, rising in the Rocky Mountains, in lat. 52° 42' N.; lon. 119° W. It thence descends through an immense valley in a N.W. direction for about 160 m. as far as a spur of the Rocky Mountains, which turns it abruptly to the S. in about lat. 54° 30', inclosing in this sweep or bend the now celebrated gold-fields of Cariboo. The whole area thus inclosed is plentifully intersected by streams, creeks, and rivulets, rising in the gorges of the mountains, and ultimately swelling into considerable tributaries of the Fraser. From Fort St. George the river is navigable by light steamers for 150 m. to Fort Alexandria, in lat. 52° 35' N. Here, the surrounding country is beautifully diversified by hill and dale, grove and plain; the soil is prolific, and yields good crops of grain and vegetables. As the Fraser continues its S.W. course it receives some important affluents, the Loon, the Chilcolin, and the Quesnelle, and, in lat. 50° 10' N., effects a junction with a considerable stream named the Thompson. It now approaches the table-land of British Columbia, marked by wide and open valleys alternating with low fertile hills, and soon arrives at the Cascade range of mountains, through which the mighty river hurls its waters in a series of magnificent falls and rapids, or *cañons*. From Alexandria to Yale, a distance of more than 300 m., the river runs through a remarkable district, the land being formed in terraces, or 'benches,' as they are called, perfectly level and parallel. The lowest, where the valley expands, presents a perfectly flat surface, many miles in extent, and 40 or 50 ft. above the river's bank. The second, 60 or 70 ft. above the lower one, is generally cut out of the mountain side; and the third, 400 or 500 ft. above the last, runs along the inaccessible face of the bluffs overhanging the river. Similar formations are found on the Thompson and other rivers, and on both sides of the streams. In the course of ages a succession of granite rocks have been hollowed out to the depth of 2000 or 3000 ft.; and it is through the chasm thus laboriously formed that the Fraser pours itself—its impetus already excited by a descent of 400 or 500 m. from its mountain source. Fort Yale is next reached, and 16 m. lower, Fort Hope, from which point the river is known as the Lower Fraser, and presents a broad channel to its mouth, where it empties itself into the Gulf of Georgia, just above the boundary line of the United States territory. Its course westward from Fort Hope lies through a pleasant and fertile country. It is navigable 75 m., as far as Fort Hope, and by light steamers 15 m. more, as far as Yale. Above Yale, for a distance of 50 or 60 m., the river passes through mountain gorges in a narrow rushing stream, attaining a velocity of 15 to 20 m. an hour; so that, the river being impassable, the only route for travellers is along the perilous 'trail,' which crosses the precipitous mountains of trap and granite, 2000 to 3000 ft. high, overhanging the river almost perpendicularly. Between June and August the melting of the snow causes the river to rise so rapidly, that it requires a very powerful steamer to stem the current; and at the same time numbers of large uprooted trees are brought down, and, becoming embedded in the shallower places, form dangerous obstructions to the navigation. The stream has a rate of 4 to 7 knots between Hope and Langley, the latter being about 30 m. from the river's mouth, and thence it becomes broad, deep, and placid, the influence of the tide being felt, except during the mouths of the freshets, when it is not perceptible much beyond New Westminster, the cap. of Columbia. The rise of the river at these times is from 14 to 25 ft., and the banks for 70 m. from its mouth being low in many places, are liable to be flooded in the spring and summer, but the land is nevertheless very fertile, and produces abundance of fine hay grass. At New Westminster the r. bank rises and forms an admirable position for the town. The land adjacent to the river is clothed with masses of foliage, with lofty fir and pine, while the wild apple-tree, the white and black thorn, the vine and soft maple, and deciduous bushes of every variety, form the massive undergrowth. The total length of the river is about 580 miles.

FRASERVILLE, a vil. British America, Canada East, co. Temiscouata, r. bank St. Lawrence, 100 m. N.E. Quebec; with a Protestant and a R. Catholic church, several schools, and a large trade in lumber. Pop. about 3000.

FRAYLE MUERTO, a tn. La Plata, Pampas, on the Carcaranal, 150 m. S.E. Cordova. It is the largest and best

place on the whole line of road between Cordova and Rosario, consists of houses which, though only of mud, have an air of elegance about them, and are built with great regularity; it possesses also a market-place, a church, and an excellent post-house.

FRECK, a tn. Austrian empire, Transylvania, circle and 10 m. E.S.E. Hermanstadt, on a height not far from the Aluta; with several fine buildings, a large and beautiful garden, and a paper-mill. Pop. 2610.

FREDERICHSTAED, a tn. West Indies, on a bay on the W. side of the isl. of Santa Cruz or St. Croix, belonging to the group of the Virgin Islands. It is defended by a fort, and has good anchorage in front of it in 5 to 6 fathoms, the bay on which it stands forming a capacious basin of about 5 m. in extent. Pop. 2886.

FREDERICKSBURG [add.], a tn. U. States, Virginia, cap. co. Spottsylvania, on the r. bank of the Rappahannock River, at the head of the tidewater, 55 m. by rail and 65 by road N. Richmond. The town is pleasantly situated in a fertile valley, and has advantages for commerce and manufactures. The railroad from Washington, via Aquia Creek, passes through it, and as the through trains generally stopped at Fredericksburg station for about an hour on each trip, a not inconsiderable chance trade was caused thereby in the immediate locality of the dépôt. A good canal has been constructed from the town to a point on the Rappahannock River, about 40 m. above, by which large quantities of wheat, flour, and tobacco were formerly received for exportation. The river affords extensive water-power, which, however, has not been much used. The hills in the neighbourhood, varying in height from 40 ft. to 100 ft., abound in fine granite and freestone. About thirty years since the prospect of Fredericksburg being a rapidly rising town was very great, but it suddenly stopped in its prosperity, and after standing still for about twenty years it gradually retrograded in its importance. Before the civil war it contained five churches, an orphan asylum, two seminaries, four newspaper offices, and two banks. During the contest it was the scene of fierce contentions, and on Dec. 13, 1862, there was fought here one of the great battles of the war, in which the Federals were defeated. The result was the reduction of Fredericksburg to ruins and desolation. In 1840 its population numbered nearly 4000 souls, and in 1850, ten years after, it had only increased 88 persons; in 1860 it had risen to 5023.

FREDERIKSHAAB, a Danish port, W. coast Greenland, lat. 62° N.; lon. 50° W.; founded in 1742. Its district, bounded S. by that of Julianeshaab, and N. by that of Fiskernæs, is 106 m. long, and contains much talc. The port is roomy and secure, has two entrances, and 8 to 10 fathoms water.

FREIBERG, a tn. Austrian empire, Moravia, circle and 6 m. N.E. Neutitschein, cap. dist. of same name, on the Lubina. It has a Gothic deanery church with a lofty tower, a Piarist college, a gymnasium, a high-school, an asylum for orphan children, extensive manufactures of cloth, two woollen and four yearly markets. Pop. 4414.

FREISTADT, two tns. Austrian empire:—1, Moravia, circle and 20 m. N.E. Hradisch, on a plain bounded by wooded hills. Its inhabitants are chiefly employed in weaving and carrying on a trade in linen. Pop. 1100.—2, Silesia, cap. dist. of same name, on the Oelsa, about 32 m. E. Troppau; with several public offices, a town hospital, a beautiful castle belonging to Count Larisch, manufactures of linen and leather, and three yearly markets. Pop. 1200.

FREISTADTL, a tn. Austrian empire, Hungary, co. Lower Neutra, cap. dist. of same name, l. bank Waag, here crossed by a long wooden bridge, 39 m. N.E. Pressburg. It is the seat of a district court, and has a Franciscan convent with a Gothic church, a fine seat belonging to Count Erdödy, with a collection of coins and natural curiosities; an hospital, a trade in wood and wooden articles, and much-frequented cattle markets. Pop. 6098.

FRIEDEBERG, a tn. Austrian empire, Silesia, prov. and 35 m. N.W. Troppau; with a very old castle, some flax-spinning, and granite quarries. Flax is extensively grown in the vicinity. Pop. 1200.

Frysztak, or FREISTADT, a tn. Austrian empire, Galicia, cap. dist. of same name, circle and 6 m. N.N.E. Jaslo. It was founded by Casimir the Great, and contains 1650 inhabitants, mostly the descendants of German emigrants.

FU-CHU. See Foo-Choo.

FUERTE DE ANDALGALA, a tn. La Plata, prov. and 75 m. N.W. Catamarca, cap. dep. of same name, on a slope near the S.W. extremity of the Sierra de Aconquija. The inhabitants are chiefly employed in the culture of the vine, and the conversion of its produce into wine, brandy, and other liquors, which have a high name, and are in great demand, not only in the province, but in the surrounding countries. The trade is carried on chiefly with Tucuman, from which the returns are rice, woollen and leather articles, maize, and beasts of burden. Copper mines, which promise to be productive, have been opened within the department.

FUGA, a tn. E. Africa, cap. of Usumbarra, near l. bank Pangani, and 37 m. N.W. of the tn. of this name. It stands nearly 4500 ft. above sea-level. It is without walls, and contains about 500 circular huts, of the form common to Africa, from Harar to Timbuctoo. The inhabitants have a strong mixture of Arab blood, and are estimated at 3000.

FULTON, two places, U. States.—1, A vil. Ohio, on the Ohio River, immediately above Cincinnati, of which it is properly a suburb. It possesses several churches, a rolling-mill, a dry-dock, saw-mills, lumber-yards, &c. The chief business is the building of steamboats. Pop. 3224.—2, A vil. Missouri, cap. co. Callaway, 20 m. N.E. Jefferson. It possesses several churches and academies, a state lunatic asylum, and an asylum for the deaf and dumb, and is extensively engaged in the manufacture of earthenware. Pop. 500.

FUMBINA. See ADAMAWA in Supp.

FURED (TISZA), a tn. Austrian empire, Hungary, co. and 46 m. N.E. Szolnok, cap. dist. of same name, near the Theiss; with a court of justice and several public offices, an infirmary, manufactures of excellent Hungarian saddles, and a trade in corn and wine. Pop. 5951.

FUREDABAD, a tn. India, N.W. Provinces, cap. jaghire of same name, called also Bulabgruh, 24 m. S. Delhi, on the route to Muttra. It stands amid groves of tamarind and other trees, forming a pleasing contrast to the barrenness of the surrounding country; is surrounded by a wall, and possesses a bazaar and a large tank. About half a century ago it was famous for the manufacture of bows and arrows.

FUREEDPOOR, a dist. and tn. India, presid. Bengal. The district, between lat. 23° 3' and 24° 5' N.; lon. 89° 30' and 90° 15' E., is bounded N. by Mymensing, E. Dacca, S. Backergunge, and W. Jessore and Pubna; area, 2052 sq. m. The whole district is an alluvial tract, low and swampy in the S. and N.E., but rather more elevated in the N. and N.W. It is watered to overflowing by the Ganges and its tributaries, of which the more important are the Podda, the Konaia or Jabuna, the Dulasseree, and the Barashee or Chundnah. The soil is in general very rich, producing rice in the swampy grounds, and in those not subject to inundation abundant crops of cereals and pulse, sugar (grown to such an extent as to be probably the most important commercial crop), cotton, indigo, and oil-seeds. The manufactures consist chiefly of coarse cottons for home use; and the trade, export, transit, and import, is considerable, a number of wealthy merchants taking an active share in it. Pop. 855,000.

—The town, cap. of the above dist., situated r. bank Ganges, which is here known by the name of the Podda, 112 m. N.E. Calcutta, can hardly be said to have the compactness of a town, and rather consists of a large number of huts scattered thinly over a large extent of garden, orchard, and rice ground. The only buildings of note are those in which the different branches of the civil department are accommodated. Fureedpoor was once a noted resort of river pirates.

FUREEDPOOR, a tn. India, Rohilcund, dist. and 12 m. S.S.E. Bareilly. It stands close to a grove of fine mango-trees, in a flat, fertile, and well-cultivated country, in which much cotton is grown; and has a well-supplied bazaar.

FURRUCKABAD [add.], a dist. and tn. India, N.W. Provinces. The district, between lat. 26° 40' and 27° 43' N.; lon. 78° 57' and 80° 2' E., is bounded N. by Budaon and Shajehanpore, E. Oude, S. Etawah and Cawnpore, and W. Etawah and Mynpoorie; area, 1909 sq. m. It consists generally of a large alluvial flat with a gentle slope S.E., as indicated by its chief streams, the Ganges, Esun, and Rind. The only exception to the general flatness is in the S.W., where part of the ridge or crest occurs which extends along the Doab, and forms part

of the watershed between the Jumna and Ganges. The soil varies much in quality, that along the banks of the Ganges consisting of *kadir*, or marsh land saturated with moisture, but not in such excess as to interfere with its regular cultivation. On land of this description the principal crop is indigo. In other parts of the district the soil is sandy, and so little retentive of moisture that in the dry season nothing but constant irrigation can save the crops from withering away. Where this remedy against drought is not or cannot be applied the country looks dismal. Where neither excessive moisture nor sand prevails the soil is well adapted for general cropping, and produces fine wheat, barley, pulse, maize, sugar-cane, tobacco, and cotton, the last grown only for home consumption. Pop. 854,799.—The town, cap. of the above district, situated nearly 3 m. W. of the Ganges, and 93 m. E.N.E. Agra, is on the whole a handsome town, surrounded by a wall, and containing many good streets and squares, many of them shaded with trees, and clean to a degree seldom witnessed in India. Within the town, on a commanding eminence, is a large mud fort, where the nabob used to reside. The trade is considerable, and many of the wealthiest of the inhabitants have large banking establishments. Such, indeed, was the commercial importance of the place at one period, that it had its own mint, which furnished a large proportion of the coin circulated in the surrounding country. This continued to be issued till 1824. The British cantonment of Futtyghur is situated about 3 m. E. of the town, on the W. bank of the Ganges. Pop. of Furruckabad, 56,300.

FÜRSTENSTEIN, a vil. Prussia, prov. Silesia, gov. and about 32 m. S.W. Breslau, near Freiburg, with a picturesquely situated castle belonging to the counts of Hochberg, containing a collection of paintings and engravings, and a library of 40,000 volumes. The castle was founded in 1148 by Boleslaw IV. of Poland, and belonged to the dukes of Silesia. In 1428–29 it was in the hands of the Hussites, was subsequently several times besieged; and after being in the possession of various proprietors, it fell (1509) into the hands of its present proprietor. Pop. of vil. 300.

FUSI, or FUZI-YAMA, a mountain, Japan, in the S.E. of the island of Nippon, about lat. 35° 37' N.; lon. 138° 48' E. It is in the form of a lofty cone, and has a height estimated at about 12,450 ft. Seen from the entrance to the Bay of Jeddo it presents a very striking appearance, and forms an excellent landmark.

FUTAL (ALT), a tn. Austrian empire, Temesvar Banat, circle and 4 m. S.W. Neusatz, on the Danube; with a beautiful castle and a brewery. Pop. 4642.

FUTEHGUNGE, two places, India, Rohileund, dist. Bareilly:—1, *W. Futehgunge*, a tn. 12 m. N.W. Bareilly, on the route to Moradabad. It stands in an open, level, and well-cultivated country, and is a thriving populous place, with a well-supplied bazaar. It takes its name, meaning "Victory-market," from a victory gained here in 1796, by a British force under Sir Robert Abercrombie over an army of Rohillas. An obelisk, raised in honour of the victors, marks the spot where the battle was fought, and within a stone's throw of it is another monument, in the form of a carved and minaretted tomb, erected by the vanquished over the remains of two of their chiefs who fell in the action.—2, *E. Futehgunge*, situated about 23 m. E. of the former, on the route to Shahjehanpore, near r. bank Bhagul. It stands close to a noble grove of mango-trees, covering from 20 to

30 acres, is surrounded by a ruinous mud wall with two handsome brick gateways, and possesses a well-supplied bazaar; but is on the whole a poor and insignificant place. It owes its existence to Shujah-u-Dowlah, nabob of Oude, who erected it to commemorate a victory which was gained in 1774 by the British over the Rohillas, and made him master of nearly the whole of the Rohilla territory, in consequence of a shameful compact which he had previously concluded with Warren Hastings.

FUTTEHPOOR, a dist. and tn. British India, N.W. Provinces. The district, between lat. 25° 25' and 26° 13' N.; lon. 80° 12' and 81° 23' E., is bounded N.E. by the Ganges, separating it from Oude, E. Allahabad, S.W. the Jumna, and N.W. Cawnpore; area, 1583 sq. m. It lies wholly within the Doab, between the Ganges and Jumna, which receive the whole of the drainage directly or by their tributaries. The surface consists generally of an alluvial flat little raised above the channel of these rivers, and sloping almost imperceptibly towards the S.E. It is cultivated like a garden, and is rich in rural scenery of the most pleasing description. The principal crops are the usual cereals—pulse, sugar-cane, indigo, cotton, and poppy. The chief difficulty with which the cultivator has to contend is frequent and long-continued drought. The great trunk road, and the railway, following nearly the same line of road, from Calcutta to Delhi pass through the district. Pop. 511,132.—The town, cap. of the above dist., situated 48 m. S.S.E. Cawnpore, on the great trunk road and the railway from Calcutta, is a large and thriving place. It contains some good houses, a small but very elegant mosque, a well-supplied bazaar, a courthouse, and other buildings connected with the civil establishment; and a spacious *serai*, or traveller's lodge, consisting of a large inclosure, with two gateways, surmounted by towers not unlike those of a college, and with a cloister or verandah all round. During the sepoj mutiny the rebels gained possession of the town, and kept it till driven out by Havelock, who, on the 12th June, 1857, here achieved the first of his series of famous victories. The railway from Calcutta was opened to this point on 25th March, 1858. Pop. 20,864.

FYZABAD, or BANGLA, a tn. India, Oude, r. bank Gogra, which is here a large and navigable stream, 65 m. E. by S. Lucknow. It stands in the immediate vicinity of ancient Ayodha or Oude, the ruins of which extend for several miles along the bank of the river, and was substituted for it by the first nabob vizier of Oude, Sadut Ali Khan, who in 1730 built a palace here and made it the seat of government. It was embellished and extended by his successors, particularly Shujah-u-Dowlah, who inclosed the fort with a ditch, and strengthened it with a new wall with round towers, and added so many new buildings that the town assumed the appearance of a great capital. Subsequently, however, when his unprincipled compact with Warren Hastings had given him nearly the whole of Rohileund, he removed the seat of government to Lucknow. This event, which took place in 1775, was a fatal blow to Fyzabad, which began immediately to decline. Its wealthy merchants and bankers quitted it at once to follow the court, and its present population, though still estimated at little short of 100,000, consists almost exclusively of the more indigent classes. The only manufactures of any consequence are cloth, metal ware, and arms. The native troops stationed here, consisting of two regiments of N. I., a troop of cavalry, and a detachment of artillery, mutinied on 8th June, 1857.

G.

GABOON, THE [add.], a river, Africa, W. coast, called by the natives M'pongo, flowing into the Gulf of Guinea; lat. 31° 30' N.; lon. 9° 20' 30" E. The territory of the Gaboon (native name Empungwa) extends along the river about 40 m., and along the coast about 30 m. Its inhabitants are a fine race of negroes, who carry on an active trade with Europeans in ivory, copal, ebony, and dye-woods, and sur-

reptitiously, in slaves. The climate is unhealthy. Near the river spread vast and unwholesome swamps, but inland rise some considerable hills, and these are clothed with dense jungle-like woods, the abode of the gorilla. This region has been made better known by the travels of M. du Chaillu, and Mr. Winwood Reade's account of his interesting explorations. A French settlement was established here in 1842, and in the

following year an American mission was founded at Baraka, 8 m. up the river, which still continues in operation.

GABRIEL (SÃO), a tn. Brazil, prov. Rio Grande do Sul, on a commanding height, 190 m. W.S.W. Porto Alegre. It is a modern place of pleasing appearance, consisting of white houses roofed with red tile; and has two small chapels, large barracks for the accommodation of the park of artillery stationed here, an hospital, a house of correction, and a little theatre. The shops are numerous and well supplied, the trade is extensive, and the whole place has a lively prosperous appearance. Pop. about 2000.

GABRIEL CHANNEL, S. America. See **DAWSON ISL.** in *Supp.*

GABROVA, a tn. Turkey in Europe, in the S. of Bulgaria, eyalet and 140 m. S.E. Widin; with three churches, a school, and a pop. of 4000.

GADIATSCHE, a tn. Russia, gov. and 70 m. S.W. Poltava, cap. circle of same name, at the confluence of the Psla and Grunja with the Dnieper. It has five churches, a circle and a parish school, two charitable institutes; and a trade in tobacco, which is largely cultivated in the circle. Pop. 4909.

GAFA, or **CAFA** [add.], a tn. N. Africa, regency and 176 m. S.S.W. Tunis, on a height surrounded on all sides by lofty mountains. It occupies the site of the ancient bulwark of Jugurtha, and consists of wide and clean streets, and houses substantially built of stone. The chief object of interest is the citadel, a remarkable structure, but now in ruins. Two copious thermal springs, which discharge into a basin, furnish the inhabitants with the means of fertilizing the surrounding district. The people also manufacture articles in esparto, white burnouses, and covers famous for the fineness of their texture; and carry on an extensive trade in dates, oil, and wool famous for its whiteness. Pop. about 5000.

GAINESVILLE, a vil. U. States, Alabama, r. bank Tombigbee, 40 m. W.S.W. Tuscaloosa. It is an active place of business, contains several churches, and is the principal point for river shipping in the county. Pop. about 1500.

GALABAT, a prov. Abyssinia, bounded N. by outliers of the Elephant range, E. the Tacazze, and E. and W. the Shimfa; area about 1200 sq. m. It is far more populous than the neighbouring provinces, and has a soil of remarkable fertility, yielding in abundance, wherever irrigation is applied, the products not only of the temperate but also of the tropical zone. The inhabitants, partly Tagruri and partly Arabs and Fungi, employ themselves in agriculture, manufactures, and trade. The agricultural products include, beside grain, cotton, which is grown so largely as to be an important article of export. The manufactures are limited to cotton stuffs and the turning of a great variety of articles in ivory, as small cups, bracelets, finger rings, &c. The trade while Galabat existed as an independent state, long before the Turkish invasion of Soudan, was very important, as it had then almost a monopoly of the traffic with the interior of this part of the African continent. Since then commerce has found new channels, and the trade of Galabat, which in consequence has greatly declined, has little prospect of any extensive revival. Government is administered by a sheikh, a Tagruri, from Darfur. He calls himself independent, but has in fact two masters, the Turks and the Kasa of Tigré, to whom he pays an annual tribute of £800.

GALAMBFALVA (GREAT), a tn. Austrian empire, Transylvania, circle and 11 m. S.W. Udvarhely, 55 m. E.N.E. Hermannstadt; with a Protestant and a Greek non-united church, and 1260 inhabitants.

GALANGUE, a territory, W. Africa, Kimbunda country, between lat. 13° 40' and 14° 30' S.; and lon. 17° and 18° 30' E.; bounded N. by Sambos, E. the Kubango, S. the land of the Nyemba-Ganguella, and W. Kaconda; area about 15,000 sq. m. It forms one of the loftiest plateaux of S. Africa, having an average height of 6000 ft. Its climate is temperate and healthy. The principal rivers are the Kubango, which borders it from N.W. to S.E., forming its boundary in that direction, and the Kunene, which, flowing from N. to S., separates Galangue from Kaconda. The government is in the hands of a prince, who is practically as well as theoretically absolute. Owing to the predatory habits of the people, who frequently take part in the Munano forays, there is not much agriculture; but from the same cause cattle are numerous,

inasmuch as in addition to those reared within the territory large numbers are introduced into it by plunder. The principal articles of trade are cattle and bees'-wax, which find a market at Benguela; some ivory also is obtained from the S. in exchange for slaves. Pop. about 250,000.

GALANJE, a tn. S. Africa, kingdom Moluwa, at a short distance N. of its capital Kabebe, about lat. 7° 30' S.; lon. 27° E. It is a considerable town, but derives most of its importance from being the burying-place of the Muati-janwo, or kings of Moluwa. Instead of one common mausoleum, each deceased monarch is buried in a separate grave of great depth and large dimensions. Over it a building with a lofty straw roof is erected, and the walls of the interior are hung with party-coloured mats. Two slaves are left to watch the body and take care of the grave. This is continued during the whole lifetime of his successor, but the moment he dies his predecessor's grave is closed, and a new one having been prepared the process of watching is resumed. Pop. about 6000.

GALAXIDI, a tn. Greece, nomarch Phthiotes and Phokis, on the W. shore of the Gulf of Salona, or N. arm of the Gulf of Corinth or Lepanto. It has its site on a low peninsula which forms three harbours, and was one of the most important commercial places in Greece previous to the war of independence, during which it was, in 1821, laid in ruins by the Turks. At present it has a civil court, a lazaretto, a custom-house, and a parish school; and contains 4000 inhabitants, engaged in shipping and trade.

GALENA [add.], a tn. U. States, Illinois, cap. co. Jo Daviess, on both sides of the Galena, 3 m. above its junction with the Mississippi, and on the Illinois Central railway, 150 m. W.N.W. Chicago. It occupies a high and healthy site, encircled by cliffs of mountain limestone, which give it a very irregular and picturesque appearance; and is for the most part substantially built of brick, many both of the private dwellings and public edifices being in a good style of architecture. Among the latter are twelve churches, ten public schools attended by 1500 scholars, a seminary, a U. States marine hospital, and a custom-house and post-office, built of stone at an expense of £14,000. The chief industrial establishments are large flour and saw mills driven by steam, two lead furnaces, two iron foundries, a pottery, several breweries, lumber yards, large leather furnishing houses, soap and candle works, and various factories of ploughs, waggons, carriages, and furniture. The great staple of Galena, however, is lead, which is extensively worked both in its vicinity and the surrounding districts. The quantity shipped from 1821 to 1858 was 820,622,839 lbs., or 366,304 tons, and had an estimated value of about six millions and a half sterling. Besides lead Galena annually exports horses, cattle, grain, flour, potatoes, pork, and bacon, to the value of about 160,000. Pop. 8196.

GALESBURG, a tn. U. States, Illinois, at the junction of the Chicago and Burlington, the Northern Cross, and the Peoria and Oquawka railways, 105 m. W.S.W. Chicago. It is well built in wide regular streets, contains a university and two colleges, one of them for females, and possesses a number of hotels, a large foundry and machine shop, and planing, saw, and flour mills. Pop. (1860), 4953.

GALLATIN, a vil. U. States, Tennessee, cap. co. Sumner, on the railway to Bowling-Green, 18 m. N.E. Nashville; contains several churches and schools, and has a pop. of about 1500.

GALLIO, a tn. Austrian Italy, prov. and 24 m. N. Vicenza; with manufactures of straw hats and two tanneries. Tobacco is largely grown in the district. Pop. 2320.

GALLO, an isl. S. America, at the N. entrance of a bay on the S.W. coast of New Granada; lat. 1° 59' N.; lon. 78° 38' 44" W. It is memorable as the spot where Pizarro, when the great body of his followers refused to proceed further, drew a line on the sand, and called upon those prepared to follow him to intimate their determination by stepping across it. Only thirteen did so, and with these he remained while Almagro returned to Panama for reinforcements. Ultimately, however, before these arrived he removed to the island of Gorgona as a more secure and equally eligible position. Immediately N. of Gallo is Caseajal Point, a bold red cliff, forming a striking contrast to the general flatness of the coast.

GALVESTON [add.], a tn. and port of entry, U. States, Texas, cap. co. of same name, at the mouth of a bay at the N.E. extremity of Galveston Island, and on the Galveston, Houston, and Henderson railway. It contains ten churches, two of which, the Episcopal and the R. Catholic, are handsome Gothic structures; a R. Catholic university, an Ursuline convent, an academy, a female seminary, many elegant private houses, and large and commodious stores. The harbour, the best in the state, has 12 feet of water in the bar at low tide, and is well provided with wharves, repairing-docks, building-yards, &c. Previous to the civil war its shipping trade was of considerable extent. The number of vessels entered and cleared for foreign ports in 1858 was 61, carrying 26,373 tons; the coasting trade was still more important. The principal export was cotton, of which above 300,000 bales were shipped in 1859. In December, 1862, it was occupied by a small Federal force, which, however, was surprised and captured on January 1, 1863, by the Confederates. Pop. (1860), 7307, of whom 1178 were slaves.

GAMA, a river, E. Africa, which rising in the Nguru hills, at a distance of about ten days' march from the coast, flows E., draining the countries between the Pangani and the Kingani rivers, and falls into the Indian Ocean near Saadani, opposite to the island of Zanzibar. Its bed is never dry, but a bifurcation a little above its mouth, forming a small delta, subdivides its volume, and thus renders it less fit than it might otherwise have been for navigation.

GAMBIA (THE) [add.], a British colony, W. co. Africa. In 1853 the native territory S. of the isl. of St. Mary, known as British Combo, was annexed to the colony, and has been settled by military pensioners and captured Africans. The tribes in the immediate neighbourhood of the colony are chiefly Mandingos, and are divided into two classes—Marabouts, or strict observers of the law of Mahomet, and Soninkees, who are only nominal Moslems; between the two are constant religious feuds. The export of slaves has been unknown on the Gambia for many years, the prisoners of war being usually retained in slavery by their captors or sold into other parts of the country. In point of unhealthiness the Gambia varies little from the other settlements. There is considerable sickness during and after the rains, but many of the merchants are in the habit of passing the worst months of the year in England. The position of Bathurst, the seat of government, is rendered more unhealthy by the vicinity of an offensive and pestilent swamp, which however might easily be drained. About 150 m. up the river the island of M'Carthy is occupied as an advanced post for the protection of trade in its neighbourhood; but the climate of it is very unfavourable for Europeans. The trade of the colony consists principally of ground-nuts, hides, and wax, ground-nuts being six-sevenths of the whole export; in 1858 the nuts—which are mostly taken to France, and there converted into an oil which is sold as olive-oil—reached the value of £188,000, but in 1864 the value had fallen to £78,000. Cotton is cultivated to some extent recently. Cotton goods, rice, and tobacco are the principal articles received into the colony. In 1863 the imports amounted to £175,965, and the exports to £141,673; and in 1864 the imports were £135,777, and the exports £148,157. The colonial revenue in 1863 amounted to £17,254, derived principally from customs and parliamentary grant; the expenditure was £19,325, chiefly upon civil establishments; and the liabilities of the colony amounted to £5630 on January 1, 1865.

GAMBIER, a vil. U. States, Ohio, beautifully situated on a high ridge nearly surrounded by the Vernon. It is the seat of an Episcopal college, and a theological seminary connected with it. The former consists chiefly of an imposing edifice, built of stone, in the Gothic style, and has five professors, fifty students, and a library of 8720 vols. Pop. 575.

GAMING, a tn. Austrian empire, circle Upper Wienerwald, cap. dist. of same name, 60 m. S.W. Vienna. It has a castle, a ruined church which belonged to a Carthusian monastery, manufactures of leather and waggon-axes, and numerous saw and other mills. There is a petroleum spring in the vicinity. Pop. 2020.

GAMLA KARLEBY, a seaport tn. in Russian Finland, E. coast of Gulf of Bothnia; lat. 63° 43' N.; lon. 23° 15' E. Gamla Karleby is equivalent to Old Charlestown. Pop. in 1856, 2627.

GANANOQUE, a tn. British America, Canada West, co. Leeds, l. bank St. Lawrence, in a district diversified by mountains and lakes, 160 m. E.N.E. Toronto. It possesses four churches—Church of England, Free, Wesleyan, and R. Catholic; a grammar and other schools; and being a port of entry carries on a considerable trade. It has also a large extent of water-power, which has been made available for mills and manufactures. The view obtained here of the Thousand Isles of the St. Lawrence is very fine. Pop. about 1600.

GANDA, a territory, S.W. Africa, Kimbunda country, about lat. 12° 40' to 13° 25' S.; and lon. 14° 40' to 15° 30' E.; bounded N. by Kissandshi, E. and S. by extensive uninhabited forests, and W. by the Makango desert; area about 2100 sq. m. The surface consists mostly of lofty precipitous mountains, inclosing deep valleys, which are watered only by mountain streams, of which the only one of sufficient importance is the Ommate, which, rising in the wilds on the E. frontiers, traverses the territory, and joins the Katumbela. The inhabitants, too predatory in their habits to settle down to any regular employment, can scarcely be said to have any agriculture. Grazing is almost equally neglected, because it is found far easier to steal cattle than to rear them; and hence, when a supply is wanted, the means resorted to is a foray to the far south, where cattle are numerous, and their owners seldom have sufficient courage to defend them. The only live stock which, from being reared on the spot, can be said to have been honestly come by, are swine and poultry. Iron, the only mineral yet known to exist among the mountains, is partially worked. Pop. 30,000, who are under the rule of an absolute prince.

GANDIKO, a tn. Western Africa, prov. Kororofa, l. bank Benuwe, 200 m. above its confluence with the Kwara. It is a Pulo or Fellatah settlement, which is said to have been founded by a Pulo force, chiefly composed of slaves, who were sent to attack Wukari, and failed. Instead of returning, they preferred to remain in the country, intermarried with the Djuku, and founded several towns. Among these, and nearly adjacent to Gandiko, are Gandra and Ibi. The three together may have an aggregate pop. approaching to 2000. The huts of Gandiko are indifferent, and too much huddled together. Those of Gandra and Ibi are less crowded, and have small plots of garden ground attached to them; on their sides and roofs also pumpkins, gourds, and other cucurbitaceæ are trained.

GANDO, a tn. Western Africa, once cap. of an empire of same name, and still the residence of a powerful Pulo prince, 50 m. S.S.W. Sokoto. It stands in a hollow, commanded from all sides by chains of hills, but has a pleasant and animated interior, adorned with various trees, among which the banana is prominent. It is intersected from N. to S. by the broad and shallow bed of a torrent, affording rich pasturage; but it is, on the whole, a very dull place, and owing to the troubled state of the country is harassed by perpetual alarms. The principal manufacture is cotton cloth, particularly cotton strips, of first-rate quality, and, though coarsely dyed, in great demand in adjoining countries. The trade, almost entirely transit, is, in a great measure, confined to a coarse kind of coloured silk, imported from the north, and much used by the natives for adorning their leather-work. Some of the vegetable products are famous, among other the banana, which is grown in considerable quantity, and the onion, which surpasses that of the adjoining districts both in size and quality.

GANDUTAN, a vil. Western Africa, r. bank Kwara, 280 m. W.N.W. Sokoto. It is a slave village, the property of a Tarki chief, and consists of about 200 huts of matting, with two leather tents in the centre. The district is much infested by lions.

GANESPOOR, a tn. India, N.W. Provinces, dist. and 38 m. W. Goruckpore, on the Koyane. It consists of about 200 houses, partly inclosed by an earthen rampart.

GANG, a mining town, Austrian empire, Bohemia, circle and 6 m. N.E. Czaaslau; with a parish church, and mines of silver and arsenic; and 1100 inhabitants.

GANGES, an isl. Pacific Ocean, in what is called American Polynesia; lat. 10° 59' S.; lon. 160° 55' W.

GANGPORE, a petty state, India, between lat. 21° 50' and 22° 37' N.; lon. 83° 31' and 84° 57' E.; and bounded N. by Chota Nagpore, E. native state Bonci, S. native state Samba

and British dist. Sumbulpore, and W. native states Ryghur and Jushpoor; length, E. to W., 90 m.; breadth, 35 m.; area, 2493 sq. m.; revenue about £10,000. The soil is naturally rich, but there is little cultivation, and the greater part of the surface is covered with jungle. The capital, which is of same name, is 250 m. W. by S. Calcutta. Pop. 112,000.

GARAKOTA, a tn. India, territory Saugor and Nerbudda, in the fork formed by the junction of the Sonar and Guddari, 25 m. E. Saugor. It consists of the town proper, which extends from bank to bank between the two rivers, and of a fort, which, situated in the apex of the fork, is washed on two sides, and is inclosed by a deep ditch and two walls, an outer which is 20, and an inner which is 30 ft. high.

GARANY, a tn. Austrian empire, Hungary, co. Zemplen, 12 m. N.E. Salorallya-Ujhely; has a strong castle, provided with bulwarks and two towers; and contains 1000 inhabitants.

GARASPOOR, a tn. India, Scindia's Dominions, 49 m. S.W. Saugor. It is defended by a small fort, and contains some ancient structures, built of the fine sandstone in the vicinity, and elaborately sculptured.

GARDINER [add.], a tn. U. States, Maine, on both sides of the Cobsessecontee, at its junction with the Kennebec, 12 m. below Augusta, and on the Kennebec and Portland railway. It possesses ten churches, a high-school, an almshouse, and a mechanics' institute, and is very largely engaged in manufactures, for which the falls on the Cobsessecontee furnish great advantages. Among the industrial establishments are a pottery, a foundry, a woollen factory, two machine-shops, three tanneries, and two paper, two flour, and six saw-mills. The shipping owned in Gardiner is about 6000 tons, of which a half is employed in the southern and foreign trade. Pop. 4487.

GARNAVILLE, a vil. U. States, Iowa, cap. co. Clayton, 105 m. N. by E. Iowa, on the route from Dubuque to Prairie du Chien. It stands on an elevated, rolling prairie, and there are veins of lead in its vicinity. Pop. 1335.

GARRY, a fort or station, British N. America, Red River Settlement, belonging to the Hudson's Bay Company, is situated a little above the junction of the Assiniboine and Red

down an inclined plane into the cavern behind the Grand Fall. The Rocket Fall is so called, because the water, forced through a series of rocky channels, assumes the form of rockets in its descent. The Dame Blanche sends down its water in snowy flakes of a peculiarly graceful appearance.

GARU, a tn. Western Africa, on an island of same name, in the Kwara, 210 m. W.N.W. Sokoto. The whole bed of the river, which is here from 6 to 8 m. broad, is studded with islands, many of which are large, very fertile, and well peopled. It is a large and important place, with a population roughly estimated at 7000 or 8000.

GARU-N-GHABBES, a tn. Western Africa, Bornou, 195 m. W. Kukawa. It is a middle-sized walled town, with a well-cultivated district, and is of some historical interest from being identical with Biram-ta-gabbes, the oldest place of the seven original settlements of the Hausa nation.

GASPE, a bay, British America, Canada East, on the W. shore of the gulf, near the entrance of the river of St. Lawrence. It is formed on the S. by Peter Point, consisting of low sandstone, covered with the white houses of fishermen; and on the N. by Cape Gaspé, a remarkable headland of limestone, having on its N.E. side a magnificent range of cliffs, which rise to the height of 692 feet. The entrance measured between these two points is about 9 m., and the bay itself, stretching W.N.W. for rather more than 16 m., gradually narrows to the point at its head where it receives the Dartmouth. The only other rivers of any importance which enter it are the York and the St. John, both on the S.W. shore. Gaspé Bay possesses advantages which may hereafter render it one of the most important maritime stations on the E. coast of British America. It contains an excellent outer roadstead off Douglas Town, a harbour at its head capable of holding a numerous fleet in perfect safety, and a basin where the largest ships may be hove down and refitted. The N.E. side of the bay for 5 miles within the cape is covered with fishing establishments, belonging to Jersey merchants, and with the houses of the fishermen; on the opposite shore scenery not deficient in grandeur is presented by a succession of precipitous cliffs of shale and sandstone, rising to the height of 200 feet, while the view inland terminates in a mountain range.

GASTON, a vil. U. States, N. Carolina, l. bank Roanoke, 65 m. N.N.E. Raleigh. It is the terminus of two railways connecting it with Raleigh and Richmond, and is a dépôt for tobacco and wheat.

GASTORF, a tn. Austrian empire, Bohemia, circle and 10 m. from Leitmeritz, on the Obertka; with a parish church, an hospital, a townhouse, a paper-mill, and a trade in corn; and 1100 inhabitants.

GATTENDORF, a town, Austrian empire, Hungary, co. Wieselburg, about 5 m. S. Pressburg; with a fine mansion in an English park, and a trade in corn and sheep. Pop. 1270.

GAURION, a tn. Greece, nomarch Cyclades, on the N.W. shore of the island; and 11 m. W.N.W. the town of Andro. It possesses a large and excellent harbour, sheltered from all winds except the west. Pop. 950.

GAYRING, a tn. Austrian empire, Hungary, co. and 20 m. N.N.W. Pressburg; with 3603 inhabitants, who trade in fish, wood, and cattle.

GAZAWA, a tn. Western Africa, 90 m. N. by W. Kano, cap. of a territory dependent on Maradi. It is inclosed by a strong stockade and a deep ditch, and is nearly in the form of a regular quadrangle, with a gate on each side. These defences are rendered necessary by its position on the frontier, where Islamism ends and paganism begins. The fanatical Mahometans are constantly attacking it. Owing to this cause manufactures and cultivation are much neglected, and the breeding of sheep and cattle constitutes the chief employment.

GDOW, a tn. Austrian empire, Galicia, circle Bochnia, on the Raba, 12 m. S.E. Cracow; with a parish church, with an ancient altar-piece. The Cracow insurgents were defeated here by the Austrians in 1846. Pop. 1200.

GEBY [add.], an isl. Indian Archipelago, situated in the Gilolo passage, on the equator, between the Molucca island Gilolo and the Papuan island Waigu. It is long and narrow, stretching about 20 m. from S.E. to N.W. Its surface

FORT GARRY, RED RIVER SETTLEMENT.—From Hind's Canadian Exploring Expeditions.

rivers, on the N. bank of the former. The fort, the name of which is frequently used for the settlement generally, consists of a square inclosure of high stone walls flanked at each angle by round towers. Within this are several substantial wooden buildings; the governor's residence, the jail, and the storehouses for the Company's furs and goods. It was established in 1811.

GARSEPPA, **GURSUPPA**, or **GAIRSOPPA**, an ancient but deserted town, India, presid. Madras, dist. N. Canara, 16 m. E.S.E. Honawar, is now deserving of notice only on account of the magnificent falls which bear its name, and are formed in its vicinity by the Sherravutty. The river immediately above, dividing into several branches, forms four distinct falls, which have received the respective names of the Grand Fall, the Roarer, the Rocket Fall, and the Dame Blanche. The Grand Fall is a perpendicular plunge of 880 feet, over a ledge of rock cavernous underneath. The Roarer rushes

is generally hilly, but not elevated, the highest point not exceeding 500 feet. The cultivated products are rice, cocoa and sago palms, yams, and bananas. The natives, mostly Papuans, but subject to Molucca settlers, who form the dominant class, are chiefly employed in the fishing of trepan and pearl oysters. Between Geby and the islet Pow, at its S.W. extremity, there is a harbour sheltered from all winds, with sufficient depth and good anchorage for a ship of the line.

GEMUSH-KHANEH, a tn. Turkey in Asia, prov. and 30 m. N.N.W. Erzeroum. It owes its name, which means the 'house of silver,' to a mine of argentiferous lead which has long been worked in its vicinity. Pop. estimated at 8000.

GENESEEE, a river, U. States, New York. It rises in Pennsylvania, near the frontiers of New York, flows N.W. and N.E., and enters Lake Ontario about 7 m. N. Rochester, after a course of nearly 150 m. In the earlier part of its course there are three falls of 60, 90, and 110 ft. high respectively, and for above 2 m. it passes between perpendicular rocks nearly 400 ft. high. At Rochester, and also near its mouth, there are other falls of about 100 ft. high.

GENESEEE FALLS, formerly PORTAGEVILLE, a vil. U. States, New York, 50 m. E.S.E. Buffalo, on the Genesee River, which is here crossed by the New York City railroad, on a bridge 234 ft. high, and by the Genesee Valley canal. It has several churches, and is much visited for its scenery, the river here being bordered by precipitous heights, and having several picturesque falls. Pop. 1020.

GENESEEO, a vil. U. States, New York, 25 m. S.S.W. Rochester, on the Genesee River; with several churches, schools, and banks, and a large academy. Pop. 1600.

GENEVA [add.], a vil. U. States, New York, at the N.W. extremity of Lake Seneca, and on the Auburn and Canandaigua railway, 200 m. W. Albany. It commands a fine view of the lake and the surrounding country, is well built, the principal street stretching along a height above the lake, and containing many handsome residences, with fine gardens sloping down towards the shore. The principal buildings are eight churches, one of which, the Episcopal, is a fine Gothic stone structure; Hobart Free College, with six professors and ninety-six students, and a medical college. The manufactures are not important. Pop. 5057.

GEORGE, a river, British N. America, Labrador, running into the S.E. side of Ungava Bay. For 200 m. up it is a considerable stream, flowing with a rapid current between rocky banks, and, though full of rapids, the water is deep enough for barges. At some distance from its mouth the country is wooded, and about 200 m. up the stream there is a lake abounding in fish. The general course of the river is northwards, running parallel to the coast of Labrador, about 100 m., or less, distant from it. It was discovered by the Moravian missionaries in 1811.

GEORGE, a sound, New Zealand, on the S.W. shore of the Middle Island or Munster, lat. (Anchorage Cove, N. shore) 44° 55' 20" S.; lon. 167° 26' 50" E. It is nearly a mile wide at its entrance, and preserves this width as far up as the anchorage, a distance of 6 m., during which it stretches S.S.E. This is its first reach, near the head of which there is good anchorage, in 15 fathoms, in a cove of the N. shore, with a sandy beach, where a rapid stream, with 2 ft. on its bar at low water, discharges itself. About a mile above, a second reach wends E.S.E. for 3 m., and then sends off two arms, at the head of one of which, but 200 ft. above its level, is an extensive lake, with an outlet sending its surplus waters down the mountain side. George Sound is surrounded by rugged and precipitous mountains. One of these rises over its W. side to the height of 4775 ft.; another near its head to the height of 5000 ft.

GEORGEN (Str.), a royal free tn. Austrian empire, Hungary, co. and 9 m. N.E. Pressburg, on the Pressburg and Tynau tramway, at the foot of a hill covered with vineyards. It has a magistracy, two R. Catholic churches, one Protestant, a synagogue, a Piarist college, an inferior school, an endowment for the poor, and a cold sulphur bath. The wine produced in the vicinity bears a high name, and is largely exported. Pop. 2904.

GEORGEN (Str.), a tn. Austrian empire, Upper Austria, circle Hausruck, 45 m. S.W. Linz; with a beautiful parish church, and 1600 inhabitants.

GEORGEN (Str.), a tn. Austrian empire, Hungary, co. Eisenburg, 5 m. S.W. Steinamanger; with an old and richly endowed abbey, with a Gothic church; and 1500 inhabitants, mostly R. Catholics.

GEORGEN (Str.), a tn. Austrian empire, Warasdin and St. Georgen Military Frontiers, on the Semovacha, in a wide plain, which stretches to the Drave, 58 m. E.N.E. Agram. It has a common school, and contains 4630 inhabitants.

GEORGETOWN [add.], three places, U. States:—1, A tn. and port of entry, dist. Columbia, 1. bank Potomac, 2 m. W. Washington, and on the Rock Creek, which is crossed by two bridges connecting it with Washington. It is overlooked by heights, crowned with villas, and commanding a magnificent view, and is a quiet retired place of somewhat antiquated appearance. Its principal buildings and institutions are eight churches, a Jesuit college, a nunnery, with a school attached, attended by about 100 pupils, several private boarding and day schools of high repute, a market-house, and a finely laid out cemetery. Being the only port of Columbia district, Georgetown has an important foreign and coasting trade. Pop. 8733.—2, A tn. and port of entry, S. Carolina, on the W. shore of Winyaw Bay, near the confluence of the Great Pedee, Black and Waccamaw Rivers, 100 m. S.E. Columbia. It possesses county buildings, six churches, an academy, and several turpentine distilleries and saw-mills. Its reputed unhealthiness has checked its prosperity. Pop. 1720.—3, A tn. Kentucky, cap. co. Scott, on a height above the N. Elkhorn River, in a fertile district, 17 m. E. Frankfort. It is the seat of a Baptist college, with eight professors, 132 students, and a library of 7500 volumes; of a female collegiate institute, attended by about 100 pupils; and of a military institute, which unites civil education with military discipline; and possesses several woollen, bag, and rope factories. Pop. 1684.

GEORGETOWN, a tn. Canada West, co. Hutton, on the Grand Trunk railway, 27 m. W. Toronto; with five churches, considerable local trade, and extensive manufactures of paper and cloth. Pop. about 1200.

GEORGETOWN, a tn. British America, E. coast Prince Edward Island, cap. King's co., situated on the N. shore of a harbour of same name. It is laid out in regular and spacious streets, which, as the pop. is only 500, are very scantily supplied with houses. The principal buildings, all of wood, are the courthouse, and two churches, one with a cupola and the other with a steeple. Its harbour, the entrance to which is indicated by a wooden octagon lighthouse, painted white, and visible at a distance of 14 m., is the best in the S. of the Gulf of St. Lawrence, with the exception of that of Charlottetown, over which, however, it has this advantage, that the ice is later in forming, and earlier in breaking up.

GERCZE, a tn. Austrian empire, Hungary, co. Eisenburg, 16 m. E. Steinamanger; with extensive vineyards, a trade in fruit, particularly excellent cherries, and 1090 inhabitants, half of them Lutherans, half R. Catholics.

GERKI, a tn. Western Africa, on the Hausa and Bornou frontier, 60 m. N.E. Kano. It is a large place, and is surrounded by a wall with turrets or pinnacles, and in very good repair. There is very little trade, as the inhabitants have little inclination for industry, and are notorious for their thievish propensities. Pop. estimated at 15,000.

GESHIYA, a tn. Western Africa, Bornou, 60 m. W. by S. Birni, once a strong place, and surrounded by a clay wall, but now, though still well peopled, in a state of decay. It consists of conical hills, separated by fences of matting into several quarters.

GESMA, a tn. Western Africa, Bornou, 185 m. N.E. Kano. Besides a swamp, which forms a natural defence on its S. and E. sides, it is surrounded by a kind of pinnacled wall, which, however, except on the W. side, is much dilapidated. Close to this place grows the *rimé*, or silk cotton tree, which is entirely wanting in Bornou proper.

GETTYSBURG [add.], a tn. U. States, Pennsylvania, cap. co. Adams, on the Wrightsville, York, and Gettysburg railway, 112 m. W.S.W. Philadelphia. It occupies an elevated site in a fertile and well-cultivated district, is on the whole well built, possesses seven churches, a college, with seven professors, sixty students, and a library of 7000 vols.; a Lutheran theological seminary, with two professors, about twenty students, and a library of 7000 vols.; an academy

and other schools, a courthouse and jail; and has an extensive manufacture of carriages. Copper mines have been opened in the vicinity. On the first three days of July, 1863, a desperate battle was fought here between the Federals under General Meade, and the Confederates under General Lee. It was attended with no decisive result, but the Confederate army subsequently retired, and recrossed the Potomac. The loss of the Federals was returned at 24,000. Pop. 2390.

GEWE, a tn. Western Africa, Adamawa, r. bank Benuwe, 85 m. E. Yola. It is a large Fellatah settlement, governed by a chief, who commands 100 horse. A little to the E. there is a large mountain called Banawa, which towers above the Benuwe, and is inhabited by pagan natives of the Fali tribe, who, before the Fellatah conquest, had their chief seat at Bazuma, about 20 m. N.E. Gewe.

GHADAMIS, a dist. N. Africa, situated on the N. frontier of the Sahara, and forming the S.W. frontier of the regency of Tripoli. It comprises three oases—Ghadamis proper, Derge, and Seenawan, each of which has a capital of its own name, while the whole three form a nearly isosceles triangle, of which the line stretching between Ghadamis in the S.W. and Seenawan in the N.E., a distance of about 95 m., is the base, and Derge is the apex. The area of the whole district is estimated at 1200 sq. m. Beyond its limits the whole of the surrounding region is purely desert, consisting of ridges and sandhills, with waterless intervening valleys, and in geological structure of horizontal strata of sandstone and limestone. The former rock, blackened on its outer surface by the presence of a little iron, which the air has oxidized, was at one time mistaken for basalt. The inhabitants are divided into four classes—Iharar, or pure blood; Homran, the offspring of pure blood by female slaves; Attara, the offspring of manumitted male slaves and slaves still in bondage. The government is vested in a Moudir Bey, subordinate to the governor of the Jebel Mountains, and assisted in his administration by a kadi or judge, his mufti, a sheikh or deputy-governor, and a municipal council. Ghadamis proper, owing to the precarious fall of rain, draws its supplies of grain from Derge and Seenawan, which are better situated for raising corn; and devotes itself chiefly to trade, which is carried on extensively with Tripoli on the one hand, and Ghat, Kano, Timbuctoo, Tuat, and other parts of the interior, on the other. From the interior are brought ivory, bees-wax, hides, goat skins, dyed red and yellow, ostrich-feathers, gold in lumps and dust, guro or kolu nuts, cottons, &c.; from Tripoli, cotton and long cloths, and tangils, all of British manufacture; red-dyed raw silk and beads from Venice; woollen cloths and red caps from Tunis; paper, zinc, copper, sword-blades, mirrors, and small needles from Germany. The current medium of exchange is the Tunis piastre, equal to sixpence sterling. The aggregate population of the district is computed at 6500, of whom Ghadamis proper contains 4000, Derge 2000, and Seenawan 500, all Mahometans.

GHAT, two vils. Central Arabia:—1, A vil. prov. Lower Kascem, 15 m. N.W. Beroydah, situated in an undulating district, thick with vegetation, and consisting of a straggling series of houses, gardens, and fields, irrigated by numerous wells, the adjoining hillocks being crowned with watch-towers.—2, A vil. Nejed, prov. Sedeyr, 165 m. N.W. Riad. It stands upon the side of a gorge or valley, surrounded with trees. The houses and gardens are prettily placed in shelving rows, one above the other against the mountain side; and in the rainy season the wells overflowing fill a large reservoir, from which, on all sides, run rivulets overshadowed by fig-trees, pomegranates, and palm-trees.

GHAT [add.], a tn. N. Africa, in the Sahara, 125 m. W.S.W. Murzuk. It stands in a valley well planted with date-trees, near the W. slope of the Akakas range, at the foot of a rocky eminence, is walled, and consists of about 250 houses, among which a spacious and noble-looking mansion, the residence of the governor, is conspicuous. The place from its position is of more commercial importance than might be inferred from its population. The chief thing wanting to a great increase of its prosperity is the opening of a direct route to Timbuctoo, but this the jealousy of chiefs, whose interests might be affected by it, prevents.

GHAUTS, and **SUB-GHAUTS**, the name of two mountain ranges of E. Africa, in the Somali country. The Sub-Ghauts, or maritime range, beginning at Tadjurrah, near the

Straits of Babelmandeb, extend S.E. to Karam, in lon. 46° E., and then break into detached groups. Their distance from the coast varies from 6 to 15 m., and their height from 2000 to 3000 ft. The surface, denuded of soil by rain, is bare rock, and of course barren. The Ghauts, which are from 8 to 40 m. distant from the sea, have an average height of 4000 to 6000 ft., are thickly covered with gum-arabic and frankincense trees, the wild fig, and the Somali pine, and form the seaward abutment of the great table land of the interior. Their northern or maritime face is precipitous; their southern face slopes gently from their tabular summit. The Sub-Ghauts and lower ranges consist of sandstone capped with limestone; the higher portion of the Ghauts and their plateau consist of primitive rocks of granite, syenite, mica schist, quartz, micaceous grit, &c., mixed with sandstone.

GHAZAL, **BAHR EL**:—1, A stream, Africa, an affluent of the Bahr el Abiad, or White Nile, which it joins in lat. 8° 58' N.; lon. 30° 18' E.; flowing from the W., and entering in the form of a broad expanse called Lake No. There is a considerable negro population along its banks, who rear cattle and hunt for ivory. Petherick, on April 25, 1863, estimates its volume as equal to about a third that of the White Nile. Speke, who passed the mouth of it in the month of February in the same year, says, 'Instead of finding a huge lake as described in our maps at an elbow of the Nile, we found only a small piece of water resembling a duck-pond buried in a sea of rushes.' In the same month of February, 1863, Steudner ascended the stream in a boat for above 100 m. to the mouth of the Djour or Jur, from which apparently it obtains its principal supply of water. He describes it as a reedy marsh, with a water-way sometimes difficult to trace, but generally with a width varying from 80 to 400 paces, and having in many places a depth of 12 to 20 feet. It is fed by several streams besides the Jur.—2, A dry river-bed, Africa, stretching N.N.E. from the E. end of Lake Tsad.

GHAZEEPORE, a dist. India, N.W. Provinces, between lat. 25° 17' and 26° N.; lon. 83° 8' and 84° 40' E.; is bounded N.W. and N. by Azimgurh, N.E. the Ghagra, or Gogra, separating it from Sarun, S.E. Shahabad, S. Shahabad and Benares, and W. Benares and Jannpore; length, E. to W., 96 m.; breadth, 40 m.; area, 2187 sq. m. Its general character is that of an extensive flat, nowhere more than 350 ft. above the sea, and little raised above the bed of the Gauges, which traverses it in a tortuous course from W. to E., and drains it directly, or by its tributaries, chiefly the Ghora, Karamnassa, and Tous or Sarju. The soil, for the most part remarkably fertile, yields annually two crops, the earlier or *khurreef*, consisting mostly of maize, rice, pulse, indigo, and oil seeds; and the later or *rubbee*, of wheat, barley, gram, safflower, opium, cotton, tobacco, and sugar. The sugar, cotton, opium, and indigo are largely exported. Pop. 1,059,287.

GHERGO, a tn. Western Africa, Tawarek country, in a swampy district, behind a backwater of the Niger, which has here the various names of Mayo Balleo, Isa, and Eghorren. It is 90 m. E. Timbuctoo. It is an ancient place; but has changed its site, having been originally erected on a height above the banks of the river, and afterwards removed for greater protection to its present semi-insular position. The inhabitants, occupying about 400 huts, grow a good deal of rice and tobacco.

GHILAN [add.], a prov. Persia, S.W. shore of Caspian Sea; bounded N.E. by the latter, E. and S.E. by prov. Mazanderan, S. by Irak-Ajemi, N. by Russia, and W. by prov. Azerbaijan; length, 144 m.; breadth, 50 m. A lofty range of mountains, measuring from 6000 to 9000 ft. above the sea's level, forms its inland boundary. The whole province, except where cleared for cultivation, and on the mountain summits, is covered with woods, and the excessive rain and dense vegetation render the whole of the level country a morass. The climate is consequently unhealthy, and in the hot months fatal to Europeans. The language of Ghilan proper is the Ghilaik, a dialect of the Persian. The inhabitants are represented as rude and brutal, much addicted to plunder and murder, but hardy, muscular, and active. Resht is the capital; a clean town, with extensive bazaars. Its houses are generally built of burned brick, and tiled. Lahijan is the next in importance. The food of the Ghilaiks is very simple and light, consisting chiefly of rice and fish; but there

is an abundance of fine poultry, and wild fruit grows profusely everywhere. The vines climb up the forest trees, as in Turkey; the juice of the grape affords a delicious kind of treacle, called *doushaub*, which is eaten with dry boiled rice; wheat and barley are very sparsely cultivated. The oak and birch flourish in the province, but the former does not attain to any noticeable dimensions. In the woods lurk the tiger and panther, the wild boar and the jackal; birds are very numerous; and the reedy marshes and islands are tenanted by myriads of wild-fowl. Enzilli is the only seaport of Ghilan, and its harbour is deep enough to admit vessels of 250 tons burden, but the passage is much obstructed by sandbanks. Pop. of Ghilan about 120,000.

GHIR, or **RAS ABERNI**, a cape, Africa, on the S.W. coast of Morocco; lat. 30° 33' N.; lon. 9° 50' W. It projects boldly into the sea, and has a height of about 1200 feet. Immediately behind is a back-ground of more than double that height, clothed with scattered woods, and dotted over with numerous villages.

GHOONGEE, a riv. India, which rises in Nepal, on the British frontier, lat. 27° 50' N.; lon. 83° 20' E., flows S., receiving many small streams on the right and left; and throwing off branches which irrigate and fertilize a great extent of country, and joins the Raptee on its left bank, after a course of about 100 m.

GHURIAN, a fort and dist. N. Africa, regency and 56 m. S. Tripoli, in a mountainous country, of which the culminating point, Mount Tekut, has a height of 2800 ft. It is approached by a very steep ascent, and stands on the spur of a kind of plateau, surrounded by olive gardens. Its natural strength is increased by a castle, with a garrison of about 200 men; who, in consequence of the disaffection known to prevail in the surrounding country, guard it so strictly that Dr. Barth and his party were allowed to enter it only man by man, after each had been searched for his arms.—The district, which is very rugged throughout, contains a number of villages—some above ground, and some subterranean. The former are generally in a wretched condition, and half deserted; the latter are thought by Dr. Barth to have originated principally with the Jews, who at a very early period became intimately connected with the Berbers, several of whose tribes embraced Judaism. Among the vegetable products of the district is saffron, which is grown in regular plantations.

GIEBAU, a tn. Austrian empire, Moravia, circle and 9 m. N.N.E. Olmütz, among the Sudeten-Gebirge; with 1700 inhabitants, whose chief employment is in weaving and spinning flax.

GILBERT, or **AVAKKUM**, a river, Russian empire, Manchooria, which has its mouth in the N.W. angle of Olga or Seymour Bay, in the Sea of Japan. It flows through a deep valley, consisting mostly of marshy and turfy land, and inclosed by high mountains. Its mouth is broad and shallow, with only 3 ft. water on the bar, but within the depth varies from 14 to 20 ft. within a distance of 5 m. The channel, which previously contained several flat islands, then divides into numerous creeks. The Chinese settled on its banks cultivate barley, wheat, hemp, potatoes, and vegetables.

GILUI, a river, Russian empire, Manchooria, which is formed by several streams from Mount Atychan, flows rapidly through a valley between mountain slopes, which are for the most part covered with moss, and joins the Zeya, an affluent of the Amoor, on its right bank. For some distance above its mouth, it has a width of about 100 yards.

GINDURA, a river in the S. of Ceylon, which, rising near Mount Hiniduwa, within the S. frontier of West Province, flows S.S.W. through S. Province, and falls into the sea about 4 m. N.N.W. of the Point de Galle. It has a course of 59 m., and drains an area of 389 sq. m.

GIRAFFE, a navigable river, Africa, or more properly an arm which the White Nile throws off in the Bohr country, about lat. 7° N., and again receives on its right bank about lat. 9° N. Opposite its mouth there is a large island, covered with thick bush, and a favourite resort of elephants, rhinoceroses, giraffes, buffaloes, and various species of antelopes.

GIRAJISIR, a tn. India, Rajpootana, state and about 120 m. N.E. Jessulmeer. It consists of about 300 houses, is defended by a small fort, and is supplied with somewhat brackish water from two deep wells.

GIRHI, or 'GIRAFFES,' a tribe of the Somali country, E. Africa, inhabiting the hills which bound the Marar Prairie on the W., interposing between it and the district of Harar. Despite the unmerciful persecutions of the Gallas, they gradually migrated westward from Makhar, their original seat, number 5000 shields, possess about 180 villages, and are accounted the paramount power in this part of the country. Though friendly with the Habr Awal, they seldom descend into the plains, unless compelled by want of pasture.

GIRREE, a river, India, which rises in the hill state of Kothkae, at the height of 7400 ft. above the sea, in lat. 31° 4' N.; lon. 77° 42' E., flows successively S.W. and S.E., and joins the Jumna after a course of about 90 m. At the point of confluence, its discharge of water averages 100 cubic ft. per second.

GLACIER LAKE, British America, Rocky Mountains, lat. 51° 53' N.; lon. 117° 30' W., is about 8 m. long, by 4 wide, and possesses much more interest than its dimensions indicate, from being situated on the watershed between the Pacific and the Atlantic Oceans—sending part of its waters to the former through the Columbia, and part to the latter through one of the affluents of the N. branch of the Saskatchewan. It is formed by the damming up of a narrow valley between Mount Forbes and Mount Lyell. The upper part of this valley is occupied by glaciers communicating with immense fields of ice, which cover the mountains all round, and obliterates all their valleys. The foot of the glacier is only 4320 ft. above the sea; but Mount Murchison, a few miles to the E. of it, rises to the height of 15,789 ft., and is considered by the Indians the highest of all the Rocky Mountains. Still nearer Glacier Lake on the S. stands Mount Forbes, with an altitude of 13,400 ft. The great mass of these mountains, and the absence of striking peaks, make it difficult for a mere spectator to appreciate their altitude.—(*Palisser*.)

GLASERHAI, a tn. Austrian empire, Hungary, co. Arva-Thurocz, about 20 m. N. Schennitz. The inhabitants are chiefly engaged in growing oats, for which the soil of the district is best adapted, and in rearing cattle. Pop. 1500.

GLASGOW. [add.] Since the time to which the text refers, this city has continued to thrive and grow in a remarkable manner. Judged of by every available test, the increase of its prosperity has been not only singularly rapid, but solid as well. For its unusual good fortune it is, beyond all doubt, indebted to the great variety of important industrial pursuits that are carried on within its boundaries, or in its immediate vicinity. The bulk of its population are not dependent on any one leading industry. It stands out as combining in itself the characteristics of the Manchester, the Liverpool, the Birmingham, and the Wolverhampton of Scotland. Thus it has escaped the full effect of many of those fluctuations and reverses in trade which have told disastrously upon towns where the mass of the people are engrossed with one leading pursuit.

According to the census of 1861, the population of the city proper was then 403,142. Adding to this number that of the inhabitants of its surrounding and closely contiguous suburbs, the total is raised to 446,395. The increase thus revealed as having taken place during the decennial period 1851-61, is no less than \$6,257—an addition larger than that made within the same period to the population of any city in the kingdom, with the single exception of London. There are valid reasons for believing that the process of augmentation continues to go forward at an equal, if not at an enhanced, ratio. An estimate, formed upon trustworthy data, has been made, that at midsummer, 1865, the population of the same area was in excess of 490,000. In principle the estimate errs rather on the side of defect than of exaggeration. The statement may therefore be hazarded that Glasgow now (1866) contains half a million souls.

Striking as this progress is, it has been accompanied by commensurate improvements. The appearance of the city has been bettered in many of its aspects. In the W. and N.W. quarters especially, numerous handsome streets and crescents have sprung into existence. Very soon all the available building ground within the municipal boundaries on these sides will be fully occupied. Dwellings of a superior kind for the accommodation of the working-classes have

also been largely multiplied; and there exists every prospect, in connection with a projected scheme of city improvements, that speedily many obscure streets in the central districts (such as the alleys leading off the High Street, and those closes and wynds which lie between Trongate, Bridgegate, and the Saltmarket—nurseries of disease, crowded with the homes of a motley population, who dwell in all the squalor of promiscuous wretchedness) will be cleared away, though not without simultaneous provision being made for their inhabitants in tenements more conducive alike to their moral and physical well-being. As it is, through the gradual operation of commercial exigencies, the heart of the city is more and more being given up to purely business purposes. Some of the warehouses and offices recently erected are remarkably handsome buildings, and take rank among the architectural ornaments of the city. Of these there may be particularized the warehouse of Messrs. J. and W. Campbell & Co. in Ingram Street, that of Messrs. Stewart & Macdonald in Buchanan Street, and a fine pile in West Regent Street, built by Mr. A. Orr Ewing. In this connection there may be noticed the large number of handsome churches erected within the last dozen years. In that space of time upwards of thirty new places of worship have been reared. The whole number in the city (excluding its suburbs) is now 173, affording accommodation to upwards of 150,000 persons, or considerably more than one-third of the entire population. Thirty-eight of them belong to the Established Church, forty-five to the Free Church, and forty to the United Presbyterian body; while there are six Episcopalian, and ten Roman Catholic. It is held within the mark to compute that half-a-million of money has been expended in church-building within the past twenty-five years. Many of the new buildings are exceedingly meritorious alike in their architectural features and in their internal decorations. Among them may be specified Park and Sandyford churches, belonging to the Establishment; the College, Kelvinside, and St. George's, in connection with the Free Church; Landsdowne U. P. church, and Trinity Congregationalist. The venerable cathedral has undergone a process of restoration and embellishment, which, while bringing out all the beauty of its original design, renders it, in one respect at least, one of the most richly-decorated temples in Europe. The windows have been filled with stained glass according to a connected and harmonious plan. Those in the nave illustrate Old Testament subjects, taken in the order of the biblical chronology; those in the choir are similarly devoted to subjects taken from the teaching of the Saviour. The work was executed at Munich, at the cost of donors who presented, or who joined in presenting, separate windows, by way of family memorial. The ancient college in the High Street is likely to be soon removed from the site it has so long occupied, which is to be surrendered to the purposes of a railway station. It is proposed to transplant the University buildings to the grounds of Gilmorehill—a commanding and eligible situation in the W. end of the city, lying between the West-end Park and the suburb of Partick. Plans for the proposed buildings have been obtained from Mr. G. G. Scott; and magnificent subscriptions have been made alike by the noblemen and landed proprietors of the neighbourhood, and by the leading merchants of the city, in order to defray the expense of transference.

The whole extent of thoroughfares within the city, excluding mere lanes, alleys, &c., is now within a fraction of one hundred and twenty miles. The sum annually expended on their maintenance exceeds £30,000. Since the Paving Act of 1856 came into operation, about £150,000 has been spent in laying down granite pavements. This, however, forms but a small item in the action of the municipal corporation for the behoof of the community. Chief among their achievements in this respect, there stands undoubtedly the accomplishment of the grand scheme by which Glasgow is now supplied with water from Loch Katrine—a Highland lake some 30 m. distant. This immense undertaking, begun in 1856, under the superintendence of Mr. Bateman, the engineer, was completed in 1859, and the supply of water to the city is now under the administration of the town council. The engineering difficulties in the construction of the works were very considerable. The aqueduct from the lake to the Mugdock reservoir is 26 m. long—13 of these are tunnelled, 4 consist of iron pipings carried across valleys, and for the

remainder there are open cuttings and bridges. The cost of the aqueduct proper was, on an average, £18,000 per mile. The total cost exceeded a million and a half, as thus—

Loch Katrine Water-works,	£930,668	16	10
Gorbals Water-works,	196,019	7	5
Purchase and Extension of the Old Works (the property of a Joint-Stock Co.), which supplied the city by pumping from the river,	462,133	16	8
	£1,588,822	0	11

Large as this expenditure is, it has proved a very good investment. Twenty-five years ago two water companies existed, the joint revenues of which were £25,000. The income of the water commission is now well-nigh £100,000. The Gorbals works above mentioned are those which formerly supplied the south side of the city. They still continue to send in from the Ferenze Hills, about 6 m. to the southward, some 3,500,000 gallons per day. The quantity derived from Loch Katrine approaches 25,000,000 gallons daily. The works are so constructed that, with a slight expenditure, they could be rendered capable of furnishing double that quantity; in truth, they give access to a permanent and inexhaustible source of supply; and nothing to vie with them, either in magnitude or success, exists in the kingdom. The advantages that have flowed from the carrying out of this great enterprise cannot be more forcibly illustrated than by the increased degree to which water is now used by the population. In 1838 the supply per head per diem was 26 gallons, which was then deemed a very liberal amount. In 1845 it was 30 gallons. In 1852 it had risen to 35 gallons on the north, and 38 on the Gorbals side. The latter was thought quite an adequate supply; and in the early calculations concerning the Loch Katrine scheme, a maximum of 40 gallons per head was adopted. Yet already the quantity delivered is 45 gallons. That, however, includes 3½ gallons sold by meter for trade purposes.

Another instance of wise and large liberality on the part of the municipal governors consists in the provision of public parks. Besides the Green (referred to in the text), two other large and beautifully laid-out parks now exist. The one on the west comprises the lands of Kelvingrove, consisting of 62 acres, whereof 17 acres have been set apart for feuing—the rest being available for park purposes. It was laid out by Sir Joseph Paxton, according to a very tasteful plan, in which the difficulties presented by the ground were most skillfully overcome, being, in fact, converted into means of additional ornament. The total cost has been about £89,000. The Queen's, or South-side Park, as its name indicates, adjoins a different quarter of the city. Trenching upon the parish of Cathcart on the S., it is situated between the village of Strathbungo on the W. and the rising suburb of Crosshill on the E., and has cost about £60,000. It extends to 142 acres; but a very considerable portion is destined to be disposed of, no doubt very profitably, for feuing. Sloping upwards to a considerable height, there is commanded from the summit one of the finest views of the city, which is spread out like a panorama beneath, while, turning to the other side, one overlooks the scene of the battle of Langside, which was fought, with such disastrous results to her, in the presence of Mary Stuart. The knoll whence the unhappy queen surveyed the battle, and from which, when all was lost, she was hurriedly led away, lies just outside the park, and will probably be, by and by, included within it. This historic circumstance was in view when it received the name of the Queen's Park.

As illustrative of the onerous and varied duties that devolve upon the municipal authorities, it may be mentioned that the corporation administer solely, or in part, no fewer than twenty distinct trusts, the united annual revenues of which is in excess of £400,000, while the debts affecting them stand at about £3,250,000. Besides these public objects, there are numerous charities, bequests, bursaries, schools, and other beneficent institutions, the financial affairs of which are under the control of the corporation as a whole, or certain members thereof.

Any record of the progress of Glasgow must needs assign a prominent place to its great artery, the Clyde. The subjoined figures, supplemental to those already given, speak for themselves.

CLYDE NAVIGATION.

Year.	Length of Quays.	Area of Harbour.	Revenue.		Proportion per Yard.
			£	s. d.	
	Yards.	Acres.	£	s. d.	£ s. d.
1854 . . .	3496	52	86,580	5 11	24 15 3
1855 . . .	3536	52	73,943	9 1	20 18 0
1856 . . .	3680	52	74,995	7 9	20 7 8
1857 . . .	3680	52	82,797	10 7	22 9 10
1858 . . .	3860	57	78,783	17 6	20 8 2
1859 . . .	4248	70	90,816	17 7	21 7 6
1860 . . .	4248	70	97,983	18 1	23 1 4
1861 . . .	4248	70	105,768	11 0	24 17 11
1862 . . .	4248	70	118,083	10 2	26 4 11
1863 . . .	4248	70	118,083	7 10	27 15 11
1864 . . .	4248	70	121,380	13 9	28 11 5
1865 . . .	4248	70	121,587	11 11	28 12 6

Of the harbour dues thus levied, the trustees for the year ending as at 30th June, 1865, expended upon ordinary operations a sum of £41,565, 4s. 11d., while the expenditure on new works and improvements amounted to the sum of £108,058, 4s. 8d. It is to be regretted that they have not as yet been able to construct any sufficient dock accommodation; various obstacles have interposed to defer the accomplishment of this cherished design; but well-contrived arrangements to that end are in progress, and there exists a reasonable prospect that this defect will be speedily supplied.

The subjoined table, applicable to the year ending at the date last specified, shows the number and the scale of tonnage of the vessels arriving in the harbour:—

Vessels' Tonnage.	Number of Sailing and Steam Vessels.	Vessels' Tonnage.	Number of Sailing and Steam Vessels.
		Brought over	15,232
Under 40 . . .	4,962	350 to 400 . .	244
40 to 60 . . .	2,383	400 to 450 . .	313
60 to 80 . . .	3,894	450 to 500 . .	244
80 to 100 . . .	1,646	500 to 600 . .	127
100 to 150 . . .	767	600 to 700 . .	45
150 to 200 . . .	534	700 to 800 . .	27
200 to 250 . . .	339	800 to 900 . .	15
250 to 300 . . .	427	900 to 1000 . .	20
300 to 350 . . .	371	1000 & upwards	88
Over . . .	15,232	Total . . .	16,355

Of these 16,355 vessels, 611 were from foreign ports, while 15,744 were engaged in the coasting trade—425 of those from abroad were sailing vessels, and only 186 steamers. These proportions were exactly reversed in the trade coastwise: in it 11,670 of the arrivals were those of steamers, while only 4074 were those of sailing vessels. The tendency is towards a decrease in the number of sailing vessels, but it is accompanied by an equally marked tendency to an augmentation in size and capacity. The gross tonnage of the 16,355 vessels, the arrival of which is recorded, was 1,719,058. The figures for the years undermentioned were—

	No.	Tonnage.
1851	17,274	1,446,606
1861	16,085	1,504,220
1862	15,864	1,530,642
1863	15,175	1,527,779
1864	14,531	1,528,239

It occurs here to mention that a large number of the arrivals thus noted are those of steamers specially constructed for passenger traffic on the river. No city in the world can boast the possession of so large and effective a service in this respect—even as no city possesses the like means and temptations for its employment. The fleet of strictly river steamers—the trips of which do not extend beyond the various watering-places that dot the shores of the estuary and of the many beautiful lochs that communicate with it—is wholly unrivalled alike for swiftness and accommodation; and the patronage they receive during the summer season is enormous. Most of the wealthier residents in the city have coast-houses, which they occupy in summer time; and the family is poor indeed, the members of which have not their annual trip 'down the water.'

As further illustrating, in a manner at once striking and succinct, the advance in the shipping trade of the port, the following comparative statement of the number and tonnage of steamers employed in particular trades during the years 1857 and 1865 may be taken:—

	1857.		1865.	
	Ves.	Tonn.	Ves.	Tonn.
Transatlantic Trade	4	4,436	8	8,946
France, Spain, and Mediterranean	10	2,006	21	7,080
Transient Steamers which loaded (Foreign)	24	7,083	46	14,447
Transient Steamers which loaded (Coastwise)	16	6,596	41	19,072
Regular Traders—English, Irish, and Scotch Ports	33	7,136	45	10,278
Steamers Engined	25	9,570	73	39,789
Total	112	36,782	234	99,612

This list, it will be noticed, does not include the steam vessels which came to the harbour to be repaired, of which there were a considerable number; nor the river steamers, tugs, screw lighters, and luggage boats; nor the rams that have been built and engined here.

No department of industrial enterprise has of late years been prosecuted with more zeal and success than that of ship-building. When iron began to be used in the construction of ships, Glasgow was not slow to turn to account the facilities which she possesses for this branch of employment. The energy and skill evinced in the trade have been such that the fame of Clyde-built vessels has become world-wide. Specimens of them navigate every sea; and whether the object be pleasure, commerce, or war, they continue to be eagerly sought after. The ship-building yards begin at the termination of the wharves and quays, and are continued at intervals all down the river. During the year 1865 there were turned out in all 257 vessels, of every size and character, giving a tonnage of 151,292, and a horse-power of 23,857. The numbers for the two previous years were—

	No.	Tonnage.
1863	170	124,000
1864	242	178,505

The immense increase of tonnage in 1864—the amount of which, it will be noted, outvies even that for the succeeding year—was due to exceptional causes connected with the American war; but that there is little reason to fear the continuance of a sound and profitable business, is evidenced by the fact that at the 1st January, 1866, there were in the builders' hands orders for 178 vessels, with a tonnage of 291,270 tons, and a horse-power of 42,607. Of this number the sailing vessels stood to steamers in the proportion of about a third. The great majority were of iron, though a considerable number were built upon what is called the 'composite principle,' which is now coming into favour—that is to say, with iron ribs and framework, covered with a skin of wood.

As connected with this increase in shipbuilding, and in ships that have a Glasgow ownership, something may here be noted as to the trade of the port. The subjoined table gives the quantities of goods brought from abroad in 1865:—

Articles.		
Sugar	tons	144,009
Melacto	casks	206
Molasses	tons	4,721
Coffee	"	357
Pimento	bags	10
Tea	lbs.	6,429,135
Pepper	bags	2,055
Jute	bales	12,865
Cotton	"	5,639
Rum	{ puns	1,112
	{ hhds.	169
Logwood	tons	2,707
Fustic	"	567
Mahogany	logs and pieces	1,463
Unmanufactured Tobacco	lbs.	3,135,700
Ashes	barrels	10,033
Flour	{ bags	69,219
	{ casks	50,319
Oil (Whale, Cod, Seal, &c.)	"	2,609
Olive Oil	{ cases	5,896
	{ casks	3,948
Tallow	bags	1,492
Sumac	"	29,122
Hides	No.	56,344
Guano	tons	8,600
Nitrate of Soda	"	6,805
Brimstone	"	17,717
Tar	barrels	15,536
Madder Root	bales	254

To show more forcibly how trade has grown, three of the chief articles enumerated above may be selected for a com-

parison with previous years. The amount of tea, sugar, and tobacco taken out of bond during each of the last five years has been:—

	Tea.	Sugar.	Tobacco.
	lbs.	tons.	lbs.
1861 . . .	4,077,774	88,694	1,668,959
1862 . . .	4,177,502	106,748	1,775,173
1863 . . .	4,634,370	121,044	1,867,524
1864 . . .	4,696,268	126,061	1,956,682
1865 . . .	5,504,351	136,540	2,017,998

It is almost needless to remark that these figures do more than illustrate the growth of trade. They attest, with an emphasis which is unmistakable, the existence of a growing improvement in the condition of the people.

Another striking instance of growth is afforded in the history of the grain trade. Here is a statement of the imports, foreign and British, received by river, rail, and canal, for the two years 1864—65:—

	1864.		1865.	
	qrs.	lbs.	qrs.	lbs.
Wheat	600,667	531,105	600,667	531,105
Flour	250	358,215	250	358,215
Wheat and Flour	860,328	721,218	860,328	721,218
Oatmeal	250	85,819	250	85,819
Oats	100,671	64,561	100,671	64,561
Barley	208,352	201,347	208,352	201,347
Beans	57,922	61,363	57,922	61,363
Pease	23,403	20,237	23,403	20,237
Maize	73,675	101,635	73,675	101,635

Let these figures be compared with those given in the text, and it will be seen that all the main items are greatly more than doubled, while some of them are quadrupled. In explanation of the falling off discernible for the last year, it may be remarked that, while the imports for 1864 were unusually high, those for the succeeding year were unusually low, the stock on hand at the beginning of the season being greater than was ever known. The principal sources of foreign supply are America and the south of Europe. From America 63,052 quarters of wheat and 69,148 barrels of flour were received in 1865, against 275,326 quarters and 272,483 barrels, in the preceding year; while from the Black Sea there came 245,339 quarters of wheat, against only 61,442 quarters in the previous season.

Allusion has already been made to the advantages which the city derives from its proximity to the great iron-fields of the north. At the close of last year there were 136 iron furnaces in blast throughout Scotland, producing upwards of 3000 tons of pig-iron daily. The Glasgow Exchange is the mart for the sale of this enormous manufacture, and the shipments of it take place almost exclusively at Clyde ports. The table next given shows the amount of production and of shipments for the last twenty years:—

	Production		Shipments	
	In Tons.	In Tons.	In Tons.	In Tons.
1845 . . .	475,000	194,000	1856 . . .	820,000
1846 . . .	580,000	376,000	1857 . . .	900,000
1847 . . .	540,000	370,000	1858 . . .	950,000
1848 . . .	600,000	394,677	1859 . . .	980,000
1849 . . .	692,000	374,431	1860 . . .	1,000,000
1850 . . .	630,000	324,658	1861 . . .	1,040,000
1851 . . .	775,000	450,000	1862 . . .	1,080,000
1852 . . .	780,000	424,000	1863 . . .	1,150,000
1853 . . .	720,000	620,000	1864 . . .	1,160,000
1854 . . .	780,000	590,000	1865 . . .	1,164,000
1855 . . .	820,000	542,000		

At the average of last year's prices (65s. 3d. per ton) the value of that year's production exceeded three millions and a half. The price, however, varies greatly. During the period indicated above it has been as low as an average of 37s. 6d., and as high as 80s. The difference between the amount produced and the amount shipped, allowance being made for the stock on hand, represents the export to England by rail, and the quantity either converted from the crude to the malleable state, or used in the foundries of the city. Enough has been said to indicate that in this manufacture we have one of the chief sources of wealth and wages in this part of the kingdom.

One peculiar branch of trade to which a special reference is made in the text is that of sewed muslin. It was first

introduced upon an extensive scale in Glasgow towards the end of last century by the founder of the existing firm of Muir & Co., Glasgow and London. For many years the production was confined to the villages and rural cottages of Ayrshire; and even yet this class of goods is known in the London market as 'Ayrshire needlework.' The founders of the new industry soon had many competitors. Early in the present century the high price paid for embroidering muslins enabled thousands of young women to earn a comfortable living in their own homes, and caused the knitting needles and the spinning-wheel to be laid aside far beyond the bounds of Ayrshire. But till about the year 1816—17 Glasgow had no rival in the trade. About that date a Scotchman, the owner of a retail shop in Dublin, began to get work done at Donaghadee, in the north of Ireland. At first he did little more than supply his own shop. In 1824—25 the successor of this gentleman was joined by his nephews, and the firm of Cochrane & Browns was established at Donaghadee. Female labour was there plentiful and cheap. The Irish girls were willing to learn, and anxious to be taught. Schools were established; the best Scottish workers were taken over to act as teachers; and such an impetus was given to the trade that by 1850 there was not a town of any importance from Belfast to Waterford on the one side, or from Derry to Galway on the other, that did not contain one or more agents employed in the distribution and collection of this kind of work. For fifteen years before the last-named date what was done in Ireland equalled in quality, and more than doubled in quantity, what was produced in Scotland. Still Glasgow retained, as it still retains, the chief place as the seat and mart of the manufacture. Various causes helped to this effect. Not the least is the superior finish which the Glasgow bleachers give to the goods—a superiority so marked that the Belfast manufacturers send their goods to be bleached here. Till about 1830 designs were transferred to the muslin by hand from wooden blocks. This process was slow, clumsy, and expensive. A great improvement was carried out by an adaptation of lithography, which the firm last-mentioned, though not the first to adopt, were the first to work out successfully. An increased demand continued to keep pace with the increased power of production till 1857, when it was computed that the sales reached an annual value of £1,500,000. In that year several large firms failed—one of them it is supposed for a larger sum than had hitherto been involved in any trade failure in Glasgow. Their stocks were suddenly thrown upon the market at ruinously low prices. A sudden contraction of the trade to about a fourth of its former dimensions ensued; and for three years it was difficult for the regular trader to make a profit. But this condition of affairs has passed; for years a gradual improvement has been going on; and at present the value of the annual sales stands at from £700,000 to £800,000.

Allusion has been already made to the important position which Glasgow holds in connection with that great branch of national industry which may be classed under the designation of 'applied chemistry.' The St. Rollox works of Messrs. C. Tennent & Co., starting from a comparatively small commencement during the latter half of the last century, have become the seat of the greatest chemical manufacture of its kind in the world. The foundation of the establishment was laid by the late Charles Tennent, Esq., in the preparation of a bleaching agent called chlorine water (*aqua chlorinata*), known also as 'oxy-muriatic acid.' The manufacture rested upon the fact that chlorine gas, a powerful bleaching agent, could be made more available for use when dissolved in water. This method of storing up the gas has, however, given place to the plan of associating it with hydrated or slaked lime, thus forming the well-known bleaching-powder. Besides this powder, the manufactures carried on at St. Rollox now include sulphuric acid, soda-ash, soda (crystallized), and soap—to which list may be added a chemically-prepared manganese by a process peculiar to the firm. The materials used in these manufactures are derived from six different countries, and the average annual consumption is—

Coal (chiefly from C. T. & Co.'s pits)	120,000 tons.
Limestone, from the North of Ireland	30,000 "
Salt, from Cheshire	20,000 "
Manganese, from Spain	3,000 "
Pyrites, from Portugal	10,000 "
Brimstone, from Sicily	2,000 "

The average annual production is—

Bleaching Powder	8,000 tons.
Sulphuric Acid	20,000 „
Soda Ash	10,000 „
Soda Crystals	8,000 „

This large amount of produce is dispersed over the whole of the United Kingdom and of the European continent, extending also to many parts of America, Australia, and New Zealand. The works cover an area of 25 acres. The workmen number about 1000. Upwards of 300 casks are made and used within the premises daily.

It would be tedious, if not impossible, to attempt to go over with any minuteness of detail the various industries that are here pursued on a large scale, else something might have been said as to calico printing and dyeing—for which many firms have gained distinction at repeated international exhibitions; as to the pottery manufacture—which is well known for its elegance, substantiality, and cheapness, and includes all descriptions of ceramic utensil, from the enamelled ware of Dives to the unornamented porringers of Lazarus; as to iron-founding—in which, though of a massive character generally, new ideas have been successfully wrought out in its bearing upon domestic requirements; as to glass-making—which is carried on upon a more extensive scale than anywhere else in Scotland; or as to brewing—in the performances in which the Wellpark brewery of the Messrs. Tennant might be taken as a specimen, with its 75 foreign agencies, its consumption of 40,000 qrs. of barley every year, and its use of 1000 casks and 400 gross of bottles every day. It must suffice to say that these immensely varied pursuits are mutually helpful to each other. Without wearing the appearance of a mutually dependent system, these industries do possess much of that relation. It would be interesting to know the number of workers employed in connection with them, and the amount of wages which the employers disburse. It is needless to say that on such a point accurate statistics are unattainable.

But though it is impossible to form any adequate estimate of the numbers that are included in the wage-receiving class, or of the sum that they get, there are some accessible sources of information as to how that sum is employed. Most gratifying is it to think that, amid much folly and debauchery, entailing a prodigious waste of wealth, deprivation of happiness, and destruction of life, there are counteracting elements in some respects worthy of a prudent, intelligent, and religious people. Notable among these is the disposition to accumulate. The subjoined figures, illustrative of the progress made by the National Security Savings-Bank during the thirty years of its existence, carry a remarkable illustration of thrift, thoughtfulness, and self-control:—

YEARS.	DEPOSITS.		Interest Credited Depositors.	Number of Depositors.	Balance Due Depositors.
	Number.	Amount.			
1836-55.	987,107	£3,399,192 11 6	£193,826 11 10	32,733	£656,998 17 4
1856 . .	89,640	285,228 17 7	19,415 0 5	33,287	680,485 1 10
1857 . .	81,842	265,283 1 8	19,450 8 1	31,044	632,231 7 7
1858 . .	92,743	340,424 1 7	19,800 5 7	35,838	724,280 15 1
1859 . .	103,590	331,918 0 10	22,479 8 8	38,998	804,679 6 8
1860 . .	108,730	350,496 6 3	24,622 10 6	41,250	876,356 15 4
1861 . .	106,581	347,724 0 0	26,350 18 10	42,122	927,427 16 3
1862 . .	108,323	356,044 3 6	27,756 9 9	42,957	971,972 14 6
1863 . .	119,828	404,061 1 5	29,702 9 10	46,078	1,069,902 8 6
1864 . .	132,548	417,745 17 1	30,901 12 11	49,037	1,071,459 10 6
1865 . .	136,503	443,627 0 2	31,239 14 7	50,893	1,121,278 16 7
Total	2,067,435	£6,941,745 1 7	£445,545 11 0	—	—

In the year 1864 the average amount of each deposit was £3, 0s. 10d.; of each repayment, £5, 14s. 2d.; and of each depositor's balance, £21, 7s. 7d.

In the year 1865 the average amount of each deposit was £3, 2s. 8d.; of each repayment, £5, 5s. 6d.; and of each depositor's balance, £21, 10s. 3d.

The balance of over a million thus shown to remain at the credit of the depositors in the bank forms a very fair break-water against poverty and want; and its continued increase during recent years is rendered all the more remarkable by the strenuous competition which has lately been set up to this mode of investment.

The charitable institutions of Glasgow are exceedingly numerous and varied. Provision, in one form or another, exists for the relief of the sick, the homeless, and the destitute of all classes. The amount of money expended in the

maintenance of these institutions is very large, and still more remarkable is the amount of time and care bestowed upon their management by many of the leading business men in the city. Besides those that are of a cosmopolitan kind, there are others that contemplate local objects, and are supported by the strength of local feeling. Natives of every county in Scotland have found a home in Glasgow, and there is scarcely a county that does not give its name to a society composed of such persons, who have united for the twofold purpose of cherishing home memories and attachments, and of succouring those from the same district who may have fallen into distress. By means of pensions to old and decayed people, and of help given towards the education of the young, a vast amount of substantial good is thus effected in a very quiet way.

Turning to those philanthropic efforts that are not of a purely eleemosynary character, the self-supporting power of which has been attested by ample experience, it may be noticed that Glasgow has led the way in respect of several very successful and beneficial experiments. Prominent among these, and well deserving of mention, is the establishment of cheap dining-halls for the working-classes. Started in 1860, in the Sailors' Home Buildings at the harbour, with the view of placing a cheap and wholesome meal within reach of the men who are always lounging about there, the distinguishing principle of the scheme primarily was that every article sold should be charged a penny—be it an egg, a cup of tea or coffee, a basin of "broth," a roll, or slice of bread. The beginning thus made was rapidly and widely followed up. There are now a central dépôt, where all the cooking is done, and twenty-six branch establishments distributed all over the city. The total amount drawn in the course of the year was £40,234, 13s. 10½d., representing the enormous number of ten millions of ordinary penny rations. In various towns attempts have been made to imitate the example which has thus been afforded; but we are not aware that in any instance have they been attended with anything like the same signal success.

GLASGOW, a vil. U. States, Missouri, l. bank Missouri, 55 m. N.W. Jefferson city. It is a place of considerable trade, and much of the produce of the adjacent districts is shipped at it. Pop. 1025.

GLEICHENBERG, a tn. Austrian empire, duchy Styria, on the slope of a mountain of same name, in a romantic district, 24 m. S.E. Gratz. It has a beautiful church, built in the Byzantine style; a strong castle, with massive towers and bastions; a Franciscan hospitiun; and celebrated mineral springs, with elegant baths, and ample accommodation for visitors. The springs were known to the Romans; large quantities of the water are annually exported.

GLOGON, a tn. Austrian empire, Banat Military Frontiers, 8 m. N.W. Pancsova; with a R. Catholic parish church, a German common school, and 2450 inhabitants.

GLOGOW, a town Austrian empire, Galicia, circle and 7 m. N. by W. Rzeszow, cap. dist. of same name; with a fine baronial castle, and 2148 inhabitants.

GLOUCESTER, a vil. U. States, Massachusetts, forming part of the township of its name, very beautifully situated on the coast, about 25 m. N.N.E. Boston. It is handsomely and compactly built, and has one of the best ports on

the coast, capacious, safe, of easy access, and deep enough to admit the largest vessels. Gloucester ranks as the third port of Massachusetts in respect of foreign trade, and as the first fishing town in the U. States. The fish are chiefly mackerel and cod. Pop. 10,904.

GMÜND, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, at the confluence of the Braunerbach with the Lainsitz, 72 m. N.W. Vienna. It has three saw-mills and numerous looms. There are two mineral springs in the vicinity. Pop. 1570.

GNILOVSKAIA, a tn. Russia, gov. Don Cossacks, r. bank Don. It is the great mart for all the fish and caviar brought to market by the Cossacks of the Don and the Black Sea, and contains 2902 inhabitants.

GOALPARA, a dist. India, presid. Bengal, between lat. 25° 40' and 26° 31' N.; lon. 89° 42' and 91° 8' E.; is bounded N. by Bhotan, E. Camroop in Lower Assam, S. the Garrow tribes and Mymensing, and W. Rungpore and the native state Coosh Behar; length, N.W. to S.E., 100 m.; breadth, 70 m.; area, 3506 sq. m. The principal crops are cotton, tobacco, sugar, and mustard. The capital of same name, situated near l. bank Brahmapootra, was nearly destroyed by fire in 1838. Pop. of dist. 400,000.

GÖCSENY, a tn. Austrian empire, Hungary, co. Tolna, not far from the Danube, 6 m. S.E. Szegsard; with a fishery, a trade in corn and wine, and 2112 inhabitants belonging to the Reformed church.

GÖDING [add.], a tn. Austrian empire, Moravia, circle and 24 m. S.W. Hradisch, on the river March, and on the Vienna and Overberg railway, near the frontiers of Hungary. It is the seat of several public offices, has a deanery church, an imposing castle, a large tobacco factory, a potash refinery, important horse, cattle, and wool markets, and a mine of lignite. Pop. 3793.

GODIYAN, a salt marsh between the Dead Sea and Red Sea, about 35 m. from Akabah, and 113 ft. above the level of the Red Sea, is the watershed of the entire district of the Wady Akabah.

GOGO, **GAWO**, or **GHAGO**, a tn. Western Africa, once capital of the Songhay empire, l. bank Niger, 220 m. E.S.E. Timbuctoo. It has been completely shorn of all its former greatness, and now consists of about 300 huts, grouped in clusters, and surrounded by heaps of rubbish, apparently the debris of the former city. The great mosque, now a ruin, was originally flanked by two towers, one of which is in tolerable preservation. It rises in seven terraces, gradually decreasing in diameter from a base measuring 40 or 50 ft. on each side, to a summit not measuring more than 16. In its most flourishing state Gogo appears to have had a circuit of about 6 m., but there is nothing in the ruins to indicate a superior style of architecture in the original structures.

GOGUREE, a river, India, which rises in the Sub-Himalayan Mountains, Nepaul, lat. 27° 30' N.; lon. 85° 40' E.; flows first S.E. for about 70 m. across the Terai; then entering the British territory, flows successively S.S.W. and S.E., and joins the Coosy on its r. bank, about 10 m. above its confluence with the Ganges. Its total length is about 235 m.

GOHANUH, a tn. India, N.W. Provinces, cap. pergunnah of same name, 50 m. N.W. Delhi. It stands on the Rohtuk branch of the Delhi canal, and became the scene of a singular disaster, produced by an engineering blunder. When the water was first let into the canal, it refused to proceed any further. Due allowance had not been made for a rise of level, and the consequence was that the embankment, unable to resist the accumulated pressure, gave way, and the great body of water rushed down, completely destroying Lalpoor, a considerable town, the remains of which are still seen. Pop. 6668.

GOHUD, a tn. India, Scindia's Dominions, 28 m. N.E. Gwalior. It is surrounded by three walls—an outer one, which is constructed of mud, faced with stone, and incloses a large area; and two others, which intervene at a considerable distance between it and the citadel, a lofty structure with massive towers and many spacious and commodious apartments. Outside the outer wall is a ditch, which can be filled with water from the Besulee. The town, once the capital of a territory of same name, belonging to a Jat rana, suffered much by war before it passed finally into Scindia's possession by a compromise which exchanged it for the territory of Dholpore, still enjoyed by the rana's descendants. It is now comparatively insignificant, possessing only a few good modern houses.

GOISERN, a tn. Austrian empire, Upper Austria, circle Hausruck, in a romantic and finely diversified district, on the Traun, about 45 m. S.W. Steyer. It has two churches, one an old R. Catholic, and the other a handsome Protestant church, a modern and an old feudal castle, and contains 1000 inhabitants.

GOLD COAST [add.], a British possession, W. coast Africa. The territory recognized as British consists of a large number of forts and posts, many of them abandoned or in ruins, which have fallen into British hands by settlement, capture, or purchase, together with the line of sea-coast adjacent to them. The Dutch also possess many forts and posts on the same line of coast, and whatever portion is not Dutch is recognized by the natives as British territory. That actually occupied consists at present, in addition to the coast, of the Fort of Dixcove in the Ahanta country, of Cape Coast Castle and Annamaboe Fort in the Fantee; Winnebah in the Agoomah country, and of Accra in the dist. of same name. Quittah Fort, on the river Volta, has not been occupied since 1856. Immediately in rear of the 300 m. of coast along which these posts are situated, and extending to the distance of about 80 m. inland, is a country inhabited by a number of native tribes, the principal of whom are the Wassaws, Denkeras, Akims, Assins, and Fantees, the whole of whom, except a small number contiguous to some of the Dutch posts, are included in what is called the 'Protectorate.' Eastward is the kingdom of Dahomey; northward that of Ashantee. In 1844 the Gold Coast settlements were placed under the jurisdiction of Sierra Leone; but in 1850 they were formed into a separate government, with executive and legislative councils. There is also a judicial establishment, with a chief justice and necessary officers, besides ecclesiastical, educational, medical, and military establishments. The slave-trade has been everywhere suppressed, but domestic slavery of a mild character exists in the districts of the Protectorate. The climate is unhealthy; dysentery, but not fever, being extremely common in a very fatal form. Cowries and gold-dust form the chief currency. The principal articles exported in 1862 and 1863, with their value, were as follows:—

	1862.	1863.
Gold Dust	£7,758	£27,000
Gum	2,699	850
Ivory	1,330	1,547
Monkey Skins	2,200	1,060
Palm Oil	85,910	22,569
Miscellaneous	2,189	629
	£102,086	£53,664

The imports and their value in the same years are thus stated:—

	1862.	1863.
Cotton and Silk Goods	£68,000	£26,000
Guns	3,200	2,139
Gunpowder	5,400	2,049
Hardware	11,800	14,840
Tobacco	7,500	6,314
Wines and Spirits	40,000	18,773
Miscellaneous	9,200	6,840
	£145,100	£76,955

The revenue, which is principally derived from a parliamentary grant of £4000 a year, and a duty of 2 per cent. on imports, amounted in 1863 to £8547, and the expenditure, chiefly upon the civil establishments, amounted to £9409. The protection afforded to the adjacent native tribes has involved their defence against the inroads of their hostile neighbours the Ashantees; this has burdened the settlements with considerable expense.

GOLDEN CITY, U. States, cap. terr. Colorado, at the base of the Rocky Mountains, 15 m. from Denver. It is the seat of government, and contains the government land-office, one or two churches, and a flour-mill. Pop. (1863), 1000.

GOLDSBOROUGH, a tn. U. States, N. Carolina, cap. co. Wayne, on the Neuse, which is crossed here by the Wilmington and Weldon railroad, 60 m. S.E. Raleigh. It has been a rising and flourishing place, with good public buildings, and is accessible by steamboats. Pop. 885.

GOLIAD, a tn. U. States, Texas, cap. co. of same name, on the San Antonio River, 155 m. W.S.W. Galveston. It possesses a Presbyterian college and a female institute. The raising of stock is the chief employment. Pop. 1212.

GOLOGURY, a tn. Austrian empire, Galicia, circle and 9 m. S.W. Zloczow; with the ruins of a strong castle, and 2234 inhabitants.

GOLUBATZ, a tn. Turkey in Europe, Servia, circle Posharevets, on the Danube, 59 m. E.S.E. Belgrade. It contains a church and a school. Its fortifications, which were strong, have been dismantled.

GOLUNGO (ALTO), a vil. and dist. S.W. Africa, Portuguese Settlements, prov. Angola, 120 m. E. Loanda; lat. 9° 8' 30" S.; lon. 15° 2' E. It stands among green hills, many of them cultivated to their tops with manioc, coffee, cotton, ground-nuts, bananas, pine-apples, guavas, papaws, custard-apples, pitangas, and jambas, fruits brought from America in former days by the missionaries. Were water present, the scenery, with its amphitheatre of high hills and its towering palms, would be no unfit representative in miniature of that of the Bay of Rio de Janeiro. The whole district is equally fertile and beautiful. The chief articles of trade are ivory and bees'-wax. According to a recent census it contains 26,000 hearths, or a pop. of at least 105,000.

GOMPOLA [anc. *Ganga-sri-poorā*], the last of the native capitals of Ceylon, stood in its central province on the Mahawalli Ganga. It was built in the fourteenth century, and was shortly afterwards visited by the celebrated traveller Ibn Batuta, who describes its palace as situated near a bend of the river called the 'estuary of rubies.' Nothing now remains to mark the site of the ancient city; but the locality has in modern times acquired high interest from being one of the first in Ceylon where the systematic culture of coffee was first attempted. Its soil and situation have proved unfavourable, but there is hardly one of the magnificent hills seen from it which has not been taken possession of by European settlers within a recent period. The locality still continues to be one of the most important in the district, because it is the point of convergence of the great roads which connect the rich districts of Pusalawa, Demboola, Kotmañe, and Ambogamma with Kandy and Colombo. Its rest-house is consequently one of the most frequented in Ceylon; and to facilitate the traffic which passes through it, a suspension bridge across the river has been substituted for the old, inconvenient, and often dangerous ferry.

GÖNCZ, a tn. Austrian empire, Hungary, co. Abauj-Torna, 15 m. S. Kaschau; with an ancient castle in ruins, a mineral spring with baths, an active trade in wine and fruit, and 3683 inhabitants, mostly belonging to the Reformed church.

GONDAR, the cap. city of Abyssinia, 21 m. N.E. Lake Zana or Dembea; lat. 12° 51' N.; lon. 37° 32' E. It is built on a lofty volcanic ridge, at an altitude of 7422 ft. above the sea, between two rivers which unite in the deep valley below the town. On the E. side flows the Angerab, on the W. the Gaha; and the two, after effecting a junction 2 m. S. of Gondar, empty themselves into Lake Dembea. The city has fallen sadly from its pristine magnificence, and no longer presents to the traveller a regular and connected whole, but a number of scattered groups of houses and ruined edifices, separated by wide and dreary wastes, and occupying an area of little less than 11 m. in circumference. The streets in the inhabited portions are exceedingly narrow, crooked, and impassable; the only scavengers being the hyenas, which, accompanied by leopards, prowl about at night in search of food. The houses are usually well built, of rough-hewn volcanic stone, and thatched with straw, which rises in the shape of a cone or cylinder. They are, however, small, and seldom exceed one story in height. The meaner houses are constructed of hardened clay. Attached are sheds for the domestic cattle, and the whole is surrounded by a wall or fence to protect them against the nocturnal depredations of beasts of prey. The principal quarter lies S.W. of the ruined palace of the Abyssinian kings, and is named Debra Birhan, the 'church, or hill of light.' It occupies the highest ground, but the church itself is built on the hill-slope. W. of the lofty castle, and close to its walls, begins the quarter Oimbecha Beit, that is, the castle-quarter, inhabited by the nobles or magnates of the land, and regarded as a sort of sanctuary or political asylum, though offering little protection against the tyranny of the sovereign. Islam-Beit, at the base of the hill, is the name of the district appropriated to the Mahometan inhabitants. The ruins of ancient Gondar furnish material for the most ardent antiquarian. Among the most interesting relics are the extensive remains of the old palace, built for the Abyssinian kings by the Portuguese. Gondar was then

a royal residence, but it is now entirely in the hands of the Gallas, and from the licentious and brutal character of its inhabitants, there seems no prospect of its recovering its former splendour. The surrounding country is blessed with a salubrious climate and a prolific soil, which would well repay the properly directed labours of the agriculturist. Upwards of one hundred different kinds of fruit may be noted in the gardens; the myrtle, the pomegranate, and the citron bloom with rare luxuriance. But the people of Gondar turn these advantages to no account. They chiefly occupy themselves with commercial pursuits, and traffic in coffee, musk, civet, raw hides, butter, and rhinoceros horns. The import of powder and shot is forbidden; but spices, antimony for smearing the eyelids, razors, sewing needles, Surat tobacco, rice, sugar, and cotton are eagerly dealt in. The principal market, held on Saturday, is well supplied with provisions. The people are well provided with churches, of which there are no less than forty-four, built in a circular form, and surrounded by pillars which support a dome-shaped roof of straw. It is said there are not less than twelve hundred priests or clergy. The prevailing religions are Christianity, Mahometanism, and Judaism. The Christians are largely in the majority. They are Monophysites, acknowledging for their head a Coptic archbishop or primate, but owing to the extreme ignorance of the clergy, have but an imperfect idea of scriptural religion. They practise circumcision, celebrate the Sabbath on Saturday, and baptize boys when forty days, and girls when eighty days old. The purest morality is found among the Jews.

The people have a great desire of performing a pilgrimage to Jerusalem, and the favourite idea of king Theodore is to reconquer the whole of Oïq Ethiopia, drive all unbelievers out of Egypt, make a conquest of Jerusalem, and seat himself there on the throne of David, from whom he thinks himself descended through the Queen of Sheba by Solomon. The Abyssinians believe that they possess the genuine tables of the law, and besides the books of the Bible, the book of Enoch, and a sixth of Moses, which latter seems to be a kind of extension of, and commentary on, Genesis and Exodus. After the clergy the scribes form a strong body in Gondar; they have schools for music and poetry.

The estimates formed by travellers of the population of the city vary greatly. Bruce puts it at 10,000 families; M. d'Abbadie, in 1838, at from 25,000 to 30,000 souls; but Herr Steudner, in 1862, asserts that it does not exceed 7000.

GONDOKORO, a vil. Africa, on the Bahr el Abiad or White Nile, lat. 4° 55' N.; lon. 32° 12' 24' E., about 1265 ft. above sea-level; the seat of an Austrian R. Catholic mission, which was abandoned in 1863. It is a station of the ivory traders, who occupy it for about two months in the year, after which time it is deserted, when the annual boats return to Khartoum, and the remaining expeditions depart for the interior. Gangs of slave-hunters also make this a place of resort. Being beyond the reach of the Egyptian government the greatest lawlessness prevails. A few miserable huts are all that dignify the spot with a name. The country around is a desert, and produces no grain. The climate is unhealthy and hot, the thermometer at noon in the shade marking 90° to 95°. In February, 1863, Speke and Grant reached this place on their way homeward, and were there met by Baker, who subsequently discovered the Albert Nyanza.

GONKOR, a river, India, which, formed in Nepal by the junction of the Ponna and the Mui, flows S. through the Terai into the British territory, and falls into the Ganges near the town of Deatpore. Its whole length is about 135 m.

GÖNEN [anc. *Poemanenum*], a tn. Turkey in Asia, Anatolia, on a flat at some distance from the banks of the *Æsepus*, 105 m. S.W. Constantinople. It consists of about 800 houses, contains four mosques, baths, and a klan, and possesses thermal springs, of which little use seems to be made, though they are said to be very efficacious in cutaneous affections. Over one of them a tannery has been erected, and several others are used by the Turkish women for washing their clothes.

GONYE, a vil. S. Africa, Makololo country, celebrated for its falls on the Leambye or Zambesi, about 100 m. below Nariete; lat. 16° 12' 9" S.; lon. 23° 55' E. These falls have not been made by wearing back, like those of Niagara, but are of a fissure form. For many miles below the river is

confined in a narrow space, not more than 100 yds wide, and the water goes boiling along as if in masses jostling and tumbling over one another. Thus interrupted, the river, when in flood, rises from 50 to 60 ft., and inundating the valley to a considerable distance above, has already been fatal to more than one important town built at too low a level. Viewed from the mass of rock which overhangs the falls, the scenery is surpassingly beautiful. The villagers of Gonye are bound to convey travellers across the river in canoes. This they do both dexterously and cheerfully.

GONZALES, an isl. S. America, belonging to the Pearl group, in the S. of the Bay of Panama. It is about 12 m. in circuit, and is separated from the Isla del Rey on the E. by a deep and broad channel, in which numerous islets are interspersed. On its N. side are two bays, protected from the N. by the islands of Senora and Senorita. These bays have been proposed as depôts for steamers; one being re-examined with this view in 1858. Only one of them was found to be tolerably well fitted for such a purpose.

GOODERICH, a tn. British America, Canada West, cap. co. Huron, beautifully situated at the mouth of the Maitland, on the E. shore of Lake Huron, and at the W. terminus of the Buffalo and Lake Huron railway, 115 m. W.N.W. Toronto. It has four churches—Church of England, Church of Scotland, United Presbyterian, and Wesleyan; tanneries and machine works, various other manufactures, important fisheries, and a convenient harbour, at which large quantities of wheat, the produce of the adjoining district, are exported. Pop. about 4000.

GOOLBURGAH, a tn. India, Nizam's Dominions, dist. and 110 m. W. by S. Hyderabad, founded in the 14th century, was the capital of the first Mahometan kingdom in the Deccan, and figures much in its early history. Nothing now remains to attest its former importance, except a strong stone fort containing a large unfinished mosque and a number of tombs. One of these, the shrine of a celebrated saint, has done more than anything else to preserve it from falling into complete insignificance. The anniversary of the saint's death attracts large numbers of devotees. The surrounding country is a bare undulating plain terminating in low hills.

GOOMA, a river, India, which rises in the peninsula of Kattywar in Gujerat, flows successively E. and S.E., and falls into the Gulf of Cambay, after a course of about 90 m.

GOOMSOOR, a tn. India, presid. Madras, dist. and 43 m. N.W. Ganjam, cap. of a hilly tract, held by a zemindar under the British government till he forfeited it by rebellion. Any importance which it formerly possessed has disappeared. The Khoonds, its inhabitants, were once addicted to human sacrifices, but the practice has been suppressed.

GOOR, a river, India, which, rising on the E. slope of the W. Ghauts, in lat. 19° 8' N.; lon. 73° 36' E., flows S.E. for 50 m. through dist. Poona, and then for other 50 m. through that of Ahmednuggur, and joins the Beema, in lat. 18° 30' N.; lon. 70° 36' E., after a rapid course of 100 m.

GOORGAON, a dist. and tn. India, N.W. Provinces. The DISTRICT, between lat. 27° 40' and 28° 30' N.; lon. 76° 21' and 77° 35' E., is bounded N. by the jaghire of Jujhur and dist. Delhi; E. jaghire Bullubgurh, and the Jumna separating it from dists. Boolundshuhur and Allygurh; S. Muttra, Tijarra, and the territory of Bhurtapore, and W. Tijarra and Jujhur; area, 1942 sq. m. The surface, generally flat, but occasionally broken by hills, has an average height of about 840 ft. above the sea. Along the right bank of the Jumna the soil is rather fertile, though the neglect of cultivation has allowed large tracts to become covered with jungle. About 8 m. W. of the Jumna the country rises into a kind of rocky table-land, on which the prevailing formation is quartzose. In a few places gneiss and mica crop out. The only minerals of any consequence are iron, which is mined and smelted in the vicinity of Ferozepore, and salt, which is obtained from deep wells in the form of brine, and rendered solid by evaporation. Pop. 460,326.—The TOWN, cap. of the above dist., 18 m. S.W. Delhi, is situated near the W. base of a range of quartzose hills. It formerly belonged to the so-called Begum Sumvoos, who makes some figure in Indian history; it lapsed to the British government on her death in 1836. The military cantonment formerly existing here has been abandoned, and its principal buildings now afford accommodation to the civil establishment.

GOOSE, an isl. British America, Canada East, in the St. Lawrence, between the Middle and South Traverse, and 43 m. below Quebec. It is 4½ m. long, and is composed partly of flat meadow and partly of rocky hilly ground. The latter, forming its E. half, is from 150 to 200 ft. high. On the W., where it is flat, a belt of meadows extends from it for 2½ m. to Crane Island, the whole thus forming one continuous stretch of 10 m. The Goose and Crane Islands, with the intervening meadows grazed by large herds of cattle, taken in connection with the mountains of the N. shore, furnish one of the finest views of the St. Lawrence.

GOOTY [add.], a tn. India, presid. Madras, dist. and 50 m. E. Bellary. It consists of a fort and native town, inclosed by a cluster of fortified hills, the loftiest of which is 2171 ft. above sea-level, and 989 ft. above the adjoining plain, and of a cantonment and other native town situated at some distance outside. The hills are connected with each other by a rampart, and the only entrance to the town within is through two fortified gateways. One of the hills situated to the N., and consisting of an immense smooth rock, is covered with a series of works which render it a separate citadel, which is sometimes used as a state prison. The cantonment being no longer required, as the troops now stationed here consist only of two companies of N.I., is in ruins; the pettah adjoining it consists of one principal street with some good houses. Sir Thomas Monro, the celebrated Indian statesman, died at Putticonda in the vicinity, and was at first interred at Gooty, though his remains were afterwards removed to Madras. A choultry and tank have been constructed here to his memory. Estimated pop. 3000, of whom about a fifth are Mahometans.

GOPUT, a river, India, which rises in the native state of Korea on the S.W. frontier of Bengal, flows circuitously, first N.W. for 70 m., then N.E. for 55 m., and joins the Sone on its right bank at the small town of Burdhec.

GORAGOT, or **GHORAGHAT**, a tn. India, presid. Bengal, dist. Bograh, on the Kurateea, an offset of the Teesta, 48 m. S.E. Dinagepore. When in its most flourishing state it was about 8 m. long and 2 m. broad, but appears to have been even then a very straggling place. The rampart of its ruined fort extends about a mile along the bank of the river and half a mile behind, but the only remains of any importance are several small mosques. The present inhabitants have some trade, but such is the general desolation that tigers prowl nightly in the streets. Pop. about 3000.

GORGONA, an isl. W. coast S. America, about 30 m. off the coast of New Granada; lat. (Watering Bay) 2° 58' 10" N.; lon. 78° 10' 20" W. It is about 5 m. long by 1½ m. broad, has three remarkable peaks, of which the loftiest, situated in the centre, is 1296 ft. high, presents a beautiful and finely diversified surface, forming a pleasing contrast to the low dense wood of the mainland, is well watered, and wherever cultivated has proved productive. This island figures much in the adventures of Pizarro, the buccaneers, and the early voyagers to this part of the coast. It was to this island Pizarro and his followers retreated after leaving Gallo Island, and here they remained for five months before they took their final departure for the coast of Peru.

GORI, a tn. Trans-Caucasian Russia, Georgia, l. bank Kur, where the river is augmented by the confluence of two large affluents, 26 m. N.W. Tiflis. The country around it, though less picturesque, is more fertile and healthy than that of Tiflis, and hence it has sometimes been regretted that the Russians in selecting the capital did not give it the preference over the latter city. In the neighbourhood of Gori is the troglodyte city of Uplotichos, on the summit of a sandstone rock out of which it has been excavated. Many of the excavations present vaulted roofs and rows of pillars on the sides; in some of these chambers the walls and ceilings are beautifully decorated. The only building not excavated is a church occupying the highest summit of the mountain, and probably much more recent than the city. Pop. estimated at 3400, of whom the majority are Armenians.

GORLICE, a tn. Austrian empire, Galicia, circle and 64 m. S.E. Cracow, on the Ropa, on a steep height. It is a place of some importance, with several public offices; and its inhabitants, chiefly German immigrants, are engaged in weaving linen and woollen cloth, and in carrying on a considerable trade in corn. It had once a strong castle, where the Arians were protected, and had an opportunity of propa-

gating their heresy. There is a seam of asphalt in the vicinity. Pop. 3666.

GORONZAGO, a mountain range, S.E. Africa, in the Macombe country, about 120 m. S. of the Zambesi, and nearly the same distance W. of the Indian Ocean; lat. 18° 20' S.; lon. 34° E. It has an estimated height of 4000 ft., is famed for its clear cold waters and healthiness, and was once a Jesuit station.

GORUCKPORE [add.], a tn. India, N.W. Provinces, cap. dist. of same name, 430 m. N.W. Calcutta. It stands in a marshy district on the left bank of the Raptée, which is here a fine navigable stream, with a channel about 200 yards wide, and contains, with some good houses of brick covered with tile, a far greater number of wretched hovels. Even the better houses have a very unsightly appearance, caused mainly by the herds of monkeys, which, by the partiality of the inhabitants, are allowed to infest the place, and one of whose favourite pastimes is to displace the tiles from the roofs and scatter them about. The fort, situated close to the river, is a regular square with twelve bastions—one at each corner and two on each face; but part of it was demolished in 1802 when the British took possession. The principal buildings of the town are two mosques, the one ruins, and the other, though in tolerable preservation, a heavy, tasteless structure; and the Imambarra, a palace built by Shujah-ud-Dowlah, spacious and handsome, and capable of producing a fine effect were it not disfigured by the chaos of filth and misery which surrounds it. The military cantonment, situated on the E. of the town on the highest ground that could be found, contains the usual buildings, though the houses of the Europeans are said to be poorer in appearance, and more devoid of ornamental ground, than usual. The celebrated temple of Gorackhnath is in the vicinity. During the sepoy mutiny Goruckpore was wrested from the rebels, on 6th Jan. 1858, by the Nepanlese auxiliary force. Pop. 45,265.

GOSAU, a tn. Austrian empire, Upper Austria, circle Hausruck, on a stream which waters the beautiful valley of the same name, about 42 m. S.W. Steyer. It has two churches, a Protestant and a R. Catholic. In its vicinity are the two lakes of Gosau, remarkable for their wild romantic scenery, and an aqueduct which conveys the salt brine of the mines from one mountain to another across a deep valley. Pop. 1600.

GOSHEN [add.], a tn. U. States, New York, on the Erie railway, 70 m. N.W. New York city, containing county buildings, four churches, an academy, a female seminary, tanneries, and fulling, flour, and saw mills. It is celebrated for excellent butter, made chiefly for the New York market. Pop. 3213.

GOSSLING, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, on the Ips; with manufactures of iron, gypsum kilns, various saw-mills and coal-mines, which are worked to some extent. Pop. 2080.

GOTTHARD (St.), a tn. Austrian empire, Hungary, co. Eisenburg, on the Raab, opposite to the mouth of the Lafnitz, 23 m. S.W. Steinamanger; with a famous Cistercian abbey, founded by Belu III. in 1183, and a considerable trade. The Turks were defeated here in 1664. Pop. 815.

GOVASDIA, a tn. Austrian empire, Transylvania, circle and about 20 m. S.W. Broos; with one of the most celebrated ironworks in the country.

GOVERDHUN, a tn. India, N.W. Provinces, dist. and 15 m. W. Muttra. It stands on a narrow sandstone ridge, possesses a well-supplied bazaar, and is inhabited mostly by Brahmins, who subsist chiefly on the endowments attached to the tombs of the Jat rajahs of Bhurtpore and Deeg, who are buried here. One of these tombs, that of Suraj Mul, situated on the N.E. extremity of the ridge, about 2 m. from the town, is a handsome structure, tastefully designed and elaborately executed in fine white sandstone, little inferior to marble. Many fantastic Hindoo legends are connected with this place.

GOWK, a tn. Persia, prov. and 50 m. S.E. Kerman, in a valley. It is a large straggling place, extending with its gardens and houses for nearly 3 m., possesses two mud forts, one at each extremity, and contains about 1500 families. There is little field cultivation, but great quantities of grapes are grown in the gardens and partly dried for exportation.

GOYA, a tn. La Plata, prov. and 100 m. S. Corrientes, l. bank Parana, on a low flat site of indifferent fertility. It

carries on a considerable trade in hides and tallow. Pop. about 7000.

GOZENAKO, a tn. Western Africa, territory and a few miles E. Tasawa. It stands in a fertile district, pastured by numerous herds of fine cattle, and is of considerable size, consisting of a town inclosed by a *keffi*, or close stockade of thick stems of trees, and an open suburb. The houses, all conical, are made entirely of stalks and reeds. The fields to the W. of the place are well cultivated, and have many tall fan-palms and other trees interspersed with them.

GRABOWKA, a tn. Austrian empire, Galicia, circle and a little N. of Tarnow; with 2459 inhabitants, who weave fine goods and have several tanneries of red leather.

GRACIAS, or **GRACIAS A DIOS**, a tn. Central America, Honduras, cap. N.W. dep. of the state, on a plateau at the foot of a steep escarpment of the mountains of Salaque. It was founded in 1536, and owing to the richness of its mines soon rose to importance both political and commercial. At one time all the trade with Guatemala from Puerto Caballos passed through it. In its churches it still presents indications of its former splendour. Immediately in front of the town a mountain stream plunges by two successive leaps to a depth of 1200 ft. Pop. about 5000.

GRADISHTEH, a tn. Turkey in Europe, Servia, circle Posharevetz, at the confluence of the Pek with the Danube, 41 m. E. Belgrade. It is the seat of a civil and criminal court, and has a church and a school, and in the vicinity the remains of a Roman bridge. Pop. 1800.

GRAFENDORF (UPPER), a tn. Austrian empire, Lower Austria, on the Pielach, 36 m. W.S.W. Vienna; with a paper-mill and five saw-mills. Friedrad, almost immediately adjoining, has ironworks and a cotton-mill. Pop. 2080.

GRAHAM'S TOWN [add.], a tn. S. Africa, cap. dist. Albany, in the E. prov. of Cape Colony, 25 m. N. from the coast; lat. 32° 40' S.; lon. 26° 22' E. It is pleasantly situated on an eminence surrounded by others of greater elevation, and consists of wide and airy streets, and houses provided for the most part with well-watered gardens abundantly stocked with fruit-trees. Among the public buildings are various handsome churches, two of them Episcopalian, one R. Catholic, and others of different denominations; a grammar-school, a library, and large barracks. The shops are decidedly better than in any other part of the colony, and the market is large, well supplied, and much frequented. In addition to the more ordinary articles exposed for sale are ivory, ostrich feathers, wild beasts' skins, antelopes' horns, and other products of the interior. The town has its municipal council, and two banks assist in developing the resources of the district. It is also a bishop's see. Pop. about 5000, of whom 1000 are coloured.

GRAN CHACO, or **HUANCHACO**, a small tn. on the coast of Peru, about 8 m. N.W. Truxillo, of which it may be considered as the port; lat. 8° 20' S.; lon. 78° 40' W. It stands on an extensive sandy flat, presenting an appearance by no means attractive; but possesses a handsome church, with a conspicuous tower, and is indebted to Truxillo for some trade. The shore however is so very flat that no vessel of any size can approach it. In the vicinity, on the road to Truxillo, are ruins extending over an immense area, and supposed to be those of an ancient Peruvian town.

GRAND BAY, a tn. British America, Canada East, co. Chicoutime, at the head of the bay of same name, in the Saguenay, about 60 m. above its mouth, 114 m. N. by E. Quebec. The bay, which is about a mile wide, and 100 fathoms deep, forms an excellent harbour, at which large quantities of lumber are shipped. Pop. about 750.

GRAND HAVEN, a tn. U. States, Michigan, cap. co. Ottawa, near the mouth of Grand River, in Lake Michigan, and at the terminus of the Detroit and Milwaukee railway. It possesses three churches, a tannery, a planing-mill, and several saw-mills; and carries on an extensive trade, in which the principal articles of export are timber, staves, shingles, fish, leather, gypsum, stucco, lime, and flour. The value of the exports has in some years exceeded £200,000. Pop. 3000.

GRAND RAPID, British America, the name given to a rapid of the Saskatchewan, which occurs shortly after it issues from the W. side of Cross Lake, and is about to pour its waters into Lake Winnipeg. After some minor interruptions the banks of the river, previously low and flat, but

thickly timbered, begin to rise, and have only attained the height of 20 ft. when the W. extremity of the Grand Rapid is reached. It is said to be unsurpassed as a rapid in magnificence and extent, as well as in volume of water. Its total length is $2\frac{3}{4}$ m. and its total descent $43\frac{1}{2}$ ft.; its breadth at its upper extremity where it commences is 480 yds., but at its lower extremity where it terminates is only about 240 yds.; the depth of water, as no soundings have been taken, can hardly be conjectured. Throughout almost its entire length the Grand Rapid is confined between perpendicular escarpments of rock, composed of brittle buff coloured limestone, in horizontal strata. Above the limestone is a bed of light-coloured clay, 23 feet in thickness, with pebbles and boulders embedded in it, and above all about 8 inches of vegetable mould, clothed by a forest of balsam spruce, tamarack, and poplar. The ascent of the Grand Rapid is a task of no ordinary labour and difficulty, but in point of danger cannot be compared with the descent, which is thus described by Mr. Hind: 'In attempting, according to his directions (those of John Spence, an old experienced voyageur), to cross from the north to the south side of the rapid, in order to get into what was reported to be the best channel for a small canoe, such was the fierceness of the current and the turbulence of the great surges and breakers in the middle, that we were nearly engulfed; and although every nerve was strained, we were swept down with impetuous velocity, and did not get near the other side till we were about $\frac{3}{4}$ m. below our starting-point. We were then impelled with astonishing swiftness along the south side of the torrent, often in dangerous proximity to the rugged wall of rocks bounding the channel, and now and then whizzing past—almost grazing—sharp rocky points jutting out into the river, against which the thundering waters seethed and foamed in their fury. During the descent the voyageurs exerted themselves to the utmost of their strength, and evinced an admirable degree of coolness and dexterity.'

GRAND RAPIDS, a tn. U. States, Michigan, cap. co. Kent, on the rapids of Grand River, and on the Detroit and Milwaukee railway, 62 m. W.N.W. Lansing. It stands on both sides of the river, which is here about 300 yards wide, possesses county buildings, several churches, an Episcopal college, and in respect both of manufactures and trade is one of the most thriving places in the state. Salt, gypsum, limestone, and pine timber abound in the vicinity. Pop. (1860), 8085.

GRAND RIVER, a tn. British America, Canada East, co. Gaspé, near the mouth of the river of same name, on the W. shore of the Gulf of St. Lawrence. It contains about 1450 inhabitants, chiefly employed in fishing, in which a large business is done.

GRATZ, a tn. Austrian empire, Silesia, dist. and 4 m. S. Troppau; with a parish church, a castle belonging to the Prince of Lichnowsky, situated in a fine park, and containing a picture gallery; an hospital, a paper-mill, a trade in wood, three yearly markets, and 1200 inhabitants.

GRAVE CREEK, a vil. U. States, Virginia, cap. co. Marshall, l. bank Ohio, between the Big and the Little Grave Creeks. It derives its chief claim to notice from a remarkable ancient mound in its vicinity, 820 feet in circuit at its base, 190 feet in circuit at its summit, and 70 feet high. By means of a shaft sunk from its apex, several interesting antiquities, including two sepulchral chambers, several skeletons, and a small stone with a sculptured alphabetical inscription, have been found. Pop. 1200.

GREAT BARRIER, or **OREA** [add.], an isl. New Zealand, on the N.E. side of Ulster or Middle Island, and on the E. side of the Hauraki Gulf, to which it affords great protection from seaward. It is 21 m. long from N.N.W. to S.S.E., and 10 m. across where it is widest, near its centre. Its E. shore, on which there is generally a heavy swell, has no safe anchorage, but on its W. shore are several bays and harbours, which, though open for the most part to W. and S.W., give excellent shelter from east winds. The interior is traversed throughout its whole length by a mountain range, the culminating point of which rises to the height of 2130 feet, and is clothed with trees to its summit. Other parts are thickly wooded. Among the trees the *kauri* once flourished in great abundance, but all of those within convenient reach have been cut down, and either exported or used for ship-building purposes on the

island itself, particularly at Port Abercrombie, where small vessels are built and repaired, and where in 1848 one of 400 tons was built, equipped, and loaded with a cargo of copper ore, which was then worked near the north end of the island. The valleys and slopes of the hills afford good pasturage, and on the east side of the mountains are some plains of considerable extent.

GREAT BARRINGTON, a tn. U. States, Massachusetts, on the Housatonic River and railway, 118 m. W. Boston. It is beautifully situated among surrounding hills, and possesses six churches, an academy, a large woollen factory turning out annually 500,000 yards of cassimere, an almost equally large cotton-mill, a tannery, a distillery, a rope-walk, two flour-mills, and a manufactory of india-rubber goods. There are beds of iron ore, and quarries of variegated marble in the vicinity. Pop. 3871.

GREAT DOG LAKE, British America, situated about 22 m. N.W. of Thunder Bay, on the W. side of Lake Superior. It is of very irregular shape, with a maximum length of 20 m., a breadth of 7 m., a depth found at two different soundings to be 12 and 15 fathoms, and an estimated area of 200 sq. m. It is bounded by bold primary rocks, and studded by innumerable islands, and is 710 feet above the level of Lake Superior. Its principal feeder is the Great Dog River, which enters it from the W., its outlet Little Dog River, which, issuing from its S.W. extremity, and thereafter expanding into Little Dog Lake, is properly only a prolongation of the Kaministiquia. The country around Great Dog Lake is hilly, and covered with forests, chiefly of white spruce, interspersed with groves of aspens, and occasionally dotted with Weymouth and Banksian pines; white and yellow birch, some of them of large dimensions, also abound.—(Hind.)

GREAT SALT LAKE, U. States, in the N.E. of Utah, about lat. 41° N.; lon. 113° W. It lies in a valley or basin of the Rocky Mountains, and is of very irregular shape, presenting in its coast line numerous indentations and projections, and stretches about 75 m. from N.W. to S.E., with an average breadth of about 30 m. Its height above the sea is 4200 ft. As its name implies, the water, though clear and transparent, is excessively salt, 22 per cent., or rather more than one-fifth of its whole volume, consisting of chloride of sodium, with a slight mixture of other salts. Owing to the great specific gravity thus produced, the water is so buoyant that a man may assume a sitting posture in it, with his head and shoulders raised above the surface. Swimming however is difficult, from the tendency of the limbs to rise at each stroke out of the water, and there is, moreover, the additional danger of having the eyes stung by particles of brine, and the throat and stomach scorched by accidentally swallowing any part of it. Of its several feeders the most important issues from Lake Utah, which is situated 35 m. to the S., and not only contains fresh water, but abounds in fish. The Great Salt Lake, on the contrary, maintains no living thing, though its shores and islands are frequented by immense flocks of gulls, wild ducks, geese, and swans. It has no outlet, and therefore all the surplus water which it receives must be discharged by evaporation. Appearances indicate that it once was of much larger extent, and formed an inland sea.

GREECE [add.] The area of the kingdom is estimated at 46,429,000 stremmata, or 18,571,600 acres. No complete survey of the country has yet been made, only the vineyards, olive-grounds, currant plantations, &c., having been measured and valued to some extent. About one-third of the surface consists of mountains and rocks; one-fifth is covered with forests; and perhaps one-half is available for cultivation, but of this barely half has been turned to account. It is difficult to ascertain the amount of the produce of the soil, or its capabilities for maintaining the population. But the following figures represent the productions of the years 1857 and 1858; $8\frac{1}{2}$ kilos being equivalent to a Winchester quarter, and the oke to 45 oz. avoirdupois:—

	1857	1858
Sesame	Okes. 65,990	Okes. 44,144
Aniseed	18,850	19,646
Flax	4,260	710
Rice	41,000	38,000
Total	129,600	102,500

	1857.	1858.
	Kilos.	Kilos.
Corn	4,713,585	2,649,550
Burley	2,738,020	1,454,743
Meslin	1,582,340	977,129
Rye	85,136	32,904
Oats	301,274	145,215
Indian Corn	3,770,288	2,837,861
Buckwheat	398,788	188,797
Pulse	195,546	100,961
Vetches	4,540	1,823
Total	13,784,517	8,420,078

The year 1858 was one of great dearth, but 1857 was an average one. Notwithstanding the excessive dryness of the climate and the torrid heat of summer, the soil, when properly turned up, is generally found to be most fertile; and even beneath the desolate stony wastes of Attica it is asserted that there lies a virgin soil of rich brown loam, which is never reached by the rude plough of the time of Hesiod, which is the chief implement of agriculture. The cultivation of the currant plant is said to be rapidly increasing in the Morea: in 1858 the plantations covered 153,058 stremmata; in 1863, about 200,000. The crop amounted in 1858 to 32,408 tons; and in 1861, to 32,660 tons. Of the crop of 1862, 35,903 tons were exported—30,906 of them to Great Britain. The duty raised upon currants in 1863 was about 1,000,000 drachmas. Cotton also has become an important crop, upwards of 30,000 acres being sown in 1864; and tobacco is much grown, the best qualities being produced in the plains of Livadia, Calamata, and Argos. Valonea, the cups of the acorn of the Levantine or Valonea oak, is one of the chief and most valuable productions, and is exported for tanning purposes.

The value of the imports and exports in the year 1862 was 49,109,666 drachmas (£1,753,917), and 32,323,726 drachmas (£1,154,419) respectively; the principal articles were as follows:—

Imports.		Exports.	
	Drachmas.		Drachmas.
Tissues (chiefly Cotton and Wool)	9,337,551	Currants	13,235,870
Skins and Hides	5,904,390	Hides	2,604,609
Cereals	3,822,191	Figs	1,843,629
Flour	139,536	Oil	1,503,807
Sugar	3,034,326	Valonea	1,381,696
Wood	2,163,933	Cereals	1,061,574
Animals	2,093,116	Spirits	1,022,039
Iron	1,833,890	Silk	771,789
Coffee	1,008,818	Live Stock	565,907
Salted Provisions	1,246,028	Tobacco	464,782
Total	30,093,779	Total	24,260,702

The number of vessels entering Greek ports from foreign countries in 1862 was 10,464, of 1,078,507 tons, and of those departing for foreign destinations 11,209, of 1,062,111 tons. The coast navigation of the same year represented a tonnage of 1,204,293 entered, and 1,189,814 cleared. The mercantile marine of the country consisted of 4335 vessels, of 257,318 tons. The Ionian Islands are not included in the foregoing statistics.

The average revenue of the kingdom in the five years 1860 to 1864 was slightly superior to the expenditure:—

Average of Revenue, ...	£834,900
„ Expenditure, ...	832,103

The revenue, according to the budget of 1864, was estimated thus:—

<i>Direct Taxes.</i>		Drachmas.
Land Tax and Usufruct	7,632,000	
Tax on Bees	60,000	
„ Pasturage	150,000	
„ Cattle	1,350,000	
„ Licenses	400,000	
„ Houses	900,000	
		10,492,000
<i>Indirect Taxes.</i>		
Customs	5,000,000	
Stamps	2,100,000	
Sundries	310,000	
		7,410,000
Total	17,902,000 = £639,357	

being £219,457 less than the actual revenue of 1860.

The land tax is a tax upon the produce of the soil of 5 per cent. upon cereals and special rates upon other kinds. The effect of the tax is very detrimental to agriculture. The usufruct is a tax or rent of 15 per cent. upon the produce of national lands rented by private persons. The expenditure according to the budget of the same year, 1864, was as follows:—

<i>Debt.</i>		
Foreign	£37,696	
Internal	32,388	
Pensions	64,434	
		£134,518
<i>Public Service.</i>		
Ministry for Foreign Affairs	£20,543	
„ of Justice	56,054	
„ Interior	138,282	
„ Religion and Education	43,850	
„ War	191,951	
„ Marine	43,214	
„ Finance	34,099	
Administrative Expenses	59,973	
		£592,966
Total		£727,484

Besides this amount there are the king's civil list, the salaries of the members of the legislature, and other expenses. But it is difficult to ascertain the actual amount of the expenditure. The public debt at the end of 1862 was estimated to be £14,324,000.

The whole of Greece is divided into ten nomarchies or prefectures. These ten nomarchies represent thirty-five eparchies or sub-prefectures; and these eparchies are made up of demarchies or communes, to one of which every member of the state must belong for himself and family. These communes are distributed into three classes:—

Class I. containing a population of 10,000 and upwards	
II. „ „ 2,000 to 10,000	
III. „ „ less than 2000	

Every town or village numbering 300 or more inhabitants can claim to be constituted a distinct commune or demos. Towns or villages with less than this number belong to the commune nearest to them. The number of demoi is, of the first class, 7; of the second, 217; and of the third, 56: altogether 280. Each demos of the first class has a communal council of 18 members; of the second, 12 members; and of the third, 6 members. Every demos is presided over by a demarch or mayor; and, if of the first class, has 6 aldermen (*παρέδροι*); if of the second, 4 aldermen; and if of the third, 1 alderman. The duties of the communes are to support elementary schools, defray the expenses of elections, the repairs and maintenance of public buildings, roads, bridges, &c., and to levy local taxes. But the demarchs are responsible to the ministry of the interior, and the consequence is that local interests are sacrificed to political influences, and what appears to be an efficient municipal system becomes the mere instrument of the dominant party. As one result it is stated that there are not a dozen roads in Greece, the total mileage being 180 to 200 miles at the most. Although the country abounds in splendid forests of excellent timber, the want of roads renders it practically useless, and large quantities have to be imported; and it is a common custom for the shepherds to burn down vast tracts in order to provide more pasture for their flocks.

In the provinces of the kingdom brigandage has revived, and is said to be increasing, many members of the better classes betaking themselves to it from vindictive or lawless opposition to the exactions of the ruling powers. It is asserted that there are few of the leading bandits who have not a friend, or relative, or political patron in high quarters, and that hence many cultivated Greeks regard brigandage with an otherwise unaccountable toleration. Little effort is seriously made to suppress it. Education, however, has been making progress. When the monarchy was established there was no educational institution in existence, except an orphan asylum at Egina. In 1864 there were—

	Professors or Masters.	Pupils.
The University of Athens ... with ... 65 ... and ...		1,080
8 Gymnasia, or Royal Colleges ...	50 ...	1,124
80 Hellenic Schools ...	142 ...	5,342
1 Normal School ...	8 ...	145
Commercial Schools ...	530 ...	42,353
Private Communal ...	42 ...	2,880
300 Elementary	10,000

The nationality of the inhabitants is mixed. The Albanian race occupies the whole of Attica and Megares (except the capitals Athens and Megara), Bœotia, parts of Locris, Eubœa, Andros, and Egina, the whole of Salamis, and, in Peloponnesus, Corinthia, Argolis, parts of Arcadia and Achaia, Laconia, &c. The Albanians are prominent in activity, and furnish the greater number of the cultivators of the soil and the most enterprising of the maritime population. The Hellenic race is not less energetic, and under favourable circumstances displays much intellectual and commercial talent. But the insecurity of property and labour prevents any material prosperity or progress. By the census of 1861 the population was found to number 1,096,810.

GREEN, an isl. British America, Canada East, in the St. Lawrence, about a mile from its r. bank, in co. Temiscouata, and nearly opposite to the mouth of the Saguenay on its l. bank. It forms a narrow belt 5 m. long from N.N.E. to S.S.W., is wooded, and is mostly composed of grauwacke and slate rocks, the loftiest of which is 250 ft. above the sea. From its S.W. point, which is low and bare, a dangerous reef extends westward, and then curves out northward beyond its general line; on its N. point there is a lighthouse in the form of a square stone tower, visible in clear weather at the distance of 12 m.

GREEN BAY, a tn. U. States, Wisconsin, at the head of the bay which gives it its name, and which branches off in a south-westerly direction from the N.W. of Lake Michigan, 112 m. N.E. Madison. It lies at the mouth of Fox River, which having been connected by a canal with the Wisconsin, gives a communication with the Mississippi, and carries on a large trade, particularly in fish and lumber. Within the town are 6 and in the vicinity 24 saw-mills, driven mostly by steam. Pop. 2275.

GREENCASTLE, a vil. U. States, Indiana, cap. co. Putnam, on high table-land at the intersection of the Terre Haute and Richmond with the New Albany and Salem railway, 41 m. W. Indianapolis. It is situated in a rich agricultural district, and contains two churches, a Methodist university, two academies, and a courthouse and jail. Pop. 2096.

GREENFIELD [add.], a tn. U. States, Massachusetts, cap. co. Franklin, r. bank Connecticut, at the junction of the Vermont and Massachusetts with the Connecticut River railway, 85 m. W.N.W. Boston. It contains 6 churches, and is largely engaged in the manufacture of cutlery and mechanics' tools, cassimere, castings, carriages, leather, harness, furniture, and tin-ware. The first manufactory of table cutlery in the U. States was established here in 1834. Some remarkable fossil footprints have been discovered in the vicinity. Pop. 3198.

GREENPORT, a vil. U. States, New York, on the S. side of the N.E. point of Long Island, 95 m. E.N.E. New York city. It possesses six churches, and an excellent harbour which admits the largest vessels, and is seldom obstructed by ice. Many vessels are fitted out in its building-yards, and not a few of the inhabitants are interested in the whaling trade.

GREENSBOROUGH, a vil. U. States, Alabama, on the Georgia railway, 50 m. W. Columbus. It possesses three churches, a female college, several academies and schools, a courthouse and jail, and standing in the midst of large cotton plantations has a flourishing trade. Pop. about 2500.

GREENVILLE, a tn. U. States, S. Carolina, cap. dist. of same name, on the frontiers of N. Carolina, and at the terminus of the Greenville and Columbia railway, 83 m. N.W. Columbia. It contains several churches and academies, and has become a favourite summer resort in consequence of its beautiful and romantic scenery. Pop. 1518.

GREENWICH, a tn. U. States, Connecticut, on Long Island Sound, and on the New York and New Haven railway, 30 m. N.E. New York. It contains three churches, an iron foundry, a tool and a wire factory, and since the completion of the railway has become a favourite place of residence for New York merchants. Pop. 6522.

GREIFENDORF, a tn. Austrian empire, Moravia, circle and 37 m. N. Brunn, in the valley of the Zwitzawa, and on the Vienna and Prague railway; with 2199 inhabitants.

GREY, or MAWHERA, a river, New Zealand, in the N.W. of Middle Island or Munster. It is formed by two branches,

one of which, rising near the centre of the island, flows circuitously S.S.W., while the other, issuing from Lake Brunner, flows N.W. From the point of junction the united stream flows nearly due W. through an extensive valley for about 12 m., and falls into the sea on the W. coast, in lat. 42° 28' 30" S.; lon. 171° 11' 15" E.

GRIES, a tn. Austrian empire, Tyrol, circle Brixen, to the W. of Botzen; with a Benedictine priory, a beautiful church adorned with some of the finest paintings of Martin Knoller, and 1700 inhabitants.

GRIFFIN, a tn. U. States, Georgia, cap. co. Spalding, on the Macon and Western railway, 62 m. N.E. Columbus. It is a healthy and prosperous place, built chiefly of brick, and containing three churches, three colleges, one of them homœopathic, and two female and various other schools. Nearly 50,000 bales of cotton used to be annually sent off from the railway station here. Pop. 2320.

GRIMSBY, a tn. British America, Canada West, co. Lincoln, on the Great Western railway, 34 m. S. by W. Toronto. It has Church of England and Wesleyan churches, a tannery, a foundry, a distillery, and some general trade. Pop. about 1000.

GRINNELL LAND, Arctic Regions, the name given by Dr. Kane, while commanding an American expedition in search of Sir John Franklin, to an extensive tract, separated from the W. or opposite coast of Greenland partly by an immense glacier and partly by an open sea, the entrance to which is by Sir Thomas Smith's Sound, a N. arm of Baffin's Bay. It extends, in continuation of Ellesmere Land and the Victoria and Albert Mountains, from lat. 80° 17' to 82° 30' N., this being the highest point seen though not visited by a party engaged in the expedition. The name of Mount Sir Edward Perry was given to this point. Much of the tract is very lofty, the culminating peaks sometimes rising to the height of 2500 ft. In this region, where the thermometer seldom reaches so high as 55°, and where the ground is almost always frozen and covered with snow, Dr. Hayes found fifty-two different species of phanerogamous and sixty-eight species of cryptogamous plants.

GRONDINES, a tn. British America, Canada East, co. Portneuf, l. bank St. Lawrence, 43 m. W.S.W. Quebec; with a R. Catholic chapel, a trade in lumber, and boat-building yards. Pop. about 1400.

GRONINGEN, or GRONINGUE, an isl. in the American Polynesia, about 35 m. E. of Penrhyn Island; lat. 10° S.; lon. 156° 44' W.

GROSSE ISLE, British America, Canada East, one of the islands of the St. Lawrence, 30 m. N.E. Quebec. It is about 2½ m. long by 1 m. wide, and is exclusively devoted to quarantine purposes. The establishment is very complete, and all emigrant ships arriving in Canada are obliged to call at it and stop till a clear bill of health has been obtained. No persons but those belonging to the establishment are allowed to reside on the isl., or even to visit it without a pass from the emigrant agent at Quebec.

GROTSKA, or KROTSKA, a tn. Turkey in Europe, Servia, circle and 16 m. S.E. Belgrade, r. bank Danube. It is the seat of a court of justice, and has a church and a school. The Imperialists were signally defeated here by the Turks in 1739. Pop. 1000.

GRUMBERG, a tn. Austrian empire, Moravia, circle and 36 m. N.N.W. Olmütz; with manufactures of hosiery, leather, and wooden ware, and 1400 inhabitants.

GRÜNAU, a tn. Austrian empire, Upper Austria, circle Hausruck, on the Alben, a tributary of the Traun, 25 m. S.W. Steyer, in a very mountainous district. It has a parish church, an hospital, manufactures of scythes and various other industrial establishments, and contains 2000 inhabitants.

GRÜNBERG, a tn. Austrian empire, Upper Austria, circle Traun, l. bank Steyer, and 90 m. W.S.W. Vienna. It has a benevolent female institute, extensive manufactures of scythes, and other industrial establishments. About 2 m. above Grünberg, on the same side of the Steyer, is the village of Leonstein, with an old mountain fastness. Pop. 2000.

GRÜNWALD, a tn. Austrian empire, Bohemia, circle Bunzlau, near Gablonz; with numerous looms, a cotton-mill, glass-works, and 2313 inhabitants.

GRZYMALOW, a tn. Austrian empire, Galicia, circle and 24 m. S.E. Tarnopol, cap. dist. of same name; with a

baronial castle, a beet-root sugar factory, and 3887 inhabitants.

GUADALCAZAR, a tn. Mexico, state and 35 m. N.N.E. San Luis Potosi, in a valley at the height of 5000 ft. above the sea. Its mines, which were very productive, and raised it to a high degree of prosperity, are in a great measure abandoned, but tin is still wrought to some extent, and there is a mine of quicksilver, which is considered the most valuable within the limits of the Confederation.

GUADALUPE HIDALGO, a tn. Mexican Confederation, state and 3 m. N. of Mexico, which communicates with it by two parallel streets planted with rows of silver poplars. It contains a large and beautiful church in connection with a nunnery which stands at the foot of Mount Tepeyac, was founded in 1709, and is one of the richest in the country. Among its treasures is an image of the Holy Virgin of Guadalupe, whose wonder-working powers are in such repute that immense numbers of pilgrims visit it. The town itself is an unimportant place, and only remarkable for the treaty of peace concluded at it between Mexico and the U. States in 1848, after the troops of the former, headed by Santa Anna, had been signally defeated.

GUAJINQUILLA, or **HUAJINQUILLA**, a tn. Mexico, state and 125 m. S.E. Chihuahua, on the Florida, in a well-cultivated district. It is a busy and apparently prosperous place, containing from 6000 to 7000 inhabitants, who are chiefly employed in raising cotton.

GUALAGUAYCHU, a tn. La Plata, prov. Entre Rios, situated on a river of same name, about 9 m. above its junction with r. bank Uruguay. Its prosperity it owes to its position in the centre of a rich grazing state, and its being the entrepôt for a very important inland and foreign trade. Its exports consist of hides, tallow, jerked beef, and bone manure, brought down in large sail-boats and small-decked craft to Frey Bentos, the anchorage at the mouth of the river. Signs of prosperity are everywhere visible in the handsome and substantial buildings, public and private, and the formation of new streets and squares. It nearly doubled its pop. in seven years. In 1849 it had 7000 inhabitants, and in 1856 14,000.

GUALEGUAY, a river, La Plata, which, rising in the interior of Entre Rios, flows S. along the foot of a mountain range past a town of same name, and, uniting with the Pabon, joins l. bank Parana. It is said to be navigable by vessels of 6 ft. draught to the port of Gualeguay, 35 m. above its mouth.

GUALEGUAY, a tn. La Plata, prov. Entre Rios, l. bank river of same name, 120 m. N.W. Buenos Ayres. It carries on an active trade in hides, wool, timber, and firewood, and has an estimated pop. of 6000.

GUAM, or **GUAJAN** [add.], the southernmost and largest of the Mariana or Ladronne group in the N. Pacific, is 29 m. long between N.E. by N. and S.W. by S., and near its centre, where it is narrowest, only 3 m. broad. It is bordered nearly throughout by a chain of reefs, which are at times uncovered. At a distance it appears flat and even, but, on a nearer approach, to have its E. side lined with steep cliffs, on which the sea dashes with great violence, and in which there is no opening fit for anchorage. The W. coast is rather low, and full of small sandy bays separated from each other by rocky points. On this side are Umata Bay, which is 1 m. deep, and at its entrance $\frac{3}{4}$ m. wide, and is well sheltered, except from W. winds, which prevail from June to September, and send in a very heavy swell; and Port San Luis d'Apra, a deep indentation, which is nearly in the form of the letter V, with its mouth nearly closed by a long narrow island, and which, though much enumbered with banks, rocks, and islets, forms a safe and extensive harbour. The principal produce is cocoa-nuts, the trees of which grow on the W. side in large groves 3 or 4 m. long and 1 or 2 m. broad. The other produce consists chiefly of rice, pine-apples, water-melons, oranges, limes, and bread-fruit. The island is inhabited, and in 1858 contained a population of about 4000, congregated chiefly in Yuaraban on the S. side, Apra on the W., and Umata, which stands on the N. shore of the bay of same name, at the foot of hills which rise behind it in an amphitheatre, and contains a church.

GUANAY, a tn. S. America, Bolivia, prov. and about 80 m. N. La Paz, on a stream which a little below unites

with the Tipuani and La Paz, and along with them augments the Mapiro. Most of the inhabitants are Indians, whose chief occupation is in navigating the rivers in *bolzas* or rafts, constructed of an exceedingly buoyant sort of cork-wood. On these large quantities of produce are brought to Guanay from Mojos and Reyes.

GUANO, a tn. S. America, Ecuador, cap. cant. of same name, about 80 m. S. Quito. It contains a number of good houses, including a large and handsome church; and has manufactures of woollen goods, blankets, carpets, furs, and sulphuric acid. Pop. about 9000.

GUARANDA, a tn. S. America, Ecuador, cap. cant. of same name, on a plain in a bleak and barren district, near the slopes of Chimborazo, 90 m. S. by W. Quito. It consists of winding streets and adobe houses with tiled roofs, and contains a parish church, occupying one side of the public square. Many of the inhabitants are muleteers. Pop. 8000.

GUARDIA, or **GUARDIA DE LA ESQUINA**, a tn. La Plata, Pampas, 40 m. S.W. Rosario, to the W. of r. bank Tereero. It lies in a deep basin in front of the plateau, is of considerable size, and regularly built in the form of a square, with houses which have well-stocked gardens attached to them, and with a market-place and a church. As a central point, where the roads from Rosario and Buenos Ayres to Cordova and Mendoza meet, it is a place of some importance.

GUAYAQUIL [add.], a tn. S. America, Ecuador, cap. dist. Guayas, on the W. or r. bank of the river of same name, 105 m. S.S.W. Quito; lat. 2° 12' S.; lon. 79° 50' W. It occupies a low site, little raised above the level of the sea, and consists of two parts, an ancient and a modern, the former on the S. and the latter on the N. The streets are for the most part irregularly formed; but some of them, more especially the Molecon, which faces the river, and stretches along its banks from S. to N. for the whole length of the new town, forming the principal thoroughfare, are straight and spacious. The houses, almost all constructed of wood, and roofed with tile, are usually provided with porticoes, which, carried round so as to embrace the small gardens attached to them, form in some of the streets long lines of shady piazzas. The principal buildings are the churches, which, however, are all of wood, with the exception of that of St. Dominic, which is the most ancient, and is built of stone; the governor's house and government offices, the appeal court, the treasury, the custom-house, the barracks, two colleges and several primary schools, two hospitals, and two markets. The growth and general prosperity of the town have been greatly impeded by destructive fires, which from time to time have laid great part of it in ashes. Another serious drawback is the prevalence of yellow fever, which has repeatedly raged like a pestilence, and committed dreadful ravages. The only defence of the town is a fort situated near its N. extremity on the banks of the river. There is no proper harbour, but a fine quay, built of stone, and about 60 ft. broad, lines the bank in front of the town, and affords good accommodation for vessels. In 1863, 218 vessels, of 58,343 tons, entered the port, bringing cargoes valued at £328,016; and 226 vessels, of 57,910 tons, left it, with cargoes valued at £630,151. Pop. about 22,000.

GUAYAQUIL, a river, S. America, Ecuador, which, formed by a number of small streams which descend from the W. slopes of the Andes, flows S.S.W., and falls into the gulf of same name on the Pacific, in lat. 2° 27' S. In the upper part of its course it takes the successive names of Caracol and Babahoyo. It is navigable for about 110 m., but is enumbered by a bar and shifting banks of sand.

GUAYMAS, [add.] a seaport tn. Mexico, dep. Sonora, on a bay in the Gulf of California, near the mouth of the Yaqui, lat. 27° 54' N.; lon. 110° 52' W. It lies in a hollow, inclosed by bare hills, which, excluding ventilation, make the summer heat almost stifling. The houses are mostly built of sun-dried bricks, and having no windows receive their whole light by the doors. There is only one spacious and regular street—all the others are mere narrow lanes. None of the public buildings are deserving of notice. The harbour, being large and well-sheltered, is much frequented, particularly by ships engaged in the guano trade. The chief exports are flour, wheat, and hides. The fishery in the bay, carried on chiefly by Indians, is very productive. Pop. about 4500.

GUAYTECAS, a group of islands, S. America, off the coast of Chili, between the island of Chiloe on the N. and

the Chonos Archipelago on the S. Guayteca Grande, one of the largest of the islands, has a peak 1100 ft. high, and on its S. side an excellent harbour. Port Low, on its N. side, is much frequented by otter-hunting and sealing parties from Chiloe.

GUBBÉ, a tn. N. Arabia, in the sandy desert of Nufood, lat. 28° 10' N.; lon. 41° 50' E. It stands on an extensive open plain of hard stony soil, between the two peaks of Musliman and Alghanta, which are about 10 m. asunder. It consists of five *sooks* or divisions, four of them extending in a row from E. to W., while the fifth lies southwards. The houses, built of sun-burned bricks, are tolerably large and comfortable. The better class have a front somewhat resembling the propylæa of the old Egyptian temples, and all of them have orchards attached to them. These are well laid out, and carefully irrigated with water raised from wells. The inhabitants are of the Armal tribe, which ranks as one of the greatest of the Shammar race, and possess large herds of camels.

GUDABIRSI, or GUDABURSI, a Bedouin tribe, E. Africa, bounding on the N. with the Eesa, with whom they claim affinity, though the other Somaal refuse to acknowledge the relationship, and unhesitatingly stigmatize them as a bastard and ignoble race. They own the rough and rolling ground, diversified with thorny hill and grassy vale, which lies above the maritime range of the Sub-Ghaults, and have by conquest extended their territory in the direction of Harar, so that they are now bounded by the Marar Prairie. In their features they are decidedly superior to the Eesa, and they are not so bloodthirsty, but they are equally turbulent, and, if possible, more regardless of truth. Their wealth consists in flocks and herds, peltries, hides, gums, and ghee. The hides and peltries are usually sent to Harar, and conveyed thence to Aden. The principal articles imported into the country are coarse cotton cloth, Surat tobacco, beads, and indigo-dyed stuffs for women's coifs.

GUDDADA, a river, India, which rises in Bhotan, on the S. slope of the snowy range of the Himalaya, in lat. 27° 52' N.; lon. 89° 8' E., flows S. into the British dist. Goalpara, and joins the Brahmapootra on its r. bank, after a course of 160 m.

GUELEA, or EL GUELEA, a tn. N. Africa, Sahara, lat. 31° 58' N.; lon. 0° 20' W. It stands on a rocky mountain of a conical shape, is surrounded by a lofty and thick wall solidly built of large stones and crucellated, is entered from the W. by a single gate, which seems to have belonged to an ancient city; and consists of about 200 houses, occupied by individuals of the tribe of Chambet-el-Mahdi, while many of the same tribe live outside in tents. They are rich in sheep, goats, and camels; but the chiefs alone have horses. A large well of great depth within the town supplies the inhabitants with abundance of water, and outside the walls, at the foot of the mountain, there is a perennial spring so copious that it fills an extensive basin, in which twenty camels can drink abreast. The environs are covered with gardens, orchards, and date plantations. Standing on the caravan route to the S.W. and N.E., Guelea shares largely in the intermediate transit trade.—(*Dumas, Le Grand Desert.*)

GUELMA, a tn. N. Africa, Algeria, prov. and 54 m. E.N.E. Constantine, on the site of the ancient Calama, part of whose walls are still standing. It is a stirring place, with two important weekly markets, at which the principal articles sold are cattle, wool, oil, grain, and leeches. The olive, the mulberry, and the tobacco and cotton plants thrive well in the vicinity. There is a government nursery here. P. 3592.

GUERNAYACA, a tn. Mexican Confederation, state and 30 m. S. Mexico, in a beautiful and fertile valley of same name, where almost all the fruits both of the temperate and the torrid zones attain perfection. It occupies the site of the ancient Gnauhnahuac, and has two churches, one of them built by Cortes, and the other surrounded by gardens in the old Mauro-Spanish style. Its principal industrial establishments are distilleries. In the vicinity is the native village of Acapanzingo, inhabited by descendants of the Azteks, who, though professing Christianity, retain their old customs and use an Aztek dialect.

GUERRERO, a state, Mexican Confederation, formed in 1849 out of states Puebla and Mexico, and named after Guerrero, a former president of the Confederation, is bounded N. by Mexico, N.E. Puebla, E. Oajaca, S. and S.W. the

Pacific Ocean, and N.W. Michoacan; area, 18,240 geo. sq. m. It belongs to the lower and gradually descending portion of the great Mexican plateau, and has a surface finely diversified by mountain and valley, and partly covered by native forests. The N. portion is covered by outliers of the Sierra Madre, and though elevated has a temperate and healthy climate. The most important rivers are the Rio de las Balsas, which in the lower part of its course forms the boundary between Guerrero and Michoacan, and the Rio de Papagallo or Tlascalala, which, though usually a small stream, becomes so swollen by the rains as to inundate a large tract of country, and interrupt the communication between the capital and Acapulco. The productions of the state are many and valuable, but agriculture is in a very imperfect condition, and the only tract which can be considered densely peopled is that which lies along the road leading from Acapulco to Mexico. The mines, particularly of gold, were long famous, but now yield poor returns. The trade also is unimportant. Pop. 270,000, mostly Indians.

GUGGUR, a river, India, which rises in the native state Puteala, beyond the N.E. frontier of Sirhind, about lat. 30° 52' N.; lon. 77° 7' E., enters Sirhind after forming part of its boundary, flows S.W., receives the Markunda and Sursooty, traverses the districts Hurreana and Butteana, crosses the frontier of Bikaneer, and shortly afterwards, having lost the greater part of its water by evaporation, absorption, and offsets for irrigation, disappears in the sands, about lat. 29°, lon. 74°. Tradition and the remains of villages scattered over a tract now desolate concur in proving that it must once have flowed to some distance beyond its present termination.

GUILFORD, a vil. U. States, Connecticut, on the New Haven and New London railway, near Long Island Sound, 8 m. S.E. Newhaven. It is an antiquated place with a public square in its centre, and contains four churches and a public school. The manufactures are unimportant, the inhabitants being chiefly engaged in agriculture and maritime pursuits. Point, about a mile S. of the village, is a favourite watering-place. Pop. 2624.

GUIMARAS, an isl. Indian Archipelago, belonging to the Philippines, and lying in the channel between Panay and Negoos. It has a computed area of 210 geo. sq. m., a mountainous surface covered with forests of fine timber, and intersected by fertile and well-watered valleys. On the W. there is a town consisting of about 994 Indian huts, the inhabitants of which manufacture coarse and fine cloth, and also engage in both agriculture and fishing. The total pop. is 5964.

GULUMBE, a tn. Western Africa, Hausa States, prov. Kebbi, 65 m. S.S.W. Sokoto. It is situated close to the S. side of a fertile valley, where yams and cotton are extensively cultivated, has a fine grove of banana-trees approaching close to the walls on one side, and is both large and densely peopled. The state of the country, however, keeping the inhabitants in perpetual alarm, is unfavourable to the prosecution of any branch of industry. The greatest pests of Gulumbé are the mosquitoes, which are so numerous and tormenting that a kind of raised hut accessible only by ladder, and so constructed as to exclude the mosquitoes, is regarded as the most essential part of even the poorest dwelling in the province of Kebbi.

GUMMEL, a tn. Western Africa, Bornou, cap. dist. of same name, 60 m. N.E. Kano. It is a place of considerable importance, and at the time of Dr. Barth's first visit was a flourishing and populous place, with an intricate labyrinth of narrow streets. Among the public buildings was a palace with some pretensions to splendour, and then the residence of a celebrated governor of the name of Dan-Tanoma. When Dr. Barth returned Dan-Tanoma had been for some time dead, and a competition for the governorship had given rise to a civil war, during which Gummel had been rendered almost desolate. The palace had been pillaged and burned, and the successful competitor for the governorship was residing in the midst of its towering ruins, and the whole place presented an appearance of wretchedness. The market of Gummel is held outside the walls, and in its more prosperous days was remarkable for its size and activity. The extensive trade in natron, carried on between Kukawa and Muniyo on the one side, and Nupé or Nyfi on the other, has its centre here.

GUNDAM, a tn. Western Africa, cap. prov. Aussa, 40 m. S.W. Timbuktoo. It is a place of considerable size, and consists partly of a walled town, inhabited by Songhay, Ruma, and Fulbe, and two suburbs, one inhabited by Toki and the other by Erbebi. It communicates with the Kwara by means of a large branch coming from Dire.

GUNDICOTA, a tn. and fort, India, presid. Madras, dist. and a few m. S.E. Bellary. It stands on the edge of a precipice, forming the S. wall of a fissure, which pierces a range of sandstone hills from top to bottom, and makes way for the passage of the Pennar into the plains of Cuddapah. The town, though once important, is now insignificant, and contains only 1500 inhabitants. Considerable interest still attaches to the fort, which contains a handsome minaret and mosque, and the remains of a temple, which, according to Ferishtah, was annually visited by 100,000 Hindoos, and enriched by their offerings. The principal parts still existing are a handsome gateway tower of carved sandstone, and some inner buildings, containing among other sculptures a curious bas-relief, which is so placed as to show only one-half of the sculpture at a time, and exhibits the figure of a cow or of an elephant according to the position of the spectator.

GUNDLACAMA, or **GOONDACAMA**, two rivers, India, the one rising in the Nizam's Dominions, about 16 m. N. of Aurangabad, flows E., and joins the Doodna, an affluent of the Godavery. In the rainy season it flows with a strong current in a deep channel about 100 yards broad, but in summer becomes a very paltry stream. The other river rises in the Eastern Ghauts, near the N.W. frontier of dist. Cuddapah, flows very circuitously, first E. and then S.E., and after a course of about 150 m. falls into the Bay of Bengal, 8 m. N.E. Ongole.

GUNGAWATA, a tn. India, Nizam's Dominions, on the S.E. flank of the granite range of Annagundi, 6 m. N. of the Toombudra, and about 36 m. N.W. Bellary. It consists of a mud fort and a town surrounded by a wall, and is the residence of a deputy of the nizam, intrusted with the charge of the whole of that part of the frontier which is contiguous to the ceded districts.

GUNONG APPI, one of the Banda isls. (which see).

GUNOUR, a tn. India, N.W. Provinces, 36 m. N. Delhi. It presents a picturesque appearance when approached, is surrounded by a ruined wall, and possesses a large and handsome caravanserai, the embattled wall and towers of which, reflected on the surface of a beautifully clear tank, have a fine effect.

GUNTOOR [add.], a tn. India, presid. and 220 m. N. by E. Madras, cap. dist. of same name, in a country which lies open and flat towards the Bay of Bengal, from which it is about 40 m. distant. It is a place of considerable size, well shaded with trees, and having been much extended and improved of late years is divided into an old and a new town. The most conspicuous edifice is the jail, which stands on an open, dry, and slightly rising ground, consists of several buildings in separate areas so as to admit a proper classification, and is large enough to receive 500 prisoners. The soil of the vicinity is black or red, and produces luxuriant crops of gram or chenna, cholam, and cotton.

GUNZA, a tn. S.W. Africa, Kimbunda country, territory Sumbe, on the N. or r. bank of the Sumbe, near its mouth in the Atlantic, 60 m. N. Benguela. It is fortified by a strong palisade, is finely shaded by incendera trees, and watered by the windings of the Sumbe; is the residence of an independent chief, and has an estimated pop. of 2000.

GURAGALBINA, a tn. Russia, gov. Bessarabia, circle and not far from Bender, with a parish church and 2035 inhabitants.

GURAM, a tn. Western Africa, on an arm of the Niger, near the S.E. shore of Lake Debu, 200 m. S.W. Timbuktoo. It is a considerable place, seated on a large rocky eminence, which, rising from an alluvial flat, is a very conspicuous object, and is visible at Yowaru, 20 m. distant. The town consists of three distinct groups, occupied respectively by Fellatah, Songhay, and Tawarek. Across the river, opposite to Guram, stands Sorroba on another rocky eminence.

GURÉ, a tn. Western Africa, Bornou, on the Tuarek frontier, 140 m. N.W. Birni. It occupies the lower slope and southern foot of a rocky eminence overlooking an extensive plain, and is separated by the irregularities of the ground

into several detached portions, and is inclosed by a stockade. At one time it was much more populous than it is now, but the original area which it covered has been contracted for greater security, part of it having been included within a labyrinth of fences, and converted into cotton ground and kitchen gardens. In the event of a hostile attack, against which Guré is still insufficiently protected, the inhabitants if driven to extremity have a refuge in the rocky cone which rises over their heads, and from which with ordinary courage a few defenders could easily repel any number of assailants. Pop. estimated at 8000.

GURGASOVATZ, a tn. Turkey in Europe, in the S.E. of Servia, cap. circle of same name, in a fertile valley on the Timok, 110 m. S.E. Belgrade. It is the seat of a court of justice and other public offices, and has a church, a school, and a much-frequented yearly market. Pop. 2700.

GURI, a tn. W. Africa, cap. Jafuna, on the route from Kasambara to the French settlement of Bakel or Bu-Jedur; lat. 15° 40' N.; lon. 10° W. It is a large place, built of clay houses, and containing, according to an exaggerated statement of native informants, no less than sixty places of worship. The inhabitants are Aswanek of a particular stock.

GURMA, a hilly country, Western Africa, forming the N.E. portion of a large triangle interposed between the Niger on the N. and the Eastern Mandingoes or Wangarawa on the S. It is of indifferent fertility, and under the government of a chief of Masina or Melle, who, after being driven by civil war from his native country, situated at some distance to the N.W., obtained it by grant from the chief of Gurma, and formed a new colony composed of his partisans. These colonists have faithfully preserved their native manners and institutions, and thus form a community bearing no resemblance to the people around them, consisting partly of Songhay, partly of Fellatah, and partly of a native race claiming to be the original possessors of the country, and still headed by chiefs who maintain a rude independence.

GURMUKTESAR, or **GURMUKTESWAR**, a tn. India, dist. and 31 m. S.E. Meerut, r. bank Ganges. It may be regarded as the port of Meerut and the adjoining part of the Doab, as there is a much-frequented ferry above the town, on which 15 boats are kept constantly plying, and there is an important inland navigation from the sea up to this ferry, and in a less degree to Sukurthal, 50 m. higher up. Even in the dry season, when the larger craft cannot ascend beyond Furruckabad, Gurmuktesar, 150 m. above it, can be reached by boats of nearly 20 tons burden.

GUROWA, a tn. Western Africa, prov. Hamarawa, r. bank Benuwe, 300 m. above its confluence with the Kwara. It is a small place, surrounded by dense bush and forest, so thick as to be impenetrable, and leave no means of access to the place except by water; and consists of neat, well-kept circular huts, each with a small garden attached, in which ochro and pumpkins are grown. There is not much trade.

GURRAH, or **DEOHA**, a river, India, which rises in Kumaon, at the N. base of the Sub-Himalaya, lat. 29° 9' N.; lon. 79° 49' E., flows S. past the towns of Pillibheet and Shajehanpoor into Oude, and there joins the W. Ramgunga on its left bank, after a course of 240 m. It is for the most part shallow, and is sometimes forded within 40 m. of its mouth.

GURSDORF, a tn. Austrian empire, Silesia, dist. Weidenau, about 28 m. N.W. Troppau; with granite quarries, and 2011 inhabitants.

GUTENSTEIN [add.], a tn. Austrian empire, Lower Austria, cap. circle of same name, in the upper valley of the Piesting, 33 m. S.W. Vienna. It contains a modern ducal palace in the midst of a fine park; an old castle, where several of the Hapsburg family resided, and Frederick the Fair died in 1330; a Servite monastery, a chapel to which numerous pilgrimages are made; copper, iron, and numerous saw mills; and a large trade in fuel and timber.

GUT OF CANSO [add.], a strait, British America, separating Cape Breton from Nova Scotia, and forming the S. entrance of the Gulf of St. Lawrence, is a most important navigable thoroughfare, thousands of vessels annually passing through it. Its length from the lighthouse on its N. to that on its S. entrance is 14½ m., its least breadth is 900 yards,

and its depth, seldom less than 15 fathoms, amounts where deepest to 32 fathoms. The shore is generally high on both sides, the land rising from it more or less abruptly to a considerable elevation. Cape Porcupine on the W. shore is a precipitous headland 640 ft. above the sea, and has in its vicinity much beautiful scenery. The rocks, belonging to the lower members of the coal formation, consist of slates,

conglomerates, sandstones, gypsum, gypsiferous marls, and occasionally carboniferous limestone.

GUTTA, a tn. Austrian empire, Hungary, co. and 10 m. N.W. Komorn, opposite to the mouth of the Waag in the Danube, with the ruins of an old castle. The inhabitants are partly employed in agriculture, for which the soil is well adapted, and partly in fishing. Pop. 4704.

H.

HABENDORF (ALT), a tn. Austrian empire, Bohemia, circle Bunzlau; with a church, manufactures of woollen cloth and cassimere, a yarn spinning-mill, a lincn bleachfield, and 1300 inhabitants.

HACZOW, a tn. Austrian empire, Galicia, circle and about 10 m. S.W. Sanok; with 2358 inhabitants, the descendants of Swedish prisoners who settled here in the 17th century.

HADAD, a tn. Austrian empire, Transylvania, circle and about 14 m. N. Szilagy-Somlyo; with an old castle belonging to the Vesselenyi family, a salt spring, and 1160 inhabitants.

HADJIKOEI, a tn. Turkey in Asia, prov. Sivas, 30 m. N.W. Amasia. It stands in a beautiful valley, surrounded by well-cultivated fields, and consists of about 220 houses, of comfortable appearance, occupied almost entirely by Turks, the number of Armenian families not exceeding 30. The principal public building is a mosque.

HAIL, or HAYEL, a tn. Arabia, Nejed, cap. prov. Jebel Shomer, situated in a low flat valley at the foot of Mount Samra Hail, belonging to the Aja chain; lat. 42° 40' N.; lon. 27° 25' E. Though one of the latest founded places in the land it is thriving and populous. The town is surrounded with fortifications about 20 ft. high, with round and square towers, and large folding gates at intervals. The area inclosed is sufficient for a population of 300,000 or more, but the many large gardens, open spaces, and plantations within the outer walls, together with the palace and its pleasure grounds, occupying at least one-tenth of the city, materially reduce the space available for buildings. The plain all around the town is studded with isolated houses and gardens, the property of wealthy citizens. The palace in the N.W. part of the city is constructed of earth walls enormously thick, and about 30 ft. in height, pierced near the top with loopholes for windows, and running 450 to 500 ft. in length. The principal gate of it is placed in a receding angle of the wall, and flanked with high square towers, and semicircular bastions project all along the front. Immediately under the wall runs a long bench of beaten earth and stone, and about the centre of it is a throne or raised seat, occupied by the monarch when giving public audience. On the opposite side of the open area stands a long range of warehouses and apartments, in which is stowed the government merchandise and strangers are lodged. Near it are a large mosque and houses of some of the chief officials. A turning leads into the market square, which is well supplied; and a lofty gate at the S. end of the area opens at right angles into the principal street, which traverses the whole extent of the town from E. to W., and is intersected by others in various directions. Most of the houses, built of sun-dried bricks and flat-roofed, consist of two stories, with large rooms, which might be called commodious and comfortable, were it not that light is admitted only through the door and some small openings in the walls immediately below the ceiling. No house is thought complete without a coffee-room, which stands apart from the other buildings, facing the orchard or in the centre of it. The streets though unpaved are broad, and in one of them is a kind of bazaar kept chiefly by wandering tradesmen. The town has received many improvements at the hands of Telal, the present ruler of Jebel Shomer, who has opened streets, dug wells, laid out extensive gardens, besides strengthening the old fortifications and adding new ones. He also built the market and mosque before named. The palace was begun by

his father Abd-Allah-ebn-Rashud, who had been appointed governor of the province by Feysul king of Nejed, and who to consolidate his authority added a new quarter to the town, and laid the foundations of the palace about 1843. His son Telal succeeded him about 1845, and his first cares were to adorn and civilize the capital, and the palace was soon completed. His politic rule has greatly raised the importance of the city; and among the measures for enhancing its wealth, he has been partially successful in drawing the annual current of pilgrims from Persia to Mecca through his territory and the capital. The pop., which is increasing, is estimated at 20,000.—(Palgrave, &c.)

HAIMUN, a walled tn. China, prov. Chekiang, r. bank Taichau, near its mouth in the N. Pacific. The bar across the bay to the entrance of the river has only 8 ft. at low water, but within the depth is 4½ and 5 fathoms. About 4 m. above Haimun the Taichau separates into two branches, one of which takes a N.W. and the other a S.W. direction. There is another Haimun on the E. of prov. Quanton, on the l. bank of a river of same name, which has 10 ft. on its bar at low water. Immediately to the N. of it is Hope Bay, formed by Haimun Point on the S. and the Cape of Good Hope on the N. This bay affords secure anchorage in the N.E. monsoon.

HAINFELD, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, cap. circle of same name, 30 m. S.W. Vienna. It has a church, so built as to be capable of defence against an enemy; manufactures of steel and iron ware, numerous saw-mills, various other industrial establishments, and a field of coal, which is worked to a considerable extent. Pop. 2520.

HAI-TAN, an isl. China, off the E. coast of prov. Fokien, between lat. 25° 24' and 25° 40' N. It is of irregular shape and diversified appearance, elevated in the N., where a peak of the Kiangshan Hills rises to the height of 1420 ft., and low and deeply indented by sandy bays on the E. and W., while the S. extremity consists of a rugged sandy headland interspersed with large boulders. The strait of same name separating it from the mainland is encumbered by numerous islands and rocks, but though thus rendered very intricate it is invariably used by the Chinese junks. The largest bay, situated on the E. shore between Hai Head and Tan Point, is 7 m. across.

HAJOS, a tn. Austrian empire, Hungary, co. Pesth-Solt, about 42 m. S.W. Keeskemet. The only building of any note is a beautiful archiepiscopal summer residence, with a stud and a park. Pop. 3244.

HAKO, or OAKO, a territory, S.W. Africa, Kimbunda country, between lat. 9° and 10° 25' S., and lon. 15° and 16° 20' E.; bounded N. by the Coanza, separating it from the Portuguese settlements, W. Libollo, S. the Longa, and E. Bailundo; area, about 3000 sq. m. It is ruled by a prince, whose power, though nominally absolute, is much restricted by minor chiefs. The surface, though generally mountainous, occasionally spreads out into extensive plains. The climate is moderate and healthy. One of the most important products is wax, which is abundant and of the best quality, and forms the staple of an active trade with Pungo Andungo, on the N. bank of the Coanza. Pop. about 30,000.

HAKODADI, a tn. Japan, on the W. shore of a small peninsula on the S.W. coast of the island of Yeso; lat. 41° 49' 22" N.; lon. 140° 47' 45" E. The appearance on entering the harbour is striking and picturesque. The town

stretches for 3 m. along the base of a lofty promontory, with three principal peaks rising to the height of 600 to 1000 ft. These peaks are either bare or covered with snow, but the lower slopes are covered with a rich profusion of verdure, embosoming and partly concealing the buildings which nestle below. The houses, about 1000 in number, and mostly of one story, with attics of varying heights, are arranged in one

junks lying at anchor in its harbour, which, if the whole bay is included, and not merely the S.E. arm to which the name of harbour more properly belongs, is for accessibility and safety one of the finest in the world. It is also of ample capacity, being 4 m. long and 5 m. deep. Hakodadi is one of the five ports thrown open to British commerce, by the treaty concluded with the Japanese, 26th Aug. 1858. Formerly it was a fishing-village of small importance, belonging to a Japanese daimio, who sold it to the tycoon in 1854, for the purpose of making it a port of refuge for foreign vessels to water, provision, and refit. The Russians freely availed themselves of the port, where their men-of-war found good anchorage; and occasionally British and French squadrons visited the place. On the 9th October, 1855, a convention was ratified between the British and Japanese granting certain privileges; the convention was extended into a treaty by Lord Elgin in 1858, and a consulate established in the following year. Here also are Russian, French, and American consulates, and a few foreign traders, numbering in all about 40 individuals, with a native population and Chinese of 45,000 approximate. Beyond the refitting and provisioning of vessels there is but little trade among foreigners; the external commerce being chiefly in the hands of the Chinese, who ship the produce to China. The export trade, amounting to 414,846 dollars in 1864, consists principally of bulky articles of small value, such as *comboo* or sea-weed, timber of various kinds, dried fish, deer skins and horns, potatoes, and charcoal.

The other articles are fish-oil, tobacco, and a little silk. Recently a trade in salt has sprung up, which is exported to Northern Russia in government transports. The imports in the year 1864 amounted in value to 90,797 dollars. The chief drawbacks to foreign trade at this port are the want of accommodation in the inner harbour, the laxity and indolence of the native officials, the inadequate administration of justice, the high duties, and the exorbitant exchange

main street which runs along the sea-side, and in two or three parallel streets hanging along the slope in its rear. These streets are regularly formed, and have a width of 30 to 40 ft., with open gutters on each side to carry off the drainage into well-constructed sewers, which convey it to the sea. Wooden picket fences with gates cross the streets at intervals, and though kept open during the day are closed at night, converting each street for the time into a separate community, superintended by a special officer called *ottona*, who is held responsible for the conduct of all its residents. The houses consist of a framework of timber, to which a double row of pine boards is fastened lengthwise. A few of the better sort are neatly roofed with brown earthen tiles, but the great majority are covered with thatch, which, often sending forth a new growth from the number of seeds lodged within it, presents a very untidy appearance. The principal public buildings are four Buddhist temples. One of these, called the *Zhiogen-zhi*, or 'the Country's Protector,' built about 30 years ago, and in excellent repair, is a good specimen of Japanese architecture; and having a tiled roof which overtops all the other houses, is one of the most conspicuous objects seen on entering the harbour. Another temple, called the *Kono-zhi*, or 'High Dragon,' from having a large figure of that fabulous animal carved on its front/entablature, stands within an inclosure beautifully shaded with gigantic willows and firs, and though somewhat dilapidated must have been a more splendid and costly structure than the *Zhiogen-zhi*, which seems to have been substituted for it. The shops generally contain only such goods as meet the wants of a poor population. The principal articles are coarse cottons and silks, common earthen and China ware, lacquered bowls, cups, stands, and chopsticks, cheap cutlery, and ready-made clothing. The provision shops are well supplied with rice, wheat, barley, flour, pulse, salt, sugar, sweet potatoes, charcoal, &c. The general quiet of the streets, and the absence of many of the ordinary signs of busy activity, impress a stranger at first sight with an idea that the trade and general business must be of very limited extent. This impression, however, is soon removed, by the occasional droves of laden pack-horses which are seen entering the town, or pacing slowly along its streets, and still more by the hundreds of

The other articles are fish-oil, tobacco, and a little silk. Recently a trade in salt has sprung up, which is exported to Northern Russia in government transports. The imports in the year 1864 amounted in value to 90,797 dollars. The chief drawbacks to foreign trade at this port are the want of accommodation in the inner harbour, the laxity and indolence of the native officials, the inadequate administration of justice, the high duties, and the exorbitant exchange

STREET IN HAKODADI.—From Perry's Japan.

demand for native metallic currency.—(*Consular Reports; Siebold's Mariner's Guide to Japan.*)
HALASEN, a tn. Austrian empire, Hungary, co. Wieselburg, on the Little Danube, 4 m. E. Altenburg. The inhabitants are chiefly employed in fishing, and have several floating-mills on the river. Pop. 1240.
HALIFAX COURTHOUSE, or **BANISTER**, a vil. U. States, Virginia, on the Richmond and Danville railway, and r. bank Banister River, 100 m. S.W. Richmond. It is high and pleasantly situated, and a place of active trade. The river is navigable for 10 m. above it, and there is a rich mine of plumbago 6 m. distant. Pop. 1600.
HALL, a tn. Austrian empire, Upper Austria, circle Traun, on a height above the Salzburg, 98 m. W. by S.

Vienna. It contains a palace belonging to Prince Trautmannsdorf, a townhouse, an hospital for children, a poorhouse, and a celebrated mineral spring. In the vicinity are a ruined and a celebrated mineral spring. In the vicinity are a ruined and a fine modern castle. Pop. 1000.

HALLIWELL, a township, England, co. Lancaster, 2 m. N.W. Bolton; contains two extensive bleaching works, and several considerable cotton-mills. There are two churches—St. Peter's, built in 1840, and St. Paul's in 1848—with large schools attached. The Dissenters have two chapels. Pop. in 1861, 5953.

HAMARRUWA, a tn. W. Africa, cap. prov. of same name, on the S.E. frontier of the Ilausa States, to which it belongs, 18 m. N. of the Benuewe, and 100 m. W.S.W. Yola. It stands on a ridge about 800 feet high, which is continued along the base of the Muri Mountains, and overlooks a marshy plain, which stretches southward to the banks of the Benuewe. The area occupied by it is fully 2 m. long, and $1\frac{1}{2}$ m. broad. Immediately outside the town are fine corn fields, and beyond them on the mountain slopes rich pasturage, on which goats and cattle are grazed. Ivory is the chief article of trade. The population is estimated at not less than 8000, almost all Fellatah.

HAMBO, a territory, S.W. Africa, Benguela, between lat. 12° and 13° S., and lon. 16° and 17° E. Its boundaries are on the N. and E. Bailundo, S. Kakonda and Kingulo, and W. Kiakka. The S. part of the surface is very mountainous, but the N. stretches out into extensive marshy plains. The only river of any consequence is the Keve. The inhabitants belong to the Kimbunda family, resembling it both in their language and customs, but to their disgrace differing from it in one important respect. The Kimbunda abhor, the Hambo practise, cannibalism. The Hambo are in person tall and handsome, but are of a cruel and rapacious disposition, following war and plunder as the great business of their lives, and sometimes extending their forays for hundreds of miles to the S., to prey upon their unoffending and more peaceful neighbours. Hambo is believed to contain gold, though no positive evidence of its existence has yet been given. Pop. about 120,000.

HAMILTON, two places, U. States:—1. A post township, New York, on the Chenango, 25 m. S.W. Utica. It contains 10 churches, the Baptist University of Madison, with 9 professors, 145 students, and a library of 7500 vols.; a theological seminary connected with the university, and a grammar-school. The manufactures consist chiefly of leather chairs, coaches, and waggons, and tin and sheet iron. Pop. 2295.—2. A tn. Ohio, cap. co. Butler, on both sides of the Miami, on the Ohio canal, and on the Cincinnati, Hamilton, and Dayton, and the Cincinnati, Eaton, and Richmond railways, 22 m. N. Cincinnati. It possesses 10 churches, a planing-mill, 2 paper, 4 flour, and several saw mills, 2 cotton and 2 woollen factories, all supplied with water power by means of a hydraulic canal, which gives a fall of 28 feet. Pop. 7223.

HAMILTON, or **ASHWANIFI**, a river, Labrador, running into Esquimaux Bay, or Hamilton Inlet, on the E. side of the peninsula. It is about $1\frac{1}{2}$ m. wide at its entrance, and gradually decreases in breadth for about 25 m., when it becomes from 250 to 500 yards wide, and from this it never varies very much as far up as it has been followed. Two hundred miles from its mouth it forces itself through a range of mountains that seem to border the table-land of the interior in a succession of tremendous falls and rapids for nearly 20 m. Above these falls the river flows with a very smooth and even current; it has been followed for 100 m. further, where a post called Fort Nascepee has been established. Between the falls and the post it passes through a succession of very large lakes, communicating with each other by very short straits. These lakes appear to cover a very considerable part of the table-land, but they have not yet been explored, and consequently their dimensions are not known. The Indians report that the river above Fort Nascepee comes from a long distance to the westward, and runs with a deep and gentle current, unobstructed by falls or rapids. From Fort Nascepee the course of the river is to the southward of E. to the place where it forces itself through the mountains; it then turns to the E. and finally to the N.E., till it falls into Esquimaux Bay.

HAMILTON, or **ESQUIMAUX**, an inlet, Labrador, on the

E. side of the peninsula. The face of the country near it, towards the N. and W., is extremely rugged and hilly; it is composed of round-backed hills, traversing the country in all directions, the intervals being filled with lakes and marshes. The greater part of this district was once wooded, but fires have laid bare the rock, and burned away the mossy soil. To the S. of Hamilton Inlet the country is more level, and more clothed with trees. The head of the inlet is said to be the garden of the Atlantic coast of Labrador. Several rivers run into it, the principal being the Kenamou from the S., and the Hamilton or Ashwanipi from the W.

HAMILTON [add.], a tn. British America, Canada West, cap. co. Wentworth, beautifully situated on the S.W. extremity of Burlington Bay, at the head of Lake Ontario, and on the Great Western railway, 26 m. S.W. Toronto. It stands in the very centre of one of the finest corn countries in America, and possesses so many other advantages that it has nearly trebled its population within ten years. The streets are laid out with great regularity, part running back from the bay nearly from N. to S., and part intersecting these at right angles. The buildings, chiefly of stone and brick, include many imposing structures—churches, government and municipal buildings, banks, hotels, &c. In the environs, on a height called the Mountain, are many elegant villas, with ornamented grounds and productive gardens. Among the churches, 27 in number, are 6 Church of England, 5 Wesleyan, 2 Episcopal Methodist, 3 Baptist (one of them coloured), 2 Methodist Episcopal (one coloured), 2 Presbyterian, a Church of Scotland, a Free, a United Presbyterian, a Congregational, a New Connection Methodist, a Primitive Methodist, and a R. Catholic. The educational, literary, and benevolent institutions include classical, grammar, and other schools, a mechanics' institute, a mercantile library association, a typographical society, a deposit and savings'-bank, a city hospital, and an orphan asylum. Magnificent water-works bring an ample supply of water from the lake. Hamilton has some of the most extensive manufacturing establishments in the province—foundries, machine works, locomotive works, &c.—and carries on an important trade. It sends a member to the legislative assembly. In 1841 it contained 3446 inhabitants, and in 1850, 10,312. At present the estimated number is 29,000.

HAMMADA, an extensive stony and almost sterile plateau, N. Africa, in the Sahara, on the route from Tripoli to Murzuk, between lat. $28^{\circ} 30'$ and $30^{\circ} 30'$ N. Near El Homrah, the name given to its most desolate tract, it obtains an absolute height of 1568 ft. Notwithstanding the general character of this fearful 'burning plain,' as it is called, it has one or two small green patches of herbage which give great relief to the camel. On the S. descent, where the geological formation of the Hammada is fully displayed, the lowest rock seen is sandstone, so blackened on the outer surface both of the cliffs and the immense blocks detached from them, that it might easily be mistaken for basalt. Above this is a layer of marble. The upper crust is composed of limestone and flints.

HAMOR (ALSO and FELSÖ), two contiguous places, Austrian empire, Hungary, co. Borsod, about 5 m. W. Miskolez; with a blast-furnace and other important ironworks, and a colliery. Pop. 1100.

HANDLOVA, a tn. Austrian empire, Hungary, co. Lower Neutra; about 20 m. N.W. Schemnitz. It is a long straggling place, containing 2675 R. Catholic inhabitants, the most of whom make frames for saddles and articles of wooden ware.

HANG-CHOW [add.] This populous and wealthy city was captured by the Taiping rebels in 1861, and deserted by all its rich or respectable inhabitants. For three years during the rebels' occupation the place was impoverished, so that very little produce or merchandise of any value was left in it; while the unfortunate people who remained were plundered and made to work as slaves for their task-masters, unless they took arms in their cause. On the suppression of that rebellion a disciplined force of Chinese, under the command of French officers, united with the Imperialist troops, recaptured the city on the 31st March, 1864. Since then the place has partly recovered itself, and the inhabitants are returning; but it will be long before it again assumes its former prosperity.

HANKOW [*Mouth of the Han*], a tn. and river port, China, prov. Houpeh, at the junction of the Han with the Yang-tse Kiang, 604 m. (688 m. by the stream) above the mouth of the latter, and 384 m. above Nanking; lat. 30° 32' 52" N.; lon. 114° 20' E. It is situated at the junction of the rivers nearly at right angles, and extends about 2½ miles along the left bank of the Yang-tse (here 1¼ m. wide), and 1½ m. along the left bank of the Han. The native town is long and narrow, down to the river bank on one side, and hemmed in by marsh land on the other, which is flooded during the autumn, when the Yang-tse rises to its highest level, being 35 to 40 ft. above its lowest in the spring. For a Chinese town of inferior grade the main streets are unusually wide; and the shops display as valuable assortments of merchandise as may be seen in provincial cities; such as that of Woochang. It has neither walls nor any other semblance of fortification, and consists mainly of two principal parallel streets crossed by a number of curved streets nearly equidistant from each other. The streets themselves are described by Mr. Oliphant as superior to any he had seen in any other city of the empire. 'They were well paved and roofed over with mats as they are in Persian or Egyptian cities, but still broad enough to be bright and cheerful. The shops were well stocked, and upon a much grander and handsomer scale than those at Canton, or any other of the open ports.' In addition to that within the town, there is a large floating population, the Han being as densely crowded with junks as it was possible to pack them for about half a mile above its mouth, while in the Yang-tse very few are permanently moored. The most anxious care is now required to select a fitting anchorage, which in the summer months is no easy matter; the strength of the current and the chow-chow water render a safe berth, where cargo may be landed and shipped, very difficult to find. The anchorage opposite Hanyang appears to be the best; there the bank is more gradual and the water more shallow. Hanyang is on the right bank of the Han river, a narrow stream of about 120 yds. in width, and is preferred by some of the residents as being more healthy than Hankow; the land is higher, the air purer, not having to pass over a dense Chinese town during the summer months; and, above all, the anchorage is safer. In 1857 it fell into the hands of the rebels, who so completely demolished the shops and houses, after rifling them of their contents, that they scarcely left one brick standing upon another. Indeed, full evidence of the wholesale destruction inflicted by them is still seen in the walled city of Hanyang, which these fearful depredators found a compact, handsome town about 5 m. in circuit, and left a heap of ruins. Woochang, the capital of the prov., situated on the opposite bank of the Yang-tse, did not escape notwithstanding the strength of its fortifications. Immediately upon its being vacated by the rebels, Hankow was begun to be rebuilt, and soon recovered some of its former appearance and activity. The native trade of Hankow is very considerable, as the crowds which throng the shops comprise a great number of small traders from towns and villages further inland who frequent this market. Not only is it a trading emporium, but it is famous for its manufactures in metal; and may be considered the Birmingham of central China. In certain quarters the hammering is incessant all day long, where braziers are at work making cooking utensils, and the large brass pipes so much prized by the Chinese. There are also iron-foundries, where from time immemorial they have cast boilers and sauce-pans, which have not been equalled for lightness and strength by the best imitations imported from Britain. Among the manufactures are cottons similar to those of Manchester, dyed blue with indigo which is largely grown, and green by two kinds of bark obtained in the neighbourhood; a species of native cotton velvet, and candles partly composed of an insect wax called *pehlah*. Among the articles of trade are cloths and other tissues of British manufacture, furs obtained partly from the frontiers of Tibet, coal, charcoal, oil, hemp, beans, rice, and grain, procured from Honan in exchange for cotton, which appears to be the great staple of Houpeh; tea of fine quality, also the product of this province; and tin, lead, copper, and iron, chiefly from the mineral districts of Sechuen. The interior trade in these and similar manufactures is entirely in the hands of the natives, as foreigners cannot compete with them.

In the river Han the number of junks loading and discharging cargo at all times is very considerable, indicating a thriving condition in the commerce of the place that makes a great impression on a stranger. Still it is not of that gigantic kind that M. Hué described, when Hankow and the adjacent cities of Hanyang and Woochang were little known, and which he would have had us believe collectively contained 6,000,000 inhabitants, whereas at a fair estimate they do not contain 1,600,000. Of the whole population but a very small proportion are foreigners, as business is chiefly conducted through native agents and employés. There are 53 firms or branches of Shanghai houses, chiefly British, and 3 consulates—British, French, and American. Here is a branch of the Chinese maritime customs, under foreign superintendence, conducted by 1 Russian and 15 British subjects. There are 2 missionary establishments, 3 doctors, and 1 bank. Altogether the resident foreign population does not exceed 140.

The port was opened to foreign trade by the treaty of Tientsin, ratified in 1860; and of all the ports added at that date it has realized the best expectations of traders. According to the Chinese system of geography it ranks no higher than a town of the fifth order, and was considered a suburb only of the walled city of Hanyang. Now it has become the chief emporium of trade for the green tea districts in the central provinces, which formerly sent their produce for export to Canton. On the opening of the port the wealthy native merchants left that city and located themselves at Hankow, together with crowds of traders of all kinds who have flocked to this inland foreign entrepôt.

At first the British residents built warehouses, and rented Chinese residences in the native town, but as Lord Elgin had negotiated for a concession of land apart from Chinese jurisdiction, they have moved to a spot below it, which has been laid out in streets like an English town. Foreigners of other nationalities, however, have their residences and places of business in Hankow. The British concession at Hankow covers an area of about 90 ac. The allotments have the advantage of being held by titles direct from the British government. A large piece of land has been presented by the British government for a church. Although not more than four years have elapsed since the opening of the port, the foreign trade has become one of the most important in China. The aggregate of exports and imports for 1863 was £7,513,627, of which £3,348,423 were the former. Tea figures on the list for £2,526,784; tobacco, £328,560; oil, £274,345; safflower, £112,103; and rice, £67,343. Of the imports, shirtings figure for £391,676; long ells and Spanish stripes, £221,032 and £136,547 respectively; and opium, £243,675. But these commodities and others are not sufficient to pay for one-third of the produce purchased, so the remainder is met in treasure and native copper coin, the latter amounting to £834,257, which is absorbed in the tea districts along with Spanish and Mexican dollars, which are preferred to *sycee* silver. The whole of this trade passed through Shanghai, excepting one shipment of tea, which sailed for London direct; and with the exception of about 30,000 tons of junks and lorchas employed, the aggregate of 405,230 tons, inwards and outwards, was American river steamers, several of them 2500 tons burden, and necessarily of great power to stem the strong current. The British concession and its residents are formed into a municipality, with a council empowered to tax land, houses, and merchandise discharged or loaded at the wharves, for the construction of public works. With this fund a quay has been built along the river front, and the streets laid out, so that in time it will have the aspect of an English town. Pop. (ashore and afloat) about 450,000.—(Oliphant's *China and Japan*; *Captain Bowers*; Mossman, *MS. Notes*; *Chinese and Foreign Customs Returns*.)

HANNIBAL, a tn. U. States, Missonri, r. bank Mississippi, at the terminus of the Hannibal and St. Joseph railway, 85 m. N.N.E. Jefferson. It contains 11 churches, a city-hall, and a market-house; and has several large tobacco factories, hemp presses, machine shops, foundries, pork-packing establishments, and saw and flour mills. Pop. (1860) 6505.

HANSI, a tn. India, N.W. Provinces, dist. Hurreema, on a branch of the Delhi canal, 89 m. N.W. Delhi. It is an ancient place which had risen to importance as early as 1036,

when, though deemed impregnable by the Hindoos, it was taken by a son of the renowned Mahmood of Ghuznee, who found in it immense treasure. After experiencing various vicissitudes and becoming almost deserted, the adventurer George Thomas, in 1798, rebuilt its walls, repaired its fortifications, and made it his capital. 'At first,' he says, 'I found difficulty in procuring inhabitants; but, by degrees and gentle treatment, I selected between five and six thousand persons, to whom I allowed every lawful indulgence. I established a mint and coined my own rupees, which I made current in my army and country; cast my own artillery, commenced making muskets, matchlocks, and powder.' Thomas, attacked in 1801 by an overpowering Mahratta force, was obliged to take refuge within the British territories. Some sepoy atrocities were perpetrated here in 1857. The present pop. of Hansi is about 9112.

HANSOUTEE, a river, India, which rises in the native state of Jhujhur, a few miles S. Narnol, in lat. 27° 58' N., lon. 76° 7' E.; flows N.E. and falls into the Delhi canal, a few miles N. Delhi, after a course of about 92 m.

HANYANG, a tn. and river-port, China, prov. Houpeh, at the junction of the river Han with the Yang-tse Kiang, 605 m. (689 m. by the stream) above the mouth of the latter, and 385 m. above Nanking; lat. 30° 33' N.; lon. 114° 19' E. It is situated in the fork formed by the junction of the rivers nearly at right angles, and extends about a mile along the left bank of the Yang-tse (here 1½ m. wide), and 2½ m. along the right bank of the Han. It is a walled city of the third order (*a hien*), the walls coming to a point at the tongue of land between the rivers, and thus giving the whole place a triangular form. Within the walls is a rocky mount about 400 ft. high, surmounted by a fort and crenellated wall, which were partially destroyed by the Taiping rebels in 1857. At the same time they demolished the greater part of the walls facing the Yang-tse, with the adjacent houses, leaving most of the streets a heap of deserted ruins, which the inhabitants have not yet restored. From Hanyang Hill a most extensive prospect is obtained of the surrounding country, with the great commercial port of Hankow, to the eastward on the left bank of the Han, here about 120 yds. wide, and Wochang, the capital of the province to the south, seen across the wide bosom of the Yang-tse, a picturesque and imposing fortified city. Hanyang is not a place of any commercial repute, but there are large shipbuilding-yards along the Yang-tse river bank, which furnish employment for its industrious population. Here resides the *tao-tai*, or chief magistrate of the district, who has jurisdiction over the more populous town of Hankow. Outside the east wall, on the right bank of the Han, a trading suburb has grown up recently, in connection with the shipping in that river, which forms the anchorage for native craft in preference to the Yang-tse. A suspension-bridge to connect the two towns has been proposed, but not yet begun. Population in city and suburbs about 50,000.—(Mossman, *MS. Notes*.)

HARAR. See HURRUR.

HARD, a tn. Austrian empire, Vorarlberg, circle Brigenz, on the Bodensee or Lake of Constance. It contains 1300 inhabitants, who are chiefly employed in spinning yarn, and in weaving and dyeing cloth.

HARO, an archipelago, Western N. America, lying between Vancouver Island and the mainland, and between the Rosario Channel on the E. and the Haro Channel on the W. The group, which covers a space of about 20 m. in each direction, consists of the three large islands, Orcas, San Juan, and Lopez, and about 30 smaller ones. Orcas, the northern and largest, contains the finest harbours; it is mountainous, thickly wooded, with much land in the valleys available for farming; and deer abound in it. Mount Constitution, on the E. side, rises nearly 5000 ft., and is conspicuous over the Gulf of Georgia. San Juan in the S.W., the best-known and most important of the group, is the second in size, and has abundance of pasture and farming land, occupied by the Hudson Bay Company. Lopez Island is lower and more swampy than the others, 9 m. long by 3 m. in breadth, and forms the S.E. end of the group. The rest are mere islets, or masses of rock covered with pines. The archipelago has received importance as a possession in dispute between the English and U. States governments, the latter alleging that under the indefinite terms of the treaty

of 1844 the boundary line passed through the Haro Channel, thus giving the group of islands, and therewith the command of both the channels and the approaches to the British island of Vancouver, to the Americans; the English government, on the other hand, claimed the group upon the ground that the boundary line passed along the Rosario Channel, the only one known at the time of the treaty, which was sufficiently wide not to be commanded by any part of the islands, and therefore not endangered for the Americans, whereas the Haro Channel was so narrow as to be easily covered from San

Juan, and therefore liable to be closed against the English. The dispute was at one time seriously complicated by Gen. Harvey with some American troops taking armed possession of San Juan Island during the negotiations in 1859. The solution appears to be the defining the boundary to pass through the Middle and Douglas Channels, between the islands of San Juan and Waldron on the W., and the rest of the islands on the E., giving the latter to the Americans and the former to the English; San Juan Island being useful to the latter only for defensive purposes, and to the former only for offensive. This boundary line would then unite with the continental one of lat. 49°, dividing the British and American territories.

HARPER'S FERRY, a tn. U. States, Virginia, on the Potomac, where, on its junction with the Shenandoah, it forces its passage through the Blue Ridge, and on the Baltimore and Ohio, and the Winchester and Potomac railways, 50 m. N.W. Washington. It is picturesquely built at the base of a hill, with a fine bridge in front which connects it with the opposite bank of the river, and contains four churches, an academy, two masonic halls, a United States arsenal, and an armoury. On the night of the 16th October, 1859, Harper's Ferry was suddenly seized by a band of men headed by a person of the name of John Brown, who had distinguished himself as an abolitionist leader during the civil war which raged in Kansas. Something like a regular conspiracy for the purpose of obtaining an ascendancy for abolitionist views by violent means had been formed; but the arrangements were futile, and the conspirators were easily put down. Brown was afterwards tried and executed. Still more recently Harper's Ferry became the scene of many important

military operations in the civil war between the northern and southern states. Pop. (1860) 1339.

HARPOHULLY, a tn. India, presid. Madras, dist. and 66 m. S.W. Bellary. It was once the capital of a large talook, and still contains about 2000 houses, inhabited chiefly by Hindoos, with a considerable mixture of Mahometans and a few Jains, native painters and sculptors.

HARRISON, a river and lake, British Columbia, Western North America, running into r. bank Fraser River about 65 m. from its mouth. The Harrison flows through a series of lakes in a generally S.E. direction, and is used with the lakes as the best route to the gold fields in the interior, avoiding the dangerous passage along the Fraser above Yale. The Harrison River and Lake are traversed in steamers, a distance of 45 m. to Douglas, whence a broad waggon road or 'portage' has been cut for 32 m. to Port Lilloett at the S. end of Lilloett Lake along the connecting river, which is also used in conveying material from one water to the other. The route then lies up the Lilloett Lake as far as Pemberton, from which another 'portage' of 22 m. brings to the S.W. end of Lake Anderson, which is closely connected with Lake Seton; from the upper end of the latter to Cayoosh or Lilloett on the Fraser is an easy passage of only 3 or 4 m. The lakes and portages are surrounded by lofty hills from 1000 to 5000 ft. high, generally very steep, with intersecting valleys, and vegetation covering the level spots. The scenery on the Harrison Lake is much finer than that on the upper ones, and the lake is larger, being 45 m. long, and 4 or 5 m. broad. There are several islands in it, and long and apparently fertile valleys running down to it, in some of which silver has been found.

HARTFORD [add.], a tn. U. States, Connecticut, and alternately with Newhaven the seat of government of this state, on the Connecticut River, which is here crossed by a bridge 1000 ft. long, while within the town the Little River, which traverses it, is crossed by 6 other bridges, 88 m. S.W. Boston; lat. 41° 45' 59" N and lon. 72° 40' 45" W. Besides the communication by the river, which is kept up chiefly by three lines of daily steamboats and three lines of steam-packets, two lines of railway—the Hartford, Newhaven, and Springfield, and the Providence, Hartford, and Fishkill—give every means of access, the one to the N. and S., and the other to the E. and W. The town extends about 2 m. N. and S. along the bank of the river, and more than a mile westward from it. It consists of 163 streets and avenues, for the most part regularly formed, and crossing in the direction of the cardinal points. The main street, which is broad and nearly straight, is the great thoroughfare and seat of the principal retail trade, and throughout its whole length, which is more than a mile from N. to S., presents an almost unbroken range of brick and stone edifices, many of them elegant. The buildings and institutions most worthy of notice are the state-house, a handsome Doric structure; the city-hall in the Grecian, and the Wadsworth Athenæum in the Gothic style; 22 churches, many of them of imposing appearance with lofty spires; Trinity college, belonging to the Protestant Episcopal church, with 16 professors, 60 students, and a library of 13,500 volumes; a high-school, a grammar school, two large female seminaries, a R. Catholic school, with 600 pupils; an arsenal, lunatic, and deaf and dumb asylums, an orphan asylum, an hospital, and a convent. The manufactures are very extensive, and include silk goods, carpets, linen cloth and thread, malleable iron and castings, silver-plated ware, rifles, revolvers, and other arms. The estimated value of manufactures in 1859 was above a million sterling. The banking business is large and profitable, and the revenue derived from life insurance is greater in proportion than in any other place of the United States. The publishing or reprinting trade is also carried on to a considerable extent. Hartford possesses a central park of 46 ac.; it also possesses a public library, a benevolent individual having bequeathed £20,000 for its establishment. Estimated pop. (1860) 29,152.

HASHAABA, a vil. N. Africa, on the E. frontiers of Kordofan, about 150 m. N.E. Obeid. It is a large straggling place, consisting entirely of round conical huts called *tukkel*, made of a slender framework of poles tied together with strips of bark covered with reeds. In front of most of them is a flat-roofed shed about 12 ft. square, which in the dry season is the usual sitting-room, and at night is the sleeping apart-

ment of the elder children. Each group of huts, forming the domicile of a family, is surrounded by a strong fence of dry thorns inclosing a convenient space. In the centre of the village is a school, which boys only are permitted to attend, and where nothing but the Koran is taught. Pop. about 1000. —(*Petherick*.)

HATRAS, a tn. India, N.W. Provinces, dist. Allygarh, 33 m. N. Agra, forms a square of about 500 yards inclosed by a mud wall and a very deep dry ditch. The old fort, which stands half a mile E. of the town, and was once deemed formidable, is now in ruins. War and Mahratta oppression had nearly destroyed the prosperity of Hatras; but since it came into British possession in 1817, there has been a considerable revival, the surrounding districts having again made it the chief entrepôt for their cotton. Pop. 22,903.

HAUPUR, a tn. India, N.W. Provinces, dist. and 20 m. S. Muttra. It is a place of considerable size, with a pop. of 13,908. The stud which government has established here has obtained some celebrity. Pop. 13,908.

HAURAN, a tract of country, Syria, to the E. of the river Jordan, extending from the neighbourhood of Damascus southward as far as the Jabbok, is now, and from ancient times has been, divided into three provinces—En-Nukrah, the Plain; El-Lejah, a rocky plain lying N.W. of the Hauran proper; and El-Jebel, a mountainous district between En-Nukrah and the eastern district. The Plain is very rich and fertile, sometimes slightly undulating, but mostly level, save where relieved by low rounded hills, which form admirable landmarks. It is covered in every direction with Roman towns, built of black basalt, some of them mere heaps of rubbish, others still almost perfect, the Arab villagers dwelling under the same stone roofs as the old Romans. Almost every village has its tank and bridge, both of stone, and both possessing the characteristic durability of Roman handiwork. But other towns are discovered, which exhibit a far more ancient style of architecture, not dissimilar to that which is found in the ruins of Palmyra. Such are Um-er-Rumán, Ed-Deir, and Um-el-Jeml. The province of El-Lejah is inhabited by a wild and lawless class of Bedouin, who continually issue from their rocky fastnesses to ravage the surrounding country. Hence most of the towns and villages have been deserted by the terrified Arabs. The third province, El-Jebel, the Mountain, has recently engaged the attention of travellers, who describe it as rocky and barren, but with fertile spots interspersed, and landscapes of the most picturesque character and romantic beauty, presenting, however, the general features of the volcanic formation. Among the principal mountain-peaks may be named—Abú Turnès, the highest point; Gurara, El-Gurvehl, and El-Klet. The Druses are the only inhabitants of the Hauran mountain-range. The Hauran is usually considered to be identical with the Land of Bashan of the Old Testament.

HAVERHILL, a vil. U. States, Massachusetts, at the head of navigation of the Merrimac, and on the Boston and Maine railway, 30 m. N. Boston. The village, situated on an acclivity, with a background of hills, and finely shaded with trees, presents a very attractive appearance. The principal buildings within the town are 16 churches, a high-school, and a savings-bank. The manufactures consist chiefly of boots and shoes, annually made to the value of about half a million sterling; silver ware, soap and candles, hats and caps, common and patent and enamelled leather, woollens, tin-ware, and castings. Pop. 9995.

HAWKE'S BAY, a prov. New Zealand, New Ulster, bounded N. by Auckland, W. and S. Wellington, and E. the ocean; is about 100 m. long, by 60 m. broad, and has an area of 3,000,000 ac. It is of a compact form, and has in general a soil of great natural fertility, well suited for agricultural and pastoral purposes. Its climate is free from the extremes both of heat and of cold. Its capital, Port Napier, situated on its N.E. shore, contains about 500 inhabitants, and possesses a harbour which admits steamers and coasters. The war with the natives has somewhat impeded its progress. Pop. about 6100, of whom 3600 are natives.

HAWKESBURY, a tn. British America, Canada West, co. Prescott, r. bank Ottawa, about 50 m. W.N.W. Montreal. It has three churches, manufactures of woollens and leather, and some trade in flour and lumber.

HAWLEY, a vil. U. States, Pennsylvania, on the rail-

way of the Pennsylvania Coal Company, which here unites with the Delaware and Hudson canal. It has grown up very rapidly, and owes all its prosperity to its position on the route by which coal is transported. Pop. about 3000.

HAZAREEBAGH, a tn. India, cap. dist. of same name, called also Rangurh, 189 m. S.E. Benares. It consists of houses which, though built of mud, are not unfrequently two stories high: and possesses a regularly-constructed bazaar, a church, which was built when the idea, now abandoned, was entertained of establishing a permanent military cantonment in the vicinity; and a jail for civil and criminal prisoners. The site is on an extensive and elevated plateau, now oppressed with forest and jungle, but having in many places the remains of mango groves, and other regular plantations, indicating that the country was once much better peopled and cultivated.

HEIDENREICHSTEIN, a tn. Austrian empire, Lower Austria, circle Upper Manhartsberg, 70 m. N.W. Vienna; with a palace belonging to Prince Palffy, a cloth and five saw mills, and a pop. of 1330.

HEILIGENKREUZ, a tn. Austrian empire, Lower Austria, on the Sattelbach, has one of the oldest Cistercian abbeys in Austria, with a fine Gothic church, beautiful painted glass, altar-pictures, numerous monuments, and a library of 20,000 vols. Pop. 820.

HEINERSDORF, a tn. Austrian empire, Bohemia, circle and 40 m. N.N.E. Bunzlau, on the Prussian frontiers; with a parish church, 2 mills, and 1000 inhabitants.

HELANYAH, an island, Indian Ocean, in a bay, about 25 m. off the E. coast of Arabia. It is the largest of the Kuria Muria group, having a length of $7\frac{1}{2}$, a breadth of $4\frac{1}{2}$, and a circuit of about 22 m. It is remarkable for the ruggedness of its outline and its sterility. Though the only one of the group which is inhabited, its whole pop. does not much exceed a score of souls. In the centre of the island a number of sharp peaks rise up, one of them to the height of 1510 ft.; from these peaks spurs and ridges branch off in all directions, lesser hills filling up the interval. On the E. extremity the contour of the hills suddenly alters, and a bold and precipitous headland, 1645 ft. high, projects into the sea. This headland is composed of a tertiary limestone abounding in fossils, and thus differs remarkably in geological structure from the rest of the island, which consists of granite, hornblende rock, and porphyry. The flora is restricted to stunted bushes of camel-thorn, some saliferous shrubs, and a few mangroves within tide mark and the more sheltered little coves. The only animals in profusion are rats, said to have come from a wreck, and centipedes. A few straggling goats, probably once domesticated but now wild, are found among the hills. The inhabitants subsist chiefly on fish.

HELPA, a tn. Austrian empire, Hungary, co. Gömör, on the Gran, in the midst of extensive forests; with 1600 inhabitants, who rear sheep and horned cattle, but are chiefly employed in felling and sawing timber.

HELSDORF, a tn. Austrian empire, Transylvania, circle and about 12 m. S.W. Kronstadt; with a Protestant church, an old strong castle, and 2042 inhabitants.

HENGSTEREBEN, a tn. Austrian empire, Bohemia, circle and about 28 m. N.E. Eger; with mines of tin and silver, and 1500 inhabitants.

HENNAVUTTY, a river, India, which, rising on the E. declivity of the W. Ghats near the W. frontier of Mysore, flows successively S.E., tortuously E., and again S.E., and joins the Cauvery on its left bank, near Kistnaarajpoor, after a course of 120 m.

HERAT [add.] The town and district of Herat, being claimed by Persia as falling under her dominion, has more than once been the occasion of serious hostilities. The last of these was in 1856, when, in violation of the compact entered into in 1853 between the Persian and British governments, the shah sent an army to besiege Herat, and actually obtained possession of the place in October of that year. This was followed on 1st November by a declaration of war by the Indian governor-general against Persia, resulting in a British expedition to the Persian Gulf and subsequent hostilities there. By the treaty of Paris of 4th March, 1857, which terminated the war, Persia agreed, among other stipulations, to withdraw all her troops from the city and territory of Herat and relinquish all claims

to its sovereignty. After having been thus alternately subject for a long period to Persia and Afghanistan, Herat now enjoys the rank of an independent state.

HERMOSILLO, a tn. Mexico, dep. Sonora, on a river of that name, not far from the place where it is lost in the sand, in the Gulf of California, opposite to the island of Tiburon. Up to 1800 it was merely a military station, but, in consequence of the discovery of gold mines in the north of the state and the number of miners who flocked to them, it became the centre of an important trade. The revolutions which have since taken place have greatly affected its prosperity, but it is still the largest town in the department. Its chief attractions are the fine gardens of the environs, and a beautiful park or alameda. The only public buildings of note are two churches, and the mint with its assay office. The trade is chiefly in wheat, which is grown extensively in the surrounding districts, and in flour, in grinding of which a number of mills are constantly employed. Pop. 14,000.

HERRLITZ (Great), a tn. Austrian empire, Silesia, dist. Benisch, about 11 m. N.W. Troppan; with a castle situated in a park, and 1300 inhabitants.

HERRNDORF, a tn. Austrian empire, Bohemia, circle Prague; with a parish church, and an ancient structure situated between two ponds, and accessible only by two stone bridges. Coal is worked, and hops are extensively grown in the vicinity. Pop. 1000.

HETENY, a tn. Austrian empire, Hungary, co. and 4 m. N.E. Komorn. A battle was fought here between the Austrians and the Hungarians on 30th July, 1849. It has 1200 inhabitants, belonging to the Reformed church.

HEVIZ, a tn. Austrian empire, Transylvania, circle and N.N.W. Kronstadt; with copious warm springs, and a bathing establishment. Pop. 1900.

HIDGELEE, a dist. and tn. India, presid. Bengal. The dist. lies between lat. $21^{\circ} 36'$ and $22^{\circ} 22' N.$; lon. $87^{\circ} 22'$ and $88^{\circ} 12' E.$, and is bounded N.E. by the Hooghly, S.E. by the Hooghly and the Bay of Bengal, and W. by the Balasore division of Cuttaek and dist. Midnapore; area, 1014 sq. m. It has a considerable extent of coast, being washed by the Bay of Bengal for 20 m., and stretching for many miles along the estuary of the Hooghly. The interior is in general low and flat, covered with swamps, and intersected by numerous streams, which during the periodical rains become the haunts of alligators. Many parts are covered with a coarse reedy grass, or overgrown with jungle, which harbours tigers, leopards, wild buffaloes, and other animals. The most important manufacture is salt. The fisheries on the coast are remarkably productive, and yield in particular large quantities of turtle, oysters, and crabs. The most important crop is rice, which has a very large grain, but is considered inferior in quality. The climate is very unhealthy even to the natives, who suffer much from elephantiasis, dysentery, ague, and fever. Pop. 133,265.—The town, which forms the nominal capital of the dist., is situated on the W. shore of one of the entrances of the Hooghly, called the Inner Channel, where a small stream falls into it. It does not seem to possess a single attraction, and has recently been deprived of the only thing which gave it any importance by the removal of the civil establishment to Contai.

HIGUERITAS, a tn. S. America, Banda Oriental del Uruguay, near l. bank, a little above the mouth of the Uruguay, 50 m. N. Buenos Ayres. It stands about $\frac{1}{2}$ m. inland, on a ridge sloping toward the river, and has a port completely sheltered. In the vicinity are granite quarries, with inexhaustible supplies of fine building stone.

HINDIA, or **HINDIYA**, a tn. India, Scindia's Dominions, l. bank Nerbudda, here 1000 yards wide, 96 m. S.E. Oojein. It is a considerable place, defended by a fort which commands the passes on the river, and possessed of a large and well-supplied bazaar.

HINDON, a river, India, which rises at the base of the Sewalik Hills, lat. $30^{\circ} 15' N.$; lon. $77^{\circ} 53' E.$, flows S., only separated from the Jumna by a slight elevation, along which the Doab extends, and joins that river on the l. after a course of about 160 m. At a bridge over the river, on the route from Meerut to Delhi, the Delhi mutineers sustained their first defeat.

HINDOOR, or **NALAGURH**, a hill state, India, on the S.W. declivity of the Himalaya, having its centre nearly

intersected by the parallel of 31° N. and the meridian of 77° E., and bounded N. by Kuhloor, E. Bhagul and Muhlog, and S. and W. Sirhind; area, 233 sq. m.; revenue, £8000. It is traversed by a steep range, which, rising over the l. bank of the Sutlej, and attaining in Chumbagarh the height of 4400 ft., becomes linked with the Sub-Himalaya near Subathoo. It is drained by the Sutlej and some small tributaries, and has on the low grounds along their banks some tracts of fertile soil, on which the usual cereals, and cotton, opium, ginger, turmeric, oil seeds, and tobacco, are grown. The scenery throughout is very picturesque. Pop. 20,000.

HIINDOWN, a tn. India, Rajpootana, state Jeypoor, 71 m. S.W. Agra. It was a large and important place till its prosperity was destroyed by Mahratta devastation. Its rampart and many of its buildings are in ruins, but it still contains a considerable population, and possesses a good bazaar.

HINGLAJGURH, or **HINGLAISGURH**, a hill fort, India, Holkar's Dominions, 130 m. N. Indore. It stands on an isolated rock which rises precipitously from a ravine 250 ft. wide and 200 ft. deep, and is accessible only by three causeways constructed across the ravine, each closed by a gate. The natives deemed it impregnable till a British detachment under Major Sinclair stormed it in 1804.

HIOGO, or **FIOGO**, a tn. Japan, Niphon, in the N.W. of the bay, and 10 m. from the town of Ohosaka, is said to be as large as Nagasaki, and is one of the ports which by Lord Elgin's treaty with the Japanese were thrown open to commerce in Jan. 1863. Its anchorage, which was once exposed and dangerous, has been rendered safe by the erection of a breakwater, which cost not only immense sums of money, but the lives of great numbers of workmen. Thus improved, Hiogo has become the port both of Ohosaka and Meiaeo. When Kaemper visited it there were 300 junks in the harbour.

HIRLAU, a tn. Turkey in Europe, Moldavia, circle Bolushani, on an affluent of the Pruth, 41 m. N.W. Jassy. It was formerly the residence of the princes of Moldavia.

HIRRIHAL, a tn. India, presid. Madras, dist. and 11 m. S. by W. Bellary, in a plain at the termination of a small pass. It is inclosed by a wall with a dry ditch and glacis, and consists of about 1200 houses, occupied chiefly by Hindoos of the Lingayet sect.

HIRSCHENSTAND, a tn. Austrian empire, Bohemia, circle and 26 m. N. Eger, in a bleak and unfertile district among the Erzgebirge; with 1250 inhabitants, of whom more than a half are employed in making lace.

HIRSOVA, a tn. Turkey in Europe, Bulgaria, eyalet and 52 m. N.E. Silistria, at the mouth of a ravine opening on r. bank Danube. It is defended by a castle, and contains 2000 inhabitants.

HISSAR, a tn. India, N.W. Provinces, dist. Hurreeana, on a branch of the Delhi canal, 100 m. W.N.W. Delhi. It was once defended by two forts, neither of which now exists; but it still possesses a well-supplied bazaar. Some atrocities were perpetrated here during the sepoy mutiny. The arid dist. around, covered with jungle infested by lions, tigers, and other wild animals, was a favourite hunting-ground of the emperor Feroz Shah.

HLUBOCZEK (GREAT), a tn. Austrian empire, Galicia, circle and about 8 m. N.W. Tarnopol; with manufactures of rosoglio and chicory, and 1340 inhabitants.

HLUF, a tn. Austrian empire, Moravia, circle Hradisch, near Ostrau; with an old castle, a mineral spring, and 2100 inhabitants.

HOBOKEN, a tn. U. States, New Jersey, on the Hudson, opposite to New York city, with which it is in constant communication by steamboats. It contains several churches, possesses extensive building-yards, and is much resorted to for pleasure or residence by New York citizens. Its pleasure-gardens, situated in the N. of the town, and an eminence called Castle Point, command fine views of the river and harbour. Pop. 9632.

HOCHSTADT, a tn. Austrian empire, Bohemia, circle and N.E. Gitschin; with a parish church, a townhouse, a ruined castle, a spinning and several other mills, and a trade in yarn. Pop. 1700.

HOCHWIENSEN, a tn. Austrian empire, Hungary, co. Bars, 7 m. W.N.W. Zsarnovicz; with a mine of argentiferous lead, and 2269 inhabitants.

HOFHOOF, a tn. E. Arabia, prov. Hasa, 200 m. E.N.E.

Riad. It is divided into three quarters or districts: the Kot, or fortress, in which the Wahabee governor resides with his retinue and adherents; the Rifeyeeyah, inhabited by the older and nobler families; and the Naathar, the largest in extent, and containing a mixed body of townsmen, rich and poor, merchants and artisans. The general form of the town is that of a large oval. The public square, an oblong space 300 yds. long by 75 in breadth, occupies the meeting-place of the three quarters, the Kot lying N.E., the Rifeyeeyah N.W. and W., and the Naathar on the E. and S. The Kot is a vast citadel, surrounded by a deep trench, with walls and towers of unusual height and thickness, built of earth and an occasional intermixture of stone, the work of the old Carmathian rulers; it is nearly square, being about $\frac{1}{3}$ m. in length, and $\frac{1}{4}$ m. in breadth; on the N. side of it is a small but strong square fortress, forming a sort of keep. Within dwells the Nejdian governor, and a population numbering between two and three thousand. This quarter is divided by streets, cutting each other at right angles, and running from gate to gate, and from side to side. The Rifeyeeyah, or noble quarter, covers a considerable extent, and is chiefly composed of tolerable, in some places of handsome, dwellings. The comparative superiority of the architecture of Hofhoof is due to the use of the arch; and the walls, whether of earth or stone, or of both mixed, are very generally covered with white plaster, and the door-ways and ogee windows are sometimes ornamented. The streets are wide and very clean, and the quarter, standing on slightly rising ground, is very healthy. The Naathar quarter forms a moiety of the town, and contains every description of dwelling from a palace to a hovel. In the part of it near the Kot is built the great mosque, with arches, porticoes, plaster, and mat-spread floor. Small inclosed gardens are attached to many of the houses, and here and there fig and citron trees overhang the streets. The fortifications of the town were once high and strong, but are now little better than a heap of ruins and broken towers. Outside the walls lie the gardens and plantations, stretching as far as the eye can reach on the N. and E.; on the S. and W. they form a narrower ring. A short distance from the S. gate stands a small isolated fort of recent construction, but now neglected. The population of Hofhoof numbered in the last generation 30,000, but has since decreased to 23,000 or 24,000.—(*Palgrave*.)

HOHENBERG, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, in a deep valley not far from the Styrian frontiers, 39 m. S.W. Vienna. It has an old castle in ruins, a manor-house with fine wood carvings, ironworks, a gypsum and a number of saw mills. Pop. 1220.

HOHENZOLLERN [add.] By a compact concluded on 7th December, 1849, the reigning princes of Hohenzollern-Hechingen and Hohenzollern-Sigmaringen ceded in perpetuity all their rights of sovereignty over these two principalities to Frederick William IV. of Prussia and his successors. The principalities are now accordingly included in the kingdom of Prussia. By the same treaty a yearly pension of 10,000 crowns was guaranteed to the first of these princes, and in the event of his having offspring by a marriage corresponding to his rank, an annuity of 5000 crowns was further secured to his heir; whilst to the prince of Hohenzollern-Sigmaringen Prussia agreed to make an annual payment of 25,000 crowns. All the principality lands lying within the ceded territories, with the seigniorial rights and customs, produce of mines and forests, and other revenues, were to remain in the free and undisputed possession of the two princely houses, which were also to enjoy under the Prussian sovereignty the same rank and precedence to which they had hitherto been entitled.

HOKIANGA, a river, New Zealand, which rises in the N.W. peninsula, forming the extreme end of North Island or Ulster, flows S.W. for 20 m. between the wooded ranges of Waima and Punguru, which send down numerous affluents, and falls into the sea on the N.W. coast, in lat. 35° 32' 5" S.; lon. 173° 22' 55" E. It has a depth in its channel varying from 4 to 26 fathoms, and, presenting few obstructions, is navigable for 15 m. from the head. The water is salt to its source.

HOKOTIKA, or **OROTIKA**, a tn. New Zealand, Middle Island, west coast prov. Canterbury, at the mouth of the river of same name. It stretches about $1\frac{1}{2}$ m. along the beach, and is composed chiefly of weather-boarded houses

with galvanized iron roofs. In its principal street, Revell Street, are stores or shops of every kind. The town was established in 1864, and is the chief place in the gold-mining district, which stretches along the coast from some distance north of Grey River, the boundary between the provinces of Nelson and Canterbury, to the south of the Hokotika River, and as far inland as has been examined. For the most part the diggings are not carried on more than 10 m. from the shore, while in some localities the beach itself is worked with a remunerative result. The river, which is snow-fed, comes down in summer with a current of 8 or 10 m. an hour, scouring a channel for itself out to sea; but in winter it is small, and not being sufficiently strong to keep its channel clear, the sandspits extend and form at its entrance bars which are frequently impassable.

HOLLABRUN (UPPER), a tn. Austrian empire, Lower Austria, circle Lower Manhartsberg, cap. dist. of same name, 27 m. N.N.W. Vienna. It is the seat of several public offices, and has a savings-bank, a poorhouse, numerous manufactures, and a trade in wine and fruit. Pop. 3150.

HOLLENSTEIN, a tn. Austrian empire, circle Upper Wienerwald, in a mountainous district on the Ips, near the N. frontiers of Styria, 78 m. S.W. Vienna. It is an industrial place, containing numerous saw, steel, and other mills. Coal is extensively worked in the vicinity. Pop. 2140.

HOLLIDAYSBURG [add.], a post borough, U. States, near the centre of Pennsylvania, cap. co. Blair, on Beaver Dam Creek, at the terminus of the main line of the Pennsylvania canal, and of the Alleghany Portage railway, which here crosses the mountains, 180 m. W.N.W. Philadelphia. It lies at the mountain foot, contains 9 churches, a number of schools, and several foundries, machine shops, and flour-mills, and is the centre of a large trade by rail and canal, most of the produce of a rich agricultural and mineral country passing through it. Pop. 2469.

HOLONDONDO, a tn. S.W. Africa, Kimbunda country, territory Selles, nearly equidistant from the Kikombo and the Balomba, about 55 m. N.E. Benguela. It stands in a fertile district, which is at once well watered and well cultivated; is the residence of a chief who claims to be entirely independent; and contains about 1500 inhabitants, who, in addition to agriculture and the gathering of copal, make such numbers of Dongo thongs or laces, as to form no unimportant article of trade.

HOMBORI (THE), a range of mountains in Western Africa, about 180 m. S.E. of Timbuktu; lat. 15° 20' N.; lon.

top, inhabited by a spirited race of natives, who, in their rocky fastness, defy the assaults of the neighbouring tribes. Another mound he describes as rising from the plain like an isolated cone, and with its steep, narrow, and rugged crest, resembling the ruin of a stronghold of the middle ages. This castellated range extends from N.W. to N.E. for several miles, seldom reaching a greater altitude than 800 ft., broken up by numerous pleasant valleys, and sheltering at their base, among the dense brushwood, the native villages.

HOMEL, or **GOMEL**, a tn. Russia, gov. Mogilev; with a church, and a circle and parish school. At the village of Píngsten, in the vicinity, there is an important yearly market. Pop. 3884.

HOMOROD-ALMAS, a tn. Austrian empire, Transylvania, circle and S.E. Udvarhely; with a remarkable cavern, near which the Barygas passes right through a hill. Pop. 1700.

HONESDALE [add.], a tn. U. States, Pennsylvania, cap. co. Wayne, in the N.E. of the state, at the confluence of the Lackawaxen and Dyberry, on the Delaware and Hudson canal, and on a railway which connects it with Carbondale and Scranton, 115 m. N.E. Harrisburg. It is neatly built, contains 9 churches, an academy, a foundry, tanneries, glass-works, and several flour-mills, and is the centre of a valuable coal-field which is extensively worked. Pop. (1860) 2544.

HONG-KONG [add.] The progress of this British colony in China is satisfactory; and its jurisdiction increased from the island to the mainland, by a further cession of territory to the queen of England by the emperor of China, under the treaty of Tien-tsin, at Kowloon, on the northern shore of Victoria Harbour. This tract of land is about 5 sq. m. in extent, and was for several years temporarily occupied by British troops as a sanitarium. In September, 1864, a portion of the ground was sold in marine and inland lots at a premium on the charge of a fixed annual rental, and purchased by the colonists for villa residences to be built thereon. In like manner numerous villas have been erected on picturesque sites round the western coast of Hong-Kong, where the S.W. monsoon tempers the extreme heat felt in Victoria town, from being situated under the Peak, and facing the N.E. The general salubrity of the island, however, is now acknowledged, and will compare favourably with any of the treaty ports for the residence of Europeans. This arises from the abundant supply of spring water that flows at all seasons from the mountain streams; and the natural drainage caused by the precipitous rocky shore, where the storm waters rush along impetuously, and sweep away the sewage, which is the chief cause of malaria and disease in Chinese cities, and which renders the country one of the most unhealthy in the world, especially for foreign residents. Notwithstanding this comparative salubrity, the records of Hong-Kong show that it is not free from deadly malaria, especially in its effects upon the English troops sent to garrison the colony. During the summer of 1865, a regiment arrived from the Cape in perfect health, and in three months it was decimated by the mortality among the troops, women and children. This malaria is accounted for by Montgomery Martin as arising from the decomposed rocks being baked by a powerful sun during the day, and evolving deleterious gases at night. Be that as it may, the Government intend garrisoning the settlement with Indian troops, who are less susceptible than Europeans to the dangers of a tropical climate.

According to the census taken by the government in 1863, the entire population of the colony was 124,850 on land, with a boat population amounting to 30,507, making a total of 155,387, exclusive of the military and navy on the station.

The nationalities of the inhabitants are divided as follows:—Europeans, chiefly English, 1644; Portuguese, Indians, and mixed blood, 1336; aliens, or temporary residents, 100; Chinese, 152,307, of which the settled boat population on board 4019 boats number 16,233 men, 6529 women, 4901 male children, and 2884 female children. The great disparity between the foreign inhabitants as 1 in 50 of all, or 1 in 100

MOUNTAINS OF HOMBORI. — From Barth's Travels in Africa.

1° 40' E; are remarkable for the picturesque character of their cones, which start up at various points like the towers of a feudal castle, often presenting an almost perfect illusion of the square and massive Norman keep. Dr. Barth describes one of these castellated peaks as rising on a sloping ground of boulders and rubbish, a wall of steep cliffs, like an artificial fortification, forming, as it seemed, a spacious terrace on the

of Europeans against the natives, will show that the prosperity of the colony is chiefly owing to the Chinese who resort to this port for the purposes of trade, and only a few of whom become permanently British subjects, although all are amenable to British laws. The criminal returns for 1863 show a considerable number of offences having been committed in that year, of which 211 were cases in higher courts, chiefly burglary, robbery, and piracy; and 5015 police cases, principally unlawful possession of property, breach of the peace, theft, assaults, &c. It will be observed that the Portuguese are not classed with Europeans, which they would be if they were natives of Portugal. These people are natives of Macao, the oldest foreign settlement in China, where the Portuguese blood has a large admixture of Chinese, the result being a physique which in many cases is scarcely distinguishable from that of the Mongol race. Generally they are of sluggish intellect, but patient scholars, so that nearly all the Macaoese in Hong-Kong read, write, and speak English well, fill subordinate posts under government and in merchants' offices with credit, and are good compositors in printing-offices. Next to these are the Parsees, forming the class designated Indians. These people are chiefly engaged in the opium trade, and form a wealthy portion of the community, but without much influence or position, although they claim to be loyal British subjects. Under the head 'Europeans,' there are a number of American citizens, some of whom are the representatives of large mercantile firms; but as far as the commerce of Hong-Kong is concerned, and its relations with the treaty ports of China, the English merchants far exceed all others in the gigantic nature of their business. But this colony does not exhibit any trade returns, neither does it contain any of the natural resources for export commerce. The island is a granite rock with scarcely sufficient soil to grow vegetables for its inhabitants; and not an article for export is produced on it. Consequently the port and harbour of Victoria is only a dépôt for the trade of the adjacent ports, and the head-quarters of the British military and naval forces in China and Japan. There are no port charges or dues levied on goods or ships entering the harbour, so that vessels may discharge, load, or tranship without any customs' officer. There is only a harbourmaster, who takes account of arrivals and departures, any aggregate of which would give an erroneous impression of the limited trade of the colony. The revenue for the maintenance of the government is derived from the land rents, licenses to sell opium, spirits, &c., taxes, postage, fines, fees of office, &c., which amounted in 1863 to £114,368. The expenditure for the government establishments and public works in the same year was £93,473, showing a surplus of £20,895. Besides this local expenditure there are large disbursements on account of the military and naval departments, with docks, hospitals, barracks, &c. There are consulates for America, France, Spain, Prussia, Netherlands, Denmark, Oldenburg, Hanover, Austria, Portugal, Russia, and Belgium. There are also ten banking establishments, one French, one local, and the others English. The press is represented by a weekly Government Gazette; 2 daily journals; 1 twice a week; 2 fortnightly—all English; 1 Portuguese weekly, and 1 in Chinese every second day. The city of Victoria has an efficient system of water-works for the supply of dwellings and the shipping; and the streets are now lighted with gas. A vigilant police of Indian sepoy guard the streets at night. These are thronged with the native population from sunrise until eight at night, when they are not allowed to go abroad without a pass; but the English and foreign community are free to move about at all hours. Altogether Hong-Kong is now one of the best regulated British colonies in the East, with a loyal volunteer corps formed of various European subjects. Sir Richard Macdonald succeeded Sir Hercules Robinson as governor in 1865, and found that there was room for improvement in the various Government departments, especially those connected with revenue and expenditure. Under his stringent rule defects have been remedied, and the revenues carefully economized. In June, 1866, a mint was established, and issued a dollar, having Chinese characters on its obverse side determining its value and place of coinage, with Queen Victoria's head on the reverse.—(*Hong-Kong Gov. Gaz.*; Montgomery Martin's *China*; Samuel Mossman, *M.S. Notes.*)

HONGO, a vil. Japan, on the peninsula of Idzu, in the S.E. of the island of Nippon. It stands on the banks of the Inodzu-gama, which is here navigable for flat-bottomed boats, and falls into Simoda harbour a few miles below. The inhabitants, about 900 in number, have succeeded, by damming up the river, in obtaining water-power for five undershot mills employed in cleaning rice, and carry on a considerable trade in charcoal, grain, stone, and other products. The country around is finely diversified and highly cultivated, every hill being only a succession of terraces which rise one above another from the base to the summit, and produce rich crops of rice, barley, wheat, and other grain.

HÖNIGBERG, a tn. Austrian empire, Transylvania, circle and about 7 m. N.N.E. Kronstadt; has near its centre the remains of a castle with a wet ditch, a double wall, and seven towers. Pop. 2048.

HOOGHLY [add.], a dist. and tn. India, presid. Bengal. The dist., between lat. 22° 13' and 23° 13' N., lon. 87° 34' and 88° 30' E., is bounded N. by Burdwan, E. the Hooghly, S. the Roopnarain, and W. Midnapore and Burdwan; length, E. to W., 72 m.; breadth, 52; area, 2080 sq. m. The surface is low and level in the E., but somewhat hilly towards the W. and N.W. The principal streams are the Hooghly, with its tributaries, Roopnarain, Dammooda, and Dalkisore. The low grounds are naturally fertile, and, being easily irrigated, produce large crops of rice; but in the S. the soil is in some places much impregnated with common salt. Next to rice, the most important crops are sugar-cane, indigo, hemp, cotton, and the mulberry for rearing silk-worms. A considerable quantity of spirits is distilled from molasses, and from the sap of the date and palmyra palms. The weaving of cotton, once the most important branch of industry, has been almost entirely destroyed by British competition, and the only manufacture of any importance now existing is hemp, made into ropes, sacking, and coarse canvas. Within the limits of this district are the settlements of Chandernagore, Chinsurah, and Serampore, the first still belonging to the French, and the other two formerly Dutch and Danish, but now British possessions. Pop. 1,520,840.—The town, cap. of the above dist., r. bank river of same name, an offset of the Ganges, 22 m. N. by W. Calcutta, is said to have been founded by the Portuguese in 1537, and was wrested from them by the Moguls in 1632, with the loss of 1000 men slain and 4400 made prisoners, and the destruction of 64 large and 254 smaller vessels. The British factory was established in 1676, and sustained no serious disaster till 1756, when it was captured by Suraj-u Dowlah during the raid in which the atrocity of the Black Hole of Calcutta was perpetrated. It long continued to be an important place, but gradually declined with the rise of Calcutta. The principal buildings are a fine church, built by the Jesuits during the Portuguese ascendancy, and still apparently in as good condition as if recently erected; a college, supported chiefly by the endowment of a wealthy Mahometan, and having in connection with it several branch schools; and the courts and other offices of the civil establishment, accommodated in a range of buildings of pretentious exterior in the Grecian style, but very flimsy and unsubstantial, being merely overlaid with chunam or stucco. It now contains only 12,000 inhabitants.

HOONSOOR, a station, India, presid. Madras, dist. Mysore, about 100 m. S.W. Bangalore, on the Letchman Teert, which is here crossed by a handsome bridge. It contains a very large and complete government establishment, including extensive workshops for the manufacture of brass and iron fittings, a training place for bullocks, a dépôt for camels and elephants, and the tannery from which the army is supplied with boots, shoes, and leather accoutrements of all sorts.

HOPE, a tn. British Columbia, l. bank Fraser River, 60 m. E.N.E. New Westminster. Its position is a pleasant one; behind it Ogilvie Peak rises to a height of 5000 ft.; to the right stretches the valley of the Que-que-alla, through which lies the road to the gold districts of the Similkameen; while in front flows the river, its channel divided by a pretty small green island, and the hills upon the opposite bank rising to a considerable height, and forming a good background to the prospect. Altogether its site is said to be the most beautiful in British Columbia: a wooded level shut in by an amphitheatre of lofty mountains. Before the discovery

of the Caribou mines; it was a place of considerable importance, but since that it has greatly declined.

HOPKINSVILLE, a tn. U. States, Kentucky, cap. co. Christian, on Little River, and on the Edgefield and Kentucky railway, 165 m. S. W. Frankfort. It is a regularly formed and well-built place, with eight churches, an academy, three female seminaries, a large state lunatic asylum capable of receiving 300 patients, and a botanic garden. The manufactures consist chiefly of tobacco and carriages. Pop. 2289.

HORCASITAS (SAN MIGUEL), a tn. Mexico, state Sonora, on a height in the fertile and well-cultivated valley, and near the left bank of the river of San Ignacio, about 70 m. N. N. W. Ures. It contains about 2500 inhabitants, who are engaged partly in mining, but chiefly in cultivating wheat, vegetables, and fruit.

HORNSTEIN, a tn. Austrian empire, Hungary, co. and 12 m. N. N. W. Oedenburg; with a castle, a trade in wine and wood, and 1800 inhabitants.

HORRA-BORA, a tank or lake, Ceylon, Central Province, dist. Bintenné, about 35 m. E. Kandy. A stream, flowing between two hills about 3 or 4 m. apart, has been intercepted by an embankment drawn across the valley where, from the approximation of the hills, it is narrowest. The water thus confined forms a lake 8 to 10 m. long by 3 to 4 m. wide, exclusive of narrow branches running behind spurs of the hills. The embankment has a width at the base of about 200 ft., and is 70 ft. high. In forming it, advantage has been taken of two vast masses of rock, which, standing in or near its line, have been included in it. In this way not only has great additional strength been given to the whole, but two spill-waters on which neither time nor the grinding action of the flood can make much impression, have been obtained, though by a most difficult and laborious process. This consisted in cutting two passages, one in each mass of rock, 60 ft. deep, and widening gradually from 4 ft. in the bottom to 15 or 20 ft. at the top, and furnishing them with sluices for regulating the quantity of water allowed to escape. The tank is now comparatively neglected, and the embankment has only been preserved from entire destruction by the above precaution used in constructing it. The water in the tank swarms with crocodiles.

HOSSZUFALU, a tn. Austrian empire, Transylvania, circle and 8 m. E. S. E. Kronstadt, cap. dist. of same name, on the Dürnbach, in a mountainous district near the Altshanz Pass; with 7746 inhabitants, who rear cattle and trade largely with Walachia.

HOSUNGBAD, a dist. and tn. India, N. W. Provinces, Saugor and Nerbudda territory. The dist. has an area of 1916 sq. m., and is in general so fertile and well cultivated that it is familiarly spoken of as the garden of Central India. Coal of excellent quality has been discovered within its limits, but hitherto the great distance from the coast and imperfect means of transport have been insurmountable obstacles to the working of it. Pop. 242,641.—The town, cap. of the above dist., stands on the left bank of the Nerbudda, here 900 yards wide, 103 m. S. W. Saugor, is built in a very irregular and straggling manner, and is defended by a quadrangular fort with lofty walls.

HOTZENDORF, a tn. Austrian empire, Moravia, circle and a little S. of Neutitschein; with a Protestant and R. Catholic church, and 1100 inhabitants, mostly Protestant.

HOUSATONIC, a river, U. States, which rises in co. Berkshire, Massachusetts, flows S. into Connecticut, and, after a winding course of about 150 m., falls into Long Island Sound. Its banks present much picturesque scenery, and its stream furnishes water-power for a number of large mills.

HOUSTON, a tn. U. States, Texas, cap. co. Harris, at the head of steamboat navigation on Buffalo bayou, and on the Houston and Texas Central railway, 48 m. N. W. Galveston. It stands in an excellent grazing district, and contains six churches, a number of schools, iron-foundries, cotton-presses, machine-shops, and other industrial establishments. Its easy communication with Galveston by steam makes it the shipping point for several adjoining counties. Pop. (1860), 4845.

HOW-CHOW-FOO, a tn. China, in the N. W. of prov. Chekiang, and cap. of the Chinese silk country, 120 m. W. S. W. Shanghai. It is surrounded by a wall apparently

not more than 4 m. in circuit, but declared by the Chinese to be 6 m., and to contain about 100,000 families. There is besides a large dense suburb, with a canal leading through it in the direction of the Tai-hu Lake. Another canal, having all the appearance of a fine broad stream, crosses the place from S. to N., and forms the chief highway for the boat traffic. It is crowded with boats of all sizes—some discharging goods and passengers at the jetties on its banks, and others hurrying onward deeply laden. Near the S. gate the town, consisting of houses nearly all of the same height, only overtopped occasionally by a pagoda or watch-tower, has a rather poor appearance, but towards the centre, and particularly towards the N., it becomes rich and densely peopled. Many of the shops are crowded with articles of great value and beauty; among others manufactured crapes and silks, and gorgeous fans. The other principal articles are embroidered shoes, hats, umbrellas, tobacco-pipes made of bamboo and nicely painted, porcelain of all kinds, and indeed everything in common demand. The staple trade is raw silk, which, sorted and made up into parcels, is sent for sale to Shanghai. It has been estimated that four-fifths of the silk produced in the district is exported to Europe and America.—(*Fortune's Residence among the Chinese, 1853—1856.*)

HOWIESKI, a tn. Austrian empire, Moravia, circle Neutitschein; with a castle, a Reformed and R. Catholic church, and 3173 inhabitants.

HOWLAND, an isl. Pacific Ocean, lat. 0° 51' N.; lon. 176° 32' W.; 40 m. N. N. W. Baker's Island. It is 1½ m. long by ½ m. wide, has an area of 400 ac. above the crown of the beach, and contains deposits of 'American guano,' but no fresh water.

HOWRA, a tn. India, presid. Bengal, dist. Twenty-four Pergunnahs, r. bank Hooghly, opposite to Calcutta, of which it may be considered a suburb. It is a considerable place, inhabited chiefly by ship-builders, and containing a number of handsome villas. New importance has been given to it by its selection as the terminus of the Grand Trunk railway to the north-west.

HRABIN, a tn. Austrian empire, Silesia, dist. and near Troppau; with a pilgrim church, a castle of the prince of Liechtenstein, and 1300 inhabitants.

HRADK (NEW), a tn. Austrian empire, Bohemia, circle and 15 m. N. N. E. Königgrätz; with a parish church, a ruined castle, three mills, and 1300 inhabitants.

HUAGNAPAN, a tn. Mexico, state and 60 m. N. W. Oajaca, cap. dep. of same name. It is a considerable place, regularly built, and containing many handsome houses.

HUAHUACHIE, an old Indian tn. Mexico, dep. and 87 m. S. W. Chihuahua, in a mountainous district near the source of the Fuerte. It is situated in the centre of a valley, and by its appearance indicates at once the industry and comfort of its inhabitants. Cattle and poultry abound; the gardens are well stocked with peach and apple trees, and every available part of the valley is under cultivation. Pop. 400.

HUATULCO (SANTA CRUZ DE), a tn. Mexico, state and 90 m. S. S. E. Oajaca, near the mouth of a small stream in the Pacific. It was substituted for another town of same name which stood farther up the stream, was opened to trade in 1852, and promises to become important.

HUATUSCO, a tn. Mexico, dep. and 55 m. W. S. W. Vera Cruz, at the height of about 4000 ft. above the sea. It consists of a number of houses substantially built of stone, and possesses two churches, a well-supplied market, and a considerable trade. The cultivation of maize and tobacco, and trade, form the chief occupations of the inhabitants, who amount to about 5000.

HUGRY, a river India, presid. Madras, which rises in Mysore, flows successively N. E. and N., passing into dist. Bellary, and joins the Toongabudra on its right bank, after a course of about 220 m.

HUISTAN, a tn. Mexico, state Chiapas, about 18 m. E. S. Christoval; with 2000 inhabitants.

HUIZO, or **GUAGOLOTILAN**, a tn. Mexico, state and 27 m. N. W. Oajaca, on the Atoyac, at the foot of a mountain chain. It has the remains of a Dominican monastery which was once richly endowed, and the church of which is now that of the parish. Its garden, now a mere waste, was famous for its European fruits. Pop. 3000.

HULHULLY, a vil. India, presid. Madras, dist. and about 30 m. N.W. Bellary, on the post road from Madras to Bombay, and on the r. bank of the Toombudra, over which there is here a much-frequented harbour. It is inclosed by walls, and contains two pagodas. The inhabitants are engaged in agriculture.

HULIKADRA, a tn. India, Nizam's Dominions, about 50 m. N.W. Bellary. It is inclosed by a wall, with a dry ditch and glacis, and contains about 200 houses.

HULLEIN, a tn. Austrian empire, Moravia, circle and 12 m. N. Hradisch, on the Russaw, and on the Vienna and Oderberg railway; with four yearly markets, and 2217 inhabitants.

HULLUF, or **ULLUF**, a tn. Western Africa, Bornou, prov. Kotoko, about 75 m. S. from Lake Tchad. It is inclosed by a high clay wall, and almost hidden by wide-spreading fig-trees. The inhabitants are said to practise witchcraft and sorcery, and have thereby given themselves so bad a name that natives in travelling along the road are unwilling to make it their place of encampment even during the heat of the day.

HUMAGUACA, a tn. La Plata, prov. and 110 m. N. by E. Salta, beautifully situated in the midst of luxuriant gardens and cultivated fields. It is a clean rural place, with neatly whitewashed houses, and a conspicuous church with a steeple. The water-melon and a kind of peach grow in abundance. To the E. and S. of the town are plains of prairie grass so tall that a man on horseback might be concealed in it.

HUMEERPOOR, a dist. and tn. India, N.W. Provinces.—The distr. lies between lat. 25° 7' and 26° 26' N.; lon. 79° 20' and 80° 25' E., and is bounded N.E. by the Jumna, E. and S.E. Banda, S. the native states Churkaree and Chutturpore, and W. Jhansi and Jaloun; area, 2240 sq. m. It consists generally of a plain, rising gently southward as it recedes from the Jumna, till it reaches the Bendahal and Punna ranges. It is drained by the Jumna and its tributaries, chiefly the Betwa and Cane. The soil is for the most part a rich friable mould formed of disintegrated volcanic rocks and alluvial deposits. It is, of course, remarkably rich, and yields heavy crops of cereals and pulse, together with sugarcane, cotton, and indigo. The chief exception to the general fertility is in these localities where kunkar or calcareous tufa prevails, and forms a soil which yields little more than a scanty herbage and stunted shrubs. The cotton, which is usually an abundant crop of excellent quality, is largely exported, being first conveyed to Calpee and other places on the Jumna, and thence transmitted to the lower provinces. The climate is trying to European constitutions, as intermitting fevers are very prevalent. Pop. 452,091.—The town, cap. of the dist., stands in the fork formed by the confluence of the Betwa with the Jumna, 39 m. S. by W. Cawnpore.

HUMPHREY, an island, Pacific Ocean, in the American Polynesia; lat. 10° 30' S.; lon. 161° 2' W. It was discovered by Captain Patrickson in 1822.

HUN-CHUN, or **HWAN-CHUN-CHING**, a tn. Chinese empire, Manchooria, on a river of same name, at its junction with the Tumen, which here forms part of the boundary between Russia and China; lat. 42° 45' N.; lon. 130° 20' E. Though the only recognized place of trade between Korea and China, its permanent residents consist only of about 100 Tartar families, with a mandarin of the second class and about 300 soldiers to maintain order. The main cause of this insignificance is the absurd arrangement of the Chinese government, which permits some mandarins by special privilege to trade annually for not more than five days, and restricts all other traders to half a day, and that only every second year. On this occasion, the Chinese, who repair hither from Ningput by a slow and laborious journey in clumsy waggons, supply the Koreans with dogs, cats, pipes, leather, stag-horn, copper, horses, mules, and asses, and receive in return ginseng, baskets, kitchen utensils, rice, corn, swine, paper, mats, oxen, furs, and ponies.

HUNSDORF (**HUNFALU**), a tn. Austrian empire, Hungary, co. Zips, on the Poprad; with several fine mansions, manufactures of linen, and a trade in flax. Roman and Munnish antiquities are found in the vicinity. Pop. 1800, mostly Lutherans.

HUNTEI, a group of islands, Tasmania, off the N.W.

coast, at the W. entrance of Bass Strait. It consists of three principal and of several smaller islands, all rendered conspicuous by their elevated surface.—*Albatross*, the northernmost, in lat. 40° 22' S.; lon. 144° 40' E., is 125 ft. high, and presents a coast-line of precipitous cliffs, rocky and straggling, with a skirt of breakers.—*Steep* island, another of the group, 11 m. from Albatross, is 250 ft. higher, and justifies its name by the steepness of its cliffy margin.—*Hunter*, which, as the largest, gives name to the whole group, and is 6 m. nearly due E. of Albatross, is about 16 m long from N. to S., and not more than 4 m. broad. In the N. it exhibits a striking picture of sterility and desolation; but its S. coast is formed by hills of moderate elevation, and well wooded.—*Three Hummock* island, in some respects the most remarkable of the Hunter group, is 2 m. E. from Hunter island, from which it is separated by Peron Channel. It is about 6 m. in length, and nearly the same in breadth, and derives its name from three hills on its S.E. side, which rise gradually, till the northernmost is 590 ft. above the sea, and becomes visible in clear weather at the distance of 27 m. The southernmost of the three hummocks, named by Flinders, from its conical shape, Sugar Loaf Hill, attains the still greater height of 790 ft., and is visible at the distance of 30 m. The best anchorage afforded by the group is in Peron Channel, sheltered by Hunter Island on the W. and Three Hummock Island on the E.

HUNTSVILLE, two places, U. States.—1, A tn. Alabama, cap. co. Madison, on the Memphis and Charleston railway, 120 m. N.N.E. Tuscaloosa. It is a well-built place, with a handsome court-house, 7 churches, a female seminary, and a market-house. Pop. (1860), 3634.—2, A tn. in the E. part of Texas, cap. co. Walker, 110 m. N.N.W. Galveston. It is pleasantly situated on high ground, is well built, and contains a Presbyterian college, a Methodist female institute, and a large state penitentiary. The surrounding country is covered with cotton plantations. Pop. (1860), 939.

HURREANAH, a dist. India, N.W. Provinces, between lat. 28° 33' and 29° 49' N.; lon. 75° 20' and 76° 22' E.; is bounded N.W., N., and N.E. by Sirhind, E. Rohtak and Dadree, S. Dadree and Loharoo, and W. state Bikanere and dist. Bhutteana; area, 3300 sq. m. The soil is formed for the most part of alluvial matter carried down from the lower ranges of the Himalaya by the Ghagur, Chitang, and other streams, and is admirably adapted both for agriculture and grazing, yielding large crops of rice, wheat, barley, millet, pulse, &c., and rich luxuriant grass, not surpassed as pasture in any part of India. The great drawback is long-continued drought, during which vegetation withers and dies. The jungles of Hurreanah were favourite hunting-grounds of the emperor Feroz Shah, and still harbour some lions, and a great number of tigers and other wild animals. Pop. 225,086.

HURRUR, **HARAR**, or **HORRUR** [add.], a city, E. Africa, the ancient capital of Hadiyah; lat. 9° 20' N.; lon. 42° 17' E. It stands on a gently declining slope about the height of 5500 ft. above the sea, having on its E. side cultivated fields, on the W. a terraced ridge laid out in orchards; on the N. a detached eminence covered with tombs, and on the S. a low valley traversed by a mountain torrent. Its area, inclosed by an irregular wall pierced with five large gates, and flanked by oval towers, is about a mile long and half a mile broad. The buildings of every kind are composed of rough stones cemented, like the ancient Galla cities, with clay, and the streets, which follow the irregularity of the ground, are narrow winding lanes nearly choked up in many places with heaps of rubbish. Most of the dwelling-houses are of two stories with flat roofs and holes high up in their sides for windows, on which occasionally some wretched decorations of wood-work have been attempted, and stand at the end of large courtyards to which access is given through gates of *holcus* stalks. In addition to these houses, there are numerous *gambisa*, or bell-shaped thatched cottages for the poorest classes. The principal buildings are mosques. With these the city abounds, but not one of them is deserving of a passing notice except the *jami* or cathedral. Even it, though built by Turkish architects from Mocha and Hadaydah, is devoid of merit, and with its broken-down gates, and two minarets shaped like-truncated cones, has a poverty-stricken appearance. The inhabitants are a distinct race, and speak a

dialect which is heard nowhere except within its walls. Their exterior is very unprepossessing. 'Among the men,' says Burton, 'I did not see a handsome face; their features are coarse and debauched; many of them squint, others have lost an eye by smallpox, and they are disfigured by scrofula and other diseases; the bad expression of their countenances justifies the expression, "Hard as the heart of Harar."' He gives a more flattering account of the women, and says that they 'appear beautiful by contrast with their lords.' 'High and low indulge freely in intoxicating drinks.' Harar is governed as an independent sovereignty by an emir, who rules despotically, and seeks to hide his Galla or pagan extraction by claiming descent from Caliph Abubekr. The trade of the place is extensive. As of old it is still the great 'half-way house' for slaves from Zangaro, Gurage and the Galla tribes, Aho and others. The principal exports are slaves, ivory, coffee, tobacco, *wars* (safflower or bastard saffron), tobos and woven cottons, mules, holcus, wheat, *karanyi* (a kind of bread used by travellers), ghee, honey, gums (chiefly mastic and myrrh), and tallows of all sorts; the imports, American sheeting and other cottons white and dyed, muslins, red shawls, silks, brass, sheet copper, cutlery, Birmingham trinkets, beads and corals, dates, rice, loaf-sugar, gunpowder, and paper. Among the above exports, special notice is due to the tobe as a branch of native industry for which Harar is celebrated. 'The hand-woven tobos and sashes of Harar,' says Burton, 'are considered equal to the celebrated cloths of Shoa. On the windward coast one of these garments is considered a handsome present for a chief. The Harari tobe consists of a double length of eleven cubits by two in breadth, with a border of bright scarlet, and the average value of a good article even in the city is eight dollars. They are made of the fine long-stapled cotton which grows plentifully upon the hills, and are soft as silk, while their warmth adapts them for winter wear. The thread is spun by women with two wooden pins; the loom is worked by both sexes.' Three caravans leave Harar every year for Berberah. The principal one, conveying slaves, mules, &c., numbers about 3000 souls, and is commanded by one of the emir's principal officers. Pop. estimated at 8000.

HURUNUI, a river, New Zealand, which rises in the Tekoa Mountains, in the N. of Middle Island or Mnister, in the province of Nelson, flows rapidly E. for about 30 m., and falls into the sea about 50 m. N. of Banks Peninsula. It is navigable only by boats.

HUSH, a tn. Turkey in Europe, Moldavia, cap. circle Faltshi, near r. bank Pruth, 42 m. S.E. Jassy. It is the seat of a civil and a criminal court, has a normal school, and carries on a considerable trade in tobacco, which is considered the best in Moldavia. In 1714 Peter the Great was shut up in the vicinity with his army, which must have surrendered at discretion had not the dexterity of the empress Catherine and the stupidity of the Turkish generals enabled him to escape. Pop. about 4000.

HUSSEIN-DEY, a vil. N. Africa, Algeria, prov. and about 4 m. from Algiers, beautifully situated at the foot of the slopes of the Sahel. The palace of the dey, from whom it takes its name, is still standing, and it also contains a number of handsome villas. The inhabitants are chiefly employed in rearing cattle, for which the district is well adapted, and number 1342.

HUSSIATYN, a tn. Austrian empire, Galicia, circle and 19 m. E. by N. Czortkow, on the Podorce and the Russian frontier; with a beautiful baronial castle, an infirmary, and 2644 inhabitants.

HUSTOPETSCH, a tn. Austrian empire, Moravia, circle and about 7 m. W.S.W. Neutitschein, in a beautiful valley, not far from Betschwa; with a castle, a walk-mill, and 1000 inhabitants.

HUTSOO, a river, India, which rises in the petty native

state of Korea, on the S.W. frontier of Bengal, flows S. into Nagpore, and, after a course of about 130 m., joins the Mahanuddy in lat. 21° 50' N.; lon. 82° 46' E.

HUTT, a river, New Zealand, which rises in the Kemtuka Mountains on the S. of North Island or Ulster, flows S.S.W. through the beautiful and fertile valley of its name, and falls into the head of Port Nicholson in Cook's Strait. It is navigable for nearly 2 m. by large cargo-boats.

HYDERABAD [add.], a 'n. India, cap. Nizam's Dominions, stands upon the r. or S. bank of the Mussi, at an elevation of 1072 ft. above the sea, in the midst of a highly picturesque country, overspread with granite hills and isolated rocks of various forms. Its palaces and mosques, seen in combination with the buildings of the British residency, give it an appearance of much grandeur, but it contains a mixture of stately houses with low and dirty hovels in narrow

STREET IN THE KURWEN, HYDERABAD.—From Taylor's Sketches in the Deccan.

irregular streets, some of which are paved. It is surrounded by a weak stone wall, forming an irregular quadrangle, about 2½ m. long upon the river, and 2 m. broad. A handsome bridge, erected in 1831 by Major Oliphant, connects the city with a crowded suburb on the l. bank of the river, in which stands the residency. The bridge is built of granite on eight elliptical arches, each 56 feet span, besides a land arch of 75 ft. span. Its total length is about 600 ft., and breadth 24 ft. The river when full is between 400 and 500 ft. wide. The residency is walled and approached through two gateways. It is a handsome building, on the plan of the government house at Calcutta, with wings resting on an arched basement, to which there is an ascent by a noble flight of twenty-two steps. Its principal front, which turns away from the city, has a richly ornamented Corinthian portico, much too large for the house. The columns are of polished chunam, and are flanked by two colossal sphinxes, all resting on a pavement of black and white marble. The palace of the nizam is of great extent, but in the usual style of native buildings. The *Chaur Manar* or Four Minarets, the most conspicuous monument of antiquity in Hyderabad, was built by the founder of the city about 1590. It stands at the junction of the four principal streets of the town, which pass through the great arches on which the building is supported, and has a very striking appearance. It was erected for a Mussulman seminary or college, but is now used for warehouses. There are many fine gardens and pavilions belonging to rich natives in the environs of the city, the country seat of the nizam's prime minister, inclosed within high walls, and containing galleries, terraces, fountains, &c., and otherwise richly adorned, being amongst the most beautiful. In 1861 a treaty was concluded with the nizam, providing, in reward of his loyalty during the mutiny, for the restoration of certain territory, and cancelling a debt of £500,000 due to the British government. Pop. about 200,000, chiefly Mussulmans.

HWANG-CHOW, a tn. China, prov. Houpe, l. bank Yang-tze-kiang, 20 m. S.E. Woo-chang. It was a large and flourishing city till it fell into the hands of the rebels, who, on being obliged to evacuate it, completed the work of destruction. Its pagoda, however, which boasts to be the finest on the river, escaped, and is in excellent preservation. The navigation of the river near this town becomes extremely intricate and even dangerous.

HWANG-SHI-KANG, a tn. China, prov. Houpe, on the Yang-tze-kiang, 25 m. S.E. Woo-chang. A handsome river wall of sandstone, surmounted by a balustrade, gives the place,

when approached by water, a most imposing appearance. Its streets are remarkable for their cleanliness; the shops are generally superior to those seen in other Chinese towns farther down the river; and the number of junks at anchor indicates a high degree of commercial activity, while the whole town has an air of prosperity and opulence. Much of this is doubtless owing to the immunity which it has enjoyed from rebel violence. A considerable trade is carried on in grain, and large quantities of cotton and indigo are grown; but neither tea nor silk appears to be produced. Coal is worked about 5 m. distant.

I.

IBARRA, a tn. S. America, Ecuador, cap. prov. Imbabura, in a beautiful plain to the N. of Quito. It consists of straight and spacious streets, and houses built of adobe and covered with tile, some of them of two stories; and contains a parish church, occupying one side of the public square; a college in which Latin, Spanish, and philosophy are taught; several convents appropriated for the use of the public schools, a governor's house, an hospital, and a beautiful pantheon. The manufactures are hats, brandy and liqueurs, confections, cotton goods, and salt. Pop. about 13,000.

ICHANG, a tn. China, prov. Houpe, l. bank Yang-tze-kiang, 1100 m. (by river) W. Shanghai, in lat. 30° 41' 5" N.; lon. 111° 3' E. Most of the trading junks from Sechuen prefer stopping here, though some proceed to Shahoz, and a few even as far as Hankow. Ichang is an important haven for the trade of W. China, and a great number of boats lie at anchor before it. Opposite to the town, and a mile below it, the breadth of the river is in May and June about 950 yards, and the depth of the channel is in March nowhere less than 3½ fathoms. Abundance of coal is found in the vicinity; but the quality is apparently indifferent.

ICHTIMAN, a tn. European Turkey, Turkish Servia, on the Wid, 22 m. S.E. Sophia. It has several mosques, and contains 5000 inhabitants, partly Bulgarians, partly Turks.

ICOLLO-I-BENGO, a tn. S.W. Africa, Portuguese settlements, prov. Angola, r. bank Bengo, 35 m. E. Loanda. It takes its name from having once been the residence of a native king, and is a place of some importance. One of its industrial establishments is a large sugar manufactory, the flat alluvial banks of the Bengo being well adapted for sugarcane. It contains a pop. of 6530 blacks, 172 mulattoes, and 11 whites.

IDAHO, a territory, U. States, organized in 1863; area, 326,373 sq. m. It is formed of the eastern halves of old Washington and Oregon territories, the western half of Nebraska, and a small section of northern Utah. It lies immediately N. of Utah and Colorado, and extends in a northerly direction to the British possessions. The territory owes its rise and importance to the rich gold fields of the Salmon river, previous to the discovery of which a few years ago it was inhabited only by Indians. The scenery along the Salmon river in the vicinity of the gold mines is very grand, the stream in some places flowing between perpendicular walls of rock from 500 to 2000 ft. high. Coal, copper, iron, and salt are also found in many localities. Platina has been gathered in small quantities in the streams by the Indians, and it is thought that extensive deposits of this valuable metal exist. The higher mountain ranges of the territory are bleak and barren, but the lower hills are generally well wooded, and the soil of the valleys is productive.

IGALIKO, Greenland. See JULIANSHAB *in Supp.*

IGBEGBE, a tn. Western Africa, advantageously situated nearly opposite the sité of the once famous market town of Odokodo, at the confluence of the Benuwe and Kwara, 240 m. above their mouth in the Gulf of Guinea. It stands on a slope at the base of a range of hills, with large fields of maize in the back-ground, and a great number of baobab-trees, the trunks and thick foliage of which are very striking. The market is well supplied. Among the articles exposed for sale are

palm-oil, shea-butter, cotton and cotton cloths, mats, bags, calabashes, corn, pepper, yams, tomatoes, papaws, plantains, and bananas. Pop. about 4000.

IGBIRA, a dist. Western Africa, which lies in the fork formed by the confluence of the Benuwe with the Kwara, and stretches E. for about 50 m. along the r. bank of the former. The inhabitants are highly civilized, friendly, civil, and most industrious, and are the medium of an important trade with Europeans. The inhabitants, with few exceptions, are pagans, but have comparatively few barbarous rites.

IGBO, a territory, Western Africa, extending E. and W. from the Old Kalabar river to the Kwara, and also to a small extent across and beyond it so as to bound with Abo; on the S. it comprehends part of the Kwara delta. The inhabitants, belonging to different races, have a mixture of dialects, but are all pagans, and practise numerous superstitious rites and ceremonies, including sacrifices of fowls, sheep, goats, and bullocks. Their most celebrated shrine is at Aro or Ano, where their deity, called Tshuku, though regarded as omnipotent and omnipresent, is believed to have his special residence.

ILA, a tn. Western Africa, Yoruba, cap. dist. Igbomma, about 120 m. W. of the Kwara; lat. 8° N.; lon. 4° 55' E. It is a large but poorly built place, the only house within it deserving of notice being that of the chief, which is large, well kept, and substantial, with a portico in front. Cotton is extensively grown in the district, and promises to become an important article of trade.

ILANCA, a tn. Austrian empire, Serbian Banat, Military Frontier, 30 m. N.E. Belgrade; with two Greek churches and 2340 inhabitants.

ILARIONE (SAN GIOVANNI), a tn. Austrian Italy, prov. and 17 m. W. by S. Vicenza; with coal-mines, and 3290 inhabitants.

ILESIA, a tn. Western Africa, prov. Yoruba, cap. dist. Ijesha. It is a large and important place, surrounded by walls and entered by several gates. The streets scarcely deserve the name, being mere paths bounded by grass 10 or 12 feet high; but the houses are remarkable both for their size and the intricacy of their construction. That of the chief occupies nearly a half mile square, and is inclosed by a wall upwards of 20 feet high. Imposing both by its height and size, and regularly built, it 'really looks,' as Mr. May expresses it, 'a palace in Africa.' The people have a wilder aspect than is common to the Yorubans. This is probably owing to an increased amount of negro beard, and the practice of wearing calabashes for head-coverings. The women wear a saucer-shaped button with its shank inserted in a hole in the left nostril.

ILLAPEL, a tn. Chili, prov. Coquimbo, cap. dep. of same name, on the river Illapel, about 11 m. above its confluence with the Choapo. It possesses three churches, two higher and four primary schools, and has a pop. of 3430.

ILLAVA, a tn. Austrian empire, Hungary, co. and 10 m. N.N.E. Trenesin, on the Waag; with a district court, a castle, a brewery, and a very large central house of correction for Hungary, Siebenburgen, the Temesvar Banat, Croatia, and Slavonia. Pop. 1000.

ILOCOS [add.], two provinces in the island of Luzon,

Philippine Isles, Indian Archipelago:—1. *Ilocos-Norte*, or *Northern Ilocos*, bounded N. and W. by the ocean, E. prov. Cagayan, and S. *Ilocos-Sur*; area, 1388 geo. sq. m. Its surface is generally rugged and mountainous, two chains of considerable elevation passing through it. The mountains are covered with dense forests, in which sapan and other dye-woods abound, and there is much valuable timber. The principal agricultural products are rice, wheat, sesame, sugarcane, coffee, cacao, and cotton. Horses are reared in great numbers. The climate is moist and cloudy, and in winter colder than might be expected from the latitude. Hailstorms are not unfrequent. The prov. has however the advantage of being sheltered from the N.E. monsoon by the Cordillera of Caraballos. Pop. 157,558.—2. *Ilocos-Sur*, bounded N. by *Ilocos-Norte*, E. by the Caraballos range, separating it from *Abra*, and W. by the ocean; area, 676 geo. sq. m. On its coast are several harbours, of which the best and safest are Salomaque and Currimaog, both of them with sufficient depth for large vessels. The interior, though much broken by spurs from the Caraballos and covered to a great extent with dense forests, contains so much fertile soil that the province justly ranks as one of the most fertile and best peopled in the Philippines. Its climate is temperate, less moist than that of *Ilocos-Norte*, and has like it the advantage of being sheltered from the N.E. monsoon. A considerable quantity of gold is washed from the sands of its rivers. Pop. 192,272.

IMMA, a river, Russian empire, Manchooria, said to be formed in a mountainous district by two streams, flows W.S.W., and joins the Usuri, of which it is the principal tributary on the right. It is navigated only by the small canoes of the Orochi, Goldi, and Chinese, but is probably navigable by larger boats. Opposite to its mouth, on the Chinese side of the Usuri, is the Manchoo village of Imma, perched on a prominent point of some hills composed of red marl. Ginseng is cultivated in the vicinity.

INAGUA, two isls. West Indies, belonging to the Bahamas, and nearly equidistant from Cuba on the S.W. and San Domingo on the S.E.—1. *Great Inagua* is of very irregular shape, stretching about 45 m. between its N.E. and S.W. points, but diminishing in breadth from 18 m. near its centre to a narrow strip of land which for 10 m. in the direction of its N. extremity is not more than 4 m. wide. Its loftiest summit does not exceed 132 ft. above the sea, while the average height does not exceed 30 ft. On its E. side it is skirted by a dangerous reef. Its best anchorage is in Matthew Road, 3 m. N. of its S.W. point, where Matthew Town is situated in front of extensive salt-ponds, and is defended by a fort.—2. *Little Inagua*, somewhat of a quadrangular shape, is 8 m. long from E. to W. by about 5 m. broad, presents a bold and rocky shore on its N.E. and S.W. sides, and on the S.E. is skirted by a dangerous reef on which the sea breaks heavily. It is not inhabited, but there are said to be wild hogs upon it and water.

INCARIANO (SAN PIETRO), a tn. Austrian empire, Italy, prov. and 8 m. N.W. Verona; with a court of justice, a parish church, and a palace built by Palladio. Pop. 2105.

INDEPENDENCE, a tn. U. States, Missouri, cap. co. Jackson, near the W. frontier of the state, and about 5 m. S. of the Missouri. It possesses several churches and hotels, and carries on an active trade, its position making it an entrepôt between New Mexico and Utah and the eastern states. The Mormons, who settled here in 1837, were violently expelled by the inhabitants. Pop. 3164.

INDIA [add.] In 1858 the government of British India was transferred by the English legislature from the East India Company to the Queen. By the terms of the act of parliament, all the powers of the company are exercised by her majesty, and all revenues and tributes are received and disposed of in her name for the purposes of the government of India alone. The executive is invested in a secretary of state for India, and a council of state consisting of 15 members, seven of whom are elected by the directors of the East India Company from their own body, and eight are nominated by the crown, vacancies among the nominated members being filled up by the queen, and other vacancies by election by the rest of the council. But the major part of the council must be of persons who have resided ten years in India, and have not left it more than ten years previous to the date of their

appointment. Each member has a salary of £1200 a year, payable, as well as that of the secretary of state, out of the revenues of India. In India the government is administered by the governor-general and a supreme council of 11 to 15 members at Calcutta, subject to the direction of the secretary of state for India. The sovereign of Great Britain is empowered to appoint from time to time an auditor of the accounts, with power to inspect all books and examine all officers, and his report is to be laid before parliament. The account of Indian revenue and expenditure must also be laid before parliament annually. Under the new form of government the affairs of the country have prospered in every way; education has been promoted among the natives; railways have been constructed; electric telegraph lines opened; roads improved, and new ones made; and trade and commerce generally increased.

In 1863 there were 10,566 miles of government telegraph line in the country, worked by 2973 persons employed.

In 1865 there were in India ten railway companies guaranteed by government, and one not guaranteed. The latter, designed to connect Calcutta with Oude and Rohilcund, had a line open between Lucknow and Cawnpore. Of the guaranteed lines the first in importance is the East India, open from the mouth of the Hooghly to the N.W. Provinces, affording direct communication between Calcutta and Delhi, a distance of 1126 m.; at Allahabad a vast iron bridge over the Jumna, with 15 spans of 200 ft. each, or 3000 ft. in all, has been opened, and by it Calcutta will be connected with Central India and eventually with Bombay. The branch from Allahabad to Jubbulpore will join the Great Indian Peninsula railway that has its terminus at Bombay; this line had about 600 m. open in 1865. A section of it only 10 m. long, but of vast importance, has been finished; it takes the line over the Thull Ghat, and in the short distance rises 1000 ft., pierces 13 tunnels, and crosses viaducts, one of them 200 ft. in height and 250 yards long. The 10 miles cost about half a million sterling. The Bombay and Baroda line had, in 1865, 306 m. open for traffic. The Madras railway, with its branches, crossing the Peninsula and connecting Madras with Bepore on the western coast, had 571 m. in work. The Madras line affords railway communication with Bangalore and the healthy country of Mysore, and will eventually pass through the cotton fields of the Nizam. In the N.W. of India are three lines: the Scinde railway runs from the port of Kurrachee to Kotni on the Indus, where the service is continued by the Indus flotilla; the Punjab railway is open from Moultan to Umritsur, passing Lahore, and has still to be connected with Delhi and Meerut by the Delhi railway; when this line, which is in active progress, is completed, there will be railway communication from the Hooghly to the Indus. There still remains the line through the valley of the Indus. In addition to all these lines others are designed, and especially one from Bombay through several native states to the N.W. Provinces. The estimated cost of the lines under construction is £77,500,000, of which £57,500,000 had been expended up to May, 1865; the total length being something under 5000 m.

The material progress of the country will be gathered from the subjoined statistics, which display the rapid rise in the revenue, without any corresponding increase of expenditure since the empire came under the control of the queen's government. Instead of a vast excess in the expenditure over the revenue, the financial measures of the executive have produced a revenue exceeding the expenditure. The resources and expenses from 1858 to 1864 appear thus:—

Years ending April 30.	IN INDIA.		Home Charges.
	Revenue.	Expenditure.	
1858	£ 31,706,776	£ 35,078,528	£ 6,162,043
1859	36,060,788	43,590,794	7,466,136
1860	39,705,822	44,622,269	7,239,451
1861	42,903,234	41,529,973	5,394,646
1862	43,829,472	37,245,756	6,634,344
1863	45,143,752	36,800,806	6,515,601
1864	44,613,032	38,087,772	6,446,913

Adding together the expenditure in India and the home charges, the finances of the year 1863-4 stood thus:—

Total Revenue,	£14,613,032
„ Expenditure,	44,534,685
Surplus,	£78,347

The gross revenue for 1865-6 was £47,041,000, and the gross expenditure £47,020,000; of the latter sum the army took £13,468,000, and public works £5,352,000. The sources of revenue and branches of expenditure are shown in the following tables, which give the items of 1863-4.

Sources of Revenue.	Amount.
Land,	£20,803,423
Forest,	804,443
Abkaree (Duties on spirits),	2,060,270
Assessed taxes,	1,483,622
Customs,	2,384,061
Salt,	5,035,696
Opium,	6,831,999
Stamps,	1,735,216
Mint,	369,750
Post-office,	459,882
Electric telegraph,	91,762
Law, justice, and police,	631,798
Marine,	307,715
Public works,	461,785
Tributes, &c.,	715,990
Miscellaneous, civil,	615,903
„ military,	747,431
Interest,	72,277
Total,	£44,613,032

Branches of Expenditure.	Amount.
Allowances, refunds, and drawbacks,	£333,565
Land revenue, forest, and abkaree,	2,834,412
Assessed taxes,	45,116
Customs,	177,401
Salt,	805,065
Opium,	2,806,493
Stamps,	103,393
Mint,	162,182
Post-office,	502,671
Electric telegraph,	821,856
Allowances, &c., under treaties,	1,721,335
Allowances to local offices,	585,089
Miscellaneous,	27,466
Army,	12,697,069
Marine charges,	567,555
Public works, &c.,	5,375,523
Salaries, &c., of public departments,	1,157,451
Law and justice,	2,120,636
Police,	2,300,482
Education, science, and art,	441,856
Political agencies, &c.,	214,148
Superannuation and retired allowances, and gratuities,	692,218
Miscellaneous,	451,450
Interest,	3,093,250
Expenditure in India,	£38,087,772
Net expenditure in England,	4,777,630
Net guaranteed interest on railway capital,	1,669,283
Total expenditure,	£44,534,685
Surplus,	£78,347

The public debt of India, with the interest payable upon it, is shown in the following figures:—

Years.	Debt in India.	Interest on Debt in India.	Debt in England.	Interest on Debt in England.	Total Debt.	Total Interest.
	£	£	£	£	£	£
1860	71,969,460	3,123,327	26,138,000	766,864	98,107,460	3,890,191
1861	71,901,081	3,232,104	29,976,000	1,061,233	101,877,081	4,293,337
1862	72,418,859	3,134,897	35,095,300	1,426,008	107,514,159	4,560,905

The proportions of the principal sources of public revenue (net) from the several divisions of India, according to the returns of the year 1862, are shown in the following table:—

	Territories, &c., under gov. of India*	Bengal.	N.W. Provinces.	Madras.	Bombay.	Punjab.
	£	£	£	£	£	£
Land, excise, &c.,	2,240,086	4,342,109	4,511,681	4,001,472	3,082,913	1,722,803
Stamps,	70,946	637,789	243,956	298,991	281,517	86,730
Customs,	190,014	1,277,966	7,470	214,464	920,732	36,885
Salt,	26,760	1,603,705	596,678	759,478	840,502	588,728
Opium,	—	2,471,347	—	—	2,453,458	—
Income and assessed taxes,	236,032	576,368	326,443	272,790	407,286	114,734
Tributes, &c.,	306,422	30	—	344,643	101,390	27,677
Post-office, mint, &c.,	892,951	465,104	470,767	455,505	480,781	248,230
Total net revenue,	3,933,211	11,374,418	6,161,995	6,347,343	8,053,879	2,825,807

* Formerly included in the Bengal presidency.

In like manner the proportionate amounts of expenditure in each division of the empire in the year 1862 are thus stated:—

Branches of Expenditure.	Territories, &c., under gov. of India.	Bengal.	N.W. Provinces.	Madras.	Bombay.	Punjab.
	£	£	£	£	£	£
Civil and political establishments,	283,262	55,441	122,632	42,912	83,266	59,781
Judicial and police charges,	515,920	744,052	676,856	631,906	589,531	444,603
Military charges,	—	7,367,906	—	3,941,563	2,372,431	—
Marine,	112,856	7,733	—	21,529	345,980	42,373
Interest of debt,	2,953,674	2	4,027	61,443	86,275	—
Other charges,	—	—	—	15,700,860	—	—
Total in India,	—	—	—	37,245,756	—	—
Home charges:—						
Payments in England,	—	—	—	6,634,344	—	—
Value of stores sent from England,	—	—	—	990,132	—	—
Total,	—	—	—	44,870,232	—	—

* Excess receipt.

Imports and Exports.—The following tables exhibit the value of the principal articles of merchandise imported and exported from the several presidencies of British India in the year 1862:—

IMPORTS. Principal Articles.	BENGAL.		MADRAS.		BOMBAY.	
	Total.	From U. Kingdom.	Total.	From U. Kingdom.	Total.	From U. Kingdom.
Medicines and medical stores, . . .	£ 25,188	£ 22,269	£ 4,825	£ 3,908	£ 9,316	£ 7,306
Apparel,	220,388	186,324	92,407	90,950	87,797	53,672

The total value of the imports and exports (including treasure) of the several provinces of British India, and of the whole empire, in each of the years ending 30th April, 1860 1861, 1862, is thus stated:—

Year.	BENGAL.		MADRAS.		BOMBAY.		TOTAL.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1860	£ 20,717,598	£ 12,903,770	£ 3,000,846	£ 2,492,166	£ 16,903,659	£ 13,493,284	£ 40,622,103	£ 28,889,210
1861	15,550,277	13,656,506	3,205,097	2,868,767	15,415,419	17,564,881	34,170,793	34,090,154
1862	14,307,358	13,110,859	3,474,519	3,413,634	18,956,750	19,050,033	37,272,417*	37,000,397*

* In these totals are included £533,790 of imports, and £1,425,871 of exports, of British Burmah, which had previously been comprised under Bengal.

The exports from India to the United Kingdom in the years 1863 and 1864 are stated to have been £48,434,640 and £52,287,869 respectively; and the imports of *Home Produce* from the United Kingdom £20,002,241 and £19,895,145 in the same years respectively.

The number and tonnage of European and other vessels

not native, and of native vessels, entered and cleared at the ports of British India in the years 1860, 1861, and 1862 are shown in the following table. Of the former class it may be stated that in the respective years the British vessels numbered 6424, of 2,918,001 tons; 6610, of 2,866,123 tons; and 7700, of 3,291,978 tons.

Years ended April 30.	EUROPEAN AND OTHERS NOT NATIVE.					
	Entered.		Cleared.		Total.	
	vessels.	tons.	vessels.	tons.	vessels.	tons.
1860	3,606	1,742,542	4,022	1,893,023	7,628	3,635,565
1861	3,891	1,846,063	4,173	1,854,800	8,064	3,700,863
1862	4,540	2,204,392	5,001	2,237,446	9,541	4,442,338
	NATIVE.*					
1860	17,584	632,427	16,436	630,960	34,020	1,263,387
1861	19,040	700,955	17,528	700,156	36,568	1,401,111
1862	17,494	727,165	16,959	717,843	34,453	1,445,013

* Exclusive of those engaged in the coasting trade of the British states.

The area and population of British India, including *British Burmah* (which see in *Supp.*), according to the latest returns,

are stated as follows; but the numbers of the population are only estimated, no actual enumeration having been ever made:

Area.	Under Gov. General.	Bengal.	Oude.	Central Provinces.	British Burmah.	N.W. Provinces.	Madras.	Bombay.	Punjab.	Total.	Native States.	Foreign States.
	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.	sq. m.
Area.	46,870	261,380	27,890	108,660	90,070	86,380	140,917	142,043	100,406	1,004,616	601,050	1,254
Pop.	5,392,128	40,466,690	8,071,075	7,041,480	1,897,897	29,624,462	23,180,323	12,802,544	14,794,611	143,271,210	47,849,199	517,149

The actual strength of her majesty's forces in India on April 30, 1862, is thus given:—

Presidencies.	Europeans.	Natives.	Total.
Bengal (including N.W. Provinces and Punjab),	47,912	39,210	87,122
Madras,	16,421	55,687	72,108
Bombay,	13,841	31,016	44,857
Total,	78,174	125,913	204,087

History.—By the act of 1833 the East India Company held, under the superintendence of the Board of Control, the government of British India until April 30, 1854. Their charter was then temporarily renewed, the number of the directors being reduced from 24 to 18, and the crown nominating 6 of them. In the latter part of 1856 disaffection became apparent among the native soldiery, the issue of greased cartridges to them by the government being made the pretext for mutinous proceedings in the early part of 1857. *Chupaties*, or small cakes, were distributed by the natives throughout the country, as a signal, it is supposed, for rebellion, and the first outbreak occurred in February, in the open mutiny of the 19th native infantry. The rebellion rapidly spread throughout the Bengal presidency. In Oude, at Delhi, Lucknow, Jhansi, Cawnpore, and other places, the mutineers rose upon the Europeans and perpetrated the most horrible atrocities, murdering all whom they overpowered under circumstances of the utmost cruelty and ferocity. The tragedy of Cawnpore, on June 27, was perhaps the most melancholy episode; but the massacres at Jhansi, Delhi, and elsewhere, were scarcely behind that at Cawnpore in blood-thirstiness. Immediate and heroic efforts were made to

check and suppress the mutiny. Unfortunately the European force in the country was small compared with the numbers of the rebellious troops, but indomitable energy and valour made up for deficiency of numbers. The small force under Sir H. Lawrence defended themselves in Lucknow with invincible heroism until Sir H. Havelock, with a mere handful of men, captured Cawnpore, and fought his way to their relief, which he effected in conjunction with Sir James Outram, though the siege was not raised. Sir Colin Campbell, afterwards Lord Clyde, being appointed commander-in-chief, arrived at Cawnpore, and in November advanced against Lucknow, stormed and captured the approaches, and opened a communication with Sir James Outram; the besieged and exhausted garrison, with many women and children, were then liberated and removed to Cawnpore; but the good and gallant Sir H. Havelock died on the 25th of the same month, November. Delhi was stormed and captured in September, and the king, being taken prisoner, was tried for treason, and banished to Rangoon for life. Sir Colin Campbell then matured his plans for effectually overpowering and suppressing the rest of the rebellious forces, and early in the following year, 1858, by a series of successful operations captured, dispersed, and reduced to submission the whole of the rebels in the disturbed districts, the rout of the Gwalior mutineers, the final recapture of Lucknow, and the storming of the fort of Gwalior and restoration of the Maharajah, who had remained faithful to the British power, being among the most prominent operations. The disadvantages of divided authority being now apparent, in 1858 the English parliament abrogated the rule of the East India Company altogether, and the supreme sovereignty of India became vested in the queen, the executive being placed in the hands of a secretary of state and council in London, and a governor-general and

council in Calcutta, as before stated. The general administration of the country has been revised and improved, and its material progress and prosperity enhanced by the change. After long negotiations active measures were taken against the Bhootas in 1865, to repress and punish their marauding propensities. As a consequence a part of Bhootan has been annexed to British territory, and the rulers reduced to submission.

INDIANOPOLIS [add.], a tn. U. States, cap. of Indiana, situated in the centre of the state, on the W. fork of White River, and at the terminus of no fewer than 8 railways, 103 m. N.W. Cincinnati. It stands in a fertile plain, and consists partly of streets which are parallel or cross at right angles, and partly of four long avenues, which traverse the place diagonally. These avenues radiate from a central square, in the middle of which there is a mound surrounded by a circular street, and planted with shady trees. Among the public buildings are 26 churches, a handsome state-house with a colonnade and a dome, a governor's residence, a court-house and county-jail, a Christian university accommodated in a handsome Gothic building, and open to both sexes; two female colleges, an hospital, an orphan asylum, and state-asylums for the deaf and dumb, the blind and the insane. The principal industrial establishments are brass and iron foundries, machine-shops, candle-works, woollen factories, factories for boilers, iron-railing, and ploughs, and a number of planing, flour, and saw mills. The river, which is navigable up to the town at high-water, is here crossed by a handsome bridge. Pop. (1860), 18,611.

INDUSTRY VILLAGE, a tn. British America, Canada East, cap. co. Joliette, on the L'Assomption, and on the Industry and Rawdon railway, 37 m. N.E. Montreal; with a R. Catholic church and college, a convent, unlimited water-power, and a large trade in flour and timber. Pop. about 3000.

INGAL, a tn. Western Africa, 85 m. S.S.W. Agades; lat. $15^{\circ} 59' N.$; lon. $7^{\circ} 18' E.$ The inhabitants belong to the tribe of the Ighdalen, who speak a dialect of the Songhay, and possess much cattle, with which they supply the market of Agades. Some salt of good quality is obtained in the vicinity.—(Barth.)

INGERSOLL, a tn. British America, Canada West, co. Oxford, on the Thames and on the Great Western railway, 80 m. S.W. Toronto. It possesses eight churches—two Wesleyan, two Baptist, a Church of England, a Free and a United Presbyterian, and a R. Catholic—a grammar and other schools, foundries and machine-works, and a large trade in wheat, flour, and sawn lumber. Pop. about 2800.

INKAN, or **INKANSK**, a vil. Russian empire, Manchooria, on the Silimji, an affluent of the Zeyer; lat. $53^{\circ} N.$; lon. $132^{\circ} E.$ Its fame as a place of trade is spread far and wide among the Tunguzians and even Daurians, the mountain tribes descending at certain seasons to barter their furs or other produce for necessaries supplied by Yakut traders, who come either direct from Yakutsk or by way of Udsk.

INNACONDAN, a tn. India, presid. Madras, dist. and 50 m. W.S.W. Guntoor. Its inhabitants carry on a considerable export trade in saltpetre, tobacco, ghee, cloths, and chillies. Earthquakes have been felt in the vicinity. Pop. 4261.

INSALAH, or **AIN SALAH**, a tn. N. Africa, Sahara, oasis of Tuat, cap. dist. Tidicult; lat. $28^{\circ} 42' N.$; lon. $0^{\circ} 43' E.$ It consists of 500 or 600 houses, and, though not surrounded by a wall, is defended by a castle. Within the town there is a copious spring, and towards the S. the sloping heights which overlook it are covered with orchards and date plantations; but on all other sides its existence is threatened by the sand, which, carried by the wind, is gathering in heaps up to the very walls of the houses. Almost all the houses belong to the Arab tribe of Onled Moktar, most of whom, however, prefer living outside in tents. A considerable trade is carried on by the inhabitants, particularly at the times when the pilgrims to or from Mecca pass through the place.

INVERCARGILL, a tn. and port, New Zealand, Middle Isl., cap. prov. Southland, l. bank of mouth of New River, upon a level site, 8 m. above the entrance. The port is capable of receiving steamers and vessels of moderate size, larger ships frequenting the great harbour of the Bluff, with which

it has railway communication, about 10 m. distant. The entrance of New River is somewhat difficult of passage, owing to the exposed and shifting nature of the bar and the channel within, as well as the rapid tides; so that vessels require a pilot. But the adjacent country is fertile, and

hence the colony is a progressing one. Sixty-seven vessels, of 25,263 tons, entered the port in 1862, the imports being valued at £239,371, and the exports at £20,097. Two or three houses marked the commencement of Invercargill in 1857, and in 1864 it was said to contain, with its suburbs, 2000 inhabitants.

INWALD, a tn. Austrian empire, Galicia, circle Wadowice, 27 m. S.W. Cracow; with 1300 inhabitants, who weave excellent drills.

IOWA [add.], a tn. U. States, Iowa, cap. co. Johnson, l. bank Iowa River, 80 m. above its mouth, and on the Chicago and Rock Island railway, 190 m. W. Chicago. It is pleasingly built on a succession of terraces rising from the banks of the river. The first terrace is laid out as a promenade; the third is crowned by a Doric edifice built of a finely variegated stone called 'bird's-eye marble.' This edifice was originally intended to be the capitol of the state; but, on the seat of government being transferred to Des Moines, it was appropriated to the state university founded in 1855. The other principal buildings are the court-house, the county offices, eight churches, a female collegiate institute, and asylums for the blind, and for the deaf and dumb. The principal industrial establishments are flour-mills. Pop. 5214.

IOWA, a riv. U. States, which rises in the state of its name, towards the S. frontiers of Minnesota, flows circuitously S.E., receiving numerous unimportant affluents, and, after a course of about 300 m., joins the Mississippi on its right bank, 30 m. above Burlington. It is navigable by small steamers to the town of Iowa, 80 m. from its mouth.

IPEK, a tn. Turkey in Europe, in the N. of Albania, eyalet Rum-ili, on the Bistritza or White Drin, 60 m. N.E. Scutari. It was formerly the residence of the Greek patriarch, and has a very pleasing appearance, most of the houses

having in front of them orchards and plantations of mulberry. Pop. 8000.

IRAPUATO, a tn. Mexico, state and 15 m. S. Guajuato. It contains amongst its public buildings a handsome nunnery and a Franciscan monastery. Attached to the latter is a richly-endowed Latin school. The inhabitants had once important manufactures, but now confine themselves almost entirely to agriculture. Pop. 13,000.

ITZMIQUILPAN, or **ITZMIQUILPAN**, a tn. Mexico, state and 72 m. N. by W. Mexico, r. bank Tula, in a beautiful but fertile mountain district at the height of 5400 ft. above the sea. Its inhabitants are chiefly employed in raising grain, vegetables, and fruit, the climate bringing to perfection almost all the products of the temperate zone. Pop. nearly 10,000.

IROQUOIS, a tn. British America, Canada West, co. Dundas, at the mouth of the Iroquois canal in the St. Lawrence, 90 m. S.W. Montreal; with a Wesleyan and an Episcopal Methodist church, and a grammar-school. It is a port of entry, is visited daily by steamers plying between Montreal, Kingston, and Hamilton, and carries on a considerable trade in flour. Pop. about 800.

ISAYE, or **ISÉ**, a tn. Western Africa, prov. Dalla, 170 m. S.S.E. Timbuktoo. It is a place of some importance, and consists, like most of the places in the district, of a nucleus of clay houses provided with a kind of square towers for granaries, and a suburb of cottages of thatchwork of great variety of shapes. The inhabitants are partly Songhay, partly Fellatah. The former are in poor circumstances; the latter, the dominant race, possess large herds of cattle and numerous flocks. The castellated mountains of Ilombori form a prominent object in the landscape of Isaye.

ISCHIA [add.], a tn. Italy, on the N.E. shore of the island of same name, near the N.W. entrance of the Gulf of Naples. It is an ancient place without walls, but defended by a castle, which is entered across a narrow causeway and a bridge, and consists chiefly of a long street, with a handsome market-place in its centre. It is the see of a bishop, whose palace is the only building within it of any note. It has a small harbour, which is tolerably well sheltered, and is visited by steamers of light draught. The castle has acquired notoriety, as the prison in whose dungeons the ex-king of Naples used to confine his victims, and subject them to the barbarous treatment which was effectually exposed a few years ago.

ISGE, or **ISSEGE**, a vil. Western Africa, country of the Marghi, at the W. foot of the Wandala Mountains, not far from the S. frontier of Bornou, to which it is nominally subject, 150 m. S.E. Birni. It consists of two large clusters of huts. The E. cluster spreads to some extent over the plain, which yields much corn and rich pasturage; the W. quarter, where the Bornou deputy resides, has in its vicinity a sacred grove of considerable circuit formed by magnificent trees, mostly of the ficus tribe, and surrounded with an earthen wall. It is much visited by the Marghi for the performance of pagan rites.

ISLA DEL REY, an isl. S. America, the largest of the Pearl group, situated on the E. side of the Bay of Panama, is about 15 m. long by 7 m. broad, and, though not very lofty, rises into several peaks, one of which is 600 ft. high. On its N. side stands San Miguel, the principal town of the Pearl group. It is badly situated, having no proper landing-place, but possesses a conspicuous church. The S. end of the island consists of a remarkable promontory which juts out into the sea, and is about 4 m. long by 1 m. wide. Immediately to the E. of the promontory, and sheltered by it, is the bay of St. Elmo, with convenient anchorage in all parts, and a fine stream of water falling into it.

ISLAMGURH, or **NOHUR**, a fort, India, on the S. frontier of Bhawalpoor, 65 m. N. Jessulmeer. It is a very ancient structure of small bricks, with ramparts varying in height from 30 to 50 ft., and inclosing an area of about 80 yards square. It is flanked by numerous bastions on its N. and E. faces, and has at its N.E. angle a high gateway covered by an outwork. Several sandhills, only a quarter of a mile distant, completely command it.

ISLAMNUGUR, **ISLAMGARH**, or **ISLAMAD**, a tn. India, territory and 5 m. N. Bhopal. It is situated in the fork formed by the confluence of the Bes and the Patra, which

supply water to a ditch built across the fork from the one bank to the other. The town and a stone-fort within it are thus surrounded by water, and completely insulated.

ISLE VERTE, a tn. British America, Canada East, co. Temiscouata, r. bank St. Lawrence, 105 m. N.E. Quebec; with a R. Catholic church, a model school, and a large trade in flour and lumber. Pop. about 3000.

ISMAIL [add.], a tn. Turkey in Europe, on the N. arm of the Danube, 35 m. E. Galatz. Before it was stormed and laid in ruins by Suwarow in 1789, it contained 30,000 inhabitants, and was one of the handsomest towns on the Danube. After it was ceded to Russia by the peace of Bucharest in 1812, it began gradually to rise from its ruins, and had acquired importance as a fortress, a naval station, and a centre of trade, when it returned to Turkey by the peace of Paris in 1856, being included in that portion of Bessarabia which, to the extent of 3280 sq. m., with a pop. of about 180,000, was withdrawn from Russia, and given back to Moldavia. It has important manufactures of leather, and carries on a very extensive trade in corn, wool, tallow, and hides. Along with the newly-erected town or suburb of Tutehkono, immediately to the E. of it, it contains 26,000 inhabitants.

ISNIK [add.], better known as **NICÆA** or **NICE**, where the celebrated council of that name was held, a tn. Asiatic Turkey, Anatolia, 60 m. S.E. Constantinople. It lies in a marshy plain surrounded by mulberry plantations, and a fine old wall, flanked by towers in a variety of styles, sometimes round, sometimes square or angular, according to the taste of the different Byzantine emperors who erected them. Embedded in the walls are numerous marble-blocks and other ancient fragments, some of them with interesting inscriptions. The inhabitants of the town and surrounding district find a ready market for their produce in Constantinople; but there is little appearance of activity within the place, except at the post station, which is situated in a small square adorned with a fountain, and constantly crowded with waggons and other conveyances preparing to pass along the great thoroughfare to or from the capital.

ISTLAN, or **IXTLAN**, a tn. Mexico, state and 40 m. N. Oajaca, in a mountainous district; with a considerable population of Creoles, a spacious market-place, and a number of excellent private and public buildings. Among the latter is a handsome church.

ITALY [add.] Through the Austro-Italian war of 1859, and the revolutionary actions in the minor Italian states, a United Kingdom of Italy was formed, with the king of Sardinia at its head, comprising the Sardinian States, Austrian Lombardy excepting a small part in the S.E. contiguous to the r. bank of the Po, the kingdom of Naples, the greatest part of the States of the Church, and all the Duchies; Nice, and Savoy, however, being severed and ceded to France. Until 1865 Turin was the capital of the kingdom, but in that year the seat of government was transferred to Florence, which thus obtained an accession of 20,000 inhabitants.

The fifty-nine provinces or departments into which the kingdom is divided are enumerated in the annexed table, together with the superficies and population. It will be seen that the population, amounting to 21,703,710 inhabitants, is very unequally distributed:—

Provinces and Prefectures.	Superficies in square chilos.	Population.	Population per square chilo.
1. Alessandria	5,052'95	637,629	126'10
2. Ancona	1,140'16	257,122	224'73
3. Aquila	6,544'44	339,555	51'87
4. Arezzo	3,300'20	222,654	67'28
5. Ascoli	2,095'79	202,398	96'57
6. Avellino	3,040'54	383,936	127'17
7. Bari	3,978'40	574,660	96'10
8. Benevento	1,153'38	288,260	205'68
9. Bergamo	2,587'83	346,550	133'91
10. Bologna	3,474'64	995,970	113'96
11. Brescia	4,867'22	475,945	97'76
12. Cagliari	13,529'92	363,212	26'84
13. Caldasinetta	3,885'45	184,592	47'50
14. Campobasso	4,946'06	366,905	74'18
15. Catania	4,325'64	408,637	94'44
16. Caserta	6,719'37	643,830	95'81
17. Catanzaro	3,951'36	401,016	101'48
18. Chieti	3,731'84	337,364	90'40
19. Como	2,467'07	454,651	184'32

Provinces and Prefectures.	Superficies in square chilos.	Population.	Population per square chilo.
20. Cozenza	7,398-51	475,759	64-30
21. Cremona	2,046-99	334,145	163-23
22. Cuneo	7,135-65	606,933	85-05
23. Ferrara	2,266-34	194,161	85-67

26. Fori	1,771-48	218,433	123-30
27. Genova	4,112-81	643,380	156-43
28. Girgenti	3,290-46	252,763	76-81
29. Grosseto	4,396-97	52,540	18-77
30. Lecce	8,588-72	448,465	49-88
31. Livorno	315-39	118,309	327-55
32. Lucca	1,450-34	242,542	167-23
33. Macerata	3,136-28	239,411	76-33
34. Massa	1,177-58	147,838	125-26
35. Messina	4,158-08	378,003	90-90
36. Milano	2,944-67	899,174	305-35
37. Modena	3,032-10	265,803	87-66
38. Napoli	1,250-50	877,120	730-62
39. Noto	3,730-84	253,664	68-17
40. Novara	6,498-08	573,392	88-24
41. Palermo	4,202-67	538,519	128-13
42. Parma	3,244-58	258,502	79-67
43. Pavia	3,936-86	410,146	123-28
44. Perugia	9,289-39	492,829	53-33
45. Pesaro	3,650-91	204,089	55-88
46. Piacenza	2,502-32	210,134	83-97
47. Pisa	3,052-37	235,613	75-54
48. Porto Maurizio	1,197-19	121,020	101-08
49. Potenza	11,524-80	320,789	45-13
50. Ravenna	1,864-23	206,018	110-51
51. Reggio (Cal.)	6,026-51	332,942	53-58
52. Reggio (Em.)	2,215-84	230,246	103-90
53. Salerno	5,865-30	577,589	98-47
54. Sassari	10,720-26	209,903	19-58
55. Siena	3,728-66	193,833	51-99
56. Sondrio	3,160-57	105,922	33-31
57. Teramo	9,347-68	240,035	71-70
58. Torino	8,789-69	924,209	105-14
59. Trapani	2,599-45	205,556	79-07
Total	255,617-29	21,703,710	84-90

The Lombard provinces contain the largest per-centage, and those of the island of Sardinia the smallest.

The whole superficies of the 59 departments contains 25,561,729 hectares, of which 3,969,279 are composed of mountains, rivers, roads, and cities.

The 21,592,450 hectares are divided as follows:—

Old Provinces	5,333,845	Romagna	963,135
Lombardy	1,650,948	Marches	924,575
Modena	488,176	Naples	6,255,320
Parma	525,320	Umbria	945,075
Tuscany	2,073,958	Sicily	2,402,098

And the number of proprietors is 4,153,645. About 6 hectares of land, therefore, may be apportioned to each.

The distribution of the proprietors and the population over the kingdom is as follows:—

Region.	Population.	Proprietors.
Old Provinces	4,079,678	1,000,000
Lombardy	3,027,018	521,900
Modena	643,887	95,000
Parma	468,636	80,000
Tuscany	1,792,243	133,850
Romagna	1,014,532	87,137
Marches	902,970	151,858
Umbria	492,829	83,900
Naples	7,061,952	1,400,000
Sicily	2,221,744	600,000

It appears, therefore, that the number of proprietors in Piedmont and Sicily is a little less than a fourth of the population; in Lombardy, Umbria, Parma, and Modena about a sixth part; in Tuscany and the Romagna three-tenths; in the Marches a ninth; and in Naples between a fourth and a fifth. Property, therefore, is most broken up in Piedmont, Sicily, and Naples; not so much so in Lombardy, the Emilia, and Umbria, and is very much concentrated in Tuscany and the Romagna.

The net income derived from the 21,572,450 hectares is calculated at 1,008,000,000 francs, which gives an average value of 51 francs 31 centimes per hectare.

The following is the value of land in the different parts of the kingdom:—

SUPP. IMP. GAZ.

Net Revenue, per hectare.		Net Revenue, per hectare.			
Fr.	c.	Fr.	c.		
Old Provinces	36	65	Romagna	57	10
Lombardy	89	58	Marches	43	26
Modena	62	47	Umbria	26	45
Parma	50	44	Naples	47	95
Tuscany	40	98	Sicily	41	63

Landed property pays taxes and imposts to the amount of 170,716,878 francs. Each hectare is therefore burdened with a tax of 7 francs 90 centimes. This sum is, however, an average; property in the different provinces paying according to the following rates:—

Per hectare.		Per hectare.			
Fr.	c.	Fr.	c.		
Piedmont	6	19	Romagna	14	22
Lombardy	21	61	Marches	6	24
Modena	11	4	Umbria	3	47
Parma	10	94	Naples	6	55
Tuscany	7	0	Sicily	4	95

The misgovernment and degradation of many parts of the country previous to the revolution render the amelioration of the social state of the people a work necessarily slow and laborious. Education has been promoted, and is extensively increasing. At the end of the year 1862 there were in the Old Provinces, Lombardy, the Emilia, Umbria, and the Marches, 15,213 elementary schools—9531 for boys, and 5682 for girls, besides 1002 evening schools and 319 asylums. Some provinces, as for instance Sicily, have doubled the number of their schools; others, as the Romagna, have tripled them. Yet 209 communes remain without boys' schools, and 1444 without schools for girls. The total number of scholars in 1864 exceeded 1,000,000, there having been an increase of 300,000 in one year. But still much remains to be done for public education. According to the census of 1864 there were 2,623,605 men and 1,260,640 women who could read and write; 893,588 men and women who could read only; and 7,889,238 men and 9,110,463 women, together 16,999,701, who could neither read nor write. Piedmont and the Basilicata occupied respectively the first and last places in education. The greatest eagerness is said to be manifested for instruction among the lower orders, and especially among the adult part of the population who are uneducated.

In 1861 there was extended to the whole of the kingdom the law which had, in the Sardinian states, since 1850 suppressed ecclesiastical jurisdiction and the privileges of the clergy, and under which a royal decree had in 1855 confiscated 2099 clerical establishments, with 7871 monks, nuns, and clergy, and an annual income of £145,640. In 1865 there were still in the kingdom 2382 religious houses, of which 1506 were for men and 876 for women. The number of 'religious' persons was 14,807 men and 14,184 women; together 28,991. Of these the Mendicant order numbered 8229. A project of law for the suppression of all religious houses throughout the kingdom was rejected by the chamber of deputies in 1865. A great part of the property previously confiscated from the monastic establishments has been devoted to the cause of public education, for which an additional sum of £600,000 annually is voted by the parliament.

In order to meet the large annual deficits in the public revenue the Italian government has had recourse to loans of considerable amount. With the same object the state railways were sold in 1864 for £8,000,000. The sale of other state property, including what were formerly ecclesiastical domains, valued at £16,920,000, is also proceeding gradually.

The material progress of the kingdom is manifested in the extension of the railway system. When the war of 1859 broke out there were only 1472 kilometres of railroad working; viz. in Piedmont, 807 kil.; Lombardy, 200 kil.; Emilia, 33 kil.; Tuscany, 308 kil.; and Naples, 124 kil. During the years 1860 and 1861, 753 kils. were opened, and at the beginning of 1864 about 3200 kils. were at work, and additional lines under construction. The position and configuration of the kingdom give advantages to the principal trunk lines for traffic from the east, and these lines will conduce greatly to the development of the internal resources of the country at the same time. Carriage roads also, in connection with the main lines of railway, have been constructed either at the expense of government or by the formation of companies for the purpose.

Commerce, &c.—The imports of the years 1861 and 1862 are specified in the following table:—

Articles.	1862.	1861.
Wine Litres	16,841,855	30,222,988
Brandy and Spirits Kilogrammes	10,971,081	12,161,479
Oils—Olive „	1,059,532	1,634,870
— Other „	4,663,048	5,540,044
Cocoa „	556,434	732,589
Coffee „	9,700,895	10,354,419
Pepper „	874,264	1,007,856
Sugars „	52,603,032	54,634,828
Chemical products „	7,737,925	7,151,027
Colours „	1,036,753	1,014,372
Dyes „	8,186,792	8,040,051
Wax „	729,158	837,333
Soap „	697,271	912,491
Oleaginous Seeds „	3,915,907	2,994,326
Cheese „	4,141,818	3,925,776
Fish—Stockfish „	8,611,753	2,150,206
— Other Dried Fish „	14,304,160	11,553,748
Cattle—Horses and Mules Number	9,745	6,175
— Oxen „	71,215	26,923
— Sheep „	27,885	3,205

Common Pottery „	1,237,658	2,281,420	1,107,273

The exports from Italy to the United Kingdom in the years 1861–1864 were as follows:—

1861	£5,781,069
1862	5,103,320
1863	5,927,980
1864	5,673,534

In 1863 the special commerce amounted to—

Imports	£31,086,320
Exports	17,367,840
Transit	2,773,720

Total £51,227,880

being an increase of £2,958,400 over the previous year, 1862.

The shipping trade has greatly increased, as the following statistics of the number and tonnage of sailing and steam vessels entered and cleared at ports in Italy, from and to various countries (including Italian ports), in each of the years 1861, 1862, and 1863, will show:—

VESSELS ENTERED.

	ITALIAN.		FOREIGN.		TOTAL.		
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.	
Sailing Vessels	(1861		(Not stated separately.)

The number of merchant vessels belonging to the kingdom at the beginning of 1864 was 10,264, of 660,622 tons.

The national debt of the kingdom, which has been consolidated by the unification of the public debts of the different Italian states, amounts to £152,699,000, bearing interest to the annual amount of £7,896,690. The items of the budgets of 1864 and 1865 are given thus:—

RECEIPTS.	1864.	1865.
	Francs.	Francs.
Land Tax	112,009,510	124,630,000
Tax on Movable Property	18,929,667	57,200,000

Total Extraordinary	124,106,987	106,470,267
Gross Total	880,360,435	853,819,035
Deficit	234,241,720	228,316,517

Reduced to pounds sterling the two budgets stand thus—

	1864.	1865.
Estimated Revenue	£25,844,749	£25,020,101
— Expenditure	35,214,417	34,152,761
Deficit	£9,369,668	£9,132,660

The actual revenue and expenditure for the two years 1862 and 1863 was as follows:—

	1862.	1863.
Revenue	£23,628,076	£23,486,566
Expenditure	39,023,703	38,519,788
Deficit	£15,395,627	£15,033,222

Army and Navy.—By a new organization of the army in 1865 it was to be composed of 189,541 men, and 19,027 horses, on a peace footing; and of 335,870 men, and 37,562 horses, on a war footing. The navy of the kingdom comprised in 1865, 98 steamers, of 20,760 horse-power, and 2160 guns; and 17 sailing vessels, with 279 guns; altogether 115 men-of-war, with 2439 guns. Among them were 5 iron-clad frigates; and 8 more iron-clad vessels were under construction. The navy was manned in 1865 by 10,927 sailors and 5880 marines.

Government and History.—The present constitution of Italy is an expansion of that of the former kingdom of Sardinia, which was promulgated in 1848, and is founded upon the model of England. According to the charter the executive power is exercised by the sovereign through responsible ministers. The legislative authority is vested in the king and parliament conjointly, the latter consisting of two chambers, an upper one—the Senate—composed of the princes of the royal house who are of age, and an unlimited number of members above the age of 40 years, nominated by the king; and a lower one—the Chamber of Deputies—the members of which must be 30 years of age, and are elected by the citizens who are upwards of 21 years old, and pay 40 lire, £1, 12s., in taxes annually. The duration of the parliament is five years, but the king has the power to dissolve it any time, but is bound to order a fresh election and convoke the new parliament within four months. The ministers have the right to attend the debates of both houses, but have no vote unless they are members. The sittings of both chambers are public, and no sitting is valid unless an absolute majority of the members is present. The Chamber of Deputies had 443 members in 1862.

Austrian oppression in Lombardo-Venetia, the tyranny of the kings of Naples, and the misgovernment of the Papal States and of the Duchies, abetted by Austria, led to the eruption of 1859, when France, siding with Sardinia, drove the Austrians out of Lombardy, and the people of the Duchies rising against their tyrants expelled them, and by popular vote annexed themselves to Sardinia. The peace of Villafranca on July 11, 1859, after the battle of Solferino, besides the cession of Lombardy, stipulated for the restoration of the dual governments and the establishment of an Italian confederation, of which the Pope was to be the head. But the people willed it otherwise. The victorious career of Garibaldi dethroned the king of Naples, detached a large part of the States of the Church, and Sardinia in 1860 intervening to complete the revolution, the whole of Italy and Sicily, except the city of Rome and its vicinity, was combined in a united realm, which in 1861 was proclaimed as the kingdom of Italy, with Victor Emmanuel as its sovereign; the temporal power of the Pope being secured by French troops stationed in Rome. In the war which broke out in the spring of 1866 between Prussia and Italy combined and Austria, the Italian invasion of Venetia was repulsed in the battle of Custoza, but the Austrians suffering heavy reverses from the Prussians, Venetia was ceded to the emperor of France, by whom its destiny was put to the vote of its inhabitants. That vote was enthusiastically in favour of union with

Italy, with which the province has accordingly been incorporated.

ITAQUI, a tn. Brazil, prov. Rio Grande do Sul, on the Uruguay. It is a stirring little place, and carries on an active retail and general trade. The shops number about 50, and are well supplied, particularly with costly articles of female attire imported from Europe. At the little harbour in the Uruguay the principal article of export is maté, or Paraguay tea. Pop. 2000.

ITASCA [add.], a lake, U. States, Minnesota, lat. $47^{\circ} 10' N.$; lon. $95^{\circ} 54' W.$ It is a small but beautiful sheet of water, surrounded by hills and bordered by pines, and lies at the height of 1575 ft. above the sea, near the watershed between the Red River of the North and the streams which belong to the basin of the Mississippi. It was at one time supposed to be the true source of this mighty river; but recent explorations prove that it shares this honour with a number of other lakes situated in the same locality, and nearly on the same level. The principal feeder of the Itasca, and in some sense the remotest source of the Mississippi, is a small rivulet which rises among some hills a little to the

south; its outlet is a stream, which, as it quits it at its N. extremity, is about 10 ft. wide, and 12 to 18 inches deep.

ITURBIDE, a tn. Mexico, state Yucatan, 80 m. S. Merida. It is the southernmost of the civilized settlements in the country, and consists for the most part of houses built out of the remains of old Indian structures, many of which are still found in the district. Inhabitants chiefly Indians.

IVANOVO, a tn. Russia, gov. and 60 m. N.N.E. Vladimir, circle Shuya. It is a well-built place, with straight and spacious streets; has seven churches, of which six are of stone; an industrial and two other schools, a cotton-mill, numerous cotton printfields, chemical works, and a machine-factory; and contains 8000 regular inhabitants, besides a large floating population.

IZZABAD, a vil. Persia, prov. and 15 m. N.W. Yezd. Like other places in the same plain, it is threatened with destruction from sand-drifts. On its S. side the gardens and houses have been buried for a space of 100 yards in breadth, and to the height of 15 to 20 ft. Houses having their roofs covered on one side with sand, are still occupied on the other side; but their doom is evidently sealed.

ABSTRACT OF THE CENSUS

OF THE

UNITED KINGDOM OF GREAT BRITAIN AND IRELAND

IN 1851 AND 1861.

* In Aberdeen, Edinburgh, Glasgow, Greenock, Paisley, and Perth, are included parishes which extend landward. In the alphabetical order of their respective names will be found the entire population of such parishes; while under the burghs so much only of the population is given as is comprised within the bounds.

END OF VOL. I,

SUPPLEMENT

TO

THE IMPERIAL GAZETTEER.

JABLONEZA

JABLONEZA, a tn. Austrian empire, Hungary, co. Upper Neutra, 6 m. S.W. Iradist, at the confluence of the Razova with the Myava. It contains a castle, several mills, and a trade in hemp and flax. A battle was fought here in 1702 between Racoksy and the Imperialists. Pop. 1950.

JABLONOW, a tn. Austrian empire, Galicia, circle and 7 m. N. Czortkow; with fine gardens, a large manufacture of sal-ammoniac, and 1530 inhabitants.

JABOON, a tn. India, Malwah, cap. of a small native state of same name, 93 m. N.E. Baroda. It is beautifully situated in a valley at the E. base of a range of hills, and is surrounded by a mud wall with circular bastions of masonry. To the S. of the town, on the bank of a fine lake, stands the rajah's palace. His small territory, bounded N. by Bansa-warra, N.E. Holkar's Dominions, S.E. Amjherra, S. Alea Rajpore, and W. Scindia's Dominions and Dohud, has an area of 1348 sq. m., a revenue of £14,453, and a pop. of 132,104.

JACKSON, three places, U. States:—1. A tn. cap. state Mississippi, r. bank Pearl River, at the junction of the Southern Mississippi and the New Orleans, Jackson, and Great Northern railways, 40 m. E. Vicksburg. It stands on a flat, is regularly built, and contains 10 churches, an elegant state-house, a court-house and county buildings, a state lunatic asylum, a state-prison, and asylums for the deaf and dumb and for the blind. By the Pearl, which is here navigable, about 40,000 bales of cotton used to be annually shipped. Pop. (1860), 3199.—2. A vil. Louisiana, on the E. side of Thomason's Creek, 25 m. N. Baton Rouge. It contains the state lunatic asylum, and centenary college, which belongs to the Methodists, and has 9 professors, 98 students, and a library of 5200 vols. Pop. about 1000.—3. A tn. Michigan, cap. co. Jackson, near the source of the Grand River, and at the junction of the Jackson branch of the N. Michigan and the S. Indiana with the Michigan Central railway, 76 m. W. Detroit. It contains 10 churches and the state-penitentiary; and possesses, among its industrial establishments, woollen, soap and candle, agricultural implement, and carriage factories, a machine-shop, a foundry, a tannery, a brewery, and planing and flour mills. There are seams of bituminous coal in the vicinity. Pop. 4799.

JACKSONVILLE, a tn. U. States, Illinois, cap. co. Morgan, pleasantly situated in a rolling fertile prairie, on the Great Western line of railways, 200 m. S.W. Chicago. It is of pleasing appearance, and contains six churches, a college with 7 professors and 70 students, a Methodist female seminary, three other academies, a mechanics' institute, and the state-asylum for the deaf and dumb, the blind, and the insane. The manufactures consist of cotton, yarn, oil, leather, ploughs, and iron castings. There are also several flour and saw mills. Pop. 5528.

JADRIN, or YADRIN, a tn. Russia, gov. and 92 m. Kazan, cap. circle of same name, on the Sura, close to the E. frontiers of Nijnei-Novgorod. It has three churches, a circle-school, and two charitable institutes; and contains 2078 inhabitants.

JAFFNAPATAM, or JAFFNA [add.], a district, island, and town, Ceylon:—THE DISTRICT consists of an island, or rather peninsula, which forms the N. extremity of Ceylon,

SUPP. IMP. GAZ.—VOL. II.

JAFFNAPATAM

and may be more properly said to be connected with it than separated from it by an extensive sand-bank, on which the water is so shallow that it is usual to ride across on horse-back. This peninsula is of very irregular shape, but bears some resemblance to a right-angled triangle, of which the base faces the N., another side the E., and the hypotenuse the S.W. Among its distinguishing features are the two long and narrow lagoons by which it is penetrated, and the uniform flatness of the surface, unbroken by a single hill, and scarcely varied by an undulation of more than a very few feet. In common with the W. coast of Ceylon, it has been undergoing a gradual upheaval, and extensive fields of madre-pore and breccia have, at no distant period, been elevated in close proximity to the shore. In the shallow estuaries thus formed, great quantities of the finest salt are deposited, and constitute one of the chief riches of the district. Another production, which rivals this one in value, and possesses far higher attractions, is the palmyra, which grows in such profusion as to form the characteristic of the landscape, extending for miles in great tops and forests. The appearance and growth of this beautiful tree are thus described by Sir J. E. Tennant: 'Unlike the cocoa-nut palm, whose softer and more spongy wood bends under the weight of its crown of leaves and fruit, the timber of the palmyra is compact and hard, so that the tree rises vertically to its full altitude without a curve or deviation, and no object in vegetable nature presents an aspect of greater luxuriance than this majestic palm when laden with its huge clusters of fruit, each the size of an ostrich's egg, of a rich brown tint, fading into bright golden at its base.' He afterwards gives a calculation by Mr. Ferguson, the government surveyor, who, taking the area of the peninsula at 700 sq. m., and assuming that $\frac{1}{4}$ th of the land is devoted to palmyras, finds that, at the rate of 200 trees to an acre, which is far below the ordinary rates, 'the number of palms in this district alone must be close upon 7,000,000, the edible product of which supplies one-fourth of the food of 220,000 inhabitants.' Mingled with palm-trees, the forests present the usual undergrowth of jungle brushwood, mimosas, mustard-trees, &c. The soil is naturally poor, and the difficulties of culture are greatly increased by the water, which can only be obtained from wells. The industry of the inhabitants, however, was not to be baffled, and, by means of skilful and laborious irrigation, a large quantity of rice is grown; while gardens, formed of artificial mould, produce mangoes, oranges, citrons, tamarinds, and all the ordinary fruits of the climate. Black cattle also are pastured in large numbers, and the finest sheep in Ceylon are reared on the dry plains overlying the limestone and coral rock on the N. and W. coasts. The grand staple of the district for export is tobacco, which bears a high name, and is now sent almost exclusively to Travancore, the rajah of which employs a resident agent to purchase the produce from the growers. This crop, it is said, is the mainstay of Jaffna agriculture, inasmuch as on its breadth and success the extent and excellence of all other crops mainly depend. It cannot be raised without high preparation; but thereafter three less exhausting crops are obtained in succession without additional manuring.—THE TOWN, capital of the above district, situated on the W. shore of the peninsula, is thoroughly

Dutch in its aspect and architecture. The houses consist of a single story, but are large and commodious, with broad verandahs, lofty ceilings, and spacious apartments. Every building inside and out is as clean and showy as whitewash, paint, bright red tiles, and brick floors can make it. Most of the houses stand detached in inclosed gardens filled with fruit-trees and flowering shrubs. The streets are broad and regular, and are lined with suria trees, whose leaves and yellow flowers afford a beautiful and agreeable shade. The fort, a pentagon built of blocks of white coral, and surrounded by a moat, is the most perfect little military work in Ceylon. It contains a residence for the commandant, an old church in the form of a Greek cross, and several other excellent buildings. The native town is occupied almost exclusively by Tamils and Moors, who, as tradesmen and dealers, are distinguished by intelligence and industry. The weavers manufacture a substantial cotton cloth, which is dyed and ornamented by calico-printers; and the goldsmiths make chains and rings as perfect in execution as tasteful in design, though they possess only a few rude tools. Another flourishing branch of industry is the crushing of the cocoa-nut for its oil by a very primitive process. Every person in Jaffna appears to be more or less busy. The bazaars are full of activity, and stocked with a greater variety of fruits and vegetables than is seen in any other town in the island. At the season when labour is not in demand at home, numbers go off to trade in the interior in curry stuffs, betel-leaves, and other produce; or resort annually to the south, where they find lucrative employment in repairing the village tanks, a species of labour in which they are peculiarly expert. With all this industry the habits of the natives are licentious and disgusting in the extreme.

JAGIELNICA, a tn. Austrian empire, Galicia, circle and S.W. Czortkow, cap. dist. of same name; with manufactures of tobacco and a general trade. Pop. 2928.

JAITSA, a tn. Turkey in Europe, Bosnia, in the valley of the Verbas, 68 m. N.W. Bosna Serai. It is a place of considerable strength, and was once the residence of the Serbian kings. It contains 2000 inhabitants, chiefly engaged in the manufacture of saltpetre.

JAJHPOOR, a tn. India, Rajpootana, state Oodeypoor or Mewar, 195 m. S.W. Agra. It consists of a town, which is large, well built, and fortified; and possesses a well-supplied bazaar, and a fort situated to the S.E. of it on an isolated oblong hill, and inclosed by two concentric ramparts, each with a good ditch and a number of round bastions. This fort guards the entrance of an important pass into Mewar from the lowlands of Boondee.

JAKOBSHAVN, a dist. Greenland, W. coast, lat. 69° N., in the northern Inspectorate. It stretches along the coast for about 30 m., and inland to the permanent ice about 15 m., and is intersected by branches of the Ice Fiord and by other two small fiords. There are very few islands on the coast.—The COLONY of Jakobshavn lies about a mile from the mouth of the Ice Fiord, famed from the remotest times for the plentiful supply it contains of marine animals, which renders it a never-failing larder for a relatively large number of inhabitants. The commercial buildings lie upon a small narrow harbour in a position very much closed in, but from the church and other dwellings a view is obtained over Disko Bay. Jakobshavn may be said to be the pleasant abode in North Greenland, partly on account of its position and remarkable environs, partly because it lies on the road along which almost continual traffic takes place between the other colonies, and partly because here the largest number of Danish families is gathered together. The colony was founded in 1741 by a merchant named Jakob Severin, who had a monopoly of the Greenland trade. There is only a little whale-fishery carried on. Pop. 314. The district likewise contains the following inhabited localities:—Sauernek, Pakitsok, and Niukonak.—(*Grönland geographisch und statistisch beschrieben von Anton von Etzel.*)

JALNA, or GALNA, a tn. India, presid. Bombay, Candeshi, 165 m. N.E. Bombay, is a small place, deriving all its importance from its fort, situated on an isolated hill, which, though not lofty, is rocky and precipitous. The summit of the hill is fortified all round, and on the side towards the town, where the ascent is least difficult, in some parts two and in others three walls of good masonry furnish additional defence.

This place was besieged by a British force in 1804, and was on the point of being stormed, when it was found that the garrison had evacuated it.

JALOUN, a dist. India, Bundelcund, between lat. 25° 32' and 26° 26' N.; lon. 78° 45' and 79° 53' E., is bounded N. by Scindia's Dominions and dist. Etawah, N.E. Cawnpore, S.E. Humceerpoor, S. Jhansi and Tehree, and W. and N.W. the territories of Duttea, Sumpter, and Gwalior; greatest length N. to S. 70 m.; breadth, 60 m.; area, 1873 sq. m. When it came into British possession it was in a wretched condition, and a large portion of it seemed fast returning to a state of nature; but considerable improvement has since taken place, and little land fit for cultivation now remains unoccupied. Pop. 246,297.—The TOWN, of same name, cap. of the dist., is 110 m. S.E. Agra.

JAMAICA [add.] Experiments have been made in recent years to grow cotton in the island, but the great difficulties to be contended against are the uncertainty of the seasons, and an inability, owing to the inactive habits of the population, to procure the requisite labour at a moderate cost and at the moment it is required. The latter constitutes the great obstacle to all undertakings requiring the prompt application of adequate labour, which can only be secured by paying excessive wages so much beyond the ordinary rates as to make the undertakings unremunerative. Some progress has been made in the cultivation of the cinchona tree. Sugar, however, continues to be the principal staple produce. The cultivation of coffee by the peasantry and small proprietors has been stimulated by high prices, and during the first half of 1863 the export nearly doubled that of the same period of 1862. The value of the chief articles of export is shown in the following figures for the years 1860-2:—

	1860.	1861.	1862.
	£	£	£
Coffee,	113,848	151,061	136,857
Ginger,	21,411	12,208	18,142
Pinnetto,	53,061	53,126	38,633
Rum,	298,497	316,906	243,527
Sugar,	646,335	595,054	563,474
Logwood,	26,285	32,553	64,290

The total value of the imports and exports in the same years was this:—

	1860.	1861.	1862.
Imports,	£1,202,855 . . .	£1,089,483 . . .	£1,141,984
Exports,	1,225,677 . . .	1,214,614 . . .	1,113,442

The shipping trade of the island is shown in the following table of the vessels entered and cleared at the various ports in the year 1862:—

Ports.	Entered.		Cleared.	
	Vessels.	Tons.	Vessels.	Tons.
Kingston,	313	69,006	234	45,058
Morant Bay, . . .	—	—	1	237
Port Morant, . . .	7	2,426	9	3,061
Annatto Bay, . . .	3	1,005	6	1,769
Port Maria,	19	2,853	23	4,593
St. Ann's Bay, . . .	7	985	13	3,851
Rio Bueno,	3	984	11	3,421
Falmouth,	61	11,530	42	9,535
Montego Bay, . . .	41	7,586	42	7,156
Luca,	—	—	8	1,669
Savanna la Mar, . .	21	4,883	43	11,297
Black River,	16	5,064	60	17,904
Old Harbour,	14	5,971	22	7,923
Port Antonio, . . .	1	349	—	—
Total,	506	112,642	523	117,474

The public revenue and expenditure in each of the three years 1860-2 were as follows:—

	1860.	1861.	1862.
Revenue,	£262,339	£275,027	£291,088
Expenditure, . . .	255,239	274,565	292,402

The public debt amounted in 1862 to £766,182, on which £30,800 was paid for interest.

The religious and educational condition of the island may be gathered from the following figures for the year 1862:—

	No. of Churches, Chpls, &c.	No. of Ministers.	Accommodation.	Attendance.	Scholars.
Church of England, . . .	90	90	48,974	37,300	8,113
Wesleyan Missions, . . .	78	28	35,550	31,610	2,321
Unit. Methodist Free Ch.	17	6	3,060	2,300	557
Jamaica Baptist Union, Jamaica Wesleyan } Methodist Assoc. }	57	28	33,846	26,126	3,456
London Mission. Society,	10	3	3,140	1,750	125
Moravian Mission, . . .	17	8	7,290	6,290	1,214
Roman Catholic, . . .	13	14	10,800	9,650	3,762
Jewish Synagogue, . . .	7	5	3,270	1,890	269
United Presbyterian, . .	1	1	400	100	29
American Mission, . . .	29	26	12,575	9,852	3,152
	5	5	1,300	1,050	317
	324	214	159,545	127,978	23,315

In 1862, 2000 immigrant coolies from Calcutta, and 608 Africans, mostly from St. Helena, were landed in the island. In October, 1865, an insurrectionary rising of the natives occurred at Morant Bay, and was supposed to be a premature outburst of a wide-spread conspiracy. Great atrocities were perpetrated, but the movement was speedily and energetically suppressed by the authorities. Area, 6400 sq. m.; pop. (1861), males 213,521, females 227,743, total 441,264.

JAMBANBANGO, a town, S.W. Africa, Kimbunda country, territory Galangue; lat. 14° 25' S.; lon. 18° E. It stands on a wide plain, embosomed among lofty incendera-trees, is surrounded by a palisade and a ditel; and contains 3000 inhabitants, who are chiefly from the Nyemba-Gianguela country, and are employed in agriculture and grazing.

JAMBI [add.], a state, river, and town in the S.E. of Sumatra, in the Indian Archipelago.—The STATE, which lies wholly within the alluvial plain extending from the central mountain-chain to the Straits of Malacca, is bounded N.E. by the sea, having in front the group of islands which nearly block up the S.E. entrance into the strait; N.W. the state of Indragiri; E. the states of Korinehi and Menangkabo; and S.E. the forests thinly peopled by the wild race of the Kubu. The surface towards the sea-coast is low, swampy, and subject to inundation; but as it recedes from it rises in an inclined plain towards the great central chain, and becomes proportionably elevated and dry. The swampy portion, extending nearly 30 m. into the interior, is uninhabited and uninhabitable, and hence, during an ascent of the river for 50 m., only 12 villages were counted, containing in the whole 118 houses, and thus indicating an aggregate pop. of not more than 700 souls. In the higher grounds the population is believed to increase in density, but very little is known of it.—The RIVER, formed by numerous streams which have their sources in the mountain-chain running parallel with the W. coast of the island, bifurcates at 50 m. from the sea, and enters it by two mouths. The more easterly and larger of the two, which is in lat. 1° 2' 30" S., has a shallow entrance; the more westerly, though much smaller, is deeper and better adapted for navigation.—The TOWN, which, reckoning by the W. branch of the river, is about 100 m. above its mouth, extends nearly three-quarters of a mile along both banks, the natives occupying the whole of the right bank, while the Arabs and other settlers confine themselves to a portion of the left. Many of the houses, especially in the Arab quarter, are neatly lined and partitioned with planks, and either roofed with tiles of excellent manufacture, or thatched with gomuti, which is very durable. The far greater part of the dwellings are mere huts of mats and palmetta leaves erected on posts in the usual Malay style. Besides the kinds of houses already described, there is a third description erected on rafts composed of trunks of trees clumsily put together. During the periodical inundations these rafts, with the houses upon them, are movable, and rise or fall with the level of the river; but in the dry season are usually lodged on a sandy flat, and become stationary. At the town the river even in the dry season has a depth of 3 fathoms and a width of 450 yards. The only interruption to the navigation is at a short distance below, where the depth is only 8 feet. Were the channel here deepened there would be free access to and from the sea with a clear depth of 12 to 15 ft.

JAMES, a tn. W. Africa, Gold Coast; lat. 5° 30' N.; lon. 18° W. It consists of a fort situated on the rocky promon-

tory of Aca, and of a town, which, spreading to the N.E. and N.W., contains some good houses belonging to British merchants, and a considerable number of native huts, forming several narrow streets. The principal export is gold, brought from the interior of Ashantee. Immediately to the E. of the fort are the ruins of the Dutch fort of Crevecoeur, picturesquely situated on a cliff about 50 ft. high; and about 2 m. farther in the same direction is the Danish castle of Christiansberg.

JAMES, an isl. S. America, Ecuador, belonging to the Galapagos group, situated in the Pacific, on the equator, about 600 m. W. of the continent, is like the rest of the islands of volcanic formation, and is, with the exception of some portions of granite and sandstone, entirely composed of lava.

It is more fertile than most of the other islands, and was in consequence a favourite resort of the buccaneers. On its W. side at the foot of a remarkable conical peak, which is its culminating point, and rises to the height of 1200 ft., there is good anchorage in 14 fathoms; a little inland there is an old crater filled with salt-water, from which salt is easily obtained.

JAMES [add.], a river, U. States, which, formed near the centre of Virginia by the junction of the Jackson and Cowpasture, flows successively S.E. and E. to the Blue Ridge, forces a passage through it, and, resuming its first direction, retains it till it reaches Lynchburg. Here it bends sharply round to the N.E., and then changes to E.S.E. It has still this direction when it arrives at Richmond, where its channel becomes obstructed by rapids and numerous small islands. After leaving Richmond it pursues a somewhat devious course, which is, however, in the main S.E., and finally falls by a broad estuary into the S. part of Chesapeake Bay, between Willoughby Point on the one side and Old Point Comfort on the other. Its whole length is about 450 m. Vessels of 130 tons navigate it to Richmond at the head of tide-water, 120 m. from the sea. It is the largest river of Virginia which has its course wholly within the limits of the state.

JAMNI, a river, India, which rises in the N. of the Saugor and Nerbudda territory, flows N. into Bundeelund and Scindia's Dominions, and, after forming part of the boundary between the two, joins the Betwa on its right bank. Its whole course is about 90 m.

JAMOO, a tn. India, Gholab Singh's Dominions, near the Punjab frontier, among the mountains of the S. range of the Himalaya, 90 m. N.N.E. Lahore. It occupies both sides of an affluent of the Chenab, the town and palace standing on the W., and the fort on an elevated height on the E. bank. A beautiful and extensive pleasure-ground, and the lofty and whitened walls of the palace and fort, give the place at a distance a very striking appearance. The town consists of numerous streets, and has a large well-built and well-supplied bazaar; the palace is at once spacious and handsome; the fort, though great labour and cost have evidently been expended upon it, is more ornamental than available for defence, as an adjacent height of easy access commands it. There are several extensive ruins in the vicinity. Pop. 8000.

JANESVILLE, a tn. U. States, Wisconsin, cap. co. Rock, on both sides of the Rock River, and on the Milwaukee and Mississippi, and the Chicago and North-western railways, 32 m. S.S.E. Madison. It stands partly on a height, and partly on a flat between it and the river, and contains a court-house crowning the height, nine churches, an academy, a female seminary, and the state-asylum for the blind. The chief industrial establishments are planing, flour, and saw mills, a brewery, carriage-factories, and machine-shops; and the trade, greatly developed since the construction of the railways, is important. Pop. (1860), 7703.

JANOSHAZA, a tn. Austrian empire, Hungary, co. Eisenburg, 26 m. E.S.E. Steinamanger; with an important trade in poultry, chestnuts, and agricultural produce, and 2244 inhabitants, mostly R. Catholics.

JANOW, a tn. Austrian empire, Galicia, circle and 10 m. N.W. Lemberg, cap. dist. of same name, on a lake, was once the favourite residence of the Polish king John Sobieski. There are remarkable caverns in the vicinity. Pop. 1100.

JANOW, a tn. Austrian empire, Galicia, circle and 24 m.

S.S.E. Tarnopol, on the Sere; with a baronial castle, a potash refinery, and 2052 inhabitants.

JAOL, a seaport tn. Western Africa, state Bur-sin, situated 64 m. N.N.W. of Fort Bathurst, and about 26 m. S.E. of Goree. The bay which here indents the coast is so shallow that ships drawing more than 8 ft. of water cannot approach the land nearer than 3 miles. The principal exports are gum, corn, rice, ground-nuts in small quantities, lime, cattle, hides, ivory.

JARMERITZ, a tn. Austrian empire, Moravia, circle and 16 m. N.W. Znaym, on a stream of same name; with a palace belonging to the prince of Kaunitz, with fine gardens; a library, picture-gallery, and theatre, one of the finest parish churches in Moravia, and four annual horse and cattle markets. Pop. 3173.

JAROSLAW [add.], a tn. Austrian empire, Galicia, circle and 18 m. N. by W. Przemyst, cap. dist. of same name, in a beautiful and fertile country, l. bank San, was once strongly fortified; is the seat of several important public offices; has a handsome church, a high and an ordinary school, a Dominican and a Franciscan monastery, an infirmary founded in 1498, manufactures of linen cloth, rosoglio, and wax-candles, and an active trade in honey, wax, linen, yarn, Hungarian wine, and corn. The yearly markets, once very important, have fallen off considerably. Pop. 8773.

JARVIS, an isl. Pacific Ocean, lat. 0° 22' S.; lon. 159° 58' W.; is about 2 m. long by 1 m. wide, stretching E. and W., and containing about 1000 ac. It is encircled by a fringing reef or shore platform, 300 ft. wide, and from 18 to 28 ft. high. The land slopes gently from all sides towards the centre, which is only 7 or 8 ft. above the sea-level. There are considerable deposits of guano, but the island affords no fresh water.

JARYEZOW (OLD and NEW), two places, Austrian empire, Galicia, circle and 13 m. N.E. Lemberg. They form a single parish, lying on a stream of same name between extensive moors; and contain 2750 inhabitants, employed in manufacturing woollen cloth and covers.

JASENOVAC, a tn. Austrian empire, Banat, Military Frontiers, 70 m. E.S.E. Karlstadt, l. bank Save, opposite to the mouth of the Unna. It has a R. Catholic and a Greek church, building-yards, and a large trade with Bosnia, and contains 2310 inhabitants.

JASLOWIEC, a tn. Austrian empire, Galicia, circle and S.W. Czortkow, cap. dist. of same name; with a cold-water cure establishment, and the picturesque ruins of a strong castle. The Tartars were defeated here in 1684. Pop. 2234.

JASSY [add.], a tn. Turkey in Europe, cap. Moldavia, on the Baklui, about 10 m. S. of r. bank Pruth; lat. 47° 8' N.; lon. 27° 40' E. It stands partly on the slope of a hill, and partly on a plain, which, though fertile, is rendered unhealthy by swamps and stagnant pools, and is irregularly built, consisting for the most part of narrow and crooked streets, in which large and splendid mansions, looking like palaces, stand side by side with mean houses and wretched huts. In the upper part of the town in particular, and elsewhere, many of the houses have large courts and gardens attached to them. Successive conflagrations in 1783, 1827, and 1843, having laid the town in ashes, destroying all the wooden houses and leaving only 300 built of stone standing, several long and spacious streets have been formed. Most of them, however, are either badly paved or not paved at all; and the consequence is, that clouds of dust in summer and deep mire in winter render them in a great measure impassable, at least on foot, and wheeled carriages of some kind are indispensable for locomotion. The principal public buildings and establishments are the palace of the prince, an extensive pile, containing not only his residence, but the ministerial bureaux and barracks; seventy Greek churches, among which only the cathedral and the church of Three Saints, so called because dedicated to St. Basil, St. Chrysostom, and St. Gregory Theosophos, deserve particular notice; a Protestant, a R. Catholic, and an Armenian church, a number of synagogues, ten monasteries, several palaces of the grandees or *bojars*, the public library, the museum, the normal school, the St. Michael's academy, the gymnasium, the industrial school, the infirmary, the national theatre, and several hospitals, military, Jewish, and foundling. The shops, kept principally by Jews, and situated for the most part in

the principal street, are large and well stocked with articles of foreign manufactures, woollen, cotton, and silk stuffs, hardware and cutlery, fancy goods, &c. The town itself seems almost totally devoid of important manufacturing establishments. The environs of Jassy, laid out chiefly in vineyards and gardens, and dotted with villas, some of them with fine parks, are very beautiful. Pop. 70,000, of whom 30,000 are Jews.

JASWINY, a tn. Austrian empire, Galicia, circle and about 20 m. E.N.W. Tarnow; with a parish church, a baronial castle, and a model farm. Pop. 1800.

JASZENA, a tn. Austrian empire, Hungary, co. and about 20 m. N.E. Neusohl, on a stream of same name; with mineral springs, valuable iron mines with extensive iron-works, and 1000 R. Catholic inhabitants.

JAULNAH, a tn. India, Nizam's Dominions, prov. Aurungabad, 200 m. E.N.E. Bombay. It consists of a town and a cantonment—The town, situated on the Jaulnah opposite to Khaderabad, though an old and decayed place, has still a pop. of 10,000, of whom about a fifth are Mahometans, and possesses, among its houses, many built of hewn stone, three or four stories high, and provided with verandahs and balconies. The streets are for the most part very narrow. The manufactures are almost confined to silks, which are chiefly exported to the upper Mahratta country; the trade in grain, once extensive, is now limited.—The CANTONMENT, situated on a gentle slope, and bounded on one side by the Goondlacama, has accommodation for a troop of European horse artillery, a regiment of native cavalry, and three regiments of native infantry. The climate is well adapted for horticulture. Figs, grapes, peaches, and strawberries are all excellent in their season, and most European vegetables grow in great perfection.

JEBEL-AMoor, a mountain range, N. Africa, Algeria, which, continuing that of the Uled Sidi Sheikh, with which it becomes linked near the village of Bu Allem, stretches N.E. as far as Sidi Buzid and the Jebel Gueb el Ashi, with a length of about 17 m. and an average breadth of 7 m. Its culminating point, Jebel Gada, has a height of about 5300 ft. Partly in the inner valleys, and partly from the N.W. and S.E. slopes, issue numerous springs, which maintain so luxuriant a vegetation of plants and trees, that all the slopes and valleys are densely clad in green. Many parts of the valleys are laid out in beautiful gardens, vineyards, and corn-fields, the produce of which usually suffices to meet the wants of the inhabitants, though in years of great drought they are compelled to obtain dates from the south and corn from the Tell. The Shelif or Ued Shelif, the largest river of Algeria, has its source in the N. slope of this range near the village of Buzid; the S. slope furnishes the sources of the Merra and the Grisha, which, by their junction, form the Jedd, the most important river of S. Algeria, though its bed in the hot season becomes partially dry. The inhabitants of Jebel-Amoor belong to the tribe Uled Amoor, which has no fewer than seven subdivisions, and are partly stationary, partly nomadic; the number of each subdivision, understood to be nearly equal, is about 13,000. In war they can raise a force of 3000 foot and 600 horse; their wealth consists in herds of sheep, horned cattle, and camels. They are of pure Arab blood and noble descent, and speak genuine Arabic.

JEBEL-SAHARI, a mountain-range, N. Africa, Algeria, is an E. continuation of the Jebel-Amoor, and stretches along the Sebgha Zahrez and Hodna, with a regular descent till it approaches the town of Biskra. Though several roads pass over the range, it remained till recently almost unexplored. It has, however, many claims to notice. Its higher slopes and valleys are finely clothed with forest-trees, and on its plateaux are seen, not only well-cultivated corn-fields, but productive gardens well stocked with fruit-trees, among which the fig is conspicuous. Everywhere numerous springs send down their water into the valleys, and occasionally leaping down in cascades, contribute to form a very picturesque scenery. Among the heights many Roman remains lie scattered, showing how well the masters of the world could appreciate the beauties and resources of the Jebel-Sahari. The inhabitants belong to the Arab tribe of Uled Nayl, and are estimated at 26,600 souls.

JEDDO, tn. Japan. See **YEDO**.

JEFFERSON CITY [add.], a tn. U. States, cap. state

Missouri, on the right bank of the Missouri River, and on the Pacific railway, 100 m. W. St. Louis. It has an elevated but somewhat uneven site, commanding a fine view of the river and of the cedar-crowned cliffs on the opposite shore, and contains a handsome state-house built of stone, a governor's residence, various churches, and a state-penitentiary. The manufactures consist of wooden and iron ware, flour, carriages, &c. Pop. (1860), 3082.

JEFFERSONVILLE, a tn. U. States, Indiana, on the Jeffersonville and Indianapolis railway, and at the head of the falls of the Ohio, nearly opposite Louisville in Kentucky. It occupies the elevated site of old Fort Steuben, commanding a magnificent view, and contains the state-prison. The Ohio Falls, which descend 22 ft. in two miles, give an unlimited supply of water-power; advantage has been taken of it to establish various mills and manufactures. Among the latter are agricultural implements, carriages, steam-engines, and brass and iron castings. Pop. (1860), 4020.

JEFREMOV, or EVREMOV, a tn. Russia, gov. and 80 m. S.S.E. Tula, cap. circle of same name, on the Krassivaia Metscha. It contains six churches, a circle and a parish school, a charitable endowment, several manufactures, and a large annual fair. Pop. 7057.

JEGA, a tn. Western Africa, Hausa states, prov. Kebbi, on a supposed affluent of the Niger, 70 m. S.W. Sokoto. Though greatly declined from the importance which it possessed when the empire of Gando was flourishing, it continues to be the great entrepôt for a coarse kind of coloured silk which is imported from the north, and notwithstanding its very inferior character, is in great demand by the natives for adorning their leather-work. Its weekly market is well frequented.

JE-HO, or ZEHOI, a tn. China, prov. Pechele, near the Great Wall on the frontiers of Chinese Tartary, 110 m. N.E. Pekin. It stands in the centre of the famous hunting-grounds, to which the emperor annually resorts, is surrounded by walls which are upwards of 4 m. in circuit, and contains a fine imperial palace and several temples. Among the latter is one of great magnificence, built on the model of one near L'hassa, and adorned with 500 gilded statues of deceased lamas.

JEHRUM, a tn. Persia, prov. Fars, 85 m. S.E. by S. Shiraz. It is surrounded by walls of recent and substantial construction about 3 m. in circuit. Many of the houses, of which there are more without the walls than within, possess turreted towers as places of defence. The staple trade is tobacco, for which Jehrum is a principal mart. The other articles are British and India cottons imported from Teheran, groceries and spices, also imported, dates, and rice. Fruit is abundant and cheap, and a considerable quantity of raisins is exported to India. Pop. about 1500.

JELLASORE, or JALLESUR, a tn. India, presid. Bengal, dist. and 45 m. S. Midnapore, l. bank Soobaureka. Its only edifice of any consequence is an ancient mosque. On the opposite bank of the river there is a ruined fortress of great extent, but rude construction.

JELLINGHEE, a river, India, presid. Bengal, which, parting at the town of same name from the Podda, or great E. branch of the Ganges, flows very sinuously S.W. for about 95 m., and at the town of Nudda unites with the Bhagruttee in forming the Hooghly.

JENO (Kis), a tn. Austrian empire, Hungary, co. and 25 m. N. by E. Arad, on the White Koros, cap. dist. of same name; with a court of justice, an infirmary, several handsome buildings, and a distillery. Pop. 2009.

JEORHUA, a tn. India, Bundelcund, dist. Jaloun, 70 m. S.E. Calpee. It contains a large Hindoo temple, which is in good repair, and was possessed of great wealth till it was pillaged by the Dacoits or gang-robbers.

JEPIFAN, or EPIVAN, a tn. Russia, gov. and 45 m. S.E. Tula, cap. circle of same name, on a height above l. bank Don. It has four churches, a circle and a parish school, a benevolent institute, and several manufactures. At Kohkor, within the circle, was fought, in 1380, the celebrated battle in which the Grand-prince Dimitri Ivanovitch of the Don defeated the Mongols under Mamai. A monument commemorates the event. Pop. 3124.

JEQUELCHACAN, a tn. N. America, Yucatan, 30 m. N.E. Campeachy. It is a large and well-built place; with a

handsome church, several schools, and a courthouse. Its market is important. Pop. 4912.

JERSEY CITY [add.], a tn. U. States, New Jersey, l. bank Hudson, at its mouth in New York Bay, not more than a mile from New York. It stands on a peninsula; is well laid out in broad regular streets and spacious squares, and possesses many private residences, which, even in the best parts of New York, are not surpassed. Its public buildings, however, are meagre, almost the only one deserving of notice being the spacious railway station recently erected for the accommodation of a number of lines which have their common centre here, and communicate with all parts of the country. The other principal buildings and institutions are twenty churches, a good high-school, and a number of common schools. The manufactures consist chiefly of crucibles, of a quality so excellent that they are used in the mints of Europe as well as in America; flint-glass, pottery, soap, starch, cement, locomotives, machinery, cast-steel, iron-ware, and fireworks. As the terminus of the Morris canal, Jersey is an extensive coal-mart, as well as the depôt of the pig-iron made on the banks of the canal. It is also one of the depôts of the Cunard steamship line between Great Britain and the United States, and the starting-point of the smaller vessels of this company, which ply between New York, Halifax, and the West India Islands. It has, moreover, a considerable fleet of schooners, engaged in bay and oyster fishing and in the southern coasting trade. Pop. (1860), 29,226.

JESSORE [add.], a dist. and tn. India, presid. Bengal. The dist., between lat. 22° 28' and 23° 46' N.; lon. 88° 44' and 89° 55' E., is bounded N.E. by Pubna, E. Dacca-Jalapore and Backergunge, S. the Sunderbunds, and W. Baraset and Nudda; length, S.E. to N.W., 105 m.; breadth, 48 m. The surface almost throughout is a low monotonous flat, varied only by the interchange of dry and swampy ground, and is traversed by numerous streams and offsets from the Ganges. The air is tainted with exhalations from the decaying vegetation of the weedy tanks and water-courses, and fever and ague prevail at all times, but especially at the close of summer. The soil is generally fertile, the only exception being in the N., where there is a considerable admixture of sand and clay. The principal crops are rice, grain, and other pulse, indigo, oil-seeds, sugar, and tobacco. Latterly the mulberry to rear silk-worms has been extensively planted. The principal exports are indigo, rice, sugar, rum, oils, silk, cocoa and area nuts, betel, saltpetre, and hides. Among the wild animals are the tiger, leopard, panther, bear, and jackal. Numbers of alligators infest the waters.—The town, cap. of the above dist., 77 m. N.E. Calcutta, is an unimportant place, and was long reputed unhealthy. Lately, however, sanitary measures have made an important improvement in this respect. The principal buildings are those belonging to the civil establishment, a large jail capable of receiving 1000 prisoners, and a public school accommodated in a handsome structure, and attended by about 120 pupils, who are instructed in English, Persian, and Bengalee.

JESSULMEER [add.], a state, India, the most western in Rajpootana, situated between lat. 26° 8' and 28° 28' N.; lon. 70° 3' and 72° 51' E., and bounded N. by Bhawalpoor, N.E. Bikaueer, S.E. and S. Joodpoor, and W. Sindre; area, 12,252 sq. m. It forms a large expanse of sandy desert, flat upon the whole, but varied particularly in the S. by ridges of hills, insulated rocks, and occasional oases, producing pasture in sufficient abundance to feed large herds of cattle. In the N., where the true character of a desert is more completely developed, the surface is so uniform and monotonous that travellers in crossing it have no landmarks, and guide their course by the stars. There are no perennial streams, but by damming up water-courses and ravines during the periodical rains, temporary sars or lakes of salt-water are formed. These, when the summer-heat has evaporated them, leave the space they occupied covered with a crust, from which considerable quantities of salt are made. Pure drinking water is obtained only by sinking, and lies so far below the surface that the wells are in some places 300 ft. deep. For most domestic purposes tanks, formed where the soil is free from saline ingredients, and filled during the rains, suffice; but when these fail, as they sometimes do, numbers both of human beings and of cattle perish from thirst. The climate is extreme, and the range of the thermometer is very great.

In the N., near the Bikaner frontier, Boileau found the thermometer on 7th February as low as 32°, and saw the ponds covered with a coating of ice. On the 4th of March, within the course of one month, the temperature in his tent was 106½, and in the sun 119°. The natural vegetation of Jessulmeer lies within narrow limits, and consists of a few broomy shrubs, which sometimes overspread the ground so as to form a kind of jungle, and of some stunted trees. The only wild animals which can be said to be numerous are snakes. The principal domestic animals are dromedaries, horses, kine, and sheep. The last are said to be so abundant, that three of them may be bought for about four shillings. The inhabitants are composed principally of Bhatti Rajpoots, with a considerable intermixture of Brahmins, Jats, and Jains. The only manufactures of any importance are coarse and fine woollens. The trade is chiefly transit between Marwar and W. Hindoostan on the one side, and Sinde and Afghanistan on the other. This traffic gives employment to a great number of men and to thousands of camels. The revenue of the state amounts only to £8500, and of this nearly a half is obtained from transit duties. Estimated pop. 74,000.

JESSULMEER [add.], cap. of the above state, lat. 26° 56' N.; lon. 70° 58' E., stands at the base of the S. extremity of a rocky ridge, and is surrounded by ramparts of un-cemented stone flanked by bastions similarly constructed, but of greater height. The whole area inclosed is about 2¼ m. in circuit, and access is given to it by four regular gateways. Within the ramparts in the S. part of the town is the citadel, seated on an isolated eminence, scarped all round, and faced with masonry to the height of 20 ft. Higher up, the ramparts commence, and are carried round the hill. Though formidable in appearance, they are of little strength, as an adjoining ridge completely commands them. Within the citadel the principal buildings are the palace, a vast pile surmounted by a huge umbrella, which is said to indicate the ruler's high Rajpoot descent; and six temples, three Brahmical and three Jain. The latter are ancient stone structures, elaborately carved and surmounted by lofty gilt spires. The town contains nearly 8000 houses, many of them solidly built of stone, and of two stories; the lower with a terraced front raised 4 ft. above the level of the street, and usually painted red, and the upper provided with a projecting balcony of stone carefully carved.

JESUS MARIA, a tn. Mexico, dep. and 140 m. W.S.W. Chihuahua, in the Sierra Madre, on the head-waters of the Rio Mayo, and near the frontier of Sonora. Its mines of silver and gold, contained in the same vein—the former, constituting the large mass of the precious metal, and the latter existing only in limited quantity in combination with it—were long regarded as the richest in N. America, and yielded immense wealth. Though their productiveness has ceased, they are still frequented by numerous miners, who, though often earning a scanty subsistence; still cling to the spot, in the hope that the discovery of some rich and still unwrought vein may reward their perseverance. Speculators on a large scale have also made their appearance, but as yet almost all the trials that have been made, whether by public companies or by individuals, have issued in disappointment. Jesus Maria, however, still continued to retain a considerable population, till the discovery of the gold-fields in California caused it to be almost deserted.

JEYPOOR [add.], a state, India, in the E. of Rajpootana, between lat. 25° 40' and 27° 37' N.; lon. 75° 8' and 77° 20' E.; length, E. to W., about 150 m.; breadth, 140 m.; area, 15,251 sq. m. It consists generally of an extensive plain, with insulated peaks and clusters of jagged hills, particularly in the W. and N.W., rising here and there above the general level. The hills are composed of quartz and granitoid rocks intermixed with a white limestone or marble, and occasionally with mica. To the S. of them is a level expanse of fine white sand nearly devoid of vegetation, and bounded on the S.E. by a low rocky ridge, which passes the city of Jeypoor at some distance to the W., and is continued N.E. to the mountains of Alwar. The S. of the territory is mostly a sandy plain, rendered cultivable only by means of incessant irrigation with water drawn from innumerable wells. In some parts, under these disadvantageous circumstances, good crops of grain, pulse, cotton, and tobacco are raised; but grazing is

found to be the most profitable mode of employing the soil, and the chief wealth of the inhabitants is in their cattle. The population is composed of Rajpoots, who are the dominant class; the Minas, who are supposed to be the aborigines; and the Jats, who are extensive holders of land, and most industrious and skilful agriculturists. The Rajpoots belong chiefly to the Kachwaha tribe, and, though far outnumbered by the Minas and Jats, are said to be able to muster 30,000 armed men. The revenue amounts to nearly half a million sterling, subject to a deduction of £40,000 payable as tribute to the British government. Pop. roughly estimated at 1,500,000.

JEYPOOR [add.], cap. of the above state, 127 m. W. by S. Agra, lies in a small plain or basin, thought to have once been the bed of a lake, and inclosed on all sides except the S. by barren stony hills, many of them crowned with forts. One of these, situated N. of the town, on a hill which rises several hundred feet above it, is the citadel. The town, about 2 m. long from E. to W. and 1 m. broad, is surrounded by two low walls of masonry, an outer one embattled at the top, and loopholed for musketry, and an inner one with lofty towers and seven well-protected gateways. This inner wall, though evidently intended to be the principal defence, is so low, that in some parts the accumulations of drifted sand are nearly as high as the parapet, and so thin that even field artillery could break it. The interior is not surpassed in point of regularity and elegance by any native Indian town. The main streets, forty yards in width, intersect each other at right angles, and form at each point of intersection a *chank* or market-square. These main streets are in their turn crossed by others of a minor description, so that the whole place is portioned out into a series of rectangular blocks. Of these the central block, about half a mile long, is entirely occupied by the palace, garden, and royal premises. The palace is a lofty structure of seven or eight stories, and has at each extremity a lofty tower crowned with a dome. The gardens, surrounded by an embattled wall terraced at top and cloistered below, are full of fountains, cypresses, palm, and flowering shrubs, with a succession of terraces and alcoves, which, as a whole, are extremely rich and striking, though none of them taken singly is unexceptionable in point of taste. The houses in the principal streets are in general well built of stone, and not a few of the mosques and temples have considerable architectural merit. One of the most interesting edifices is the huge observatory constructed by the celebrated Jey Singh. It is still in good preservation, and contains, besides dials, azimuth circles, altitude pillars, and other bulky instruments of masonry, some brazen altitude circles of enormous size. In the arsenal there is a furnace for casting and machinery for boring guns.

JEZIERZANY, a tn. Austrian empire, Galicia, circle and 12 m. S.S.E. Czortkow; with a potash refinery, an old castle, and 2444 inhabitants.

JEZUPOL, a tn. Austrian empire, Galicia, circle and 4 m. N. Stanislaw; with a Dominican monastery. A strong castle which stood here, and was repeatedly besieged by the Tartars, has entirely disappeared. Pop. 2643.

JHALLODE, a tn. India, Scindia's Dominions, 108 m. N.E. Baroda. It was once cap. of a pergunnah in Gujrat containing seventeen towns, and is still a considerable place, with some well-built brick houses two stories high, a mosque, a small temple, and a bazaar.

JHALRA PATUN, a tn. India, Rajpootana, state Kotah, 90 m. E. Neemuch. It is a well-built handsome place, which was framed by Zalim Singh, rajah of Kotah, on the model of Jeypoor, and is nearly in the form of a square surrounded by a substantial wall and bastions. Two main streets in the direction of the cardinal points intersect each other, and are opened into by smaller streets. At the point of intersection, on a broad terrace, is a lofty temple dedicated to Vishnoo, and at the termination of one of the main streets another temple dedicated to Krishna. There is also a Jain temple of great antiquity, but modernized by recent repairs and embellishments. Close to the town is a large tank or lake about a mile square, and well supplied with water throughout the year. Jhalra Patun owes its present prosperity to Zalim Singh, who not only rebuilt it, as already mentioned, when it was old and decayed, but conferred many privileges upon the inhabitants, exempting them from forced contributions,

and making them liable to only half the transit duties usually paid in other parts of the country. Thus favoured, it has become the grand mart for N. Malwa and S.E. Rajpootana.

JHANSI, a territory, India, Bundelcund, formerly forming a native state, but annexed to the British territory in 1854, on an alleged failure of heirs. It lies between lat. $24^{\circ} 55'$ and $25^{\circ} 48'$ N.; lon. $77^{\circ} 53'$ and $79^{\circ} 31'$ E., and consists of two parts, a W. and an E., separated by a belt of land belonging to the rajah of Tehree. The W. division is bounded N. by Gwalior and Dutteah, E. Tehree, and S. and W. Gwalior. The E. division is bounded N.W. by Jaloun, E. Humceerpoor, and S. and S.W. Tehree; length of both divisions, E. to W., about 100 m.; breadth, 60 m.; area about 2922 sq. m.; estimated pop. 286,000. These numbers apply not so much to its present condition as to the past when it was a native state.

JHANSI, a tn. India, cap. of the above territory, 125 m. S. by E. Agra. It is pleasantly situated amid tanks and groves of fine timber trees; is surrounded by a fortified and massive wall from 6 to 12 ft. thick, and from 18 to 30 ft. high, with numerous flanking bastions, mounted as batteries with ordnance, and with loopholes for musketry. Within the town, which has a circuit of about $4\frac{1}{2}$ m., and surrounded by it on all sides except the W. and part of the S., stands the fort on an elevated rock, completely commanding the town and the surrounding country. Its natural strength has been so much increased by art as to make its capture even by regular siege a task of no small difficulty. Its walls, composed of granite, and therefore difficult to breach, vary in thickness from 16 to 20 ft. Its extensive and elaborate outworks are of the same solid construction, with front and flanking embrasures for artillery, and loopholes, of which in some places there are five tiers. As additional means of defence, the towers of the fort, one especially, higher than the rest, and distinguished by the name of the White Tower, are armed with heavy ordnance. Outside the walls are a summer-palace, several temples, and the ruined British cantonments. During the late mutiny Jhansi acquired an infamous notoriety. The sepoy's stationed there having mutinied, most of their officers and the other European residents succeeded in gaining the fort. Here they defended themselves with the utmost courage, till the rance of Jhansi, who had never forgiven the British government for annexing the state, took open part with the mutineers, and rendered further defence impossible. As a last resource terms of surrender were proposed, and the brave defenders, after an assurance of safety and protection solemnly sworn to, agreed to quit the fort. No sooner, however, were they without the gate than the whole of them, including a number of helpless women and children, were seized and diabolically butchered. This atrocity, perpetrated in the beginning of June, 1857, was fully avenged on 2d April, 1858, when the place was stormed by the British force under Sir Hugh Rose, and 5000 of the rebels were slain. The rance escaped at the time, but, on the 19th of June following, was slain before Gwalior, while heading the rebels in male attire with a courage and resolution worthy of a better cause.

JHEEND, a petty native state and town, India:—The STATE, which, from being intermingled with others, is of very irregular shape and ill-defined limits, has a computed area of 376 sq. m., and a revenue of £30,000. The soil is naturally fertile, but, from the neglect of proper cultivation, is much overrun with jungle. The triple enormity of slave-dealing, suttee, and infanticide, which once prevailed here, has been suppressed by British interference. Pop. 56,000. —The TOWN, situated 70 m. N.E. Delhi, on Feroz Shah's canal, which occupies the channel of the Chittung, here crossed by a bridge, is a considerable place; with a palace and a good bazaar.

JHUJHUR, a native state and tn. India:—The STATE, between lat. $27^{\circ} 55'$ and $28^{\circ} 55'$ N.; lon. $75^{\circ} 55'$ and $76^{\circ} 58'$ E., is bounded N. by Hurreeana and Rohluk, N.E. Delhi, S.E. and S. Goorgaon and Alwur, and W. Shakawutty and Loharoo; area, 1230 sq. m.; revenue about £60,000. The surface, which has an average height of about 830 ft. above the sea, is intersected by numerous water-courses, which carry the drainage to the Jumna, and is nearly flat, with a very gentle declivity, except in the S.W., where it is broken by several low rocky ranges; pop. 110,700.—The TOWN,

cap. of above state, 35 m. W. Delhi, was assigned by the Mahrattas to the adventurer George Thomas, and was for some time the seat of his short-lived government.

JHURRIE, a river, India, which rises in dist. Goruckpore, about lat. $27^{\circ} 5' N.$; lon. $84^{\circ} 3' E.$, flows S., and joins the Gogra on its left bank, after a course of about 130 m.

JINNA, a tn. Western Africa, towards the S.E. extremity of Bornou, prov. Logone, 125 m. S.S.E. Kutawa. It is a considerable place, standing in a plain richly clothed with trees, inclosed with a wall, of high repute for its fine matting and lattice work, and an important market for ivory.

JIPIJALPA, a tn. S. America, Ecuador, prov. Manavi, cap. cant. of same name, on a beautiful plain, 75 m. N.W. Guayaquil. It is a handsome place, with wide regular streets, and a number of good houses, a few of them covered with zinc, several with tiles, and a greater number with a species of thatch. There are also two public schools, the one for boys and the other for girls. The principal manufacture is straw-hats, of which great numbers are exported. In the neighbourhood there is a thermal sulphurous spring.

JISTEBNITZ, a tn. Austrian empire, Bohemia, circle and 5 m. N.W. Tabor; with a parish church, a townhouse, an hospital for the poor, a brewery, and two mills.

JOANNET, an isl. in the Coral Sea, belonging to the Louisiade Archipelago to the E. of New Guinea. It lies off the N.W. extremity of Sud-east Island, is 11 m. long by $1\frac{1}{2}$ to 3 m. broad, and is traversed nearly throughout its whole length by a high ridge of hills which rise most abruptly from the S. shore, and descend gradually to the N.W. Mount Asp, the culminating point of the ridge, is 1104 ft. above the sea. The island is well wooded, has numerous groves of cocconut trees near the sea, and seems generally fertile. The natives, many of whom are congregated in a large village crowning a hill on the S.W. side, are warlike and treacherous.

JOBELI, a tn. Western Africa, on the route from Agades to Sokoto, 140 m. N.N.E. of the latter. It stands near the N. frontiers of Ada, to which it belongs, and is a considerable place. The Kelgeres use it as their market. The language spoken is a dialect of Songhay.

JOBLA, a tn. Arabia, Yemen, 100 m. S. by W. Sana. It contains about 1200 houses, for the most part lofty and well built, and ranged in well-paved streets, and has extensive manufactures of soap.

JODLAWA, a tn. Austrian empire, Galicia, circle and about 12 m. N.W. Jaslo; with 2430 inhabitants, almost all linen-weavers.

JOHANN (St.), a tn. Austrian empire, duchy and 33 m. S. Salzburg, on the Salzach; with an infirmary, a nailery, and 1000 inhabitants.

JOHANNA, or **ANJOUAN** [add.], one of the four isls. which form the Comoro group, nearly equidistant from the E. coast of Africa and the N.W. coast of Madagascar. It is of a triangular shape, about 24 m. long by 18 m. broad; and has a finely diversified surface, consisting of a plateau from which finely wooded heights rise majestically into mountains from 3000 to nearly 4000 ft. above sea-level, and are at the same time intersected by verdant and fertile valleys. Along the coast are several commodious roadsteads of easy access, while the interior is so productive as to maintain a pop. of about 20,000 souls. The principal products are rice, arrow-root, beans, and haricots in great variety, sugar-cane, tamarinds, lemons, oranges, cocoa-nuts, and bananas. Most of the inhabitants are scattered in hamlets and villages over the island, but there are two localities in which they are congregated in greater numbers. The one of these is Makhadou, situated on the N. about half a mile from the roadstead where the European vessels usually anchor. It is surrounded by walls about 15 ft. high, flanked with square towers, and has a pop. of about 3000. The other Johanna, situated on a beautiful bay on the E. shore of the island, consists of streets so narrow that it is difficult to pass along them, and of houses which, though substantially built of stone, have a very gloomy appearance, as their gate of entrance is the only opening to the street. The principal buildings are the castle, the sultan's palace, distinguished from the other houses only by being a little larger; and four mosques, in which no taste whatever is displayed. The inhabitants, like those of the island generally, are a mixed race of Arabs and negroes, all Mahometans. Their number is about 2000.

JOHILA, a riv. India, which has its source near those of the Nerbudda and Sone, flows N.W. for about 90 m., then N.E., and joins l. bank Sone.

JOHN (Str.), two rivers, British America:—1. *St. John*, Canada East, rises in a mountainous dist. in co. Gaspé, flows E. and falls into an arm of the spacious bay of this name at the town of Douglas. At its entrance, which is between two points of sand, there is often in spring a depth of 9 ft.; and within, though the channel is narrow, the depth is 12 ft.; but at 2 m. above, the navigation ceases in consequence of a number of islands, between which the water is shallow and rapid.—2. *St. John*, Labrador, has its mouth on the N. shore of the Gulf of St. Lawrence opposite to the Perroquets, the westernmost of the Mingan group. At its entrance, between clay cliffs on the W. and a sandy point on the E., it is 260 yards wide, and within it increases to the width of nearly half a mile, but again decreases gradually to about 200 yards. For 6 m., the limit of the tide, it may be ascended with a depth of 1 to 3 fathoms at low water, but beyond becomes so rapid as to be navigable only by canoes or flat-bottomed boats. Half a mile outside its entrance there is an extensive bar of sand, which shifts with every gale of wind, and has seldom more than 3 or 4 ft. over it at low water.

JOHNSBURY (Str.), a tn. U. States, Vermont, cap. co. Caledonia, r. bank Passumpsic, 37 m. N.E. Montpellier. The Connecticut and Passumpsic railway passes through it; and it has nine churches, an academy, a high-school, several foundries, machine shops, and other factories. Pop. 3469.

JOLIET, a tn. U. States, Illinois, cap. co. Will, on both sides of the Des Plaines, and at the junction of the Chicago and Rock Island with two other railways, 33 m. S.W. Chicago. It stands in a rich agricultural district, is well situated and well built; contains six churches, two handsome school-houses, the city-hall, and the state-prison; and carries on an active trade in flour and lumber. Pop. 7104.

JONGA-PANZA, a tn. S. Africa, near the S.W. frontiers of the Balonda country; lat. 10° 25' S.; lon. 20° 15' E. It is a small place, embowered in lofty evergreen trees hung round with fine festoons of creepers. The inhabitants, a crafty rapacious race, opposed so many obstacles to Dr. Livingstone's further progress towards Loanda, that the necessity of desisting from the prosecution of the enterprise when the Portuguese frontiers were at hand, and all other obstacles promised to give way, was seriously mooted, the Dr. however plainly telling his attendants that if they went back he would go forward alone.

JOOBUL, a protected hill state, India, between lat. 30° 48' and 31° 6' N.; lon. 77° 32' and 77° 54' E.; bounded N. by Poondur and Bussaher, E. Bussaher and Gurwhal, S. Sirmour, and W. Sirmour and Bulsun; estimated area, 320 sq. m.; revenue, £1413. It has an elevated and mountainous surface, one granite peak on the S.W. frontier rising to the height of 12,149 ft., and another in the N. 10,000 ft. The N. portion belongs to the valley of the Pabur, and stretches along its r. bank; the S. portion to the valley of the Shalwee, a tributary of the Tonse. Both valleys are very beautiful, particularly that of the Pabur, which rises with a gentle slope, and is formed into numerous terraces, on which rice and other grains are grown. The inhabitants are remarkably handsome, and some of them nearly as fair as Europeans. The capital is Dehra. Pop. 15,000.

JOODPOOR, or MARWAR [add.], a state, India, in the S.W. of Rajpootana, and the largest of the Rajpoot states, lies between lat. 24° 36' and 27° 40' N.; lon. 70° 4' and 75° 23' E.; and is bounded N. by Bikaner and Shekhawuttee, E. Jeypoor, Kishengurh, Ajmere, and Mewar, S. Mewar and Serohee, W. the Runn of Cutch and Scinde, and N.W. Jessulmeer; length, N.E. to S.W., 330 m.; breadth, 160 m.; area, 35,672 sq. m.; revenue, £175,252. It consists of two distinct portions, separated by the Loonee, which rising on the E. frontier traverses it in a S.W. direction and nearly bisects it. The portion on the S.E. or l. bank is fertile, that on the S.W. or r. bank is a continuation of the great desert of Scinde, and a mere desolate waste. On the E. frontier the surface swells upwards to the Aravulli range, which rises boldly to the height of 3000 to 4000 ft.; in the S., where a succession of rugged hills occurs, the prevailing rock is porphyry. Salt abounds in the territory, and is largely manufactured by means of evaporation; iron is partially

worked on the borders of Gujerat; kunkar or calcareous conglomerate is much burned for lime; and in some places the limestone assumes the form of marble, of which there are some fine quarries at Mukrana, 120 m. N.E. of the town of Joodpoor. A hard red sandstone, well adapted for building, is also abundant. The best soil consists of a fat black earth, on which the principal crops are wheat and cotton. The latter however is extremely precarious, in consequence of the prevalence of frosts, by which in a single night every bud has sometimes been nipped. In the other soils sand more or less predominates, and is particularly adapted for millet, which along with a kind of pulse called *moth* forms the principal food of the inhabitants. In the S., where the torrents from the Aravulli Hills furnish ample means of irrigation, almost every kind of grain is successfully grown. The wild animals include lions, leopards, tigers, wolves, hyænas, jackals, nyлгаus, antelopes, and wild asses. Snakes are so common that the inhabitants, as a protection against them, wear a kind of thick leggings or gaiters. The principal domestic animals are camels, horses, kine, and sheep. The fleeces of the last are extensively manufactured into coarse cloths and blankets. The inhabitants have a remarkable turn for commerce, and not only carry on a large trade at home, but have overspread the neighbouring countries, and obtained the management of their most important trading concerns. According to Tod natives of Marwar, chiefly Jains, constitute nine-tenths of the bankers and commercial men of India. Pop. 1,783,600.

JOODPOOR [add.], a tn. India, cap. of the above state, lat. 26° 19' N.; lon. 78° 8' E.; 300 m. S.W. Delhi, occupies a striking site at the S. extremity of a rocky ridge which rises from 300 to 400 ft. above the average level of the plain. It is inclosed by a rampart 5 m. in circuit, and slopes somewhat irregularly towards the ridge on the top of which the citadel commanding a magnificent view is seated. Much of the rampart, though solidly built of stone, is in a dilapidated state. In many places the parapet has fallen, and in some places access could easily be gained to the interior through gaps in the wall itself. In the whole circuit the number of bastions is 101, and of gates 70. The streets are somewhat uneven, owing to the inequalities of the site, but are laid out with considerable regularity, and lined with houses, many of which are substantially built of freestone and are handsome, though a greater number are said to be mean and badly constructed. The freestone used is of a red colour, but not a few of the houses built of it are covered over with a fine white plaster. The contrast of colours thus produced, together with the lively green of shady trees which line several of the streets and the banks of numerous tanks, has a pleasing effect, and gives the whole place a gay look. The principal edifices are the royal palace and attached buildings, which occupy about two-fifths of the whole area of the citadel, and tower high above all the other houses; and numerous fine temples. Notice is also due to the tanks, several of which are of great extent and finely built of stone throughout; and to the wells, one of which, of immense size cut to the depth of 90 ft. in the solid rock, is provided with three flights of steps leading down to the water, while the fourth side remains perpendicular to allow of the working of the Persian wheel. Outside the walls, and about a cannon-shot from the N.E. angle, is a suburb inclosed by a thin stone wall, with battlements and bastions, and forming a distinct town of about 1000 houses. It takes its name of Mahumandir from its great temple, which confers the right of sanctuary, is conspicuous from afar by its lofty whitewashed spire, and possesses among its rich internal decorations a canopy of silver in the form of an umbrella. Five miles to the N. are the striking ruins of Mandor, which was capital of Marwar till it was supplanted by the founding of Joodpoor in 1459. This place has long been famous for its turnery, particularly of ivory, and for various articles of hardware. The pop. of Joodpoor, including suburbs, has been variously estimated at 150,000, 129,150, and 80,000. Even the last seems to be an exaggeration.

JOONER, or JUNAR, a tn. India, British Deccan, collectorate Poonah, about 90 m. E.N.E. Bombay; lat. 19° 12' N.; lon. 74° 18' E. It lies at the foot of a steep and rugged basaltic hill crowned by a fort. Around the town in every direction the hills are pierced with caves containing Buddhist emblems, *vihara* or monasteries, hermitages, vaulted reser-

voirs and tanks with stone benches. At a hill fort in the vicinity the celebrated Sivajeo was born. Pop. about 8000.

JOSÉ (SAN) [add.], a tn. Central America, cap. of state Costa Rica, in a mountain valley between two streams, at the height of 4500 ft. above the sea; about lat. 9° 45' N.; lon. 83° 45' W. It stands nearly in the centre of the state, equidistant from the Caribbean Sea on the E. and the Pacific Ocean on the W., is laid out with almost mathematical precision, in straight streets intersecting at right angles, and consists generally of houses of only a single story. The principal buildings are the governor's residence, the guard-house, the custom-house, the cathedral, the churches of Merced and Carmen, the university, the episcopal palace, and the theatre. Most of the streets are paved and well shaded with trees. The trade is active, and coffee is largely grown in the vicinity. Pop. about 12,000.

JOSEPH (Str.), familiarly known as **St. Joe**, a tn. U. States, Missouri, cap. co. Buchanan, 155 m. N.W. Jefferson City, on the railway from the Kansas frontier to Hannibal in Mississippi. It is a quaint curious town, the most commercial and populous in Western Missouri, and is surrounded by an extremely fertile district, in which wheat, tobacco, and hemp are cultivated. It has seven churches,

chiefly by the temple and the pilgrims who lodge here on their way to it.

JOUNPOOR, or **JUANPOOR**, a dist. and tn. N.W. Provinces:—The dist., between lat. 25° 22' and 26° 12' N.; lon. 82° 12' and 83° 10' E., is bounded N.W. by Oude, N.E. Azimgurh, E. Ghazepore, and S. and S.W. Benares and Allahabad; length, E. to W., 60 m.; breadth, 55 m.; area, 1552 sq. m. It is a remarkably level tract, with a gentle slope probably averaging not more than 6 inches per mile from N.W. to S.E., and is watered by numerous streams, of which the Goomtee is the most important. The soil is peculiarly adapted for the sugar-cane, the cultivation of which is said to occupy 23,158 acres. Pop. 798,503.—The town, cap. of the dist., 37 m. N.N.W. Benares, stands on the Goomtee, which is here navigable, and divides it into two unequal parts, the larger on the l. and the smaller on the r. bank, communicating by a bridge, which is considered a favourable specimen of Indian architecture. The town and its vicinity abound in ruins which attest the former magnificence of the place, but the few edifices of note which it now possesses are the fort, a massive stone structure in the form of a quadrangle, about half a mile in perimeter, with a highly ornamental gateway, and a large mosque in very bad repair, but surrounded by colonnades and surmounted by three lofty domes. The military cantonment is on the l. bank of the river at the E. end of the town. The civil establishment contains the usual buildings. Pop. 16,177.

JOWRA, a tn. India, Malwa, on the Piria, a small stream here crossed by a handsome bridge of porphyry, 61 m. S. Neemuch. It stands at the height of 1437 ft. above the sea, contains a pop. of about 10,000, and is cap. of a small territory of same name, which has an area of 872 sq. m., a revenue of £80,000, and a pop. of 85,456.

JUAN (SAN), an island, Western N. America, chief, but second in size, of the Haro Archipelago, between Vancouver Island and the mainland. It is about 11 m. long and on an average 3 m. wide, and has a large extent of land available for agriculture and pasture; the Hudson Bay Company having a large sheep-farm upon a beautiful prairie at the S.E. end of the island, 140 ft. above the sea, with several outlying stations. San Juan was brought into prominent public notice during the boundary dispute between England and the U. States in 1859, when Gen. Harvey, with a body of American troops, took armed possession of it. Its importance lies not in its intrinsic value,

but in its commanding the Haro Channel, and therefore the right of way to Vancouver Island. (See HARO ARCHIPELAGO in *Supp.*)

JUAN DE FUCA, a strait between Vancouver Island and the mainland of the American Continent. The breadth of the strait at its entrance between Cape Flattery, its S. point on American territory, and Bonilla Point in Vancouver Island, is 13 m. It narrows soon to 11 m., and continues this breadth in an E. and N.E. direction for 50 m. to the Race Islands. The coasts are remarkably free from danger, and may as a rule be approached closely, and have several convenient anchorages on either side; the shores are also well lighted. Upon the N. side from the shore of Vancouver Island, densely wooded hills rise gradually to a considerable height; while on the S. or American shore, the rugged outline of the Olympian range of snow-clad mountains extends for many miles, varying in elevation from 4000 to 7000 ft., and with breaks in which beautiful country may be seen. As the strait is ascended the tides and currents, which at its junction with the Pacific are of little strength, become embarrassing, and often dangerous to the navigator, and where the strait, near the Race Islands, turning E.N.E. meets the waters of the Gulf of Georgia, the tidal irregularities are very baffling. At all seasons the wind blows up or down the strait. At the Race Islands the strait terminates and opens into a large expanse of water.

JUAYUA, an Indian vil. Central America, state and 38 m. W. Salvador. It stands in a mountainous district to the E. of Mount Apaneca, and is inhabited by 1500 Indians, who

ST. JOSEPH, from the Kansas side.—After a photograph.

a convent, a large female seminary, a courthouse, steam, flour, and saw mills, manufactories of bagging, &c., and a considerable trade; and though an outlying place, its hotels afford as good entertainment as can be found in many of the great hotels of the large cities of the east. It is the eastern terminus of the various routes of the American Pony Express, by which rapid communication is maintained between the far-distant territories of the American Union on both sides of the Rocky Mountains, and is the point of arrival and departure of the trains of waggons going and returning by the overland route to California and Oregon. The town was founded in 1843, and became the capital of the county in 1845. Pop. (1860) 8932.

JOSEPH (Str.), a river, U. States, which rises in the S. of Michigan, and after flowing S. into Indiana, bends round to the N., and again entering Michigan discharges itself into the lake of this name on its S.E. shore at the village of St. Joseph. Its total course is 250 m., of which 120 m., reaching to Constantine, is navigable by small steamers.

JOSHIMATH, a tn. India, Kumaon, l. bank Aluknunda, here formed by the junction of the Bishenganga and the Doulee or Lete; lat. 30° 33' N.; lon. 79° 37' E. It stands in a hollow recess, sheltered on every side by a circular ridge, at the height of 6185 ft. above the sea, and is approached by a steep path cut into steps. The houses, only 119, are neatly built of gray slate and roofed with shingles. Among the number is the residence of the *rawal* or high-priest of Bhadrinath, who lives here for six months, while the approaches to his temple are buried in snow. The inhabitants live

are well civilized, and possess extensive coffee plantations. In the vicinity the Rio Grande or Sonsonate forms a magnificent waterfall, descending by two successive leaps, each 300 feet high.

JUBBULPOOR, a tn. India, territory Saugor and Nerbudda, cap. dist. of same name, 200 m. S.S.W. Allahabad. It stands at the base of a rocky eminence about 1 m. from the l. bank of the Nerbudda, and is a large well-built thriving place, well situated for trade, and containing a school of industry which has been brought to a state of great efficiency. In a limestone ridge in the vicinity of the town a number of large fossil remains have been found.—The dist. has an area of 6237 sq. m., and a pop. of 442,771.

JUDENBURG (anc. *Montana Castra*) [add.], a tn. Austrian empire, duchy Styria, circle Bruck, cap. dist. of same name, romantically situated in the upper basin of the Mur, 39 m. W.N.W. Gratz, at the height of 2277 ft. above the sea. It consists of the town proper, surrounded by walls, and of two suburbs; and has a handsome square with a statue of St. John of Neopomuk, a strong castle, two churches, one of them with beautiful stained glass, and the other a large edifice with a square tower and an excellent organ; barracks, and in the vicinity the ruins of an old feudal castle, with one of the finest churches in Upper Styria. Pop. 3000.

JUGGIAPETTAH, a tn. India, presid. Madras, dist. Masulipatam, near the Nizam's frontier. It was built by a late zemindar, has already become the third town in the district, is inhabited by many rich Marwari and Teluga merchants; and carries on an extensive trade, chiefly in cotton, silk and cotton cloths, opium, and tobacco.

JUJUY, a prov. of the Argentine Confederation, South America, lying between 22° and 24° S. lat., extending about 60 German leagues from N. to S., and of the same breadth from E. to W. It lies immediately under the tropic, but for the most part stretching up the slope of the great Cordilleras range, so that its climate is not so hot as might be expected from its geographical position. The low-lying districts around Oran and the Chaco exhibit all the luxuriant pomp of a tropical vegetation. The province is divided into nine departments, which are named, Yavi, Rineonado, Cochinoca, Santa Catalina, Humahuaca, Tumbaya, Jujuy, Rio Negro, and Perico. Watered by innumerable streams, the soil gives forth its fruit in abundance, and yields the pomegranate, citron, orange, walnut, apricot; besides rice, cotton, maize, indigo, tobacco, and the sugar-cane. Salt effloresces in considerable quantities on the plains; horses congregate in immense herds, and millions of oxen are reared on the breeding estates. Silver mines are found in the departments of Humahuaca and Tumbaya. Pop. upwards of 30,000.

JUJUY, a tn. and river, South America, Argentine Confederation.—The town, cap. above prov., is situated on the river Jujuy, 60 m. N.N.E. of Salta. It was founded in 1580. Owing to its position in the line of traffic between Buenos Ayres and Upper Peru it is a place of some importance, and recent travellers speak of it as in a very flourishing condition.—The river Jujuy rises in the W. declivity of the Chilian Andes, and receiving several tributary streams, flows in a N.E. direction to join the Tarija below Oran, and form with it the Vermejo. It is also known as the Lavayen, Rio Grande, San Salvador, or Rio Dulce. Course, 300 m.

JULA, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on the E. slope of the Lingi-Lingi, near one of the sources of the Kupo. It has its site in a fruitful valley, is surrounded by a strong wall, and is the residence of an influential chief. Pop. about 2500.

JULIANSHAAB, or **JUMANESHAAB**, a district, Greenland, southern Inspectorate, lat. 60° to 61° N., stretching from the adjoining district of Frederikshaab on the N.W. to Cape

Farewell, a distance of above 150 m. In the southern portion the distance from the outermost islands that line the coast to the head of the fiords is 30 to 40 miles, but in the northern it does not exceed 20 miles. It is split up into six greater peninsulas separated from each other by seven fiords, and eight or ten smaller peninsulas, which separate the northern bays, and along its coast are 20 larger and above 100 smaller islands. The district consists chiefly of unfruitful hills covered with perpetual snow and ice, partly inaccessible, and partly unvisited by human beings. The islands and

JULIANSHAAB, GREENLAND—proposed Station of North Atlantic Telegraph.

landspits even in summer are continually beset with drift ice, the cold mist retards the thawing of the snow and chokes vegetation, so that the appearance of the exterior coast is made to resemble that of North Greenland, while not far off the vegetation on the inner fiords and narrow valleys of the land attains the highest state of luxuriance permitted by the climate of this latitude. The chief trade is in seal-oil, livers, fox and bear skins, and eider down. Pop. (1855) 2609, of whom 38 were Europeans.—The colony of Julianshaab lies on the outer portion of the peninsula which separates the fiords of Igalliko and Tunnudliorbik, upon whose east or inner portion lay the former town of Brattelid. The centre of this peninsula forms a sharp saw-topped mountain chain of 4000 to 5000 ft. high. The houses, which stand in a valley tolerably well closed in, and are erected on both sides of a stream, here crossed by a bridge, consist of an oil-boiling house, a blubber-house, the mission-house, church, school, &c., and the dwellings of the natives. In the harbour a small schooner is stationed, which is chiefly employed in visiting Nennortalik and other trading places for the exchange of goods. Julianshaab has been proposed as the Greenland station of the submarine telegraph which, proceeding from the northern shores of Scotland by the Orkney, Shetland, and Faroe Islands, Iceland, Greenland, and Newfoundland, is intended to unite Europe and America. For this purpose the Igalliko Fiord is admirably adapted, having a bottom of mud, and a depth of water so great that the cable once laid will be in no danger from icebergs. The other hamlets in the district are Igalliko, on the fiord of same name, Upernivik, Itibliarsuk, Itiblidlik, Pardleet, Igloernerit, Ikaresarsuk, Iglokassik, Nougetsiak, &c. In the district there exist the ruins of several places formerly of more or less interest, among which Brattelid, already mentioned, is of chief interest, because it has been ascertained that an expedition of Scandinavians who sailed from it about A.D. 1000, in the time of Eric the Red, made the first discovery of America. Having sailed to the W. and S. they reached the shores of the continent, and landed successively on two spots, the one of which, containing good prairie land, they called Marklaud, and the other, yielding abundance of wild grapes, they called Viinland. After wintering in America, and leaving some settlers, who seem

to have been destroyed by the natives, they set sail in the following summer and returned safely to Brattelid with cargoes of timber.—(*Grönland geographisch und statistisch beschrieben von Anton von Etzel.*)

JUMMULMADOOGOO, a tn. India, presid. Madras, dist. and 56 m. N.W. Cuddapah, l. bank Pennaur, a few miles E. of the Gundicota Hills. It consists of houses built of blue limestone, in some instances thatched with straw, but for the most part with flat roofs covered with earth. A small fort adjoins the bazar. In the vicinity are the palace of the Cuddapah Patan governors, the tomb of a brother of one of the nabobs, and a temple said to have been erected four centuries ago. The inhabitants cultivate jowaree or sorghum, cotton, tobacco, and turmeric, and manufacture dye and print cotton cloths. Pop. about 3000.

JUNIATA, a river, U. States, formed near the centre of Pennsylvania by the Little Juniata and the Frankstown from the Alleghany Mountains, flows circuitously E. through a picturesque and mountainous country, and joins the Susquehanna 14 m. above Harrisburg. Its course, including that of the Frankstown, is about 150 m. It is not navigable, but this defect is supplied by the Pennsylvania canal, which follows its banks throughout its whole course.

JUQUILA, a tn. Mexico, state and 70 m. S.S.W. Oajaca. It has a parish church, with a wonder-working image,

held in such repute that it annually attracts from 70,000 to 80,000 pilgrims. Pop. 800.

JUTECALPA, a tn. Central America, Honduras, cap. dep. Olancho, on a stream of same name, an affluent of the Guyape, at the height of 4000 ft. above the sea; lat. 11° 12' N.; lon. 85° 25' W. It is finely situated in a valley overlooking a splendid landscape, and is indebted for its importance to the destruction of Olancho, the ancient capital of the province. Previous to that event it was an unimportant village, whereas it has now become the commercial centre of eastern Honduras. The revolutions of the country have however greatly injured its prosperity. The town is but indifferently built. Its streets are narrow and ill paved, and the houses are almost all of a single story, with red tiled roofs. The whitewashing of the walls, which has generally a pleasing effect, becomes annoying from the excessive glare which it produces, while a scorching sun operating upon open drains and ill-cleaned lanes produces effluvia at once offensive and pestilential. The principal building is the parish church, which has a portico in front, and possesses bells whose deep and mellow tone is ascribed by the inhabitants to the large quantities of gold and silver which at the time of their casting were thrown into the furnace as voluntary offerings. The population, at one time 8000, has dwindled down to half that number.

K.

KAABANDA, a tn. S.W. Africa, Kimbunda country, territory Hako, on the Kusangai, an affluent of the Coanza. Its inhabitants divide their time between agriculture and fishing. The fish, which are caught in great quantities, are dried, made up into bundles of ten pieces each, and sent to market, where they form a considerable article of trade. Pop. about 2000.

KABARA, a tn. W. Africa, on a slope above l. bank Niger, 12 m. S. Timbuktoo. It consists of huts used for residence, and clay buildings employed chiefly as storehouses, and has two small market-places. The authorities are Fellatah, but almost all the inhabitants, amounting to about 2000, are Songhay. Kabara is the port of Timbuktoo.

KABEBE, a tn. S. Africa, cap. kingdom of Molwa, about lat. 8° S. and lon. 26° 45' E. It stands in a gently undulating plain, watered by several beautiful streams, and including a number of villages which encompass it on every side. The streets of the town proper are tolerably regular, intersecting each other at right angles; they are also spacious, and occasionally planted with fine trees; towards the interior are several market-places, where well-supplied markets are regularly held, and even articles of European manufacture may be purchased. The houses are for the most part well built, and carefully thatched with straw. Those appropriated to the prince are conspicuous, their lofty roof, supported on pillars, making them look as if they were of more than one story. In many of them the walls are hung and the floors carpeted with various-coloured mats. The principal staples of trade are slaves and ivory; wax, also, at one time was collected, and sold in large quantities, but the dealers, finding that the expense of transport nearly annihilated their profits, have ceased to purchase it. In their industrial products, consisting chiefly of cotton goods, dyed various colours, fine mats used by the richer classes as wall-hangings and carpets, and various ornamental articles, in which copper, ivory, and pearls are employed, they have attained much excellence and display a high degree of taste. The chief agricultural products are manioc and excellent tobacco, but many valuable products are given them gratuitously without culture. Among these may be mentioned dates, bananas, and ananas. Pop. 50,000.

KABOWA, a vil. W. Africa, Bornou, 120 m. W. by N. Kukawa. It is a large place, with a well-frequented market, in which the staple articles exposed for sale are natron, salt,

the fruit of the doum-palm, cattle, and a cloth for female dress made in Kano, and called *tinkedi*.

KACONDA, a territory, fort, and vil. S.W. Africa, Kimbunda country. — The **TERRITORY**, situated between lat. 13° and 14° S., and lon. 15° 30' and 17° E., bounded N. by Kiakka and Hambo, E. Sambos and Galangue, S. the land of the Luseke and Nyemba Ganguella, and W. by large tracts of desert; area about 4500 sq. m. It lies high, and being watered by numerous streams, of which the Kunene with its tributary Kalai, and the Kubarot with its tributary Knando, are the largest, has a cool and healthy climate. Both tropical and European fruits thrive well, and wheat has been successfully cultivated by some strangers from Europe. The principal crops of the natives however are maize, manioc, beans, potatoes, and tobacco. Considerable numbers of cattle and sheep are reared on the rich pastures; swine and poultry are also numerous. The trade carried on by exchanging European wares obtained at the factories for ivory, wax, and cattle, brought from the interior, is important. — The **FORT**. A small portion of Kaonda was about a century ago taken possession of by the Portuguese, who erected a fort upon it, which was mounted with cannon, and garrisoned by a company of regular infantry. The factory, owing to the healthiness of the situation, and the large profits obtained by the traffic in slaves, attracted a number of Europeans, and became flourishing. It still exists, but since the abolition of the slave-trade has rapidly declined. The fort or presidio, situated between the streams Shekula and Kathape, about lat. 14° 35' S., lon. 16° E., is inclosed by a palisade and an earthen rampart mounting eight cannon. Its influence, and that of the factory connected with it, do not at present extend over a circuit of more than 8 m. — The **VILLAGE**, consisting of huts formed by driving posts into the ground, and thatching the whole with straw, is a very straggling place, and, including the environs, contains about 3000 souls, almost all mulattoes born in the country, and blacks, who though they call themselves Christians, retain many of their original superstitions, and have not yet abandoned their predatory habits.

KADIRI. See **KEDIRI**.

KADOOE, or **KADU** [add.], a prov. Java, bounded N. by Pakalangan and Samarang, E. Pajang, S. Mataram, and W. Baglen and Banumas; area, 631 sq. m. It consists of a valley, lying between the mountains of Marapi and Rababu on the

E., and Sumbing and Sundara on the W. Marapi, an active volcano, but the lowest of these mountains, is 9250, Sumbing, the highest, is 11,000 ft. above the sea. The principal products are rice and tobacco, both important articles of export. To these the Dutch have recently added coffee, indigo, and tea. Mr. Crawford, who had charge of this province when it was delivered over to the British government in 1812, observed in his *Descriptive Dictionary of the Indian Islands*, "Although down to that time it had never been subject to any other than native rule, I can safely say that I have never since seen, although I have visited the plains of Belgium and Lombardy, so luxuriant a scene of cultivation—the result of a soil of wonderful fertility, of long-practised irrigation at all seasons, and of near sixty years of uninterrupted peace." In the Buddhist or Jain temple of Borobudur, Kadoe possesses the largest and most perfect of the ancient monuments of Java. By the census of 1845 the pop. was 457,035, or 724 to the sq. m.; probably the largest rural pop. of any country of Asia, except some parts of China. Pop. (1850) 400,057.

KAFAR, a vil. N. Arabia, situated between the Aga and the Selma chains, about 12 m. S.S.W. Hail, is the largest and most thriving place in that part of the country. Its inhabitants, belonging exclusively to the tribe of Benos Temim, number about 500 families.

KAFOOR, a river, Central Africa, rising E. of the Great Albert Nyanza Lake, and flowing N.E. into the Somerset River, or Victoria Nile. At the point of junction it was perfectly dead water at the season (Feb.) that Mr. Baker first crossed it, about 80 yds. wide, including the beds of papyrus on each side. At a point about 60 m. higher up, the stream is in the centre of a marsh, and although deep was so covered with thickly matted water-grass and other aquatic plants, that a natural floating bridge was established by a matting of weeds two feet thick, upon which men walked across.

KAGOSIMA, or KANGZIMA [add.], a tn. and seaport, Japan, in the S. of Kiusiu Island, near the head of a landlocked harbour, about 40 m. long, 10 to 12 m. wide at the upper part, and 4 to 5 m. at the entrance, is one of the finest harbours in Japan. It is entirely under the control of the feudal Prince of Satsuma, the most powerful daimio or noble in Japan, with his head-quarters at the town, which is strongly fortified with heavy ordnance in the batteries. Here is a manufactory of arms and ammunition after the European model for the equipment and supply of the prince's army of retainers, who own allegiance to him independent of the Tycoon or

central government at Yedo. Communication by electric telegraph is established between Kagosima and other portions of the prince's domain in Kiusiu. At anchor in port may be seen four or five armed steamers of large tonnage and horse-power, purchased from the English and Americans. The batteries protecting the town were bombarded by a British squadron under Admiral Kuper in August, 1863, in retribution for the murder of an Englishman named Richardson by the retainers of Shimadzo Saburo, the prince's father, who refused to give up the murderers, or pay compensation to the relatives of the murdered man. During the engagement three of the enemy's steamers were sunk, their magazine exploded, and the town set on fire while a typhoon was blowing, which reduced its frail wooden tenements to ashes. This brought the Prince of Satsuma to a satisfactory understanding with the British, whose demands he complied with. Since then the town has been rebuilt, the batteries repaired, and the manufactories of ordnance, shot, and shell restored, with an increasing fleet of steamships.—(*MS. Notes; Japan Herald; Blue Books on Japan.*)

KAHI, a tn. S.W. Africa, Kimbunda Land, Upper Mupinda, 140 m. N.N.E. Benguela. It lies at the foot of the Hama range, and is the residence of an independent chief. At some distance from Kahi there is a remarkable waterfall of the same name. It is formed by the Munging, an affluent of the Longa, which, breaking through the mountain chain of Hama, and after descending 1150 ft. in a foaming cataract, pours its water in one mass over a precipice of another 150 ft. The sound is heard nearly 20 m. off. Kahi contains 2500 inhabitants, who are industrious cultivators.

KAI-CHU-FU, a tn. China, near the N.W. coast of the Gulf of Liau-tung, about lat. 40° 30' N.; lon. 122° 25' E. It stands about 10 m. inland, consists of low and ill-built houses, thickly inhabited, and carries on an extensive trade.

KAIIGIRI, a river, Central Africa, rising in a marsh in the Unyoro country, about lat. 1° 35' N.; lon. 32° E., and flowing W. into the Albert Nyanza Lake, into which it empties itself in a splendid volume of water, and by a magnificent fall of about 1000 ft. from the mountains at the E. side of the lake. The neighbourhood of this outfall is very beautiful.

KAIRWAN, or KAIROUAN [add.], [auc. *Vicus Augustus*; French, *Kairouan*], an important tn. regency of and about 80 m. S. by W. Tunis. Its site in a military point of view is well chosen, being on a height which commands an immense plain

KAIRWAN, looking north, from the Cistern of Ibrahim-ben-Aglab.—Charisou, *Aperçu Pittoresque de la Régence de Tunis*.

and the routes leading to the N. of the regency, the sea towards the E., and the Jerid or the Tunisian Sahara; and it is furthermore excellently adapted for being the military centre of a power whose chief force consists of cavalry. The town, which is surrounded by a crenelated wall in good preservation, is well

built, and contains some elegant buildings and a profusion of mosques and tombs of marabouts. The great mosque, which covers almost the whole of one of the quarters, comprises 312 columns of the Roman period, brought from Thystrus, Hadrametum, and Aphrodisium. It is gradually disappearing

under the weight of ages, and of habitual carelessness of the Arabs for the preservation of ancient monuments. Near one of the gates to the S. is a vast open cistern of Saracenic origin, called by the Arabs the cistern of Ibrahim ben-Aglab, an emir famous in the Mussulman records. It is a polygon of 64 sides of above 6 yards each, and is one of the most important structures of the kind in the regency, and serves as a settling pond for the rain-water it receives.

Kairwan is one of the three holy Mahometan towns, and was formerly the centre of the political and religious power of the Arabs in Northern Africa. The fanatical spirit of the population renders access to it difficult. No Christian or Jewish merchant may there take up his residence. Christian travellers, even when protected by the Tunisian government, cannot sojourn there without being exposed to insult, if not to serious danger. After Mecca it is the town which, at the present day, Mahometans most seek to preserve with the greatest rigour from the contamination of other creeds. Its population, which at one time, according to Arab historians, was at least 60,000, does not now exceed 10,000 to 12,000.—(Charissou, *Aperçu Pittoresque de la Régence de Tunis*, 1849.)

KAKA, a tn. Central Africa, l. bank White Nile, cap. of the small independency of Shillook, about lat. 11° N.; lon. 32° E. It is surrounded by tamarind and doum trees, consists entirely of reed huts, and being the only place in the country where strangers are permitted to settle, possesses some commercial importance. The inhabitants, a fine tall well-made race, perfectly black, and with short woolly hair, but with well-formed features, neither flat noses nor thick lips occurring among them, are of predatory habits, but are ruled by a single *meek* or chief, of whom they appear to stand in great awe. Though he levies no direct taxes his revenue is considerable, consisting of the tusks of all the elephants slain by his subjects, and of a third part of the entire produce of their plundering excursions.

KAKAMAS, a tn. Austrian empire, Hungary, county Szabolcs, not far from the Theiss; with 2465 inhabitants, who grow excellent tobacco.

KAKINGI, or KIBABA, a territory, S.W. Africa, Kimbunda country, between lat. 12° 35' and 14° S.; lon. 17° 30' and 19° E., bounded N. by Bihé, E. the Coanza, S. Dalanhoshi and Kilombo, and W. the Kabango and Sambos; area about 9000 sq. m. It has an elevated but tolerably diversified surface, a temperate and healthy climate, and a number of beautiful and fertile valleys alternating with bleak marshy tracts. The forests are extensive, and furnish haunts to numerous wild animals, including lions, leopards, hyenas, and several species of antelopes, wild dogs, and monkeys. The inhabitants belong chiefly to the Ganguela tribes, are mild and industrious, and, taking full advantage of the numerous streams which water and fertilize the territory, raise good crops of manioc and maize, and rear numerous herds of horned cattle and sheep. The cannibalism practised by their neighbours they are said to hold in abhorrence. Till lately Kakingi was parcelled out among a number of petty chiefs, whose feuds and divisions made them an easy prey to the marauders of Bihé and Bailundo. Their sufferings have taught them a better policy, and they now recognize the supremacy of a single chief, who, by concentrating the formerly scattered forces of the country, has shown himself able to defend it against all invaders and marauders. Thus protected, the inhabitants devote themselves to trade, of which the three staple articles are ivory, wax, and cattle. Pop. about 120,000.

KALA, a tn. Austrian empire, Military Frontiers, Licca district, about 60 m. S. Karlstadt; with a R. Catholic and a Greek non-united church, and the ruins of two Turkish castles. Peter Zrini defeated the Turks here in 1651. Pop. 1980.

KALA, a tn. W. Africa, Bornou, prov. Logon, about 100 m. S.E. Kukawa, and 60 m. from Lake Chad. It is inclosed by high clay walls which start forth from a beautiful grove of fig-trees, is entered by a gate so narrow that an unloaded camel can scarcely pass through it, and consists of spacious oblong houses of considerable elevation. As usual in this part of the country, the place everywhere showed signs of decay, but the pop. is still estimated at 1000, and cotton is extensively cultivated in the district.

KALA-BAGH, a tn. India, r. bank Indus, at the point where it forces its way through the Salt range which stretches from Afghanistan into the Punjab; lat. 32° 57' N.;

lon. 71° 35' E. The river, which has here a width of 350 yds., flows between steep and lofty banks. Along these the road, formed by cutting a gallery in the cliff, proceeds, and is so narrow as not to allow a loaded camel to pass. The site of the town, perched upon the precipice overhanging the road and the river, is very picturesque. The chief manufactures are salt and alum, the effluvia from which, in the process of manufacture, make the town at once a disagreeable and an unhealthy residence. Pop. about 2000.

KALAFAT, a tn. Little Walachia, cap. dist. and on a plain of same name, l. bank Danube, about 1 m. E. Widdin, on the opposite bank, and 370 m. N.W. Constantinople. It is surrounded with walls, consists of about 2000 houses, and has three churches, a townhall, custom-house, quarantine, and cavalry-barracks. It is a strong military position; the Turks having (1853-4) thrown up formidable redoubts and other works partly on two high hills in its plain, while awaiting the attack of the Russians.

KALAHARI DESERT, a region, S. Africa, extending from the Orange River, lat. 29° S., N. to Lake Ngami, and from lon. 24° E. nearly to the W. coast. It is called a desert simply because it contains no running water, and very little water in wells. It is by no means destitute of vegetation and inhabitants. Besides a covering of grass, and of creeping plants in great variety, there are large patches of bushes and even trees; prodigious herds of certain antelopes, which require little or no water, roam over its plains; and on the game thus bountifully provided, as well as on the vegetable products, particularly water-melons, and large tubers of a very remarkable description, a great number of human beings, Bushmen and Bakalahari, subsist. The surface of Kalahari is remarkably flat, and is intersected in different parts by the beds of ancient rivers. The soil is in general a light-coloured soft sand, but in the ancient river-beds there is a good deal of alluvium, which when baked hard, becomes so retentive that in some cases pools formed by the rain contain water for several months in the year.

KALAMANCSA, a tn. Austrian empire, Hungary, co. Somogy, about 20 m. S.S.W. Kaposvar; with a church and a monastery, and a trade in tobacco and maize. There are large oak forests in the vicinity. Pop. 900.

KALAMAZOO, a river, U. States, which rises in co. Hillsdale, in the S. of Michigan, flows circuitously W.N.W., and falls into Lake Michigan. Its direct course is only 98 m., its indirect nearly 200 m. It is from 300 to 400 ft. wide at its mouth, and is navigable at all seasons for 38 m. by vessels of 50 tons.

KALAMAZOO, a tn. U. States, Michigan, cap. co. and l. bank river of same name, and on the Michigan and Chicago railway, 100 m. N.E. Chicago. It stands in a beautiful and fertile country, and has a very attractive appearance, being regularly built in spacious streets, which are shaded by fine oak-trees. Its principal buildings and institutions are ten churches, a college for both sexes, a female seminary, and a state lunatic asylum. The industrial establishments are soap and candle works, an iron foundry, a machine shop, a tannery, flour and planing mills, and factories in which piano-fortes and agricultural implements are made. Pop. (1860), about 6070.

KALAMITA BAY, Black Sea, on the S.W. of the Crimea, commences at Cape Eupatoria, and trends round, first E.N.E. to the town of that name, and then S.S.E. by a gentle curve to its termination at Cape Lukul or Ulukul, near the mouth of the Alma. Near the centre of the bay, the average depth is about 20 fathoms, but on nearing the coast diminishes to 10 and ultimately to 5 fathoms. The only proper roadstead is that of Koslov or Eupatoria, which, however, lies exposed to storms from all points of the compass except the N., where the town and rising ground give it shelter.

KALANY, a river, Ceylon, which rises among the mountains to the E. of Adam's Peak; flows successively and circuitously W.N.W., S.W., and W., and falls into the sea a little N. of Colombo, after a course of 84 m. It drains a basin of 892 sq. m.

KALARASH, a tn. Turkey in Europe, Walachia, cap. circle Yalomitza, on an arm of the Danube, 62 m. S.E. Bucharest. It is the seat of a civil and criminal court, and has a church, a normal school, an infirmary, and a quarantine establishment. Pop. about 3000.

KALAWEVA, or **KALAWAPI**, a tank or lake, Ceylon, which the king Dhatu Sena, about the year 460, endeavoured to form between Anarajapoor and Dambool, about 50 m. N. by W. Kandy. The project commenced by drawing an embankment across the river Kala-oya, which flows N.W., and enters the sea at Calpentin, and was conceived on the grandest imaginable scale, the area submerged being more than 40 m. in circuit, the embankment 12 m. long, and the spill-water of hammered granite, one of the most stupendous works in the island. Unfortunately the levels had not been properly taken, and the superfluous water, after the tank had been filled to the brim, instead of flowing over the spill-water, accumulated in a different direction, broke down the embankment, and caused a fearful inundation. Enough of the embankment still remains to show what an amount of human labour must have been misapplied in raising it; but the area of the tank itself has for ages formed part of the forest.

KALKANDELEN, a tn. Turkey in Europe, in the N.W. of Macedonia, eyalet and 23 m. W. Uskub. It contains 5000 inhabitants, of mixed races—Serbs, Bulgarians, Turks, and Albanians.

KALKINI, a tn. N. America, Yucatan, on the highroad to Merida, from which it is distant 50 m. S.E. It possesses a courthouse, a church, a school, and a Franciscan monastery. The last, which is in a dilapidated state, though a few monks reside in it, was put in a state of defence during the Mexican war, and has its walls loopholed for musketry. In its whole appearance it resembles a fort much more than a building intended for any religious purpose.

KALLEE, or 'BLACK,' the name of three rivers, India:—1, *East Kallee Nuddee*, rises in dist. Mozuffernuggur, in the Doab, in lat. 29° 19' N.; lon. 77° 51' E., flows S. to Meerut, where it receives the Khodara Nullah, which crosses the British cantonment, then proceeds to Boolunshuhur, where it changes its direction to S.E., and retains it to its junction with the Ganges on its r. bank about 4 m. below Canouj or Kunnoj. Its whole length is 310 m.—2, *West Kallee Nuddee*, which, rising also in the Doab, in dist. Saharunpoor, flows successively S. and S.W., and joins the Hindon on its left after a course of about 70 m.—3, *Kallee Sind*, a river, Malwah, which, rising on the S. slope of the Vindhya range, flows generally N., receiving the Ludkunda and the united Ahoor and Angar at Gagroun. Immediately thereafter it forces its way through the Mokundara range, and winding along through most romantic scenery, reaches the more depressed tract of the route, and finally joins the Chumbul on the right, after a course of 225 m.

KALLEEWAN, a river, Chinese empire, island of Formosa. It has its mouth on the N.E. coast, opposite to a steep island, rendered conspicuous by a sharp conical peak which rises to the height of 1200 ft. Though the surf breaks heavily on the beach, and there are only 3 ft. on the bar at low-water, it is much frequented by junks, whose high bulwarks and great buoyancy enable them to enter with comparative ease. The entrance to the river is $\frac{1}{2}$ m. wide, but the channel immediately narrows to 200 yards, and continues to decrease, so that at 4 m. up the width is only 50 yards, with a general depth of 5 to 6 ft. At 7 m. the depth is only 3 to 4 ft., and the channel so narrow as scarcely to allow the gig of H.M.S. *Inflexible*, which had ascended so far, to use its oars.

KALLNA, a tn. Austrian empire, Bohemia, circle and 12 m. N.E. Gitschin; with a parish church, saw and other mills, and 1500 inhabitants.

KALOUMA, an isl. in the N. of the Coral Sea, belonging to the Louisiade Archipelago, to the E. of New Guinea, is 5 m. long from N.E. to S.W., by 3 m. broad, and is traversed by two ridges of hills, one of which has a height of 962 ft., and the other of 768 ft. Between the ridges is a valley opening into a bay on the S. coast. The island is well peopled, and has a large village on its N. point.

KALOWA, a vil. W. Africa, Bornou, 160 m. W. Kukawa. It consists of about 200 huts, every one with its courtyard shaded by a korna or bito tree (*Balanites*), and presents a pleasing appearance of industry and comfort. Among the employments are the spinning and cleaning of cotton, weaving, and the making of reed-mats.

KALU-OYA, a river, Ceylon, which rises in a moun-

tainous dist. near the E. frontier of the W. Province, flows circuitously E., and falls into the sea near Caltura, after a course of 72 m. The area of its basin is 1141 sq. m.

KAMARA, or **KUMAR-BIEA**, a river, Manchouria, which rises in a mountainous but well-wooded district, about lat. 52° 40' N.; lon. 122° E., and flows first E. and then S.E., pursuing a course nearly parallel to that of the Amoor, which it joins on its r. bank in lat. 51° 30' N.; lon. 126° 50' E. The forests near its source supply the Chinese arsenal of Argunt, and the country along its banks abounds in moose-deer, wild goats, sables, and squirrels.

KAMBA, a kingdom, S. Africa, between lat. 16° and 17° S., and lon. 20° 25' and 21° 25' E. It is bounded N. by the kingdom of Molondo, E. by the river Kunene, S. by the land of the Humbi, and W. by the sandy desert of Affe. Its inhabitants live not in towns and villages, but in detached and scattered dwellings. They belong to the negro stock of Munyaneka, and speak the same language. This little kingdom appears like a true oasis in the desert. It has a very hot climate, and being abundantly, but not excessively, watered by the Kunene, is of great fertility, produces manioc in abundance, and some tobacco. Unfortunately the habits of the people are more predatory than industrious, and they are almost constantly at war with their neighbours. Pop. estimated at 12,000.—(*Travels of Ladislas Magyar*.)

KAMBASA, a tn. W. Africa, Hausa States, prov. Kebbi, a little W. of Gando, and 60 m. S.S.W. Sokoto. It lies on the N. side of a large swamp, affording excellent ground for the cultivation of rice; and has, in addition to the wall which encircles the whole town, a separate wall which intersects it, and divides it into two distinct quarters. The greatest obstacle to an increase of prosperity is the troubled state of the surrounding country.

KAMBUITE, a tn. S.W. Africa, Kimbunda country, territory Kibala, near l. bank Longa, 160 m. S.E. Loanda. Its inhabitants, about 2000, employ themselves in agriculture and fishing.

KAMENGRAD, a tn. Turkey in Europe, in the N.W. of Bosnia, 30 m. W.N.W. Banyaluka. It possesses extensive mines of iron and silver, and contains about 3000 inhabitants, who are chiefly employed in casting and working iron.

KAMENSKAIA, a tn. Russia, gov. Don Cossacks, cap. dist. and r. bank Donitz, 65 m. N. Novo-Teherkask; with two annual fairs, and 10,585 inhabitants.

KAMERA, a tn. S.W. Africa, Kimbunda country, territory Selles, 50 m. E. by N. Benguela. It occupies the top of a hill overlooking several romantic valleys, and contains about 1500 inhabitants, whose chief employment is in making *dongo* thongs or laces, which they dispose of in considerable quantities to the European factories on the coast.

KAMESZNICA, a tn. Austrian empire, Galicia, circle Wadowice, about 40 m. S.W. Cracow; with a paper and a powder mill, and iron mines.

KAMIENICA, a tn. Austrian empire, Galicia, circle and about 14 m. S.W. New Sandee; with a paper-mill and glass-works, and 1200 inhabitants.

KAMIESCH BAY, Black Sea, in the S. of the Crimea, about 1 m. E. Cape Khersonese, properly consists of two distinct indentations, forming a common sheet of water at the entrance, but afterwards separated by an isthmus about 700 yards broad. The more E. is properly called Kamiesch, and the W. Kazatch or Fanary Bay. The greatest depth, from 8 to 10 fathoms, gradually decreases to 2 fathoms.

KAMINISTIQUIA, a riv. British America, which issues from Great Dog Lake, flows in a very tortuous channel, first S., then E., and falls by three mouths into the W. side of Thunder Bay, on Lake Superior, at Fort William. Within half a mile of its mouth the water shoals rapidly, and on the bar is only from 3½ to 5½ ft. deep, but immediately afterwards a depth of 12 to 14 ft. is maintained. The river, however, is totally unfit for navigation, in consequence of rapids and falls. The principal of these, called the Grand or Kakabeka Falls, 17 m. of direct, and 30 of indirect distance from the mouth, have a sheer descent of 105 ft. over a sharp ledge, into a narrow and profound gorge. The surrounding scenery is very beautiful.—(*Ibid.*)

KAMLOOPS, a fort or station and lake, British Columbia. The fort, belonging to the Hudson's Bay Company, is situated on the S. bank of the Thompson, a few

hundred yards below the junction of the N. with the S. branch, 65 m. N.E. Lytton. The Shushwap branch of the Thompson coming from the S. turns to the W., to enter the Shushwap Lake, and flows in the same direction to Kamloops, below which its waters are rendered muddy by the accession of the northern branch. Seven miles below the river expands into Lake Kamloops, and issues from it again clear and pellucid. Around Kamloops rolling hills, covered with bunch-grass and scattered pines, rise in every direction. The pasturage is very rich and extensive, and large bands of horses, herds of cattle, and flocks of sheep, are kept here by the Hudson's Bay Company. The Shushwap Indians occupy the surrounding country.

KAMMANE, a tn. W. Africa, Hausa States, 50 m. S. Sokoto. It presents a pleasing interior, tall donn-palms starting up between the several granite mounds which here rise to some height, and form a peculiar feature in the scenery both of the town and the surrounding country. The inhabitants are very industrious, and manufacture cotton goods, particularly shirting, which are celebrated both for the strength of the fabric and the lustre of the dye. The chief agricultural products are rice, sorghum, cotton, and indigo. The number of the inhabitants can only be guessed at, but must be large if there is any foundation for their own statement that they can bring 5000 archers into the field.

KAMOURASKA, a tn. British America, Canada East, cap. co. of same name, r. bank St. Lawrence, 70 m. N.E. Quebec. It possesses a R. Catholic church, a court-house, where the criminal, superior, and circuit courts are held; a gaol, an academy of the Frères de la Doctrine Chrétienne, machine works, and some general trade. Pop. about 2600.

KAMPAR, a native state, Indian Archipelago, on the N.E. side of the island of Sumatra, is bounded on the N. and N.W. by Siak, to which it is tributary, W. Menangkabo, S. and S.E. Indragiri, and E. the Straits of Malacca. A river of same name traverses it throughout from E. to W., but is of no navigable importance, being shallow, full of sandbanks, and subject to a dangerous bore. The surface was covered with forests when the Portuguese first visited it, and still continues in the same state. The inhabitants, described as simple and peaceable, are chiefly employed in cultivating the sago palm. A small quantity of tin and gold is produced within the province. The Malays are the dominant class, but the great bulk of them, though they speak a Malay jargon, seem to be distinct from them.

KAMPTEE, a British cantonment, India, territory and 10 m. N.N.E. Nagpore. It stretches for $4\frac{1}{2}$ m. along the r. or S. bank of the Kunnau. The officers' houses, situated for the most part close to the river, are large and commodious, and have spacious compounds with excellent gardens attached to them. In the centre of the cantonment are the Parsees' shops, and a little to the S. the Sudder bazar, which has houses and shops of all descriptions, containing everything that can be required by natives or Europeans. At the W. end of the lines are large ranges of barracks for the European infantry and the horse, and foot artillery. The other most conspicuous buildings are a commodious church, and the different European and native hospitals. The climate is remarkable for its extremes of both heat and cold, and is subject to sudden changes which are trying to constitutions previously debilitated. In April, with the thermometer ranging at 100°, severe hailstorms sometimes occur.

KAMURI, a tn. and fort, India, presid. Madras, dist. and 40 m. S.S.E. Madura, on the Kandar. The tn. occupies part of both sides of the river, having on the N. side a wide street with a Hindoo temple in its centre, and on the S. side a number of streets generally narrow and crooked and lined with low mud huts, almost the only exception being a grand terraced house belonging to a native, and standing out in strong contrast to the others. The fort, seated on elevated rocky ground on the N. side, and commanding a most extensive and beautiful prospect, is small but of some strength, being built of stone in a circular form, and inclosed by double walls of great height and thickness flanked with bastions. Kamuri is noted for its long cloths of fine quality, and has among its inhabitants a number of wealthy merchants, who trade largely in cotton, which is grown here in greater abundance than any other part of the district. At the market, which is held every Tuesday, and is attended by crowds of

people from the surrounding districts, a good number of cattle are sold.

KANAGAWA, a tn. and seaport, Japan, isl. of Nipon, N. side of a bay in Yedo harbour, 16 m. S.W. of that city. It is a long narrow town, stretching for two or three miles along the bay, having one main street only. The houses are built of wood; the shops large and well supplied. The shores of the bay are very beautiful, and covered with villages, while the view inland is bounded by the magnificent cone of Fusi-yama. The American consul and the governor of Yokohama reside at Kanagawa, while the consuls and vice-consuls of the European powers reside at Yokohama. Yokohama, which is the port open to foreigners, and about 3 m. lower down, was built by the Japanese government expressly for the exigencies of the European trade. Two small streams flow into the bay between these two places, and several dykes along their banks show that much land has been reclaimed and converted into rice-fields. There are several pretty temples in the vicinity, and many large black wooden buildings, store-houses, and depôts of the government. The street of the town is part of the *tokaido* or great highway of the island, from the capital to the N. and S. extremities. Between Kanagawa and Yedo the road is as wide and well made as any country road in Europe, being formed of coarse gravel, well packed and levelled. Along the whole distance the roadside is more or less occupied by tea-houses, small shops, and dwellings of different kinds. Where these intermit, the road is bounded by quick-set hedges and trees as in Great Britain, with ditches on either side to drain it, and bridges across the streams that flow into the bay. According to the custom of the country this is the 'official' road, along which the princes and nobles travel to and from Yedo, with large bodies of armed retainers. On such occasions foreigners are warned not to appear, which happened on one occasion near Kanagawa, when an Englishman named Richardson was cut down and killed; a circumstance that led to the bombardment of Kagosima. In the Elgin treaty with Japan, Kanagawa is named as one of the open ports, and thither the British and other treaty powers went in 1858-9; but the anchorage was found to be so shallow, and the place so inconvenient for residence and trade, that the merchants, seconded by the Japanese, persuaded the consuls to remove the port to Yokohama, a small fishing village on the S. side of the bay. (See YOKOHAMA.)—(MS. Notes; Blue Book on Japan.)

KANARA, a tn. Abyssinia, cap. dist. Kedaref; lat. 14° 10' N.; lon. 30° 50' E. It is a large place, which was at one time a great entrepôt for the trade between Abyssinia and Soudan. That trade having found a different channel, Kanara has greatly declined, and has at present a scantily supplied market, in which the principal articles exposed for sale are rice, sugar, tobacco, cottons, Turkish shoes, and German sword-blades. The surrounding district is populous and well cultivated.

KANCZUGA, a tn. Austrian empire, Galicia, circle and about 24 m. E. by S. Rzeszow, with 1650 inhabitants, chiefly employed on working in wire and making earthenware. It was once a place of importance, and was taken and burned by the Turks in 1498.

KANDUMBA, a tn. S.W. Africa, Kimbunda country, near the centre of territory Sambos; lat. 12° 55' S.; lon. 17° 15' E. It lies along the ridge of a hill rising with a gentle acclivity, is inclosed by a palisade and a ditch, and its inhabitants are industrious cultivators and traders. The Kunene has its source in a marsh in the vicinity. Pop. 2500.

KANGKAO, or **KANGKAU**, a tn. Cambodia, near the mouth of a river of same name, in the China Sea, lat. 10° 14' N.; lon. 104° 55' E. It is a place of considerable trade, inhabited chiefly by great numbers of Chinese, whose principal market is Singapore, to which they export large quantities of rice and salt. The great drawback was the shallowness of the harbour, but this has been in a great measure removed by opening an old canal which communicates with the Mekon. Kangkao occupies the site of an older town which was a great emporium for the whole Cambodian trade, and well known to Europeans under the names of Pon-tea-mas and Potai-mat. The Siamese, envying the rapid growth and prosperity of this place, destroyed it in 1717.

KANGROA, a vil. Aracan, dist. Rala, l. bank Koladya,

a little above the junction of the Pee-Khyoung. 'The houses are large, in groups of three and four, inclosed in bamboo palisades, with narrow paths winding between them, and all buried in a dense grove of mangoes, jacks, betel-nuts, guavas, plantains, cocoa-nuts, and pine-apples.' The inhabitants, though Mussulmans, have heavy Jewish features, and wear huge turbans.

KANHAN, a river, India, which rises in the Deogarh Mountains, territory Saugor and Nerbudda, pursues a very tortuous course, generally S.E., passes the British cantonment at Kamptee, and about 45 m. below joins the Waingunga on its right, in lat. 21° 5' N.; lon. 79° 39' E. Its whole course is 175 m. At Kamptee it has a channel 500 yards wide. The chief use made of it is in floating down timber.

KANIETI, a river, Central Africa, a tributary of the Sobat, rising among the Madi Mountains. It has its source in a beautiful valley, well wooded, and about 6 m. broad, in the heart of the mountains, about lat. 4° 29' N.; lon. 33° 40' E. It first flows W. for about 60 m., and then bends to the N. and N.E., and uniting with the Chol in lat. 5° 40' N., and with other affluents of the Sobat, runs into that river. The stream is rapid, and a considerable volume of water is carried by it to the Sobat during the rains.

KANITZA (TURKISH), a tn. Austrian empire, Banat, circle and 40 m. N.W. Temesvar, cap. dist. of same name, on the Theiss; with a castle with a fine park, a trade in wine, tobacco, sheep, and cattle; and 2211 inhabitants.

KANIZSA (GREEK), [add.], a tn. Austrian empire, Hungary, co. Zala, cap. dist. and on a river of same name, 24 m. S.S.E. Zala Egerszeg. It occupies a marshy site, is the seat of a district court, and several public offices; contains a Piarist college, an under-gymnasium, a high-school, a Franciscan monastery, a savings-bank, two hospitals, one of them for Jews, a Jewish asylum for children, manufactures of liqueurs, a brewery, tileworks, and a steam-mill. Kanizsa is the principal market for the Slavonian fat cattle. P. 11,722.

KANNAGHERRY, a tn. India, Nizam's Dominions, 45 m. N.W. Bellary. It consists of about 500 houses, is defended by a fort, and carries on a considerable trade in grain. The numerous mounds, ruins, and sculptures around the town, prove that it must at one time have been a place of great size and importance.

KANNEA, or CANNIA, a vil. in the N.E. of Ceylon, Eastern Province, 5 m. N.W. Trincomalee, possesses hot springs, which are in high repute for their medical qualities, and have a peculiar sacredness in the eyes of the Tamils, from bearing the name of the mother of Rawana. It is hence customary to resort to them on the thirteenth day after the death of any of their near kindred or friends, to perform certain funeral rites, and distribute alms. The ruins of a temple to Ganesa can still be traced, but the masonry and conduits which inclose the springs, and convey the water, appear to be the work of the Dutch.

KANO [add.], a tn. Western Africa, Hausa States, cap. prov. of same name, 220 m. E.S.E. Sokoto; lat. 12° N.; lon. 8° 20' E. It stands within an area of an irregular pentagonal form, inclosed by a wall 30 ft. high, with a ditch on either side of it, and is entered by fourteen gates made of wood, and cased with sheet iron. The circuit of the walls is at least 15 m., but of the space within them not more than a third part, situated towards the S.E., is inhabited. This part has at its N. extremity a steep rocky eminence, called Mount Dala, about 120 ft. high, from which the whole city is seen as in a panorama. An object of a less agreeable description is seen towards the centre, where a *jakara* or deep stagnant pool intersects a portion of the city from E. to W., and becoming the common receptacle of its sewage, renders the air almost pestilential. Of the different quarters into which Kano is divided, Dala is the most ancient, and may thus be regarded as its original nucleus. This distinction is undoubtedly due to its natural strength, and it still so far retains its precedence by continuing to be the residence of almost all the wealthy Arab and Berber merchants. The other quarters N. of the *jakara* are inhabited by people of the Hausa race. Among the other quarters is one called Yola, which is considered as the court-end of the city, and possesses an additional interest from having given its name to the modern capital of Adamawa. Nothing can be more irregular than the ground-plan of Kano. In every quarter clay houses and

huts, with thatched conical roofs, are mingled together without any regard to uniformity. In Dala, where Arab influence prevails, and it might be inferred from the wealth of the occupants that the houses would be superior, the reverse is the case. They are indeed built of clay, but in the most uncomfortable form, the only object contemplated being the greatest degree of privacy for domestic life. This has too often been secured by means of small courtyards and apartments from which fresh air and light are systematically excluded, and hence, in this respect, the houses of Kano are very inferior to those of Agades and Timbuktoo. The inhabitants are very industrious, and have the merit of carrying on an extensive trade in the produce of their own manufactures. Of these the principal articles are cotton cloth, woven and dyed in the form of tobies; *turkedi*, or the oblong piece of dress, of dark blue colour, worn by the women; the *zenne*, or plaid of various colours; the *rawani baki*, or black litham; various articles in leather, as sandals and shoes, bags plain and ornamented, bridles; tanned hides, and red sheepskins. 'The great advantage of Kano,' says Dr. Barth, 'is, that commerce and manufactures go hand in hand, and that almost every family has its share in them. There is really something grand in this kind of industry, which spreads to the N. as far as Mourzouk, Ghat, and even Tripoli; to the W. not only to Timbuktoo, but even as far as the shores of the Atlantic, the very inhabitants of Arguin dressing in the cloth woven and dyed in Kano; to the E., all over Bornou, although there it comes in contact with the native industry of the country; and to the S. it maintains a rivalry with the native industry of Igbora and Igbo, while towards the S.E. it pervades the whole of Adamawa, and is only limited by the nakedness of the pagan *sans-culottes* who do not wear clothing.' In addition to this trade in native produce, Kano has an important transit trade, confined chiefly to two great staples. The one is the guro or kola nut, which has become to the natives what coffee and tea are to the English; the other unfortunately is slaves. Salt and natron also deserve to be mentioned. Of the former at least 20,000 loads, conveyed by pack-oxen, sumpter-horses, and asses, pass annually through the Kano market; of the latter, which is almost all consumed in the province, 3000 camel-loads. Ivory does not at present form an important item. The principal European goods exposed in the market of Kano are bleached and unbleached calicoes and cotton prints from Manchester, French silks and sugar, red cloth from Saxony and other parts of Europe, beads from Venice and Trieste, a very coarse kind of silk also from Trieste, common paper with the sign of three moons, sword-blades from Solingen, razors from Styria. A vast increase, as well as a complete revolution in the import trade of Kano would be produced by opening the navigation of the Niger. The inhabitants, composed chiefly of Kanar or Bornou people, Hausawa, Fulbe or Fellatah, and Nyffawa or Nupe, with a considerable sprinkling of Arabs, are roughly estimated at 30,000, exclusive of a large floating population, which, during the busy season, may nearly double the number.

KANPOO, a tn. China, prov. Chekiang, about 25 m. E. Hang-chow-foo. It is an ancient place, supposed to be the same as mentioned by Marco Polo under the name of Kanfoo. At that time it was the seaport of Hang-chow-foo, and frequented by ships from India and other regions; but the sands and the alluvial deposits of the Yang-tze-kiang have so encroached that it is now an insignificant inland town, with a few passage junks, which keep up a communication with the opposite shore, and convey principally Chinese passengers and pigs.—(Fortune's *Residence*, 1853-6.)

KANSAS, a tn. U. States, Missouri, r. bank Missouri, not quite a mile below the confluence of the Kansas, and at the terminus of the railway from St. Louis, 125 m. W.N.W. Jefferson. It stands on high ground, consists of spacious streets and substantial houses, mostly of brick, and contains seven churches, two female seminaries, a high-school, a German free-school, and various other schools. The manufactures consist chiefly of leather, boots and shoes, iron castings, and brick, and the trade has for its staple articles pork and lumber. Pop. (1860), 4418.

KANSAS, a state, U. States, between lat. 37° and 40° N.; lon. 94° 40' and 106° 50' W., bounded N. by the territory of Nebraska, E. Missouri, S. the Indian territory and New Mexico, and W. New Mexico and Utah. With the exception

of the N.E. corner, where the boundary line follows the course of the Missouri, its shape is nearly that of a parallelogram; greatest length E. to W. 650, breadth 200 m.; area, 114,798 sq. m., of which about one-fourth is unfit for cultivation. The surface in the E. is generally undulating, with an occasional elevation of considerable height; in the centre it is more level, and in the W. it is rugged and mountainous, spurs of the Rocky Mountains penetrating it for nearly 100 m. E. of the Utah frontier. Limestone is the prevailing rock, though sandstone abounds in various localities, and granite, quartz, porphyry, and feldspar are not uncommon. The principal river, and the only one which is navigable within the territory, is the Kansas, which, formed by two branches from the Rocky Mountains, flows E., and with its affluents, which join it on its l. bank, waters a large portion of the N. and centre. The W. and S. are watered mainly by the Arkansas. The most important mineral products are gypsum, limestone, and coal, the last occurring in a prolongation of the Missouri coal-fields. Some gold also has been found, particularly in Pike's Peak, the loftiest summit of the Rocky Mountains in Kansas. The soil is nearly barren over a large part of the centre, where there is a desert tract, extending into N. Mexico, but elsewhere, and particularly in the E., it is rich and deep, consisting of a black loam, mixed sometimes with sand and sometimes with decomposed limestone. The climate is, on the whole, mild, agreeable, and healthy, though sudden changes of temperature and fierce winds prevail in the spring months, and the thermometer occasionally rises in summer to 115°. Tracts of forest occur chiefly in the W., among the spurs of the Rocky Mountains; in other directions their growth has been checked by the fires which often sweep over the prairies, and the trees are in consequence so stunted, that they are seldom suitable for being cut into planks, or for building purposes. The wild animals include the buffalo, elk, deer, antelope, prairie-dog, squirrel, horned-frog, prairie-hen, wild turkey, wild goose, &c. Besides the white settlers there is a large number of Indians, partly wild and partly or wholly domesticated, for whom reservations of territory has been made to the amount, in all, of rather more than 3,000,000 acres. In framing the constitution of Kansas with a view to its admission into the Union, the question of free soil or slavery was so keenly agitated that the contending parties, after attempting to outnumber each other by the introduction of new settlers, came to blows, and a civil war ensued. For administrative purposes the state has been divided into thirty-one counties, which, according to the returns of 1860, contained a pop. of 107,206.

KANUM, a tn. India, Bussahir, cap. dist. Koonawar, on the declivity of a recess embosomed among lofty mountains, at the height of 9296 ft. above the sea; lat. 31° 40' N.; lon. 72° 30' E. The slope is formed into terraces by means of rough and massive stone embankments; the larger of these terraces are overlaid with earth and cultivated, the narrower form the sites of houses, which rise above each other in such a manner that the flat roofs of a lower tier serve as platforms to the tier immediately above them. The houses are not numerous; but as the whole wants of the families must be supplied in a great measure from domestic sources, each contains more than the usual proportion of inmates. As the inhabitants have a strong turn for trade, a dwelling is scarcely deemed complete if it has not a small warehouse attached to it. Kanum possesses a celebrated Buddhist temple, with a library of books printed in the Tibetan tongue. Its lama, elected by the other lamas of the district, takes precedence of them all, but is subordinate to the lama of Ladakh.

KANYENNI, a tn. Western Africa, near the E. extremities of the mountains of Kong, 270 m. N. of the Ivory Coast; lat. 9° 8' N.; lon. 4° 35' W. It is a large place, situated on a water course, and has the most important market in that part of the country. The inhabitants, Mandingoes, are partly Mahometans, partly idolaters.

KAPALLA, a tn. S.W. Africa, Kimbunda country, territory Bailundo; lat. 12° 25' S.; lon. 163° 25' E. It stands on a mountain slope of the Lingi-Lingi range, is surrounded by a dry stone-wall, and contains 2500 inhabitants, whose predatory habits make them the terror of the passing caravans.

KAPITI, or **ENTYX** [add.], an island, New Zealand, Cook Strait, off the S.W. coast of North Island or Ulster. It is 5 m. long from N. to S., and 1½ m. wide, lies nearly parallel

to the main island, from which it is only 3 m. distant, and is wooded and mountainous, its highest peak rising to the height of 1780 ft. On the W. the hills rise steep and precipitous from the sea; on the E. they descend in gentle slopes, and are intersected by deep ravines. Entry Anchorage, at its S.E. extremity, is formed by three small conical-shaped islets, which, with the reefs extending from them, afford good shelter from the S.E., while Kapiti itself protects it from the N.W. The depth of water is from 12 to 17 fathoms. There were formerly extensive whaling establishments on the islets, and whalers have ridden out the whole winter gales at this anchorage.

KAPSDORF, a tn. Austrian empire, Hungary, co. Zips, about 8 m. W.S.W. Leutschau; with saw and flour mills. Beautiful carnelians are found in the vicinity. Pop. 1400.

KAPUKA, a tn. S.W. Africa, Kimbunda country, in the N.E. of territory Sambos; about lat. 12° 40' S.; lon. 17° 30' E. It is fortified by a palisade and a ditch, and has a pop. of about 1200. The Kubango, a large river, rises in its vicinity.

KARA-HISSAR [add.], a tn. Turkey in Asia, pash. Sivas, 86 m. S.W. Trebizond, at the height of 3000 ft. above sea-level. It is an ancient place, which, under Turkish rule, has fallen greatly into decay, though a number of new houses, some of them four stories high, seem to indicate that it has begun to make progress. The principal buildings are the mosques, the castle, and the bazaar. The military importance of the place depended on its castle, which, from the commanding height on which it stands, might well be deemed all but impregnable; but now that it is no longer kept up, and does little more than serve to furnish the governor with a residence, Kara-Hissar has little to depend upon for present or future prosperity except its mines of alum, copper, and silver. The first, by far the most valuable of the three, are extensively worked, and furnish raw material to four large alum factories in the vicinity. The inhabitants, chiefly Armenians and a few Greeks, almost entirely monopolize the bazaar and the trade connected with it. The Turks, who, though the dominant race, form a small minority, confine themselves to agriculture and a few handicrafts.

KARAKAL, a tn. Turkey in Europe, Walachia, cap. circle Romanatzi, in a beautiful valley, 90 m. W.S.W. Bucharest. It is the seat of a court of primary jurisdiction, and has a church and a normal school. An obstinate battle was fought here between the Turks and the Russians, on the 30th of May, 1854, when the latter were defeated. Pop. 7600.

KARANOVATZ, a tn. Turkey in Europe, Servia, circle Tchatchak, on the Ibar, near its confluence with the Morava, 73 m. S. by E. Belgrade. It is the residence of the bishop of Ushitza, and has a church and a school, and a much-frequented yearly market. Pop. 1000.

KARA-SU, a chain of lakes, European Turkey, Dobrudsha, nearly in the line of Trajan's wall, 22 m. W. Kustendji. The area covered by them was originally a valley, which being lower than the waters of the Danube when swollen, received the surplus, and was thus transformed into a chain of lakes, communicating with that river by an outlet 3 m. long, while they themselves extend eastward for 12 m. more. The proposal of forming a navigable canal, which, commencing at the E. extremity of the lakes, should be continued to the Black Sea at Kustendji, derived all its plausibility from the assumption, now proved to be erroneous, that the Danube, instead of merely forming the lakes by its back-water, at one time flowed through them, and had one of its mouths near the E. terminus of the proposed canal.

KARATOVA, a tn. Turkey in Europe, in the N. of Macedonia, eyalet and 40 m. E. Uskub, in a mountain basin open only toward the W. It is watered by three mountain streams, and contains three small mosques and a church. At a short distance there are mines of lead, so rich in silver that there is a furnace for extracting it. Pop. about 6000.

KARCZAG, a tn. Austrian empire, Hungary, co. Stuhlweissenburg, on the Hortobagy arm of the Theiss, and on the railway from Pesth to Debreczin; with 12,689 inhabitants, who mostly belong to the Reformed church, and are employed in cultivating the ground, rearing cattle, and growing wine and melons.

KARIGMAWA, a vil. Western Africa, Bornou, 130 m. N.E. Kano. It is an open straggling place, lying out of the

common track, and probably indebted to its sequestered position for a degree of comfort and prosperity rarely seen in the neighbouring districts. According to Dr. Barth, it 'displayed a most animated and cheerful picture of a wealthy and industrious little community; the men sitting in the shade of some fine caoutchouc-tree, some of them busy making mats, others weaving, while the women were carrying water or setting the pot upon the fire for the evening repast. Cattle, goats, and fowl roved about in considerable quantities.'

KARKENNA, or **KERKENNAH**, a group of islands, N. Africa, Tunis, off the N.E. coast of the Gulf of Gabes, opposite to the town of Sfax. The largest of the islands, about 18 m. long between N.E. and S.W., was called by the ancients Cercinna, and has given its name to the whole group. The inhabitants are very industrious, and weave articles in esparto to such an extent as to form an important branch of trade. They also engage in the sponge and other fisheries, and with the produce of these and their date-trees, which yield far more than they are able to consume, supply themselves with many necessaries and comforts. One use which the Tunisians make of the Karkenna Isles is to employ them as a penal settlement for females.

KARNAK LOGON, or **LOGON BIRNI**, a tn. Western Africa, Bornou, cap. prov. Logon, on the Logon, an affluent of the Shari, 70 m. S. from Lake Chad. It is divided by the river into two parts. The part on the N.W. or l. bank has only one gate, which is so narrow that a loaded camel cannot pass it. Nor is the interior attractive. The cottages evidently belong to the poorer classes, and nothing worthy of notice is seen till the principal street is reached, where the palace of the sultan occupies one side of it, and the palace of the Keghamma or Ibalaghwan the other. The former, inclosed by a wall 14 ft. high, covers a large space, which is occupied chiefly by large courtyards, separated from each other by covered apartments, the sultan's private dwellings, and the public court of audience, with a raised platform on which a rough kind of seat, painted red, serves for a throne. The latter, which was assigned to Dr. Barth as his quarters, surprised him not a little 'by the superior and even grand style of its architecture,' and is thus described by him: 'This very spacious palace consists of a number of wings inclosing small quadrangular courtyards, and having an upper story of extensive apartments. The only part which did not correspond with the magnificence of the rest of the building was the staircase, which was rather dark and inconvenient. My own apartment was not less than 35 ft. long by 15 ft. wide and as many high, and received sufficient light from two semi-circular windows, which of course had no glass, but could be closed by means of a shutter of reed. The ceiling was gable-shaped—rather a remarkable phenomenon in these countries; it was filled out with thatchwork.' The chief branches of industry are weaving and dyeing; in the former the people are very expert and make excellent shirtings; in the latter, owing to the inferiority of their indigo, they do not succeed so well. The principal crops of the environs and whole province are sorghum, millet, and cotton, the last in great quantity.

KARWIN, a tn. Austrian empire, Silesia, dist. Freistadt, about 28 m. E.S.E. Troppau; with a castle, coal-mines, and 1000 inhabitants.

KASAURE, a tn. Western Africa, Hausa States, cap. dist. of same name, 50 m. N.E. Kano. It stands in a rocky district, much of which remains in a state of nature, densely covered with wood, is surrounded by a clay-wall, and has a weekly market. The space it occupies is but thinly inhabited.

KASBA-EL-HAMRA, a vil. N. Africa, Sahara, Oasis of Tnat, dist. Augerut; lat. 30° N.; lon. 1° 20' W. It is advantageously situated at the point where several caravan routes meet; and consists of about 150 houses, grouped in the middle of well-stocked gardens and date plantations. Madder, henna, and excellent tobacco are grown in the vicinity.

KASEEM (UPPER AND LOWER), a prov. Central Arabia, Nejed.—*Upper Kaseem* is an elevated plateau or steppe, and forms part of a long upland belt which crosses the northern half of the peninsula diagonally. Its surface is in general covered with grass in spring and summer, and with shrubs and brushwood at all times, and thus affords excellent pasture for sheep and camels. Sometimes the plain sinks for miles

into a shallow irregular basin, where streams pour down and water collects in the rainy season, leaving pools not entirely dried up even in the autumn. Here the alluvial soil produces a more vigorous crop of shrubs. Intersecting the plateau at an acute angle, are occasional long and broad valleys of light soil, half chalk half sand, furnishing water wherever wells are sunk. Adjacent to the wells rise the villages of Upper Kaseem, numbering about forty, and containing populations varying from 500 to 3000. Every hamlet is surrounded by palm-groves, gardens, and fields.—*Lower Kaseem*, about 120 m. long and 60 m. broad, and 200 ft. below the level of the uplands, stretches out in an immense plain, studded with towns and villages, towers and groves, showing everywhere life, wealth, and activity. Fifty or more good-sized villages, and four or five large towns, form the commercial and agricultural centres of the province; and its surface is moreover thickly strewn with smaller hamlets, isolated wells and gardens, and traversed in all directions by a network of tracks. A series of high watch-towers affords the inhabitants a means of discerning the approach of foray or invasion. The soil, red or yellow, wherever irrigated, bears a copious and varied vegetation. The staple article of cultivation is the date-palm, which is often the entire support of the poor townsman or villager. Corn-fields also, and fields of maize, millet, vetches, and the like, surround the villages, and afford a plenteous harvest, besides melons and pot-herbs. Another produce is that of the cotton plant, but the quantity grown only supplies the home wants. The inhabitants are possessed of commercial and industrial talent, and are cheerful and vivacious. In religion, a long-continued intercourse with Mecca has given them a tinge of modern Islamism; a very low standard of morality prevails. Upon the rise of the practically independent kingdom of Djebel Shomer, Upper Kaseem revolted from the Wahhabee tyranny of Nejed, and annexed itself to the new kingdom by universal consent. The pop. of Upper Kaseem is estimated at 25,000 or 30,000.—(Palgrave.)

KASHIMMA, a tn. Western Africa, Bornou, about 78 m. W. Kukawa. It has a fine healthy site on the top of a sandy swell, which rises about 300 ft. above the valley. It is without defence, and though consisting entirely of huts made of corn-stalks and reeds, is large and populous. The district around is watered by the Kommadugu Wauhe, the main stream of Bornou, is beautiful and luxuriant, but native laziness having allowed its banks to be converted into an almost impenetrable jungle, the elephant has taken possession.

KASHIN, a tn. Russia, gov. and 75 m. N.E. Tver, cap. circle of same name, on the Kashinka, about 8 m. above its confluence with the Volga. It has 28 churches, a monastery, two religious and two secular schools, a distillery and a brewery, a wax-smelting establishment, candle-works, tile-works, &c., and two annual fairs, at which are sold great quantities of glass and stoneware, hardware, linen cloth, yarn, horses, &c. Within the circle great quantities of leather and paper are manufactured. Pop. 4947.

KASHIPOOR, a tn. India, N.W. Provinces, dist. and 30 m. N. Moradabad, in a marshy plain overrun with tall grass and jungle. It is famous as a place of pilgrimage, contains several temples, and possesses a tank of peculiar sanctity, in which pilgrims usually bathe on their way to Badrinath. A ruined fort occupies a height a little to the S.E. An active transit trade is carried on here between Kumaon and Chinese Tartary on the one hand, and the more southern parts of Hindoostan on the other. Some of the traders are said to have accumulated great wealth.

KASHIRA, a tn. Russia, gov. and 50 m. N.N.E. Tula, cap. circle of same name, r. bank Oka. It contains six churches, a circle and a parish school, and manufactures chiefly of woollen cloth. The environs are covered with gardens. Pop. 3185.

KASHNA, **CASHNA**, **KACHENA**, or **KATSENA**, a tn. Western Africa, cap. princip. of same name (which, though now only a province, was once an independent kingdom), 85 m. N.W. Kano; lat. 12° 59' N.; lon. 8° 30' E. It is surrounded by clay walls, inclosing a very extensive space, of which not more than one-tenth is built upon, the rest being laid out in fields or covered with wood. Most of the houses are in ruins, in consequence of the preference given to Kan since the Fellatah

conquest. The governor's house, about $\frac{1}{2}$ m. E. of the other buildings, resembles a large village. The manufactures are chiefly tanned bullocks'-hides, and various articles in leather; and the trade, though greatly decayed, is still considerable. The inhabited houses number about 700. Though it has now lost the appearance of a city, and consists chiefly of a large number of light detached cottages, its importance is still indicated by the immense mass of its wall, which in the lower part measures not less than 30 ft. in height, the vast area which it incloses having an estimated circuit of 13 m. Probably the whole of this space was never covered with buildings, but if only half was so, its pop. must have been at least 100,000. Among the fruits exposed in its market are limes of tolerably large size, and the beautiful large fruit of the gonda (*Carica papaya*). The prov. of Katsena is one of the finest parts of Negroland, and being situated just at the watershed between the basins of the Chad and the Kwara or Niger, at an average elevation of 1200 to 1500 ft., has the advantage of being at once well watered and well drained, so that its climate is less insalubrious than that of some other adjoining regions. Dr. Barth, giving a bare list of the chief places in this prov., says that not less than fifty of them have each 4000 inhabitants.

KASLINSKOI, a tn. Russian empire, gov. Orenburg, on the E. slope of the Ural Mountains, 350 m. S.S.E. Perm. Its churches and other large buildings, with their green domes and golden crosses sparkling in the sun, give it a grand and imposing appearance; while its Zavod or iron-works, situated on the margin of Lake Silatch, are famous for the superior quality of their castings. Among these are tables perforated in tracery and foliage of most delicate execution, chairs of a similar pattern, small boxes, baskets, and card-dishes in beautiful open work, animals, paper-weights, &c.—(Atkinson, *Oriental and Western Siberia*.)

KASR-EL-JEBEL, a fort, regency and 75 m. S.W. Tripoli, in a mountainous district, on the very edge of steep rocky cliffs, with an extensive view over the plain. It was garrisoned at the time of Dr. Barth's visit with 400 men, and was a chief instrument in the hands of the Turks for over-awing the mountaineers, to whom it owes its name, meaning 'the oppressor's stronghold.' So much importance was then attached to it, that its *kaimakan* or governor ranked as the second person in the regency, and ruled over a very extensive tract of country towards the S.E. and S.W.

KASTORIA, or **KESRIE**, a tn. Turkey in Europe, eyalet Rum-III, on an affluent of the Kara-su or Strymon, 21 m. S. Monastir. It is advantageously situated on a lake of same name, where several important roads meet leading both inland and toward the coast, is the seat of a Turkish governor, has many handsome houses of two stories, and carries on a very extensive transit trade. Pop. from 6000 to 8000, chiefly Greeks and Turks, with Albanians, Bulgarians, and Jews.

KASTRON, a tn. Greece, nomarch Cyclades, cap. isl. Milo. It rises in the form of terraces on the loftiest mountain of the island, near its N. coast, and has both a picturesque and a healthy site. Its houses are built partly in the Venetian and partly in the Turkish taste, and it has a justice of peace court, a lazaretto, a Hellenist and a parish school. Northwards towards the coast lie the remains of the ancient Milo. Pop. about 900.

KATAR, a prov. E. Arabia, a dependency of Oman, on the Persian Gulf. It is formed of a great extent of barren hills, almost entirely devoid of trees and vegetation, and is bordered by a muddy beach $\frac{1}{2}$ m. in breadth. Inland, beyond the hills, are downs affording very little pasture, and dotted with clusters of wretched cottages and huts, all walled for protection against marauding Bedouins. The wealth of the province, however, consists in the pearl-fishery, which is the best and most copious in the Persian Gulf; hence the real homes of the inhabitants are in the countless boats which line the shores. The climate of Katar is remarkably dry, and the sea-air loses all trace of humidity a few miles inland. The soil is poor, gravel and marl mixed with sand. The gardens are small and unproductive, and the air, probably owing to the stagnant pools of sea-water that border the shore, is said to be unhealthy.—(*Palgrave*.)

KATCHA, a river, Russia, gov. Taurida, in the S.W. of the Crimea, is formed by several streams from the Yaila Mountains; flows W.N.W. between and nearly parallel to the

Alma and Belbek, collecting its waters from numerous valleys and hollow glens, and lastly passing through a fine open and fertile country, interspersed with villages and embellished with orchards, falls into the Black Sea about 7 m. N. Sevastopol. In summer it is only a shallow brook, but in winter and spring often becomes a swollen and dangerous torrent.

KATHEREIN, a tn. Austrian empire, Silesia, dist. and at a short distance from Troppau, on the Prussian frontier; with a large seam of gypsum, and 2600 inhabitants.

KATONGO, a tn. S. Africa, Makololo country, about 10 m. E. of the Liambeye or Zambesi; lat. $15^{\circ} 16' 33''$ S.; lon. about $23^{\circ} 20'$ E. It stands embosomed among trees on a ridge which there bounds the valley of the Barotse. At this point commence the lands which are never inundated, and which, rising gently from a dead level, greatly resemble the edge of the desert in the valley of the Nile. The Banyeti inhabitants, who are industrious and skilful cultivators, have fine gardens, and raise large quantities of maize, millet, and native corn (*Holcus sorghum*), large in grain, and beautifully white. They grow also yams, sugar-cane, Egyptian arum, sweet potato, manioc or cassava of two kinds, pumpkins, melons, and ground-nuts. The view from the ridge, embracing the broad river glancing out at different points, the valley dotted over with villages and cattle stations, and the cattle quietly grazing in large herds, while hundreds of *leches* (antelopes) feed securely beside them, is truly enchanting. There is, however, a serious drawback to all this beauty. No part of the district is free from fever; even the natives suffer by it. Dr. Livingstone, though he tells almost nothing of the town, declares it to be 'the best place' he had yet seen on his journey to Loanda.

KATSENA. See *KASHNA* in *Supp.*

KATTYWAR, a prov. India, comprehending the whole of the peninsula of Gujerat. It lies between lat. $20^{\circ} 42'$ and $23^{\circ} 10'$ N.; lon. $69^{\circ} 5'$ and $72^{\circ} 14'$ E., and is bounded N. and N.W. by the Runn and the Gulf of Cutch, S.W. and S. the Arabian Sea, and E. the Gulf of Cambay and dist. Ahmedabad; area, 19,850 sq. m. It is divided into 10 districts called *prants*, which again are subdivided into about 210 petty territories, held by chiefs as tributaries either of the British government or of the Guicowar. Their aggregate revenue is estimated at £450,172, of which £104,739 is payable as tribute. The surface is generally undulating, but rises occasionally into a number of ridges, which attain their greatest height near the centre, where most of the streams have their sources. Collecting the drainage as they descend, they carry it to the ocean directly, or indirectly through the Runn, the Gulf of Cutch, and the Gulf of Cambay. In the S. there is a wild tract full of caverns, ravines, and other fastnesses, and with a climate so deadly that none but the Seedees, a race of African descent, can encounter it with impunity. The grains most cultivated are bajra or millet, joar or maize, and wheat. Cotton is the principal commercial crop. The soil being generally sandy cannot be maintained in a state of fertility without constant irrigation. The principal domestic animals are the horses, once celebrated, but now greatly deteriorated; kine, of which one breed, called *desamis*, is much prized. The buffaloes are also excellent, but the camels are few, small-sized, and little valued. Among the wild animals are lions, leopards, chitas or hunting leopards, wolves, jackals, wild swine, antelopes, and porcupines. None of these, however, are so destructive as a species of migratory rats, about twice the size of the common rat, which make their appearance at intervals, and move across the country, ravaging it to such an extent that in 1814 they actually produced a famine. Whence they come, and whither they go, are points which have not yet been ascertained. Pop. 1,463,900.

KATUBU, an island of the Niger, W. Africa, 300 m. S.E. Timbuktoo. It is almost entirely occupied by a vil. of the same name, which is adorned by two beautiful tamarind trees, and has a pop. of about 1200, living in about 250 huts.

KATUMBELA, a tn. S.W. Africa, on both sides of the river of same name, 20 m. N. Benguela. It consists of about 100 houses, among which those of the Portuguese commandant and some private individuals have a handsome exterior; the others are mere huts thatched with cane. On the S. bank of the river stands the fort, occupying a conical hill, and provided with six guns to guard the passage, and overawe the predatory hordes of the neighbourhood. The inhabitants,

chiefly Mundombe, pure and mixed, live especially by trade, for which the caravans passing here give great facilities. They also cultivate the soil, raising maize, potatoes, manioc, bananas, and ananas.—The RIVER Katumbela, which is tolerably broad and deep, rises in the S.E. among the mountains of Kitata, descends rapidly from its lofty source, and receives a number of mountain torrents, which, in the rainy season, cause it to overflow its banks. While pursuing its course to the N.W. it forms several waterfalls. Having now become a tolerably sized river it flows W. in a deep and rocky bed, separating the independent Ganda and Kissandshi tribes from the Portuguese possessions, forms another beautiful waterfall called Upa, and dividing into several branches, reaches the ocean. Owing to bars at its mouths, and falls and cataracts in other parts of its course, it is nowhere navigable.

KAUMBERG, a tn. Austrian empire, Lower Austria, circle Upper Wienerwald, 25 m. S.W. Vienna; with several saw-mills, and a considerable trade in fruit, which is grown abundantly in the district. Pop. 1230.

KAVALLA, a tn. Turkey in Europe, eyalet and 75 m. N.E. Saloniki, on a bay of the Archipelago, partly formed on the S.E. by the island of Thaso. It was once a notorious resort of pirates, and is the birth-place of the celebrated Mahomet Ali, who erected a Turco-Greek school here in 1846, and endowed it with property belonging to him in the island of Thaso. Pop. about 3000.

KAWAU, an isl. New Zealand, near the W. shore of the Gulf of Hauraki, on the N.E. of North Island or Ulster. It is $3\frac{1}{2}$ m. long from N. to S., and nearly the same in breadth from E. to W., has an average height of 500 to 600 ft., is hilly and well wooded, and in Bon Accord harbour on its W. side affords good anchorage for the largest vessels. On the S.W. there is a copper mine in course of being worked, and a large smelting establishment.

KAZAN, a tn. European Turkey, 35 m. S.S.W. Shumla, in a kind of mountain cauldron in one of the most inaccessible valleys of the Balkan. Its church, *menzel khanè* or post-office, and two schools, are the principal public buildings. It is an industrious place, and carries on extensive manufactures of coarse cloth, and is said to owe its prosperity to its municipal government, which gives a degree of freedom and independent action unusual in Turkey. The schools of Kazan are said to supply the best popular teachers in Bulgaria.

KAZANZA, a tn. S.W. Africa, Kimbunda Land, dist. Mupinda, is situated at the N.E. extremity of a lake of same name, about 12 m. E. of the Atlantic, and N. by E. Benguela, is the residence of an independent chief, and has a pop. of 2000, who are famous hunters of elephants and hippopotami.

KAZIMERZ, a tn. Russian Poland, gov. Lublin, named after its founder, Casimir the Great, stands in a pleasant valley on the r. bank of the Vistula, has three churches, one of them a very ancient and beautiful structure, numerous corn magazines, and a large trade in corn and other produce. An obstinately contested battle was fought here between the Poles and Russians on 16th April, 1831. The town contains 2725 inhabitants, of whom the majority are Jews.

KEBBI, or BIRNI-N-KEBBI, a tn. W. Africa, Hausa States, cap. prov. of same name, 70 m. S.W. Sokoto. It stands on a slope about 250 ft. above the *faddama* or large green valley, which intersects the whole province from E.N.E. to W.S.W., and were the country more secure would by its extraordinary fertility richly reward the labours of the cultivator. Though walled, well built, and rather densely peopled, the almost total want of trees gives it a dull look. About a mile from the present town stood an old town, to which the name of Birni-n-Kebbi is properly applied, on a beautiful and most commanding site. It was founded by the dynasty of Kanta when the rival Songhay empire was broken up, and became the centre of a considerable trade till it was in its turn destroyed by the Fellatah. Its wall, and some ruins, still remain to show where it stood.

KEBILLI, a tn. Africa, regency and 225 m. S.S.W. Tunis, cap. dist. Nefsaua. It possesses five mosques, and sends out several direct caravans, but at present is only recovering from the disasters inflicted upon it by the bey, who, in 1857, to punish it for harbouring a celebrated rebel from Tripoli, of the name of Rhoma, brought a force against it and

laid great part of it in ruins. The inhabitants are distinguished for industry and intelligence, and have fair complexions.

KECHIDUNIYA, a tn. W. Africa, Bornou, 180 m. N.E. Kano. It is a comfortable and populous little place, surrounded by a stockade, and has a well-frequented market, in which sour-milk, ground-nuts, grain, earthenware, young cattle, and sheep are sold.

KE-CHOW, or KI-CHOO, a tn. China, prov. Houpe, 1. bank Yang-tze-kiang, 60 m. S.E. Woochung. It is surrounded by walls, crowning a bluff which overhangs the river, and defended by a circular stone fort or martello tower, rising from the midst of the channel. The number of junks shows that the trade is extensive.

KECSA, a tn. Austrian empire, Banat, about 20 m. W.S.W. Temesvar; with 2779 inhabitants, who grow excellent maize and oats, and rear great numbers of sheep and cattle.

KEDJEREE, a tn. India, presid. Bengal, 40 m. S.W. Calcutta, on the E. shore of the estuary of the Hooghly, and on the most westerly channel. This channel, having formerly a depth of 6 or 7 fathoms, was that chiefly used by shipping destined for Calcutta, but in consequence of a sand-bank which has been allowed to accumulate, the depth does not now exceed $2\frac{1}{2}$ fathoms at low water. The first section of telegraphic communication in India was laid between Kedjeree and the capital.

KEENE, a tn. U. States, New Hampshire, cap. co. Cheshire, 1. bank Ashuelot, at the junction of the Cheshire and Connecticut River railways, 77 m. N.W. Boston. It is pleasingly situated, regularly laid out, and well built, the principal streets radiating from a central square on which a handsome court-house is built. The other public buildings are three churches, a high-school, and a town-hall. The manufactures include woollens, machinery, and doors; sashes, and blinds, for export to California and Australia. P. 4320.

KEER (ALT and KLEIN), two places, Austrian empire, Banat, circle Neusatz:—*Alt* or *Old Keer*, about 12 m. N. Neusatz, contains 3421 inhabitants, chiefly employed in agriculture and the rearing of cattle.—*Klein* or *Little Keer*, about 4 m. N. of the former, contains 2502 inhabitants, who trade in agricultural produce, chiefly butter and hemp, and in cattle.

KEFF [anc. *Sicca*, or *Sicca Veneria*], a tn. regency of and 88 m. W.S.W. Tunis. It is built on an elevated plateau, in the midst of mountains about 27 m. from the frontier of the Algerian province of Constantine, and in almost the same latitude with that city. Its position renders it the most important military point of the regency. In the centre of the town are the remains of a remarkable Roman well, the only antiquity existing in the place. The inhabitants consist chiefly of warlike mountaineers, of a remarkably independent spirit, of which they have often given proofs in times past in their intercourse with neighbouring Arab tribes, and even the beys of Tunis have met with resistance from them and a refusal to pay tribute. From the mountains of Keff are obtained the horses called Djebelis, which form the chief part of the remounts of the Tunisian cavalry. Keff is surrounded with forests of cedar and chestnut, which attain in this locality a larger size than in other parts of the regency. The pop. of Keff is 5000 to 6000.—(Chassiron, *Aperçu Pittoresque de la Régence de Tunis*.)

KEHNU, a vil. Persia, prov. Kerman, about 70 m. N. of the Straits of Ormuz. It consists of about 300 huts clustering round the bottom of a ruined fort, built partly of stone and partly of earth. The ruin of the fort is attributed to earthquakes, which are said to be of frequent occurrence. The inhabitants, a mixed race of blacks, or the descendants of Beloochees, are almost all slaves belonging to the chief of the place. The chief products of the district are barley, wheat, rice, indigo, cotton, and dates.

KEIDANA, a tn. Russia, gov. and 34 m. N.N.W. Kovno, circle Rossiena, on the Nevesha; with a Greco-Russian, a R. Catholic, a Lutheran, and a Reformed church, a synagogue, and a pop. of 3728.

KEIMES [anc. *Tricomia*], a tn. Turkey in Asia, Anatolia, 72 m. S.E. Constantinople. It stands on the side of a brook, whose banks are well planted with plum and apple trees, and contains the remains of ancient buildings, which have been much employed in modern erections, and more especially in the mosque, where, among other objects of interest,

there is a large sarcophagus. The inhabitants raise crops of barley and wheat in the surrounding district, which, however, is by no means fertile, and among their other live-stock possess some Angora goats.

KELENO, a natron lake, W. Africa, near the N.W. extremity of Bornou, on the frontiers of provs. Muniyo and Zinder. It is situated in a hollow at the foot of a rocky eminence which rises out of a plain, not far from a village called Magajori. All round the lake, and in striking contrast with its snow-white surface, is a border of luxuriant vegetation, formed by well-kept cotton grounds and kitchen gardens. On the lake itself, which has a circuit of $1\frac{1}{2}$ m., there is a crust of natron resting on a black boggy soil, and varying in thickness according to the season, being scarcely an inch thick in the hot season, and considerably more at the end of the rains.

KELLING, a tn. Austrian empire, Transylvania, circle and about 25 m. N.W. Hermannstadt; with an old castle, a trade in wine, and 1120 inhabitants.

KELLY, a harbour, S. America, Chili, in the N.E. corner of the Gulf of Penas, between San Estevan Gulf and Cheap Channel; lat. (N. point) $46^{\circ} 59' S.$; lon. $74^{\circ} 5' W.$ It is 2 m. wide at its entrance, stretches for about 8 m. in a N.E. direction, and possesses the advantages of sufficient depth, complete shelter, and abundance of wood and water. It is described, however, as 'chill, damp, and dreary.' Its shores are high and rugged; a peak on its S. side rising to the height of 1540 ft., while some of the hills immediately beyond have heights varying from 1400 to 1800 ft. One of the most remarkable features in the scenery is an extensive glacier stretching northwards into the country for many miles. There are no human inhabitants, and apparently the only representatives of animal life are a few birds and hair-seals.

KELUNG, an isl., harbour, and town, Chinese empire, in the N. of the island of Formosa. The island, standing in the middle of an extensive bay 22 m. wide, into which the N.E. monsoon rolls a heavy sea, is a remarkable mass of black rock, rising precipitously on all sides to the height of 580 ft., and terminating in a rather flat summit. It is important as an excellent landmark guiding to the harbour, the entrance to which bears S.S.W. from it, and is 2 m. distant. This entrance is formed by Palm Island on the E. and Image Point on the W. Within the shelter is complete, and the depth sufficient for the largest vessels.—The town, situated near the bottom of the harbour, is described as 'a beggarly collection of wooden huts,' occupied by a very poor and wretched population of Chinese extraction. The trade, however, is extensive, and is carried on chiefly with the River Min, Chinha, Amoy, and Tongsang. To the last-named there is a considerable export of coal, which is worked to some extent a mile E.S.E. of Kelung; to the others the exports are rice, ground-nut oil, camphor, and camphor-wood.

KEMPVILLE, a tn. British America, Canada West, co. Grenville, on a branch of the Rideau canal, and on the Ottawa and Prescott railway, 106 m. W.S.W. Montreal; with six churches, a grammar and a ladies' school, tanneries, foundries, and a large trade in flour and lumber. Pop. about 1350.

KENAMOU, a river, Labrador, enters Hamilton or Esquimaux Inlet from the S., 30 m. from the coast; it is a succession of rapids, and scarcely admits of navigation even by canoes. Its source is said to be in the lakes and marshes which occupy the table-land of the peninsula.

KENDAJI, a vil. Western Africa, on an isl. in the Niger, 85 m. S.E. Timbukto. It is of considerable size, the huts covering the whole surface of the island, while the river scenery in its vicinity is of the most romantic description. Immediately opposite to it is the rocky cone of Warba, which is seen from a considerable distance, and forms a conspicuous object to the surrounding country, and immediately above and below the channel is so completely covered with woody islands as to seem at first sight to oppose a complete barrier to navigation. Indeed, between Kendaji and the Cove of Warba there is no passage, but between the other side of the island and the opposite bank two passages remain, apparently free from any serious obstruction. The inhabitants are of Songhay extraction, but the Fellatah, the dominant race, have settled in the neighbourhood, and possess large herds of sheep and cattle.

KENNEBEC [add.], a river, U. States, which, deriving its principal source in Moosehead Lake in the central part of Maine, receives the Dead on its r. bank, and then flows nearly due S. on the meridian of 70° . On approaching Norridgewock it turns E., but after flowing 12 m. resumes its original direction, and retains it to its mouth in Sheepscott Bay, an irregular indentation of the Atlantic coast studded with numerous islands. Its chief affluent is the Androscoggin, which joins it on the right 18 m. from the sea. In its whole length of 150 m. the Kennebec has a descent of 1000 ft. Large ships ascend it 12 m. to Bath, steamboats 40 m. to Hallowell, and small craft 54 m. to Waterville. The tide ascends 42 m. to Augusta, and to improve the navigation above that point, and at the same time obtain an increase of water-power, a dam with locks has been constructed at the expense of £50,000. Below Bath the river is always open except in seasons of unusual severity, but at Hallowell it is closed by ice from the middle of December to the beginning of April.

KENNEBUNK [add.], two places, U. States:—1, A tn. and port of entry, Maine, on the Kennebunk, at its mouth in the ocean, 22 m. S. by W. Portland. It contains six churches, 14 public schools, a yarn factory, and several saw-mills. Ship-building is the chief branch of industry. The inhabitants were formerly much engaged in the West India trade, and own about 50 vessels. Pop. 2679.—2, *Kennebunk Port*, also in Maine, and at the opposite side of the mouth of the river, contains seven churches, 13 schools, a brass-foundry, and several saw and flour mills. The harbour, which is excellent, has building-yards, and is occasionally used for shipping lumber, but most of the vessels owned by the inhabitants are employed in coasting and fishing. Pop. 2668.

KEOKUK, a tn. U. States, Iowa, at the S.E. corner of the state, at the foot of the lower rapids of the Mississippi, 2 m. above the confluence of the Des Moines, and on the Keokuk, Fort Des Moines, and Minnesota railway, 205 m. above St. Louis. It is built partly at the foot and partly on the summit of a limestone bluff, about 150 ft. high, and has broad regular streets with many handsome houses. Its public buildings are 12 churches, a public school occupying a very handsome edifice, a medical college, a female seminary, and a number of academies. The industrial establishments number about 50, and the trade, chiefly in flour and lumber, is very active. Pop. about 8136.

KERANGOBÉ, a tn. S.W. Africa, Kimbunda country, territory Angola, on a small stream which joins the Balé; lat. $10^{\circ} 10' S.$; lon. $17^{\circ} 35' E.$ Its inhabitants are almost all employed in working and smelting the iron ores of mines in the vicinity, or in making various articles of smith-work, particularly hoes, for which there is a great demand in the adjoining countries, where they form a kind of currency. Pop. about 4000.

KEROWLEE, a petty state, India, Rajpootana, between lat. $25^{\circ} 53'$ and $26^{\circ} 48' N.$; lon. $76^{\circ} 47'$ and $77^{\circ} 38' E.$; and bounded N. by Bhurtpore, E. by Dholpore, S.E. the Chumbul, separating it from Scindia's Dominions, W. the Bunass, separating it from Jeypoor, and N.W. Jeypoor; area, 1878 sq. m.; aggregate revenue, £50,690. Scarcely anything is known either as to its physical features or cultivation. Pop. roughly estimated at 187,800.

KEROWLEE, cap. of the above state, 75 m. S.W. Agra, lies in a country rendered almost impassable by the number of ravines which intersect it, is surrounded by a wall of masonry, and defended by two forts, and consists of narrow filthy streets lined with houses, of which some are substantially built of brick faced with stone. One of the forts contains the rajah's palace, is described as a fine structure, faced inside and outside with red stone, and surmounted by lofty towers.

KERZ, a tn. Austrian empire, Transylvania, circle and 18 m. E.S.E. Hermannstadt; with the picturesque ruins of a Cistercian abbey, which king Matthias suppressed in 1477, on account of the dissolute lives of the inmates. Pop. 960.

KESSIL-BACK-NOOR, a lake, Chinese Tartary, among the Syan-Shan Mountains, about lat. $43^{\circ} N.$; lon. $87^{\circ} E.$ It is about 70 m. long and 18 m. broad, and is bordered by hills on the N.E., but on the S.W. has flat shores extensively covered with reeds, and in some parts affording good pastures.

KEVE, or **KUPO**, or **CUVO**, a river, S.W. Africa, Benguela, which rises in the plateau of Galangue, flows N.W., separating Hambo on the W. from Sambo on the E., traverses the S.E. portion of Bailundo, and intersects the mountainous districts Kibala and Ambuim, where its channel is obstructed by cataracts. On approaching the sea it forms several deep lakes, in which crocodiles and hippopotami abound, and then flowing smoothly in its deep bed, falls into the Bay of Old Benguela, in the Atlantic, in lat. 11° S. During the rains it lays a great extent of country under water.

KEW-HEEN, or **Kew-ni-en**, a tn. China, prov. Nganhoei, picturesquely situated under a range of hills skirting the S. bank of the Yang-tze River, about 80 m. above Nankin. Having fallen into the hands of the insurgents, and been afterwards recaptured from them, it is now half in ruins, and presents few traces of its former importance. It is, however, gradually recovering since the suppression of the Taeping rebellion in 1864.

KEW-KIANG, or **Kiu-Kiang**, a tn and port, China, on the r. bank of the Yang-tze River, 530 m. by its course from Shanghai, and a few miles above the N. extremity of Lake Poyang. It is one of the open ports under the regulations of the treaty of Tien-tsin, ratified in 1860 at Peking; which grants the privilege to British subjects of purchasing land from the inhabitants for a settlement. This has been chosen on the river frontage, where the ground is laid out as a commodious wharf, with a good depth of water for shipping. The residents are formed into a council for municipal purposes; and streets have been laid out at right angles, where substantial warehouses and residences have been erected. A vice-consul is stationed here, and a branch of the foreign maritime customs, with a staff of 21 officers. At the back of the settlement lies the walled town of Kew-Kiang, which takes its name from the 'nine rivers' that flow from the adjacent hills, which form the western head at the entrance of the Poyang Lake. It was on account of this central position, and its reputation as the entrepôt of trade from the province of Kiang-see through the lake, that Lord Elgin fixed upon it as a treaty port, as the nearest outlet for the green-tea districts. This tea forms the staple article of export; in 1864 the value of it, including about one-fifth black tea, amounted to £1,356,982. The imports consisted of Manchester goods, sugar, rice, opium, and edible sea-weed, amounting to £1,044,217; the balance of trade being made up in copper cash and Mexican dollars. The shipping inwards comprised 477 ships, in the aggregate 333,467 tons, and outwards a fraction less, as they were chiefly steamers that carried the produce to Shanghai for shipment to British and other foreign ports. This will give the total value of the trade for 1864 as £2,401,199, against £3,455,919 in 1863, showing a falling off of about 30 per cent. The import, export, and coast trade duties, together with the tonnage dues, amounted to £209,728, against £237,926 in 1863. Kew-Kiang was once a thriving and populous city, surrounded by a wall from 5 to 6 m. in circuit, but, having fallen into the hands of the rebels, suffered alike from them and from a long siege by which the Imperialists ultimately effected its recapture. The consequence was that little more was left standing within the walls than a single dilapidated street containing only a few mean shops. The only building possessed of any interest is a temple which the emperor has caused to be built since his authority was restored, and in which is a tablet erected by a minister of state to his friend, a Tartar general who fell during the siege. In the suburbs, without the walls, is a street more substantial and with better shops than the one within them. There is also in the same locality an uninjured pagoda.—(*S. Mossman's MS. Notes; Reports Chinese Maritime Customs.*)

KEYRAULOO, a tn. India, Gujerat, in a fertile country, 120 m. N.N.W. Baroda. It is a considerable place, with 12,000 inhabitants, who are extensively engaged in manufactures.

KEY WEST, a tn. U. States, Florida, cap. co. Monroe, on the island of same name in Florida Bay; lat. 24° 22' N.; lon. 81° 48' W. Being the key to the best entrance to the Gulf of Mexico, it is strongly fortified, principally by Fort Taylor, which is built on an artificial island within the main entrance to the harbour. The streets of the town are spacious, and the houses, generally of the cottage style, are often

embosomed among trees. The principal buildings are three churches, large and commodious barracks forming three sides of a quadrangle, a marine hospital, a court-house, and a custom-house. The principal employment of the inhabitants is what is called 'wrecking,' but deserves a better name, as it is conducted not in the lawless manner which that name implies, but according to strict rule for the mutual benefit of all parties concerned. The vessels of the wreckers, generally sloops or schooners, averaging 50 tons, and having each a crew of eight or ten persons, are regularly licensed by the judge of the district, and the amount of salvage is determined by the admiralty court. In 1858 the number of vessels licensed as wreckers at Key West was 47. Their spare time is usually occupied in fishing, but the extent of their special employment may be inferred from the fact that the number of wrecks in that year for which salvage was obtained was 52, and that the value of the cargoes and vessels exceeded three millions sterling. Pop. (1860), 2832.

KEY WEST [Spanish *Cayo Hueso*, or 'Bone Key'], the most westerly of the group of Pine Islands, which lie off the coast of Florida, U. States, about 55 m. S.W. Cape Sable. It is about 6 m. long by 2 m. broad, of coral formation, with a sandy sterile surface, which nowhere rises more than 15 ft. above the sea. It is so dangerous to mariners that no less than four lighthouses have been erected upon it or in its vicinity. Notwithstanding these precautions, disastrous shipwrecks frequently occur.

KHABAROFKA, a tn. Russian empire, Manchooria, r. bank Amoor, at the junction of the Usuri. It stands on a picturesque eminence, is the head-quarters of the fifth battalion of the line, and has a church with paintings executed by some Russian officers while stationed here. It was founded only in 1858, but is so advantageously situated that it can hardly fail to become a place of importance. Immediately below the town the l. bank of the Amoor is one continued level prairie for 100 m.

KHACHROD, a tn. India, Scindia's Dominions, 70 m. S. by E. Neemuch. It is a large open town, consisting, according to Sir John Malcolm, of 10,000 houses, and is famous for its tobacco.

KHADEJA, a tn. Western Africa, Bornou, cap. dist. of same name, 120 m. N.E. Kano. It is a large and populous place, surrounded by a very strong double clay-wall. The inhabitants, engrossed by warlike expeditions, have no industry except that of dyeing, which is carried on to a limited extent.

KHADERABAD, a tn. India, Nizam's Dominions, prov. and 30 m. E. Aurungabad, on the Goondla, opposite to Jaulnah. It is surrounded by a stone wall, and the inhabitants are chiefly engaged in weaving sarees, hughrees, kummurbunds, coarse muslins, and the coarser kinds of cotton cloth. A beautiful description of scarlet dye is prepared here, and sent to Bombay, where it is much prized for the brilliancy of its colour. The cotton raised in the neighbourhood is of superior quality, but mostly retained for home consumption. Within the last half century the silk and cotton manufactures of Khaderabad and Jaulnah were famous, and employed from 4000 to 5000 weavers. Owing partly to British competition, and partly to excessive taxation, this source of prosperity has been in a great measure destroyed, and the beautiful fabrics of silk and muslin have disappeared to make way for the coarser articles above mentioned. Pop. 7000.

KHALSEE, a tn. India, Jaunsar, at the confluence of the Tonse with the Jumna, 120 m. N. by E. Delhi. It was formerly more considerable than at present, but is still defended by a fort, and continues to be an entrepôt for the traffic between the plains and the highlands of the N. A copper-mine was once worked in its vicinity.

KHARTOOM, or **Khartum** [add.], a tn. N. Africa, Upper Nubia, near the confluence of the White and Blue Nile, and at the height of 1450 ft. above the sea, lies chiefly along the l. bank of the Blue River, from which, however, it is partially separated by gardens, and is at the same time so near the White River that its inundations not unfrequently reach the earthen wall by which the place is surrounded. When approached from the White River the town presents an appearance by no means attractive. In front is seen a sterile sandy plain, without an eminence of any kind, and without either trees or bushes, and in the midst of it a large

dirty gray mass of houses, overtopped only by a single minaret, and totally devoid of everything that might break the dull monotony of the scene. The town is entered by a long narrow street, stretching from W. to E., and terminating in the market. It is dirty in the extreme, and has on each side a row of mud-houses, which, as there is seldom any exterior opening in them except the doors, only form two lines of dead wall. In the other parts of the town there is not the least semblance of regularity. Every inhabitant has apparently been permitted to exercise his own discretion in

and beyond, in succession, markets for corn, tobacco, and butter. Among the chief attractions of Khartoom are the large and beautiful gardens along the banks of the Blue Nile. These produce vegetables and fruits in great variety, and of excellent quality, with the exception of dates, the date-palm having here reached its southern limit, and ceased fully to ripen its fruit, though, as a tree, it still continues to grow vigorously. The government is nominally Turkish, but the real sovereign is the Pacha of Egypt, the Soudan provinces being under the control of a governor-general with despotic

power. There are consuls for France, Austria, and America. Being at a great distance from civilization, and separated from Lower Egypt by the Nubian deserts, Khartoom affords every opportunity for misgovernment, extortion, and oppression. The taxes are collected by the soldiery, of whom there were 6000 quartered in the town in 1861. The heaviest and most unjust tax is that upon water-wheels, with which the farmers irrigate the otherwise barren soil. On the borders of the river there is much land available for cultivation; but the tax upon irrigation, and the contributions levied upon the produce, cause the Arabs to limit their agriculture to their bare necessities. The slave-

KHARTOOM.—From a view by Weidenbach.

selecting a site and building upon it, and the consequence is, that the houses are of all shapes and sizes, and the streets are mere labyrinths in which a stranger threads his way with the utmost difficulty. But though the houses are thus huddled together in the most disorderly manner, there are many open spaces so large that they are not only used as gardens, but cultivated as corn-fields. So far as thus occupied these spaces may be considered as contributing at once to the beauty and the salubrity of the place. Unfortunately there are other open spaces of a very different description. These are low hollow flats, which, becoming inundated during the rainy season, retain the water which flowed into them, and form large tanks and standing pools, which fill the air with pestilential miasma, and are tenanted by myriads of frogs, whose loud and incessant croaking throughout the night makes peaceful slumber almost impossible. The long and narrow street already mentioned, poor though it be, is by far the best which Khartoom possesses. It contains the governor's residence, the government offices, and a number of tolerably spacious mansions, belonging to Turks, Copts, or wealthy Arabs. With these exceptions all the houses, both here and throughout the town, are of the most paltry description, often consisting only of four walls of sun-dried clay, roofed over, cemented with slime, or plastered with a coating of mud, chaff, and cow-dung, as a protection against the effects of the rains. In the market-place the only mosque, built of brick and surmounted by a minaret, the bazaar, the coffee-houses, brandy-shops, and other places of entertainment, are situated. In addition to those already mentioned the only public buildings are a Coptish and a R. Catholic chapel, a R. Catholic school, a lazaretto or infirmary, a jail, and barracks. The market-place is well provided with the requisite accommodation, and at certain hours presents a very busy scene. It has two principal market-halls, both divided by pathways, which lead across them, and are lined on both sides with shops, where, on open and slightly elevated platforms, the goods are exposed. Many of the shops have signs containing the owner's name, and not unfrequently some pithy proverb from the Koran, in large ornamental characters; others are adorned with painted figures of lions, horses, or other animals. Between the market-halls is the bread-market, where the baker, if an Egyptian, exhibits his loaves of the finest wheat, or, if a native of Soudan, supplies his customers, generally of the poorer class, with rolls and cakes of maize. Immediately adjoining is the milk, fruit, and vegetable market, with the very singular appendage of a gallows in its centre,

trade is the support of Khartoom, and without this traffic upon the White Nile, the place would almost cease to exist, the export ivory trade not exceeding an annual value of £40,000. The population, estimated at about 25,000, is of a very mixed character, and includes Europeans (chiefly British and French), Greeks, Turks, Egyptians, Nubians, Soudanese, Abyssinians, Gallas, and four or five different negro races.

KHERSONESE, or **CHERSONESE**, a cape, Russia, forming the S.W. extremity of the Crimea. It terminates a peninsula on which the ancient town of Chersonesus is believed to have stood, and after reaching the water's edge is continued by a reef. On the highest point of the cape, a lighthouse 170 ft. high has been erected, presenting a conspicuous mark by day, and furnishing by night a light which, in clear weather, is visible at the distance of 17 m.

KHODAGANJ, a tn. India, N.W. Provinces, dist. and about 16 m. S. Furruckabad, on the N. bank of the E. Kallee Nuddee, which is here crossed by a suspension-bridge. It possesses a large serai for travellers, and a well-supplied bazar.

KHOORUM, a river, Asia, which, rising on the S.E. slope of the Sufeid Koh range of mountains, in lat. 33° 28' N.; lon. 69° 27' E., flows E. for 65 m. through Afghanistan, enters the Panjab through a gorge in the Suliman Mountains, shortly afterwards changes its direction to S.E., and after flowing for 100 m. through the valley of Bunnoo, joins the Indus on its r. bank, at the town of Kafer-Kote, in lat. 32° 30' N.; lon. 71° 20' E.

KHORO, or **KHOLU**, a river, Russian empire, Manchooria, rises in a mountain range, flows W.N.W. for 250 m., and joins the Usuri on its r. bank, entering it by five mouths. It flows in a very rapid current, carrying along with its immense volume of water large masses of stone and trunks of trees.

KHOTIN, or **CHOCZM** [add.], a tn. Russia, gov. Besarabia, cap. circle of same name, on the frontiers of Podolia, 20 m. S.S.W. Kamenetz. It is a place of some strength, contains four churches, a circle and a Lancasterian school, and has a variety of manufactures, and a pop. of about 12,200.

KHYRPOOR, a tn. India, Bhawalpoor, about a mile from 1. bank Sutlej or Ghara; lat. 29° 36' N.; lon. 72° 12' E. The sandhills of the Thurr, or great sandy desert, are encroaching so fast on the town, that, though they were only a few years ago 2 m. distant, they have already reached the extremities of the streets, and are threatening the whole place with destruction. The houses, though built only of unburnt brick, are sufficiently durable, as rain seldom falls. The only buildings of

any note are the mosques, which are conspicuous by their round domes, while the principal one is embellished with varnished tiles of various colours. The bazaar contains 400 shops, and a considerable trade is done in supplying the *cafilas* or caravans of the desert.

KIAHTZ, a tn. China, prov. and 185 m. E.S.E. Canton, near the mouth of a stream which falls into the China Sea. It stands about 2 m. from Cupchi Point, a rugged promontory, crowned by a dilapidated fort; is surrounded by walls, and contains a conspicuous pagoda. The entrance to the river, which has a bar with 9 ft. at low water, is defended by a fort and a martello tower.

KIAKKA, a dist. S.W. Africa, Benguela, between lat. 12° and 13° S.; lon. 15° and 16° E.; and bounded N. by Bailundo, W. by the extensive forest of Dambo-olo-Mone separating it from Kissandshi, S. by Kibala and Kakonda, and E. by the Lingi-Lingi range, which separates it from Hambu. The people are in general well-made, but arrogant, blood-thirsty, and very warlike. In union with their neighbours they are able to muster several thousand armed men. Accordingly they make frequent forays into the southern district, and after wasting all with fire and sword, return home laden with plundered cattle and slaves. Their religion is nothing but a superstitious fetichism, though they have an idea of a supreme being whom they call Suku; their worst abomination is cannibalism, which they practise not only on the flesh of prisoners taken in war, mixed with that of cattle and dogs, but on the children of their neighbours, whom they steal for the purpose, and on the aged among themselves whenever they become sick. The men, too much given to plunder to settle down to agricultural employments, leave them, as in many other parts of Africa, to the women, who, displaying equal skill and industry, raise large crops of maize, manioc, potatoes, beans, and tobacco. The domestic animals are cattle in limited number, and in greater number sheep, goats, swine, and poultry; wild animals are very numerous in the mountains and forests. Iron, the only mineral known to exist, is worked to a considerable extent. The pop. is estimated at 75,000, who live under a prince or *sova* whose power is absolute.

KIANG-HUNG, the capital of a Shan state, r. bank Cambodia, 155 m. E. Ava. Though nominally tributary to Ava, its proximity to China brings it more immediately under the influence of the Chinese, who keep a body of officials within it and levy a regular revenue. The town, situated W. of the Mekong, on the side of a low range of hills, has neither walls nor fort, but can boast of several public buildings, of which the most prominent is the palace, substantially built, roofed with highly glazed tiles, and adorned with carving and gilding in the Chinese style. Kiang-Hung, lying on the route of caravans, is much visited by Chinese traders. Curiously enough one of the imports into China is tea. Pop. about 2000.

KIANG-TUNG [add.], a tn. Burmah, cap. Shan state of same name, about midway between the Salwen on the W. and the Mekong on the E., 122 m. E.S.E. Ava. It stands on low undulating hills, is surrounded by an extensive and irregular wall of brick and mud, about 15 ft. high, fenced on the outside either by swamps or by an artificial ditch, and contains about 600 or 700 houses, widely scattered and of a mean description. The palace, situated in the centre of the town, has a shabby exterior, but is internally handsome and richly adorned, having a throne and other royal insignia on the Ava model. The *tsaubwa* or prince levies no taxes on his own account, but derives his revenue from his own domains, from trade, and from presents given by his feudatories and by the people generally. He also receives part of the fines exacted from criminals. The whole force of the state, including the hill tribes, is said to amount to 30,000; the contingent for Ava is 5000.—(Yule, *Geography of Burmah*.)

KIANG-YIN, a tn. China, prov. Kiangsu, r. bank Yangtze-Kiang, 80 m. N.W. Shanghai. The river here narrowing considerably, and the shore rising into bluffs behind the town, present scenery of a somewhat picturesque character. Two batteries command the pass, but so unskillfully that their flank might easily be turned. One of the hills is crowned with a temple; the most conspicuous object within the town is its tall pagoda. The great number of junks crowding the

creek leading to Kinyan shows that it must have an extensive trade.

KIBABA, a tn. S.W. Africa, Kimbunda country, in the N.E. of the Kakingi territory, between the Kokema and the Coanza; lat. 12° 40' S.; lon. 18° 15' E. It is surrounded by incendera-trees of great size and age, is well fortified, and counts about 4000 inhabitants, who belong to the Ganguella stock, and carry on a considerable trade in honey and wax.

KIBALA, a territory, S.W. Africa, Kimbunda country, between lat. 10° 20' and 12° S.; and lon. 15° and 16° E.; bounded N. by Hako, E. and S.E. Bailundo, S. Kissandshi, S.W. Selles, and W. Ambuin; area, about 3000 sq. m. Though claiming independence, and governed by two chiefs, it is tributary to Bailundo. Much of the territory is hilly and covered with large forests, but the cultivable portions are well watered, particularly by the Kupo, which traverses it centrally in a N.W. direction, and the Longa, which flows from E. to W. near its N. frontier. The woods abound with bees, from which a great deal of wax is obtained, and disposed of to the factories on the coast. The only mineral known is iron, which is found of excellent quality almost everywhere throughout the territory. Pop. about 35,000.

KIBANDA, a dist. S.W. Africa, Kimbunda country, territory Bailundo, on the W. slope of the Lingi-Lingi range, about lat. 12° 15' S.; lon. 15° 45' E. It is the largest district in Bailundo, and contains about 500 villages or hamlets. Its chief exercises absolute power, and though nominally subject to the chief of Bailundo, recognizes his authority only so far as he deems it his interest to do so. Thus without consulting any superior, he unites with other minor chiefs, and, with a host of plunderers, often to the number of several thousands, makes devastating inroads into distant districts. Under such leadership the very name of 'the Munano,' by which the inhabitants of Bailundo are designated, excites feelings of dread and hatred over a large extent of S. Africa. In the western part of the district, surrounded by lofty wooded precipices, are the hot sulphur springs of Kitagota.

KIDZI, a lake, Russian empire, Manchooria, formed by the expansion of a branch of the Amoor. It measures 25 m. in length and 12 m. in breadth, and has an area of 93 sq. m. It consists of two portions, connected by a strait about half a mile wide, and contains two islets, one of which is held sacred by the Gilyuks, who assemble on it from time to time to practise their Shaman rites. Kidzi Lake is only 15 m. from Castris Bay, but the ground between is somewhat elevated.

KIKOBOE, or ДЮКОЕ, a territory, S. Africa, between lat. 10° and 13° S., and lon. 22° 25' and 24° 25' E.; bounded N. by the Ssindjsche, or according to Livingstone, Chinge or Basinge, and the Manasa Molutwa territory, E. Lobal, S. the Buunda and Lutschasi Land, and W. the Olowihenda forests. The surface is hilly and even mountainous, attaining its greatest height in the W., and thence descending toward the E. where at last it becomes almost flat. A large part of it is still in a state of nature, covered with dense forests, but it is so abundantly watered by the Kassubi and its numerous affluents that the parts under culture yield most productive returns. The climate is more temperate in the summer months than might be supposed, and during the night in dry winter weather a thermometer placed in the open air sometimes sinks to the freezing-point. There are no towns, properly so called, the inhabitants generally living in detached dwellings or small clusters of huts in the vicinity of their chief, but their number is so great that Kikoboe is said to be as densely peopled as any region in inner Africa. Wax, said to be the best in S. Africa, is the staple article of trade. The only other article deserving notice is iron, which seems to be the only mineral of value, and is said to be of excellent quality.

KIKOMBO, a river, Portuguese factory, and native tn. S.W. Africa, Kimbunda country.—The RIVER, called also Ambuido, rises in the Mountains of Bailundo, flows W. through Kissandshi and Selles, and falls into the Atlantic a little S. of Novo-Redondo.—The FACTORY, situated on the S. bank of the river near its mouth, where a tolerably good harbour is formed, has lost any importance it ever possessed, and consists only of a few straw huts, whose inhabitants, interdicted from the slave-trade, are obliged to content themselves with dealing only in wax, gum copal, and orchil.

Owing to its low site, the factory is periodically laid under water and is very unhealthy. — The NATIVE TOWN, situated on the N. bank of the river, about 6 m. above the factory, stands surrounded by lofty granite precipices. Its inhabitants employ themselves in agriculture, grazing, and fishing. In following the last they are said to display remarkable skill in swimming, often going far out to sea with nothing to support them but a piece of bamboo cane. They are not on good terms with the Portuguese, but it is generally believed that the latter are most in fault. Pop. 1700.

KILAKARAI, or **KEELACURRAY**, a tn. India, presid. Madras, dist. Madura, on the Gulf of Manaar, 10 m. S. by W. Rammad. It is about $2\frac{1}{2}$ m. in circuit; and having a number of houses and granaries finely built along the shore, presents a beautiful appearance when approached from the sea. The appearance, however, is much better than the reality. The numerous streets are narrow and ill-formed, and the great majority of the houses are mere huts with thatched roofs. The principal buildings are 11 mosques, mostly erected over the tombs of wealthy Mussulmans who have died here. Some of them are elegant structures; and one of them is rendered particularly conspicuous by its cupola, which is gilded or covered with gold. Near the E. skirts of the town, and contiguous to the ruins of a Dutch factory, is a small R. Catholic church. The manufactures consist of long cloths, fine and coarse, and a sweet beverage called *puthaneer*, extracted from the palmyra-tree, of which there are thick groves in the vicinity. The inhabitants are industrious, active, and enterprising, and readily engage in any branch of trade which promises to yield a profit. Upwards of 100 boats belong to the port.

KILANDI, a tn. S.W. Africa, Kimbunda country, territory Bailundo; lat. $12^{\circ} 25' S.$; lon. $16^{\circ} 25' E.$ It stands on a height on the E. side of the Djamba range, and contains 2000 inhabitants, who have the reputation of being bold and fearless warriors.

KILIA, a tn. Turkey in Europe, Moldavia, on an arm of the Danube of same name, 21 m. N.E. Ismail. It is a place of strength, and has a valuable fishery (at which a great deal of caviar is prepared), and a trade in cattle, hides, wax, and honey. It is one of the places ceded by Russia in 1856. Pop. 6400.

KIMBANDI, or **DJIMBINDI**, a territory, S.W. Africa, bounded W. by the Coanza, which separates it from Bihé; N. by the land of the Massongo; E. by the extensive uninhabited forests of Olowikenda; and S. by the territories belonging to the tribes of Bango Akanuka. The surface is generally hilly, rising toward the E., where it becomes densely covered with wood. The principal river is the Kuiba, which, after receiving a number of affluents from the S. and E., flows W. and joins the Coanza on its r. bank. The land where fertile is composed of a mixture of clay and sand of a dark red colour. Its capital, Knjo, is seated on a commanding height above the r. bank of the Coanza, and has a much-frequented ferry. Other places of importance are Kariongo, where the caravans going eastward lay in their stock of provisions; Na-Senda in the centre of a fertile plain near the fork formed by the junction of the Kuiba and Coanza; and Angoluka or Angura, on the Coanza, with a ferry, where the caravans from the N. of Bihé usually cross. The inhabitants are industrious, and produce large quantities of manioc and a species of sorghum called *massango*. They are rich in cattle, sheep, goats, and swine. They are still, however, in a very savage state, and addicted to Fetichism, with many of its most absurd and barbarous practices. The staple article of trade is wax; next to it are ivory and slaves. — (*Ladislav Magyar.*)

KIMBOLENGE, a tn. S.W. Africa, Kimbunda country, territory Bailundo, on the W. edge of the Bulum-Bulu Steppe and the caravan route to Bihé. It is shaded by lofty incense-trees, and contains about 2000 inhabitants, who carry on an active trade, greatly facilitated by the caravans.

KIMBUNDA, a country, S.W. Africa, inhabited by a people of same name, who, on account both of their numbers and the extent of their territory, as well as their distinguishing qualities physical and moral, form one of the most remarkable and most powerful races in this quarter of the African continent. Their territory embraces nearly five degrees of latitude and five degrees of longitude; thus forming a vast area nearly

of a square form, which extends from lat. 9° to $14^{\circ} S.$, and from lon. $12^{\circ} 35'$ to $18^{\circ} E.$; washed by the Atlantic on the W., and bounded on the N. and E. by the Coanza, which in the former direction separates it from the Portuguese possessions, and in the latter from the Mazongho and Kimandi races; the S. boundary, as little or nothing is known of the country beyond it, cannot well be defined. According to the limits above assigned to Kimbunda, it is obviously nothing more than the northern and better-known portion of the immense region which figures on the map under the name of Benguela. The only unity which it possesses consists in its physical features and its population; the former being very much alike throughout its whole length, and the latter all deriving their origin from a common Kimbunda stock. But there is no political unity. Instead of forming one great state, it is broken up into a number of territories, all independent of each other—and not only so, but not unfrequently a single territory is again subdivided, and forms several petty independencies, each under a chief who acknowledges no authority but his own absolute will. For an account of the government and customs prevalent in the Kimbunda country, reference is made to the articles in which its various states or territories are described. As a guide to the references, it may be necessary to mention that the names of these territories, taken from N. to S. in the order in which they lie along the coast of the Atlantic, in the centre of the country, and along its eastern frontier, are as follows:—On the coast, Kisama, Mupinda, Sumbe, and Mundombe; in the centre, Libollo, Hako, Bailundo, Ambuim, Kibala, Andullo, Selles, Kissandshi, Ganda, Kiakka, Hambo, Sambos, and Caconda; on the E. frontier, Mazongho, Bihé, Kakingi, and Galangue.

KIMPOLUNG, a tn. Turkey in Europe, Walachia, cap. circle Mustshelo, in a mountain district, 80 m. N.W. Bucharest, on an affluent of the Arjsh. It is the seat of a court of primary jurisdiction; and, standing on the road which leads across the mountains to Kronstadt, is an entrepôt for the traffic between Sichenburgen and Walachia. Pop. 8695.

KINDUMBA, a tn. S.W. Africa, Kimbunda country, territory Galangue; lat. $14^{\circ} S.$; lon. $18^{\circ} E.$ It lies on the Kubango, in which it has a harbour much used by the inhabitants of E. Ganguella; and contains 1500 inhabitants, whose chief employment is fishing.

KINESMA, a tn. Russia, gov. and 52 m. S.E. Kineshma, cap. circle and at the confluence of a river of same name with the Volga. It has 11 churches, a circle and a parish school, a benevolent institution, and an extensive trade. Within the circle much linen and cotton cloth and large numbers of bark-shoes are made. Pop. 2454.

KING AQUA AND KING BELL, the names of two towns, W. Africa, on the S. side of the estuary of the Cameroons, near its mouth in the Bight of Biafra, opposite to the island of Fernando Po. The towns, separated only by a small stream, are of great extent inland, and consist of houses neatly built of bamboo, and arranged in wide regular streets. Much of the adjoining space being occupied by plantain and cocoa-nut trees, it is difficult to form an estimate of the number of the inhabitants. There can be no doubt, however, that they form a large and important community, who by their long intercourse with Europeans have made great progress in civilization. The trade, chiefly in palm-oil, is very extensive.

KING-CHU-FU, a tn. China, about 20 m. above the mouth of a river of same name, which falls into the head of the Gulf of Liau-tung. Nothing more is known of it than that it is a place of considerable trade.

KINGKKA, KENKA, OR HINKAI, a lake, Manchooria, on the boundary between the Russian and the Chinese empires, between lat. $43^{\circ} 36'$ and $45^{\circ} N.$; lon. 133° and $133^{\circ} 40' E.$ It is about 60 m. long by 40 wide, is fed by the Cefu and several streams from the S. and S.W., and discharges its waters by the Sungohan, an affluent of the Usuri. Its N. and N.E. shores are level, and swampy tracts extend at the mouths of its feeders. It abounds in fish, as do the neighbouring mountains in game. About ten villages lie scattered along its shores.

KINGO, a tn. S.W. Africa, Kimbunda country, territory Kibala, on a lofty rugged hill, not far from the N. or r. bank of the Kupo. Pop. 1200.

KINGSTON [add.], a tn. British America, Canada West, cap. cos. Frontenac, Lennox, and Addington, at the head of the St. Lawrence, where it issues from Lake Ontario, on the Rideau canal and the Grand Trunk railway, 125 m. E.N.E. Toronto. It is regularly laid out in streets which cross at right angles, and are lined with houses, the most of which are substantially built of a blue limestone quarried in the vicinity. The public buildings and institutions are numerous, and include among others a large and elegant city-hall, a court-house and jail, 13 churches, a Presbyterian and a R. Catholic college each endowed by government, a mechanic's institute, an hospital, an orphan asylum, and a provincial penitentiary. The manufactures consist chiefly of steam engines, locomotives, boilers, agricultural implements, iron work, soap and candles, and leather. There are also several breweries and distilleries, and various establishments connected with ship-building, which, though said to have somewhat declined in consequence of the diminution of the lake trade by railway competition, may still be considered as the staple industry of Kingston. The harbour, which is guarded at its entrance by Wolfe Island and Garden Island, is a beautiful expanse about 3 m. in width, provided with commodious wharves, and deep enough to float the largest vessels. Part of it, situated on the E. between Point Frederick and Point Henry, is occupied as a naval dockyard. Both of these points, but more especially the latter, is covered with fortifications which command and defend the town and harbour. For additional defence a number of martello towers have been erected, and as a military post Kingston now ranks next to Quebec. Pop. 13,000.

KINGSTON, a tn. U. States, New York, cap. co. Ulster, r. bank Hudson, at the terminus of the Hudson and Delaware canal, 90 m. N. New York. It contains 18 churches and a number of schools and academies, a savings-bank, cement-works, and limekilns, and has a large trade in coal, stone, and ice. The first constitution of the state of New York was framed at Kingston. Pop. 16,640.

KING-TE-CHING, a tn. China, prov. Kiangsee, on one of the feeders of Lake Poyang, 63 m. E.S.E. Nan-tchang-fow. It is an open town, very irregularly built, but of vast dimensions. The inhabitants are almost all employed directly or indirectly in the manufacture of china, which has here its central and most important locality. All day long clouds of smoke and columns of flame ascend from its chimneys, and at night the whole place, seen from a distance, assumes the appearance of a vast conflagration. Thousands of furnaces and more than 500 factories are constantly at work upon china vases, each of which it is said, owing to the minute division of labour, passes, before it is completed, through the hands of fifty different workmen. Pop. upwards of 500,000.

KINSBERG, a tn. Austrian empire, Bohemia, circle and 4 m. S. Eger; with a church, a chapel, an old castle, a brewery, and two mills, and 1000 inhabitants.

KINSHAN, OR **GOLDEN ISLAND**, China, prov. Kiangsu, on the Yang-tze-kiang, about 50 m. below Nankin. It once was, as its name implies, an island, but is so no longer. The channel separating it from the river bank, and marked on charts as having a depth of 4 fathoms, has been silted up, and is now covered with kitchen gardens. Thus converted from an island into a peninsula, it has lost some of its picturesque beauty; but this is the least of its losses. It has been in the hands of the rebels, and subjected to their devastation. Speaking of its former state, its pagodas and the ornamental roofs of its temples and other buildings, Sir John Davis says it 'looked like a fairy creation rising out of the waters,' and was 'celebrated all over China.' 'Now,' says Mr. Oliphant, 'with the exception of the dilapidated pagoda, there is not one stone left upon another.' Recent as the work of destruction has been, 'the rock-cut steps are worn and crumbling, and the ruins generally look as if centuries had passed' over them.

KINYANDA, a tn. S.W. Africa, Kimbunda country, territory Selles, on the Balomba, which flows W., and falls into the sea at Egypton, lat. 12° 20' S. It is the residence of a native chief, who claims to be independent. Pop. 1200, who cultivate the ground and collect gum-copal.

KIOTO, OR **MIAKO**, a tn. Japan, in the S.W. of the island of Niphon, on the Jedogawa or Sedogawa, which has

its source in Lake Oity, and is here navigable by large boats, 30 m. N.N.E. Ohosaka. It has been styled the Rome of Japan, because it is the residence of the spiritual emperor, and the permanent seat of the Dairi—an enormous ecclesiastical court by whom he is virtually controlled. It contains the most magnificent temples of which Japan can boast, and the tomb of Taiko Sama, the most famous of its temporal emperors. It is also said to be its most important manufacturing town. The peculiar sacredness attached to this place is shown by the third article of the Japanese treaty, which stipulates that British subjects may go for 25 m. from any of the opened ports in any direction, except that of Kioto, which they must not approach nearer than 25 m. Pop. estimated at 500,000.

KIOZINDIA, a tn. Austrian empire, Hungary, co. and 32 m. E.N.E. Arad, in a mountainous district. It is a straggling place, with a trade in deals and brandy. Pop. 2111.

KIPANDA, a tn. S.W. Africa, Kimbunda country, territory Selles, on a height above the Kikombo, 85 m. N.E. Benguela. It is defended by a strong wall constructed of stones without cement. The inhabitants, less given to plunder than those of the adjoining districts, cultivate the ground, rear cattle, collect gum-copal, make *dongo* laces, and carry on some trade. Pop. 3000.

KIRCHDORF, a tn. Austrian empire, Hungary, co. Zips, about 8 m. E.S.E. Leutschau. It is one of the sixteen Zips royal towns, and has a high-school, a convent of the sisters of charity, an hospital, and a trade in flax. Pop. 3425.

KIRCHHEIM, a tn. Austrian empire, on the frontiers of Carniola, 22 m. N.E. Görz; with several public offices and some trade.

KIRINDE, a river, Ceylon, which rises in the Central Province, near the S. outlet of the magnificent pass of Ella, flows first nearly due S., then circuitously S.S.E., and falls into the sea on the S.E. shore of the island, about 3 m. S.W. from the town of its own name. Its whole course is 62 m. Area of basin, 334 sq. m. Of these only 34 sq. m. belong to the mountain zone, all the rest lie within the lowlands.

KIRIRA, an isl. Central Africa, near the middle of the W. shore of Lake Tanganyika, 50 m. S.S.W. Ujiji. It is a long narrow irregular mass of primary formation, projecting like a headland or promontory from the mainland, from which it is scarcely 2 m. distant. Its length from E. to W. is 5 m., its breadth from 2 to 3 m. It rises from the shore partly in dwarf terraces and partly in abrupt and thickly wooded steeps to a point in the centre, where it attains its greatest height, and commands an extensive view of the lake. It is inhabited, and has at least two villages surrounded by cultivated fields, in which grain, pulse, and manioc are grown. The usual male dress is a diminutive apron of monkey's skin. A stranger approaching Kirira is challenged by a watch boat; if the answer is satisfactory, permission is given him to enter the long deep bay in which lies the *kkambi* or station. About 5 m. due S. of Kirira is the islet Kabizia. It is well wooded, and, though only half a mile in circuit, is inhabited, and grows holerus, manioc, sweet potatoes, and beans. Another islet, Kasenge, about 7 m. S.W. of Kirira, and 3 m. due W. of Kabizia, lies at the mouth of a deep bay, lat. 9° 44' S. It is a narrow block of high ground, about 2 m. long, destitute of trees, but clothed with grass, well peopled, and deemed of such importance as to have its own sultan. The Arab merchants have establishments upon it, where they collect the surplus supply of slaves from Uguhha, Uruwua, and Marungu.

KIRKILISSA, a tn. Turkey in Europe, eyalet and 32 m. E. Edirneh or Adrianople, cap. liva or dist. of same name. It contains six mosques, several Greek churches, and a bazaar with numerous shops. Its trade is chiefly in confectionery, for which it is famous; and in butter and cheese, which are brought hither by the Bulgarians, and disposed of to Jews, who carry them to Constantinople. Pop. 16,000.

KIRK-KELESIA, OR **KIRK-KILISEN**, a tn. European Turkey, 33 m. E. Adrianople, in a district producing much corn and wine. The Russian wars and the disasters connected with them have destroyed its prosperity, and reduced its inhabitants from 16,000 to half that number.

KIRSCHLAG, a tn. Austrian empire, Lower Austria, cap. circle of same name, on the Zöbernbach, near the frontiers of Hungary, 48 m. S. Vienna. It contains a palace

belonging to Prince Palfy, a handsome Gothic church, an old castle, a town hospital, and a trade in flax, which is extensively grown in the district. Pop. 900.

KISHENGURH, a petty state and tn. India, Rajpootana, between lat. 25° 50' and 26° 50' N.; lon. 74° 50' and 75° 15' E., and bounded N.W. and N. by Joodpoor, E. Jeypoor and Ajmere, and S. and S.W. Ajmere; area, 724 sq. m. Near the centre a rocky ridge extends across the state from S.W. to N.E. In most other quarters the surface is tolerably level. The general appearance, however, is by no means attractive. The soil in many parts is nearly barren, cultivation is confined within very narrow limits, and those tracts which continue in a state of nature are either bare or covered with stunted shrubs and jungle. Pop. about 70,000.—The town, cap. of the above state, 20 m. N.E. Nusserabad, stands on the S.W. side of a range of gneiss and granite hills, and is surrounded by a high and thick rampart of masonry, and defended by a fort containing the residence of the rajah—a structure of large dimensions but rude architecture. The town, once considerable, is now in many places ruinous.

KISHNUGUR, a tn. India, presid. Bengal, cap. dist. Nuddea, 64 m. N. Calcutta, on the Jellinghee, which is here navigable, and joins the Hooghly about 10 m. below. It is the seat of one of the government colleges, and is noted for its fine muslins, which though extremely dear and printed only in a single colour, still keep the market in spite of British competition.

KISI-CHANG, the largest of a group in the Gulf of Siam, to which the name of Dutch Islands has been given. It possesses a harbour, which, as it affords complete shelter and great facilities for watering, has been recommended as a naval station. The inhabitants cultivate chiefly maize, and to a less extent yams and sweet potatoes. The whole islands of the group are famous for the edible birds'-nests, the taste for which, once confined to the Chinese, has now extended to European gourmards. They are built by the swallow (*Hirundo esculenta*) in the caves of the limestone rocks, of which the islands seem to be principally composed.

KISSAMA, a dist. S.W. Africa, Kimbunda country, bounded N. by the Portuguese settlements, W. the Atlantic, S. the Longa separating it from Mupinda, and E. Libollo; area about 3000 sq. m. It is divided into two parts, an Upper and a Lower, each with its own independent chief.—*Lower Kissama* lies along the coast of the Atlantic, and consists partly of a sandy flat and partly of a rugged hilly land. The climate is hot and dry, springs are few and stunted, and the periodical rains so often fail, that the inhabitants are driven by the severe drought to exchange their usual abodes for the banks of the Coanza and Longa. In this quarter the fields are well cultivated, and produce manioc, maize, beans, &c. The chief town is Demba, besides which there are about 300 villages or hamlets.—*Upper Kissama* is traversed from N. to S. by mountains, which give it a much more temperate climate than Lower Kissama. The soil, which consists of a red clay, being well watered by the periodical rains, is fruitful, while throughout the year a great flush of vegetation is maintained in the valleys by numerous copious springs, and lofty forests climb the sides and cover the tops of the mountains. Of the villages or hamlets, amounting to about 400, the largest is Kittel-Kamaschingi. The Portuguese, tempted by the proximity of Kissama, and annoyed and irritated at the almost daily forays of its wild inhabitants, attempted to subjugate it, but managed the matter so bunglingly that only a few of the troops returned to tell how nearly all the others, deprived of water, because the enemy took the precaution to tap their cisterns of hollowed baobab-trees, had perished of thirst. Pop. about 25,000.

KISSANDSHI, a country, S.W. Africa, Benguela, which is inhabited by an independent tribe of same name, and extends from N. to S. along a series of mountain ridges, about 80 m. E. from the Atlantic, between lat. 12° and 13° S., and lon. 14° 30' and 15° 30' E. Ganda bounding it on the S., and Muscles on the N.W., as the inhabitants belong to the same stock, though they have their own chiefs, are usually included. The whole three have an estimated pop. of 125,000. The Kissandshi are of predatory habits, and often make inroads into the neighbouring districts, causing great devastation. They have not permitted even the Portuguese settlements to escape, but have more than once wasted them with

fire and sword, and then retired to their mountain fastnesses, whither it is impossible to follow them. The Portuguese, to put an end to this fearful scourge, have tried both force and conciliation, but in vain without effect. The climate on the mountains of Kissandshi is healthy, and many of the valleys have a fertile soil, on which good crops of corn, beans, and a variety of fruits and vegetables are grown. The domestic animals are cattle, sheep, and swine; the wild animals—lions, leopards, ounces, jackals, elephants, buffaloes, quaggas, zebras, &c. The valleys and mountains, containing a distinct vegetation, would afford a rich field to the botanist.

KISSENDI, a tn. S.W. Africa, Kimbunda country, cap. territory of same name, near the Kuyunga, an affluent of the Coanza; lat. 10° 20' S.; lon. 17° 30' E. It lies on a plain, and contains 2500 inhabitants, engaged chiefly in agriculture and trade.

KISTNAPURAM, a tn. India, presid. Madras, dist. Travancore, about 3 m. E. of one of the lagoons which stretch along the coast of Malabar, and 56 m. S. by E. Cochin. It is a place of some note, containing a large pop., chiefly Nairs, and possesses an extensive fort, nearly in the form of a regular square, surrounded for greater security with a strong bamboo hedge, and containing within it a modern cotarum or palace, a powder-magazine, and granaries. The greater part of the inhabitants reside on the E. of the fort. In the same locality is a pagoda, the annual festival of which lasts thirty days. This is one of the five Zillah coast stations.

KITANGULÉ, a river, Central Africa, supposed to rise among the M'fumbiro Mountains, about lat. 2° S., and flowing in a N.E. direction to fall into the Victoria Nyanza, about lat. 1° N.; lon. 31° 50' E. It is the principal feeder of the lake from the W. Where it was crossed by Speke and Grant, about 40 m. from its entrance into the lake, it was about 80 yards broad, and was sunk down a considerable depth below the surface of the land like a huge canal, and so deep that it could not be poled by the canoe-men; its velocity was from three to four knots an hour.

KITTANING, a tn. U. States, Pennsylvania, cap. co. Armstrong, l. bank Alleghany, on a flat where an Indian village of same name once stood, 35 m. N.E. Pittsburg. The chief buildings are six churches, a university, a town-hall, and an academy; and the industrial establishments are blast furnaces and other large iron works, coal-oil factories, and a flour-mill. Coal, iron ore, limestone, good building stone, and fire-clay are extensively worked in the vicinity. Pop. (1860), 1696.

KITTEL-KAMASCHINGI, a vil. S.W. Africa, Kimbunda country, 80 m. S.S.E. Loanda. It stands on a rugged height, contains the residence of the chief of Upper Kissama, and has a pop. of 1500, some of whom dwell in caverns among the rocks.

KIUNG-CHOW, or **KIUNG-CHAU-FU** [add.], a city of the first order, and a seaport, China, the capital of Hainan Island, off S. coast prov. Quang-tong, situated on a narrow spit of land between a river and a bay. On the N. bank is a 12-storied pagoda; the streets are flagged with large stone slabs, and some are 1½ mile long. The inhabitants are civil, and the authorities kind to shipwrecked people, in consequence of the many wrecks that occur on the rocky coast, which is infested by wreckers and pirates. This place was inserted in the treaty of Tien-tsin as one of the ports to be opened to foreign trade, because it stands at the southern extremity of the empire; but scarcely anything was known of its capabilities at that time. On examination, and consultation with the merchants at Canton and Hongkong, the British authorities deemed it not advisable to send a consul there, or claim the privilege of forming a settlement. These powers remain in abeyance, and the port may yet be opened, when, in all probability, the resources of this tropical region would be greatly developed. There is a considerable native trade with Macao and Canton in the products of the island, the principal of which are cocoa-nuts, betel-nut, preserved fruits, sugar, cotton, salt, varnish, bees'-wax, tanned hides, rice for export, gold, silver, pearls, sapan-wood, and other articles used by the Chinese in manufactures.—(Williams' *Chinese Commercial Guide*.)

KIYENGO, a tn. S.W. Africa, Kimbunda country, Katingi territory; lat. 13° 30' S.; lon. 18° 25' E. It occupies

the centre of an extensive plain close to a number of marshy pools, is well shaded by incendera-trees, and well fortified. Pop. about 2000.

KLADNO [add.], a tn. Austrian empire, Bohemia, circle and 16 m. N.W. Prague, with which it communicates by railway. It consists of the town proper, partly surrounded by a ruined wall, and of three suburbs; has a parish church and chapel, a castle, tile-works, a brewery, distillery, and a potash refinery. In the vicinity coal and ironstone are extensively worked. Pop. 5500.

KLARI, a tn. Austrian empire, Banat, about 22 m. W.S.W. Temesvar; with a large trade in sheep and cattle, and 2316 inhabitants.

KLINZU, a tn. Russia, gov. and about 70 m. N.E. Tchernigov, circle Suraj, near the Iputa. It stands on a sandy plateau surrounded by forests, consists of spacious streets and handsome stone houses, and contains five churches, and a remarkable wooden belfry, which is 168 ft. high, and was erected by a trader in the town without any professional assistance. The manufactures consist chiefly of woollen cloth and woollen stockings. Of the latter 20,000 dozens of pairs are made annually.

KLOSTER, a tn. Austrian empire, Bohemia, circle and 9 m. S.S.E. Czaslau; with a parish church, a castle, a town-house, an hospital, a brewery, and a mill. Pop., including that of the adjoining village of Wilimow, 1600.

KLUKNAU, a tn. Austrian empire, Hungary, co. Zips, on the Hernad, N. of Kaschau; with a castle, smelting furnaces, and mines, and 1000 inhabitants.

KNIN (NEN), a tn. Austrian empire, Bohemia, circle and 17 m. S.S.W. Prague, to the left of the Moldau. It contains a church, a chapel, a school, a brewery, and tileworks. There was once a gold mine in the vicinity. Pop. 1200.

KNOXVILLE, a tn. U. States, Tennessee, cap. co. Knox, on a height above r. bank Holston, at the junction of the E. Tennessee and Georgia, and the E. Tennessee and Virginia railways, 160 m. E.S.E. Nashville. It is the chief commercial place of E. Tennessee, and is rapidly increasing in size and importance, having within ten years more than doubled its population. It contains eight churches, a university, several academies, the state asylum for the deaf and dumb, glassworks, and a large car factory. Pop. (1860), about 8000.

KOCS, a tn. Austrian empire, Hungary, co. and 26 m. S.W. Gran, cap. dist. of same name; with 3005 inhabitants, who belong for the most part to the Reformed church, and are chiefly engaged in weaving.

KOKELAI, a lake or lagoon on the N.E. of Ceylon. It is about 20 m. in circuit, and is believed to have been at one time a rich and fertile plain covered with rice fields, which were irrigated by the immense reservoir of Padevil, situated about 16 m. to the S.W. The sluices of the reservoir having become decayed the embankments gave way, and the immense body of water rushing into the plain completely inundated it, and then burst its way to the sea. Kokelai was thus converted into a lake, bounded on its E. side by a long and narrow belt with an opening in it, through which the tide regularly flows and ebbs. Though its bottom is never wholly dry, the deepest spots are not more than 6 or 7 ft. During the S.W. monsoon, when the rains are light and the waters low, the surf forms a bar of sand which closes the entrance. Were advantage taken of the circumstance it might be possible to exclude the sea permanently, and thus restore the plain to its original state. At present the bar disappears with the change of the monsoon, and the communication is restored. On the N. side of the channel stands the Tamil village of Kokelai, possessing extensive pastures, on which numerous herds of fine cattle are grazed. The woods bordering the lake abound with pea-fowl and game, and its shores are frequented by vast numbers of wild animals—buffaloes and deer, wild hogs, jackals, &c.

KOKEMA, a river, S.W. Africa, which rises in the Bulum-Bulu Steppe on the W. frontiers of Bihé, flows N.N.E., dividing the territory of Bihé into two unequal parts, and having become a considerable stream, in consequence of the junction of several tributaries, particularly the Kulatu or Bihé, and the Kiutu, continues its N. course somewhat circuitously, and joins the Coanza on its l. bank, near the village of Pekholo. It swarms with crocodiles and hippopotami.

KOKS-AR, a tn. Chinese empire, in the country of Thian Shan-Nanwo, on the Chandra, in lat. 37° 5' N.; lon. 77° 8' E. It is situated in the famous wool-producing district, and would become the centre of communication between Kashmir and Nurpur, Umritsur and Loodiana, if a good bridge were at this point thrown across the Chandra. The only transit across the river is for foot passengers, by means of a bridge of twigs, which is thus described:—Pendant between two ropes of birch twigs, which stretch across the stream from rude piers erected on either bank, hang, cradle-like, a continuous hurdle of the same frail material, attached to the ropes above by a sort of open basket-work; this is the footway, and the ropes above serve as balustrades. The footway is further supported by two or three smaller birch ropes laid side by side beneath it, and stretching across the stream in the same manner as the two upper ropes. As such a bridge is not available for beasts of burden, they have to swim the river, a proceeding rendered very dangerous by the force of the current.

KOLA, a tn. W. Africa, Hausa States, prov. Kebbi, 80 m. S.W. Sokoto. It occupies a very strong position crowning a rocky eminence, and commanding the passage of the valley or *faddama*, which intersects the whole province. Owing to its strategical importance it is not only walled, but provided with a small garrison. The governor who commands it and its district has a large house or palace somewhat in decay.

KOLACZYCE, a tn. Austrian empire, Galicia, circle and 6 m. N.N.W. Jaslo; with extensive bleachfields and manufactures of earthenware. In the vicinity in a beautiful valley are the ruins of an old castle, with a fine park and a mineral spring. Pop. 1900.

KOLAPOOR, or **COLAPOOR**, a native state, India, between lat. 15° 58' and 17° 17' N.; lon. 73° 47' and 74° 46' E.; and bounded N. and N.E. by Sattara, E. and S. Belgaum, and W. Sawnt Warree and Rutnagherry; length, S.E. to N.W., 95 m.; breadth, 65 m.; area, 3445 m. It slopes from the culminating ridge of the W. Ghauts, forming its W. boundary, towards the eastern plains, which have still on its E. frontier an elevation of 1500 to 1800 ft. In the W. some summits of the Ghauts within its limits rise from 3000 to 4000 ft. The drainage is by the Kistna directly, and through its tributary Wurna and numerous mountain torrents. The soil, composed for the most part of disintegrated trap rocks and laterite, is very fertile. The rulers of Kolapoor trace their descent from Sivajee, the celebrated founder of the Mahratta empire. Pop. 500,000.—The TOWN, cap. of above state, 185 m. S.E. Bombay, stands in a secluded tract, which has not been much visited by Europeans, is surrounded by a rampart, and provided with other defensive works, and was till lately an excessively crowded and unhealthy place. A series of sanitary measures undertaken by the British government have greatly improved it.

KOLBASZOW, a tn. Austrian empire, Galicia, circle and 40 m. N.E. Tarnow. It consists of two distinct places, an Upper and a Lower, and in the vicinity are the ruins of a castle destroyed by the confederate Poles in 1769. It contains 3700 inhabitants, whose chief employment is in making cabinet and other articles of wooden ware.

KOLEAH, a tn. N. Africa, Algeria, prov. and 18 m. W.S.W. Algiers, pleasantly situated on a S. slope. It is composed of a native and a European town, the latter formed of two spacious streets, and contains a handsome mosque, a caravanserai, and a military hospital. For defence it has two towers seated on the hill above it. Its industrial establishments are a brewery, oil and flour mills, and limestone quarries. Part of the environs are laid out in gardens and a fine orangery with walks, forming a delightful promenade. The old town was almost entirely destroyed by an earthquake in 1825, and it is only since the French made a permanent settlement at it in 1839 that it has again begun to assume importance. Numerous Roman remains are found in the vicinity. Pop. 2712.

KOLLO, or **COLLO**, a tn. N. Africa, Algeria, prov. and 42 m. N. Constantine, on a bay of the Mediterranean, at the foot of Cape Bugiaron. It occupies the site of the ancient *Collops Magnus*, in a picturesque, well-wooded, and fertile district, and at an early period became an important shipping

place to several of the maritime states of Europe. The Venetians and Genoese had factories here as early as the 12th century, and were followed by the Flemings and the French. The chief articles of export were then as now wool, leather, wax, honey, oil, and fruit. Pop. 2000.

KOLOGRIV, a tn. Russia, gov. and 140 m. N.E. Kostroma, cap. circle of same name, on the Uniha. It contains three churches, a circle and a parish school, and a benevolent endowment. The inhabitants of the circle are chiefly employed in felling timber and in aiding the traffic on the river. Pop. 1471.

KOLOMEA [add.], a tn. Austrian empire, Galicia, cap. circle of same name, on the Pruth, 108 m. S.S.E. Lemberg. It is the seat of several important public offices, and has a high-school, a fund established in 1857 for making loans to industrious persons, an infirmary, a Jewish hospital, numerous potteries, and several yearly markets. It had once a strong castle, but was notwithstanding pillaged by the Turks in 1589. Pop. 14,839.—The CIRCLE, bounded N. by Czortkow, E. Bukowina, S. Hungary, and W. Stanislaw, has an area of 1335 geo. sq. m., and a pop. of 281,731, all United Greeks, except 1301 Protestants, 1546 Armenians, 24,139 R. Catholics, and 31,195 Jews.

KOLYVAN, a tn. Russian empire, W. Siberia, gov. and 115 m. S.W. Tomsk, at the confluence of the Bergka with the Obi. It once ranked as the principal town of W. Siberia, and though supplanted in this respect, is still celebrated for its polishing works, which have furnished the Hermitage of St. Petersburg with some of its finest ornaments. The articles, consisting of vases, columns, pedestals, &c., are often on a gigantic scale. When Atkinson visited the Zavod about 120 workmen were employed. 'Many,' he says, 'were engaged cutting dark purple jasper columns 14 ft. in height, others were at work on vases of dark green jasper; both the design and material were exceedingly beautiful, and in some the foliage was equal to any I have ever seen either ancient or modern.' The workmen, at that time serfs, were made to work for 2s. 9d. to 3s. 8d. a month.

KOMANOVA, a tn. Turkey in Europe, in the N. of Macedonia, eyalet and 17 m. E.N.E. Uskub, at the foot of a mountain slope on the Velika Rieka. It is surrounded by a mud wall, and contains 3000 inhabitants, mostly Bulgarians, who have extensive well-watered and well-managed kitchen gardens.

KOMARNO, a tn. Austrian empire, Galicia, circle and 22 m. N.E. Sambor, on an affluent of the Dniester. It has a monument commemorative of victories over the Turks in 1524 and 1695, and contains 3689 inhabitants, who are chiefly employed in weaving linen.

KOMBALA-AN-BAILUNDO, a tn. S.W. Africa, Kimbunda country, cap. Bailundo, nearly equidistant from the Kulatse on the E. and the Kupo on the W.; lat. 11° 35' S.; lon. 16° 28' E. It is built in the form of a semicircle, on a slope in an extensive and gently undulating plain, is inclosed by a thick wall of stones piled one upon another without cement, and consists of narrow tortuous ill-paved streets. A stream intersecting the town supplies it with water, and would doubtless greatly contribute to its security in the event of a siege. The inhabitants are chiefly the office-bearers and body-guards of the prince. His residence differs little from the other houses except in its extent, consisting of a great number of huts of smaller or larger dimensions, thatched with straw, and set down without any regard to order or beauty. In these huts the prince finds accommodation for himself and his many wives. Pop. about 5000.

KOMBALA-AN-BIHÉ, a tn. S.W. Africa; cap. territory of Bihé, in the fork formed by the Kokema and Maschishi-Kuitu, about lat. 11° 50' S.; lon. 17° E. It is surrounded by a strong palisade and a ditch, inclosing a large area, and entered by several gates. Immediately within the principal entrance is a grass plot, about 170 yards wide, and shaded with fine trees; beyond are narrow, crooked, dirty streets, lined with houses of very indifferent appearance, thatched with straw, and huddled together without any order. Farther within the town a small stream with swampy banks intersects it from E. to W. As there is no bridge over it there is no means of crossing but by wading. Beyond the stream is a spacious place of a polygonal shape planted with trees, and lined with trenches, indicating that it is the *jango* or chief

place of resort and business. Here the streets become broader, and an ascent leads to the royal palace, which occupies a commanding eminence. The approach to it is through a small square lined with wooden benches, and strangely ornamented with human heads, some of them converted into mere skulls by long exposure to the air, but others showing by their comparatively fresh state that they must have been recently stuck up. Passing through a spacious gate, the foreground of which is thus hideously ornamented, a narrow lane, lined partly with houses and partly with wooden palings, but so tortuous as to form a kind of labyrinth, a square inclosed by a high wall is reached. In one corner of it stands a handsome square building called the royal chapel, and in its centre, under a leafy guajara-tree, an arm-chair covered with a lion's skin serves for the royal throne. There is nothing particularly noticeable in the palace but its extent, of which some idea may be formed from the fact that the prince's wives and concubines, exceeding 200 in number, are accommodated within it. Pop. about 4000.

KOMBALA-AN-DUMBA, a tn. S.W. Africa, Kimbunda country, near the centre of Galangue, of which it is the capital; lat. 14° S.; lon. 17° 20' E. It stands on an elevated plain, strongly fortified by palisades and ditches, and has about 3000 inhabitants, chiefly officials and soldiers of the prince. They live mostly by plunder, and on occasional festivals eat human flesh.

KOMBALA-AN-KAMESSE, a tn. S.W. Africa, Kimbunda country, territory Mazzongo, on a small stream of same name, an affluent of the Coanza; lat. 9° 40' S.; lon. 17° 40' E. It is the seat of an independent chief, is defended by a strong palisade, possesses a school of some celebrity, in which a kind of code, remarkable for the rigour and cruelty of its laws, and known by the name of Kesila or Quixelles, is taught; and contains about 4000 inhabitants, notorious for robbery and superstition.

KOMBALA-AN-KIBABA, a tn. S.W. Africa, Kimbunda country, cap. territory Kikangi; lat. 13° S.; lon. 18° E. It stands surrounded by beautiful incendera-trees on the r. bank of the Kutye, an affluent of the Coanza; is so well fortified by palisades and ditches that it has successfully resisted several assaults. The residence of the prince is built somewhat in the European style, and the other houses, though not handsome, look clean and comfortable. Pop. about 4000.

KOMBALA-AN-KIBANDA, a tn. S.W. Africa, Kimbunda country, territory Bailundo, about lat. 12° 15' S.; lon. 15° 45' E. It is the chief place in the district of Kibanda, and the residence of a powerful chief, who is all but nominally independent. Its naturally strong position, at the foot of a steep rocky eminence, has been improved by inclosing it with a stone wall, built, as usual in Bailundo, without cement. The inhabitants, about 4000, are notorious plunderers.

KOMBALA-AN-KIKALA, a tn. S.W. Africa, Kimbunda country, territory Angolo; lat. 10° 40' S.; lon. 17° E. It lies on the Balé, inclosed with a palisade and a ditch, and contains about 2000 inhabitants, who employ themselves partly in collecting natron from pools in the vicinity.

KOMMADAGU, or KOMMADAGU WAUHE, a water-course, W. Africa, which, commencing in the S.W. of Bornou, intersects it in a N.E. direction, and finally reaches the E. shore of Lake Chad, 40 m. N. Kukawa. In the dry season the water in it is limited to detached pools of stagnant water, but it begins to form a continuous stream towards the end of July, and thereafter runs eastward with a rapid current till February, pouring a considerable volume of water into the lake. In this state it overflows its banks, and lays an extensive tract on either side of them under water. As the dry season returns nothing can exceed the luxuriance and beauty of the vegetation. A good deal of the tract is cultivated, but the possession is disputed, particularly in those quarters where extensive swamps and thickets have formed a regular jungle, and elephants, antelopes, wild hogs, partridges, and guinea-fowl abound. The tract from which the inhabitants of Bornou have allowed themselves to be ousted by the lower animals is the most fertile in the country, and was once covered with towns and villages. One of these towns was Ghambaru, which was the favourite resort of the kings of Bornou during the most flourishing period of their empire, and of which all that now remains is a few ruins rendered almost inaccessible by the thickets of the forest.

the centre of an extensive plain close to a number of marshy pools, is well shaded by incense-trees, and well fortified. Pop. about 2000.

KLADNO [add.], a tn. Austrian empire, Bohemia, circle and 16 m. N.W. Prague, with which it communicates by railway. It consists of the town proper, partly surrounded by a ruined wall, and of three suburbs; has a parish church and chapel, a castle, tile-works, a brewery, distillery, and a potash refinery. In the vicinity coal and ironstone are extensively worked. Pop. 5500.

KLARI, a tn. Austrian empire, Banat, about 22 m. W.S.W. Temesvar; with a large trade in sheep and cattle, and 2316 inhabitants.

KLINZU, a tn. Russia, gov. and about 70 m. N.E. Tchernigov, circle Suraj, near the Iputa. It stands on a sandy plateau surrounded by forests, consists of spacious streets and handsome stone houses, and contains five churches, and a remarkable wooden belfry, which is 168 ft. high, and was erected by a trader in the town without any professional assistance. The manufactures consist chiefly of woollen cloth and woollen stockings. Of the latter 20,000 dozens of pairs are made annually.

KLOSTER, a tn. Austrian empire, Bohemia, circle and 9 m. S.S.E. Czaslau; with a parish church, a castle, a town-house, an hospital, a brewery, and a mill. Pop., including that of the adjoining village of Wilimow, 1600.

KLUKNAU, a tn. Austrian empire, Hungary, co. Zips, on the Hernad, N. of Kaschau; with a castle, smelting furnaces, and mines, and 1000 inhabitants.

KNIN (NEU), a tn. Austrian empire, Bohemia, circle and 17 m. S.S.W. Prague, to the left of the Moldau. It contains a church, a chapel, a school, a brewery, and tileworks. There was once a gold mine in the vicinity. Pop. 1200.

KNOXVILLE, a tn. U. States, Tennessee, cap. co. Knox, on a height above r. bank Holston, at the junction of the E. Tennessee and Georgia, and the E. Tennessee and Virginia railways, 160 m. E.S.E. Nashville. It is the chief commercial place of E. Tennessee, and is rapidly increasing in size and importance, having within ten years more than doubled its population. It contains eight churches, a university, several academies, the state asylum for the deaf and dumb, glassworks, and a large car factory. Pop. (1860), about 8000.

KOCS, a tn. Austrian empire, Hungary, co. and 26 m. S.W. Gran, cap. dist. of same name; with 3005 inhabitants, who belong for the most part to the Reformed church, and are chiefly engaged in weaving.

KOKELAI, a lake or lagoon on the N.E. of Ceylon. It is about 20 m. in circuit, and is believed to have been at one time a rich and fertile plain covered with rice fields, which were irrigated by the immense reservoir of Padevil, situated about 16 m. to the S.W. The sluices of the reservoir having become decayed the embankments gave way, and the immense body of water rushing into the plain completely inundated it, and then burst its way to the sea. Kokelai was thus converted into a lake, bounded on its E. side by a long and narrow belt with an opening in it, through which the tide regularly flows and ebbs. Though its bottom is never wholly dry, the deepest spots are not more than 6 or 7 ft. During the S.W. monsoon, when the rains are light and the waters low, the surf forms a bar of sand which closes the entrance. Were advantage taken of the circumstance it might be possible to exclude the sea permanently, and thus restore the plain to its original state. At present the bar disappears with the change of the monsoon, and the communication is restored. On the N. side of the channel stands the Tamil village of Kokelai, possessing extensive pastures, on which numerous herds of fine cattle are grazed. The woods bordering the lake abound with pea-fowl and game, and its shores are frequented by vast numbers of wild animals—buffaloes and deer, wild hogs, jackals, &c.

KOKEMA, a river, S.W. Africa, which rises in the Bulum-Bulu Steppe on the W. frontiers of Bihé, flows N.N.E., dividing the territory of Bihé into two unequal parts, and having become a considerable stream, in consequence of the junction of several tributaries, particularly the Kulatu or Bihé, and the Kiutu, continues its N. course somewhat circuitously, and joins the Coanza on its l. bank, near the village of Pekholo. It swarms with crocodiles and hippopotami.

KOKS-AR, a tn. Chinese empire, in the country of Thian Shan-Nanwo, on the Chandra, in lat. 37° 5' N.; lon. 77° 8' E. It is situated in the famous wool-producing district, and would become the centre of communication between Kashmir and Nurpur, Umritsur and Loodiana, if a good bridge were at this point thrown across the Chandra. The only transit across the river is for foot passengers, by means of a bridge of twigs, which is thus described:—Pendant between two ropes of birch twigs, which stretch across the stream from rude piers erected on either bank, hang, cradle-like, a continuous hurdle of the same frail material, attached to the ropes above by a sort of open basket-work; this is the footway, and the ropes above serve as balustrades. The footway is further supported by two or three smaller birch ropes laid side by side beneath it, and stretching across the stream in the same manner as the two upper ropes. As such a bridge is not available for beasts of burden, they have to swim the river, a proceeding rendered very dangerous by the force of the current.

KOLA, a tn. W. Africa, Hausa States, prov. Kebbi, 80 m. S.W. Sokoto. It occupies a very strong position crowning a rocky eminence, and commanding the passage of the valley or *Jaddama*, which intersects the whole province. Owing to its strategic importance it is not only walled, but provided with a small garrison. The governor who commands it and its district has a large house or palace somewhat in decay.

KOLACZYCE, a tn. Austrian empire, Galicia, circle and 6 m. N.N.W. Jaslo; with extensive bleachfields and manufactures of earthenware. In the vicinity in a beautiful valley are the ruins of an old castle, with a fine park and a mineral spring. Pop. 1900.

KOLAPOOR, or **COLAPOOR**, a native state, India, between lat. 15° 58' and 17° 17' N.; lon. 78° 47' and 74° 46' E.; and bounded N. and N.E. by Sattara, E. and S. Belgaum, and W. Sawunt Warree and Rutnagherry; length, S.E. to N.W., 95 m.; breadth, 65 m.; area, 3445 m. It slopes from the culminating ridge of the W. Ghauts, forming its W. boundary, towards the eastern plains, which have still on its E. frontier an elevation of 1500 to 1800 ft. In the W. some summits of the Ghauts within its limits rise from 3000 to 4000 ft. The drainage is by the Kistna directly, and through its tributary Wurua and numerous mountain torrents. The soil, composed for the most part of disintegrated trap rocks and laterite, is very fertile. The rulers of Kolapoor trace their descent from Sivajee, the celebrated founder of the Mahratta empire. Pop. 500,000.—The town, cap. of above state, 185 m. S.E. Bombay, stands in a secluded tract, which has not been much visited by Europeans, is surrounded by a rampart, and provided with other defensive works, and was till lately an excessively crowded and unhealthy place. A series of sanitary measures undertaken by the British government have greatly improved it.

KOLBASZOW, a tn. Austrian empire, Galicia, circle and 40 m. N.E. Tarnow. It consists of two distinct places, an Upper and a Lower, and in the vicinity are the ruins of a castle destroyed by the confederate Poles in 1769. It contains 3700 inhabitants, whose chief employment is in making cabinet and other articles of wooden ware.

KOLEAH, a tn. N. Africa, Algeria, prov. and 18 m. W.S.W. Algiers, pleasantly situated on a S. slope. It is composed of a native and a European town, the latter formed of two spacious streets, and contains a handsome mosque, a caravanserai, and a military hospital. For defence it has two towers seated on the hill above it. Its industrial establishments are a brewery, oil and flour mills, and limestone quarries. Part of the environs are laid out in gardens and a fine orangery with walks, forming a delightful promenade. The old town was almost entirely destroyed by an earthquake in 1825, and it is only since the French made a permanent settlement at it in 1839 that it has again begun to assume importance. Numerous Roman remains are found in the vicinity. Pop. 2712.

KOLLO, or **COLLO**, a tn. N. Africa, Algeria, prov. and 42 m. N. Constantine, on a bay of the Mediterranean, at the foot of Cape Bugiaron. It occupies the site of the ancient *Collops Magnus*, in a picturesque, well-wooded, and fertile district, and at an early period became an important shipping

place to several of the maritime states of Europe. The Venetians and Genoese had factories here as early as the 12th century, and were followed by the Flemings and the French. The chief articles of export were then as now wool, leather, wax, honey, oil, and fruit. Pop. 2000.

KOLOGRIV, a tn. Russia, gov. and 140 m. N.E. Kostroma, cap. circle of same name, on the Unihia. It contains three churches, a circle and a parish school, and a benevolent endowment. The inhabitants of the circle are chiefly employed in felling timber and in aiding the traffic on the river. Pop. 1471.

KOLOMEA [add.], a tn. Austrian empire, Galicia, cap. circle of same name, on the Pruth, 108 m. S.S.E. Lemberg. It is the seat of several important public offices, and has a high-school, a fund established in 1857 for making loans to industrious persons, an infirmary, a Jewish hospital, numerous potteries, and several yearly markets. It had once a strong castle, but was notwithstanding pillaged by the Turks in 1589. Pop. 14,839.—The circle, bounded N. by Czortkow, E. Bukowina, S. Hungary, and W. Stanislaw, has an area of 1335 geo. sq. m., and a pop. of 281,731, all United Greeks, except 1301 Protestants, 1546 Armenians, 24,139 R. Catholics, and 31,195 Jews.

KOLYVAN, a tn. Russian empire, W. Siberia, gov. and 115 m. S.W. Tomsk, at the confluence of the Bergka with the Obi. It once ranked as the principal town of W. Siberia, and though supplanted in this respect, is still celebrated for its polishing works, which have furnished the Hermitage of St. Petersburg with some of its finest ornaments. The articles, consisting of vases, columns, pedestals, &c., are often on a gigantic scale. When Atkinson visited the Zavod about 120 workmen were employed. 'Many,' he says, 'were engaged cutting dark purple jasper columns 14 ft. in height, others were at work on vases of dark green jasper; both the design and material were exceedingly beautiful, and in some the foliage was equal to any I have ever seen either ancient or modern.' The workmen, at that time serfs, were made to work for 2s. 9d. to 3s. 8d. a month.

KOMANOVA, a tn. Turkey in Europe, in the N. of Macedonia, eyalet and 17 m. E.N.E. Uskub, at the foot of a mountain slope on the Velika Rieka. It is surrounded by a mud wall, and contains 3000 inhabitants, mostly Bulgarians, who have extensive well-watered and well-managed kitchen gardens.

KOMARNO, a tn. Austrian empire, Galicia, circle and 22 m. N.E. Sambor, on an affluent of the Dniester. It has a monument commemorative of victories over the Turks in 1524 and 1695, and contains 3689 inhabitants, who are chiefly employed in weaving linen.

KOMBALA-AN-BAILUNDO, a tn. S.W. Africa, Kimbunda country, cap. Bailundo, nearly equidistant from the Kulatse on the E. and the Kupo on the W.; lat. 11° 35' S.; lon. 16° 28' E. It is built in the form of a semicircle, on a slope in an extensive and gently undulating plain, is inclosed by a thick wall of stones piled one upon another without cement, and consists of narrow tortuous ill-paved streets. A stream intersecting the town supplies it with water, and would doubtless greatly contribute to its security in the event of a siege. The inhabitants are chiefly the office-bearers and body-guards of the prince. His residence differs little from the other houses except in its extent, consisting of a great number of huts of smaller or larger dimensions, thatched with straw, and set down without any regard to order or beauty. In these huts the prince finds accommodation for himself and his many wives. Pop. about 5000.

KOMBALA-AN-BIHÉ, a tn. S.W. Africa, cap. territory of Bihé, in the fork formed by the Kokema and Maschishi-Kuitu, about lat. 11° 50' S.; lon. 17° E. It is surrounded by a strong palisade and a ditch, inclosing a large area, and entered by several gates. Immediately within the principal entrance is a grass plot, about 170 yards wide, and shaded with fine trees; beyond are narrow, crooked, dirty streets, lined with houses of very indifferent appearance, thatched with straw, and huddled together without any order. Farther within the town a small stream with swampy banks intersects it from E. to W. As there is no bridge over it there is no means of crossing but by wading. Beyond the stream is a spacious place of a polygonal shape planted with trees, and lined with trenches, indicating that it is the *jango* or chief

place of resort and business. Here the streets become broader, and an ascent leads to the royal palace, which occupies a commanding eminence. The approach to it is through a small square lined with wooden benches, and strangely ornamented with human heads, some of them converted into mere skulls by long exposure to the air, but others showing by their comparatively fresh state that they must have been recently stuck up. Passing through a spacious gate, the foreground of which is thus hideously ornamented, a narrow lane, lined partly with houses and partly with wooden palings, but so tortuous as to form a kind of labyrinth, a square inclosed by a high wall is reached. In one corner of it stands a handsome square building called the royal chapel, and in its centre, under a leafy guajara-tree, an arm-chair covered with a lion's skin serves for the royal throne. There is nothing particularly noticeable in the palace but its extent, of which some idea may be formed from the fact that the prince's wives and concubines, exceeding 200 in number, are accommodated within it. Pop. about 4000.

KOMBALA-AN-DUMBA, a tn. S.W. Africa, Kimbunda country, near the centre of Galangue, of which it is the capital; lat. 14° S.; lon. 17° 20' E. It stands on an elevated plain, strongly fortified by palisades and ditches, and has about 3000 inhabitants, chiefly officials and soldiers of the prince. They live mostly by plunder, and on occasional festivals eat human flesh.

KOMBALA-AN-KAMESSE, a tn. S.W. Africa, Kimbunda country, territory Mazzongo, on a small stream of same name, an affluent of the Coanza; lat. 9° 40' S.; lon. 17° 40' E. It is the seat of an independent chief, is defended by a strong palisade, possesses a school of some celebrity, in which a kind of code, remarkable for the rigour and cruelty of its laws, and known by the name of Kesila or Quixelles, is taught; and contains about 4000 inhabitants, notorious for robbery and superstition.

KOMBALA-AN-KIBABA, a tn. S.W. Africa, Kimbunda country, cap. territory Kikangi; lat. 13° S.; lon. 18° E. It stands surrounded by beautiful incensera-trees on the r. bank of the Kutye, an affluent of the Coanza; is so well fortified by palisades and ditches that it has successfully resisted several assaults. The residence of the prince is built somewhat in the European style, and the other houses, though not handsome, look clean and comfortable. Pop. about 4000.

KOMBALA-AN-KIBANDA, a tn. S.W. Africa, Kimbunda country, territory Bailundo, about lat. 12° 15' S.; lon. 15° 45' E. It is the chief place in the district of Kibanda, and the residence of a powerful chief, who is all but nominally independent. Its naturally strong position, at the foot of a steep rocky eminence, has been improved by inclosing it with a stone wall, built, as usual in Bailundo, without cement. The inhabitants, about 4000, are notorious plunderers.

KOMBALA-AN-KIKALA, a tn. S.W. Africa, Kimbunda country, territory Angolo; lat. 10° 40' S.; lon. 17° E. It lies on the Balé, inclosed with a palisade and a ditch, and contains about 2000 inhabitants, who employ themselves partly in collecting natron from pools in the vicinity.

KOMMADAGU, or **KOMMADAGU WAUHE**, a water-course, W. Africa, which, commencing in the S.W. of Bornou, intersects it in a N.E. direction, and finally reaches the E. shore of Lake Chad, 40 m. N. Kukawa. In the dry season the water in it is limited to detached pools of stagnant water, but it begins to form a continuous stream towards the end of July, and thereafter runs eastward with a rapid current till February, pouring a considerable volume of water into the lake. In this state it overflows its banks, and lays an extensive tract on either side of them under water. As the dry season returns nothing can exceed the luxuriance and beauty of the vegetation. A good deal of the tract is cultivated, but the possession is disputed, particularly in those quarters where extensive swamps and thickets have formed a regular jungle, and elephants, antelopes, wild hogs, partridges, and guinea-fowl abound. The tract from which the inhabitants of Bornou have allowed themselves to be ousted by the lower animals is the most fertile in the country, and was once covered with towns and villages. One of these towns was Ghambaru, which was the favourite resort of the kings of Bornou during the most flourishing period of their empire, and of which all that now remains is a few ruins rendered almost inaccessible by the thickets of the forest.

KONAIE, a river, India, a large offset of the Brahmapootra, which thrown off at Mehindergunje, dist. Mymensing, in lat. $25^{\circ} 10' N.$; lon. $89^{\circ} 43' E.$, flows first S. for 100 m., and then, after communicating by a considerable branch with the Ganges, turns S.E., and retains this direction till it again joins the main stream in lat. $23^{\circ} 13'$; lon. $90^{\circ} 33'$. In the lower part of its course it takes the name of the Dulasseree.

KONCHA, a tn. W. Africa, Adamawa, 90 m. S.S.W. Yola. It is a large place, divided into three quarters, occupied respectively by the Fellatah, the Kanuri, and Pagan natives. All the dwellings, except the governor's, which is built of clay, are round conical huts. To the east of the town a lofty mountain is seen. The wild sugar-cane is said to grow here in great abundance. The wealth of the dominant races is in slaves, of whom the governor possesses about 10,000.

KONG, a tn. W. Africa, 250 m. N. of the Gold Coast. It is a large place, with houses entirely of clay. The inhabitants, Mandingoes or Wangara, are mostly employed in weaving, and manufacture an excellent cotton cloth, of which a kind in red and black stripes is particularly celebrated.

KONGONE, one of the mouths or branches of the Zambesi, S.E. Africa, about lat. $18^{\circ} 50' S.$; lon. $36^{\circ} 15' E.$ It is 5 m. E. of the Milambe or western branch, and 7 m. W. from East Luabo, which again is 5 m. from the Timbwe. The first 20 m. are straight and deep, and inclosed with mangrove jungle; then a small and rather tortuous natural canal leads off to the right, and after about 5 m. ends in the broad Zambesi. The rest of the Kongone branch comes out of the main stream considerably higher up as the outgoing branch called Doto. The channel is probably of recent formation, and very variable. Dr. Livingstone states that during his acquaintance with it 'about 80 yards were washed away on one side, and deposited on the other; a navigable channel by Nyangalule was quite filled up, and Pearl Island nearly all washed away. As nothing is done to preserve the channel it will soon be as shallow as the Milambe, and entirely useless for navigation.'

KÖNIGSDORF, a tn. Austrian empire, Hungary, co. Eisenburg, on the Lafnitz; with a trade in excellent flax and hemp, and 1100 inhabitants.

KÖNIGSFELD, or **NEUDORF** [add.], a tn. Austrian empire, Moravia, circle and about 2 m. N. Brünn. It possesses a handsome church, a castle, barracks which were once a Carthusian convent, an archducal villa, and manufactures of beet-root. It is a great resort of the inhabitants of Brünn, and contains numerous villas and country seats. Pop. 2491.

KÖNIGSWARTH, a tn. Austrian empire, Bohemia, circle and about 16 m. E.N.E. Eger, cap. dist. of same name. It has a parish church, a townhouse, mineral springs with a bathing establishment, a brewery, and manufactures of chicory and rosoglio. The castle of Königswarth is situated in a park, and iron and tin are worked in the vicinity. Pop. 7494.

KONITZA, a tn. Turkey in Europe, Herzegovina, in the valley of the Neretwa, which here forms the boundary between Herzegovina and Bosnia, 62 m. N. Ragusa. It is a poor Turkish town, separated by a bridge from another still more insignificant, which takes its name from the river. The only thing remarkable about them is the great change of vegetation which is observable on passing from the one to the other. In the valley on the side of Herzegovina a southern climate and vegetation prevail, and the vine, fig, and pomegranate are common fruits, whereas on the Bosnian side the principal fruits are those of the north—apples, pears, and plums.

KONYITZA, a tn. Turkey in Europe, Herzegovina, on the Narenta, on the road between Mostar and Bosna-Serai, and nearly equidistant from them. The river, which crosses the town, is spanned near its centre by a fine bridge of six arches. The inhabitants, about 6000, were formerly notorious for their pillaging propensities.

KOOREE, or **KOHARI**, a river, India, which rises in Scindia's Dominions, about 60 m. S.W. Gwalior, flows successively N.W., N.E., E., and S.E., pursuing nearly a semi-circular course, and joins the Sinde on its l. bank in lat. $26^{\circ} 28' N.$; lon. $79^{\circ} 14' E.$ Its total length is about 186 m.

KOONA, or **KOYANE**, a river, India, which rises in Oude, about lat. $27^{\circ} 22' N.$; lon. $82^{\circ} 11' E.$, flows S.E. to the fron-

tier, where it forms part of the boundary between Oude and dist. Goruckpore, thereafter continues its S.E. direction somewhat circuitously, and joins the Gogra on its l. bank, after a course of 155 m. It might be navigated by canoes at all times, and by large boats during the rainy season, but no commercial use appears to be made of it.
